

[MS-FSSPRDF]: SPRel Data File Formats

Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation for protocols, file formats, languages, standards as well as overviews of the interaction among each of these technologies.
- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you may make copies of it in order to develop implementations of the technologies described in the Open Specifications and may distribute portions of it in your implementations using these technologies or your documentation as necessary to properly document the implementation. You may also distribute in your implementation, with or without modification, any schema, IDL's, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that may cover your implementations of the technologies described in the Open Specifications. Neither this notice nor Microsoft's delivery of the documentation grants any licenses under those or any other Microsoft patents. However, a given Open Specification may be covered by Microsoft [Open Specification Promise](#) or the [Community Promise](#). If you would prefer a written license, or if the technologies described in the Open Specifications are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting iplg@microsoft.com.
- **Trademarks.** The names of companies and products contained in this documentation may be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights.
- **Fictitious Names.** The example companies, organizations, products, domain names, e-mail addresses, logos, people, places, and events depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

Reservation of Rights. All other rights are reserved, and this notice does not grant any rights other than specifically described above, whether by implication, estoppel, or otherwise.

Tools. The Open Specifications do not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments you are free to take advantage of them. Certain Open Specifications are intended for use in conjunction with publicly available standard specifications and network programming art, and assumes that the reader either is familiar with the aforementioned material or has immediate access to it.

Revision Summary

Date	Revision History	Revision Class	Comments
02/19/2010	1.0	Major	Initial Availability
03/31/2010	1.01	Editorial	Revised and edited the technical content
04/30/2010	1.02	Editorial	Revised and edited the technical content
06/07/2010	1.03	Editorial	Revised and edited the technical content
06/29/2010	1.04	Editorial	Changed language and formatting in the technical content.
07/23/2010	1.04	No change	No changes to the meaning, language, or formatting of the technical content.
09/27/2010	1.04	No change	No changes to the meaning, language, or formatting of the technical content.
11/15/2010	1.04	No change	No changes to the meaning, language, or formatting of the technical content.
12/17/2010	1.04	No change	No changes to the meaning, language, or formatting of the technical content.
03/18/2011	1.04	No change	No changes to the meaning, language, or formatting of the technical content.
06/10/2011	1.04	No change	No changes to the meaning, language, or formatting of the technical content.
01/20/2012	1.5	Minor	Clarified the meaning of the technical content.
04/11/2012	1.5	No change	No changes to the meaning, language, or formatting of the technical content.
07/16/2012	1.5	No change	No changes to the meaning, language, or formatting of the technical content.

1 Introduction

This document specifies the SPRel Data File Formats used for client click input analysis. This analysis improves search relevancy by analyzing client feedback.

Sections 1.7 and 2 of this specification are normative and can contain the terms MAY, SHOULD, MUST, MUST NOT, and SHOULD NOT as defined in RFC 2119. All other sections and examples in this specification are informative.

1.1 Glossary

The following terms are defined in [\[MS-GLOS\]](#):

Augmented Backus-Naur Form (ABNF)
Coordinated Universal Time (UTC)
little-endian
MD5 hash

The following terms are defined in [\[MS-OFCGLOS\]](#):

absolute URL
base64 encoding
content collection
dictionary
document identifier
equivalence class
file
search clickthrough

The following terms are specific to this document:

MAY, SHOULD, MUST, SHOULD NOT, MUST NOT: These terms (in all caps) are used as described in [\[RFC2119\]](#). All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

1.2 References

References to Microsoft Open Specifications documentation do not include a publishing year because links are to the latest version of the technical documents, which are updated frequently. References to other documents include a publishing year when one is available.

1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact dochelp@microsoft.com. We will assist you in finding the relevant information. Please check the archive site, <http://msdn2.microsoft.com/en-us/library/E4BD6494-06AD-4aed-9823-445E921C9624>, as an additional source.

1.3 Structure Overview (Synopsis)

These **files** contain information for **search clickthrough** log analysis. Search clickthrough log analysis computes search ranks for documents. These logs are produced on a daily basis. A log contains information about how often and when a search query is processed. It also provides information about document retrieval, clicks, for a specific search query. This information is used as input to compute a search rank for the documents.

1.4 Relationship to Protocols and Other Structures

The file formats in this document are used by the protocol described in [\[MS-FSFDWMW\]](#).

1.5 Applicability Statement

None.

1.6 Versioning and Localization

None.

1.7 Vendor-Extensible Fields

None.

2 Structures

This chapter specifies the directory structure, file names and internal data format for the files used for search clickthrough log analysis.

2.1 Common File Structures

A file **MUST** either be empty or contain a set of rows. Each row consists of one or more columns and is terminated by a newline. A newline is either a carriage return in combination with a line feed or only a line feed. Columns **MUST** be separated by a white space delimiter. If the column does not contain binary data, the columns **MUST** be ASCII encoded.

The common structure for a file with no binary data corresponds to the following rules written in **Augmented Backus-Naur Form (ABNF)**, as specified in [\[RFC5234\]](#).

```
FILE = *LINE
; Section 2.3 and 2.4 specify ABNF rules for each type of ROW.
LINE = ROW NEWLINE
BASE64 = 1*(ALPHA / DIGIT / "=" / "+" / "/" )
TOKEN = 1*(%x21-ff)
CID = 1*TOKEN
CLICKEDURLRANK = 1*DIGIT
COLLECTION = 1*TOKEN
DATE = 4DIGIT "." 2DIGIT "." 2DIGIT
GCOUNT = 1*DIGIT
URLHASH = 1*DIGIT
NUMURLS = 1*DIGIT
LCID = 1*DIGIT
LCOUNT = 1*DIGIT
MEMBER = 1*(%x21-ff)
OP = "add" / "del"
QUERIES = 1*BASE64
QUERIESINFO = 1*BASE64
QUERY = *(TOKEN SP) TOKEN
QUERYID = 1*DIGIT
TIMESTAMP = 1*DIGIT
URL = 1*(%x21-ff)
URLID = 1*DIGIT
PLACE = 1*DIGIT
ZERO = "0"
NEWLINE = (CRLF / LF)
```

Some of the ABNF rules are specified in more detail in the following table.

Column	Description
CID	Specifies a document identifier(3) .
CLICKEDURLRANK	Specifies the rank of a document in the search result.
COLLECTION	Specifies a content collection name.
DATE	Specifies a processing date. This date MUST be formatted as yyyy.mm.dd.
GCOUNT	Specifies the number of times a search query was processed.

Column	Description
URLHASH	Specifies a 128-bit MD5 hash value of a URL. The hash value is represented as a numerical value.
NUMURLS	Specifies the total number of URLs associated with a specific search query.
LCID	Specifies a language code identifier, as specified in [MS-LCID] .
LCOUNT	Specifies the number of times a URL was clicked for a particular search query.
MEMBER	Specifies a URL or document identifier that is in the equivalence class of the document. The MEMBER column MUST contain the value 0xc782, as specified section 2.2.1.3.2.1.4 in [MS-FSWASDR] , when the OP column contains a DEL operation.
OP	Specifies a content submission operation. Values are: - ADD: A new document was added to the index. - DEL: A document was deleted from the index
QUERIES	Specifies all search queries associated with a particular document identifier. This column contains a dictionary encoded with base64 encoding , as specified in [MS-FSWCU] . This dictionary MUST contain two keys: contentid and queries . The contentid key specifies a document identifier (CID). The value of the "queries" key MUST contain an array, as specified in [MS-FSWCU] , of query entries. Each query entry MUST be a five entry tuple, as specified in [MS-FSWCU] . Each tuple MUST contain the following column values; LCOUNT, GCOUNT, PLACE, NUMURLS and QUERY.
QUERIESINFO	Specifies search queries and collections associated with a particular document identifier. This column contains a dictionary encoded with base64 encoding as specified for the QUERIES column. However, this dictionary MUST have one additional key, the collections key. The collections key MUST contain an array of all the collections, as specified in [MS-FSWCU] , where this document identifier is registered.
QUERY	Specifies an ASCII encoded search query string.
QUERYID	Specifies a unique identifier for a search query.
TIMESTAMP	Specifies a processing timestamp. This is a numerical value, it specifies the time in seconds after 00:00:00 1970-01-01 UTC .
URL	Specifies an absolute URL .
URLID	Specifies a unique identifier for a URL.
PLACE	Specifies a numerical rank. This field ranks URLs for a specific search query.
ZERO	This column is reserved, and MUST contain the ASCII character "0".

2.2 Common File Naming Conventions

Some files do not have a fixed file name. Parts of these file names have one or more variables, specified as follows.

- **date:** Specifies the date when this file was processed. The date format MUST be `yyyymmdd`.

- **gen:** Specifies the generation of this file. This value begins at 0 and increases for each new version of the file.
- **sf:** Specifies the split factor number of a file. The split factor specifies the number of files into which to split the data. The value MUST be a number between 0 and up to the maximum split factor.
- **part_num:** Specifies a dataset partition number. This number is retrieved from the configuration file of the process.
- **col:** Specifies a collection name used by search clickthrough log analysis process.
- **host:** Specifies the worker hostname. The hostname is specified in the configuration file of the process.

2.3 Search Clickthrough Files

The files contain daily information from the search clickthrough logs. These files are used as input for search clickthrough analysis log process. For more information about ABNF parameters, see section [2.1](#).

2.3.1 <date>.clicks.txt

File of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = QUERYID SP URLID SP LCID SP CLICKEDURLRANK
```

For more information about ABNF parameters, see section [2.1](#).

2.3.2 <date>.queries.txt

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = QUERYID SP DATE SP QUERY
```

For more information about ABNF parameters, see section [2.1](#).

2.3.3 <date>.urls.txt

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URLID SP DATE SP URL
```

For more information about ABNF parameters, see section [2.1](#).

2.4 Analysis Files

The analysis files consist of intermediate computation files of the search clickthrough log analysis process. For more information about ABNF parameters, see section [2.1](#).

2.4.1 allfeeduris.<sf> files

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = CID SP COLLECTION
```

For more information about ABNF parameters, see section [2.1](#).

2.4.2 cid_by_cid_with_counts_and_query.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = CID SP LCOUNT SP GCOUNT SP PLACE SP NUMURLS SP QUERY
```

For more information about ABNF parameters, see section [2.1](#).

2.4.3 cid_by_cid_with_counts_and_query_mergereduce.<sf>.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = CID SP LCOUNT SP GCOUNT SP PLACE SP NUMURLS SP QUERY
```

For more information about ABNF parameters, see section [2.1](#).

2.4.4 global_querycnt_by_query.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = GCOUNT SP QUERY
```

Rows MUST be sorted by the **QUERY** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.5 local_querycnt_by_cid.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = CID SP LCOUNT SP QUERY
```

Rows MUST be sorted by the **CID** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.6 local_querycnt_by_cid_merge.<sf>.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = CID SP LCOUNT SP QUERY
```

Rows MUST be sorted by the **CID** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.7 local_querycnt_by_query.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = CID SP LCOUNT SP QUERY
```

Rows MUST be sorted by the **QUERY** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.8 local_querycnt_by_query_reduce.<sf>.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = CID SP LCOUNT SP QUERY
```

Rows MUST be sorted by the **QUERY** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.9 local_querycnt_by_url.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URL SP LCOUNT SP QUERY
```

Rows MUST be sorted by the **URL** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.10 local_querycnt_by_url_merge.<sf>.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URL SP LCOUNT SP QUERY
```

Rows MUST be sorted by the **URL** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.11 local_querycnt_by_urlid.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URLID SP LCOUNT SP QUERY
```

Rows MUST be sorted by the **URLID** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.12 **local_querycnt_by_urlid_reduce.<sf>.<sf>**

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URLID SP LCOUNT SP QUERY
```

Rows MUST be sorted by the **URLID** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.13 **semi_local_querycnt_by_queryid.<sf>**

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URLID SP QUERYID SP LCID SP LCOUNT
```

Rows MUST be sorted by the **QUERYID** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.14 **semi_local_querycnt_by_urlid.<sf>**

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URLID SP LCOUNT SP QUERY
```

Rows MUST be sorted by the **URLID** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.15 **semi_local_querycnt_by_urlid_map.<sf>.<sf>**

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URLID SP LCOUNT SP QUERY
```

Rows MUST be sorted by the **URLID** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.16 **semi_local_querycnt_pre_token.<sf>**

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URLID SP LCOUNT SP LCID SP QUERY
```

For more information about ABNF parameters, see section [2.1](#).

2.4.17 **uris_by_contentid_ts.<sf>**

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = CID SP TIMESTAMP SP OP SP MEMBER
```

Rows MUST be sorted by the **CID** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.18 uris_by_member.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = CID SP MEMBER
```

Rows MUST be sorted by the **MEMBER** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.19 uris_by_member_reduce.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = CID SP MEMBER
```

Rows MUST be sorted by the **MEMBER** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.20 urls_by_urlhash_with_queries.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URLHASH SP QUERIES
```

For more information about ABNF parameters, see section [2.1](#).

2.4.21 urls_by_urlhash_with_queries_sort.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URLHASH SP QUERIES
```

For more information about ABNF parameters, see section [2.1](#).

2.4.22 urls_on_urlhash_with_queries.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URLHASH SP QUERIES
```

For more information about ABNF parameters, see section [2.1](#).

2.4.23 <col>_feeduris.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URL SP COLLECTION
```

For more information about ABNF parameters, see section [2.1](#).

2.4.24 <col>_feeduris_expand.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URL SP COLLECTION
```

For more information about ABNF parameters, see section [2.1](#).

2.4.25 <col>_feeduris_expand_resplit.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URL SP COLLECTION
```

For more information about ABNF parameters, see section [2.1](#).

2.4.26 <gen>.queries_by_queryid.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = QUERYID SP DATE SP QUERY
```

Rows MUST be sorted by the **QUERYID** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.27 <gen>.queries_by_queryid_all.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = QUERYID SP DATE SP QUERY
```

Rows MUST be sorted by the **QUERYID** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.28 <gen>.queryinfo.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = ZERO SP QUERIESINFO
```

For more information about ABNF parameters, see section [2.1](#).

2.4.29 <gen>.urls_by_urlid.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URLID SP DATE SP URL
```

For more information about ABNF parameters, see section [2.1](#).

2.4.30 <gen>.urls_by_urlid_all.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URLID SP DATE SP URL
```

For more information about ABNF parameters, see section [2.1](#).

2.4.31 <gen>.<col>.unique_uris_by_uri.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = CID
```

Rows MUST be sorted by the **CID** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.32 <gen>.<col>.uris_by_contentid.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = CID SP TIMESTAMP SP OP SP MEMBER
```

Rows MUST be sorted by the **CID** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.33 <gen>.<col>.uris_by_contentid_ts.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = CID SP TIMESTAMP SP OP SP MEMBER
```

Rows MUST be sorted by the **CID** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.34 <gen>.<col>.<host>_contentids_by_contentid_new.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = CID SP TIMESTAMP SP OP SP MEMBER
```

Rows MUST be sorted by the **CID** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.35 <gen>.<col>.<host>_contentids_by_contentid_new_resplit.<sf>.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = CID SP TIMESTAMP SP OP SP MEMBER
```

Rows MUST be sorted by the **CID** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.36 <gen>.<col>.<host>_uris.0

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = CID SP TIMESTAMP SP OP SP MEMBER
```

For more information about ABNF parameters, see section [2.1](#).

2.4.37 <date>.clicks_by_urlid_and_queryid.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = QUERYID SP URLID SP LCID SP CLICKEDURLRANK
```

For more information about ABNF parameters, see section [2.1](#).

2.4.38 <date>.clicks_by_urlid_and_queryid_sort.<sf>.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = QUERYID SP URLID SP LCID SP CLICKEDURLRANK
```

For more information about ABNF parameters, see section [2.1](#).

2.4.39 <date>.clicks_on_queryid.0

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = QUERYID SP URLID SP LCID SP CLICKEDURLRANK
```

For more information about ABNF parameters, see section [2.1](#).

2.4.40 <date>.local_querycnt_by_queryid.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URLID SP QUERYID SP LCID SP LCOUNT
```

Rows MUST be sorted by the **QUERYID** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.41 <date>.local_querycnt_by_queryid_reduce.<sf>.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URLID SP QUERYID SP LCID SP LCOUNT
```

Rows MUST be sorted by the **QUERYID** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.42 <date>.queries_by_queryid.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = QUERYID SP DATE SP QUERY
```

Rows MUST be sorted by the **QUERYID** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.43 <date>.queries_by_queryid_sort.0.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = QUERYID SP DATE SP QUERY
```

Rows MUST be sorted by the **QUERYID** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.44 <date>.queries_on_queryid.0

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = QUERYID SP DATE SP QUERY
```

Rows MUST be sorted by the **QUERYID** column.

For more information about ABNF parameters, see section [2.1](#).

2.4.45 <date>.urls_by_urlid.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URLID SP DATE SP URL
```

For more information about ABNF parameters, see section [2.1](#).

2.4.46 <date>.urls_by_urlid_sort.0.<sf>

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URLID SP DATE SP URL
```

For more information about ABNF parameters, see section [2.1](#).

2.4.47 <date>.urls_on_urlid.0

Files of this type MUST contain rows that are specified by the following ABNF rule.

```
ROW = URLID SP DATE SP URL
```

For more information about ABNF parameters, see section [2.1](#).

2.5 Database Files

The database files consist of the resulting output from the analysis process.

2.5.1 <gen>.sharepoint.rel.<part_num>.bin

These files specify a set of records. The record size MUST be a multiple of 32, specified as a 32-bit signed integer in little-endian order before each record. If the record size is not a multiple of 32, the record MUST be padded with zeros.

The first record is a header record. The size of this record MUST be set to 124. This record MUST contain a marshaled representation of the following string, as specified in [\[MS-FSWCU\]](#).

```
"{'offset_step': 32, 'len_field_type': 'I', 'serializer': 'pyfastmarshal',  
'compression_type': 'gzip'}"
```

A record entry consists of a dictionary, as specified in [\[MS-FSWCU\]](#). This dictionary MUST contain two keys: **contentid** and **queries**.

The **contentid** key MUST contain a document identifier (3) (CID).

The **queries** key MUST contain an array, as specified in [\[MS-FSWCU\]](#), with a set of query entries. Each query entry, as specified in [\[MS-FSWCU\]](#), is a five-entry tuple that MUST contain the columns **LCOUNT**, **GCOUNT**, **PLACE**, **NUMURLS**, and **QUERY**.

A record **string** MUST be serialized as specified in [\[MS-FSWCU\]](#). All records MUST be compressed using the zlib format, as specified in [\[RFC1950\]](#). For each compressed record, the compression

method and flags header MUST be removed. This means the protocol removes the first 2 bytes "78 9C" from every compressed record.

2.5.2 <gen>.sharepoint.rel.<part_num>.idx

This file specifies a set of hash values of the record entries, excluding the header record, in the <gen>.sharepoint.rel.<part_num>.bin file. Each hash value MUST be computed with the 32 most significant bits of a 128-bit MD5 hash. The 4-byte hash value MUST be specified in **little-endian** order. The 128-bit MD5 hash is calculated from the **contentid** field of the record entries in the <gen>.sharepoint.rel.<part_num>.bin file. The hash values MUST be in the same order as the record entries.

2.5.3 <gen>.sharepoint.rel.<part_num>.idx.ofs

This file contains offsets to record entries in the <gen>.sharepoint.rel.<part_num>.bin file. Each offset is relative to the first record after the header record in the <gen>.sharepoint.rel.<part_num>.bin file. An offset is a 4-byte integer that is calculated by dividing the byte offset by 32. Each offset entry MUST be specified in little-endian order, and MUST be in the same order as the record entries.

2.6 Empty Files

All files that have an ".end" file extension MUST be empty. In addition, the following files MUST be empty: cidcollapser_done, done, sppartialupdate_done and copied_<gen>.sharepoint.rel.<part_num>. These files are used for tracking internal states.

3 Structure Examples

The following are examples of information gathered by the analysis process.

3.1 Search Clickthrough Files

3.1.1 <date>.clicks.txt files

The following is an example of a <date>.clicks.txt file.

```
1017 2017 1 1
1018 2018 1 1
1019 2019 1 1
1020 2020 1 1
1021 2021 1 1
1022 2022 1 1
1023 2023 1 1
1024 2024 1 1
1025 2025 1 1
1026 2026 1 1
```

3.1.2 <date>.queries.txt files

The following is an example of a <date>.queries.txt file.

```
1000 2009.03.16 query1000 scope:"all sites"
1001 2009.03.17 query1001 scope:"all sites"
1002 2009.03.18 query1002 scope:"all sites"
1003 2009.03.19 query1003 scope:"all sites"
1004 2009.03.20 query1004 scope:"all sites"
1005 2009.03.21 query1005 scope:"all sites"
1006 2009.03.22 query1006 scope:"all sites"
1007 2009.03.23 query1007 scope:"all sites"
1008 2009.03.24 query1008 scope:"all sites"
```

3.1.3 <date>.urls.txt files

The following is an example of a <date>.urls.txt file.

```
2000 2009.03.16 http://www.alpineskihouse.com/2000
2001 2009.03.17 http://www.alpineskihouse.com/2001
2002 2009.03.18 http://www.alpineskihouse.com/2002
2003 2009.03.19 http://www.alpineskihouse.com/2003
2004 2009.03.20 http://www.alpineskihouse.com/2004
2005 2009.03.21 http://www.alpineskihouse.com/2005
2006 2009.03.22 http://www.alpineskihouse.com/2006
2007 2009.03.23 http://www.alpineskihouse.com/2007
2008 2009.03.24 http://www.alpineskihouse.com/2008
```

3.2 Analysis Files

3.2.1 allfeeduris.<sf> files

The following is an example of an allfeeduris.<sf> file.

```
ssic://2143300394 sp
ssic://2143300398 sp
ssic://2143300399 sp
ssic://2145300400 sp
ssic://2145300402 sp
ssic://2145300405 sp
ssic://2145300407 sp
ssic://2146300404 sp
```

3.2.2 cid_by_cid_with_counts_and_query.<sf>

The following is an example of a cid_by_cid_with_counts_and_query.<sf> file.

```
ssic://2143300394 22 22 1 1 query1022 scope all sites
ssic://2143300398 26 26 1 1 query1026 scope all sites
ssic://2143300399 27 27 1 1 query1027 scope all sites
ssic://2145300400 6 6 1 1 query1006 scope all sites
ssic://2145300402 4 4 1 1 query1004 scope all sites
ssic://2145300405 3 3 1 1 query1003 scope all sites
ssic://2145300407 1 1 1 1 query1001 scope all sites
ssic://2146300404 15 15 1 1 query1015 scope all sites
```

3.2.3 cid_by_cid_with_counts_and_query_mergereduce.<sf>.<sf>

The following is an example of a cid_by_cid_with_counts_and_query_mergereduce.<sf>.<sf> file.

```
ssic://2145300405 3 3 1 1 query1003 scope all sites
ssic://2145300400 6 6 1 1 query1006 scope all sites
ssic://2146300404 15 15 1 1 query1015 scope all sites
ssic://2143300394 22 22 1 1 query1022 scope all sites
ssic://2143300398 26 26 1 1 query1026 scope all sites
```

3.2.4 global_querycnt_by_query.<sf>

The following is an example of a global_querycnt_by_query.<sf> file.

```
2 query1002 scope all sites
3 query1003 scope all sites
5 query1005 scope all sites
6 query1006 scope all sites
9 query1009 scope all sites
13 query1013 scope all sites
14 query1014 scope all sites
15 query1015 scope all sites
19 query1019 scope all sites
22 query1022 scope all sites
25 query1025 scope all sites
```

```
26 query1026 scope all sites
```

3.2.5 local_querycnt_by_cid.<sf>

The following is an example of a local_querycnt_by_cid.<sf> file.

```
ssic://2143300394 22 query1022 scope all sites
ssic://2143300398 26 query1026 scope all sites
ssic://2143300399 27 query1027 scope all sites
ssic://2145300400 6 query1006 scope all sites
ssic://2145300402 4 query1004 scope all sites
ssic://2145300405 3 query1003 scope all sites
ssic://2145300407 1 query1001 scope all sites
ssic://2146300404 15 query1015 scope all sites
```

3.2.6 local_querycnt_by_cid_merge.<sf>.<sf>

The following is an example of a local_querycnt_by_cid_merge.<sf>.<sf> file.

```
ssic://2145300405 3 query1003 scope all sites
ssic://2143300394 22 query1022 scope all sites
ssic://2143300398 26 query1026 scope all sites
```

3.2.7 local_querycnt_by_query.<sf>

The following is an example of a local_querycnt_by_query.<sf> file.

```
ssic://2145300404 2 query1002 scope all sites
ssic://2145300405 3 query1003 scope all sites
ssic://2145300403 5 query1005 scope all sites
ssic://2145300400 6 query1006 scope all sites
ssic://2145300415 9 query1009 scope all sites
ssic://2146300402 13 query1013 scope all sites
ssic://2146300405 14 query1014 scope all sites
ssic://2146300404 15 query1015 scope all sites
ssic://2146300408 19 query1019 scope all sites
ssic://2143300394 22 query1022 scope all sites
ssic://2143300397 25 query1025 scope all sites
ssic://2143300398 26 query1026 scope all sites
```

3.2.8 local_querycnt_by_query_reduce.<sf>.<sf>

The following is an example of a local_querycnt_by_query_reduce.<sf>.<sf> file.

```
ssic://2143300394 22 query1022 scope all sites
ssic://2143300398 26 query1026 scope all sites
ssic://2145300400 6 query1006 scope all sites
ssic://2145300405 3 query1003 scope all sites
ssic://2146300404 15 query1015 scope all sites
```

3.2.9 local_querycnt_by_url.<sf>

The following is an example of a local_querycnt_by_url.<sf> file.

```
http://www.alpineskihouse.com/2003 3 query1003 scope all sites
http://www.alpineskihouse.com/2007 7 query1007 scope all sites
http://www.alpineskihouse.com/2011 11 query1011 scope all sites
http://www.alpineskihouse.com/2014 14 query1014 scope all sites
http://www.alpineskihouse.com/2016 16 query1016 scope all sites
http://www.alpineskihouse.com/2021 21 query1021 scope all sites
http://www.alpineskihouse.com/2022 22 query1022 scope all sites
http://www.alpineskihouse.com/2026 26 query1026 scope all sites
```

3.2.10 local_querycnt_by_url_merge.<sf>.<sf>

The following is an example of a local_querycnt_by_url_merge.<sf>.<sf> file.

```
http://www.alpineskihouse.com/2003 3 query1003 scope all sites
http://www.alpineskihouse.com/2021 21 query1021 scope all sites
```

3.2.11 local_querycnt_by_urlid.<sf>

The following is example of a local_querycnt_by_urlid.<sf> file.

```
2001 1 query1001 scope all sites
2003 3 query1003 scope all sites
2006 6 query1006 scope all sites
2009 9 query1009 scope all sites
2012 12 query1012 scope all sites
2013 13 query1013 scope all sites
2017 17 query1017 scope all sites
2021 21 query1021 scope all sites
2024 24 query1024 scope all sites
2025 25 query1025 scope all sites
2027 27 query1027 scope all sites
```

3.2.12 local_querycnt_by_urlid_reduce.<sf>.<sf>

The following is an example of a local_querycnt_by_urlid_reduce.<sf>.<sf> file.

```
http://www.alpineskihouse.com/2007 7 query1007 scope all sites
http://www.alpineskihouse.com/2014 14 query1014 scope all sites
http://www.alpineskihouse.com/2026 26 query1026 scope all sites
```

3.2.13 semi_local_querycnt_by_queryid.<sf>

The following is an example of a semi_local_querycnt_by_queryid.<sf> file.

```
2002 1002 1 1
2002 1002 1 1
2004 1004 1 1
2004 1004 1 1
```

```
2004 1004 1 1
2004 1004 1 1
2006 1006 1 1
2006 1006 1 1
2006 1006 1 1
2006 1006 1 1
2006 1006 1 1
2006 1006 1 1
2006 1006 1 1
```

3.2.14 semi_local_querycnt_by_urlid.<sf>

The following is an example of a semi_local_querycnt_by_urlid.<sf> file.

```
2001 1 query1001 scope all sites
2003 1 query1003 scope all sites
2003 1 query1003 scope all sites
2003 1 query1003 scope all sites
2006 1 query1006 scope all sites
2006 1 query1006 scope all sites
2006 1 query1006 scope all sites
2006 1 query1006 scope all sites
2006 1 query1006 scope all sites
2006 1 query1006 scope all sites
```

3.2.15 semi_local_querycnt_by_urlid_map.<sf>.<sf>

The following is an example of a semi_local_querycnt_by_urlid_map.<sf>.<sf> file.

```
2003 1 query1003 scope all sites
2003 1 query1003 scope all sites
2003 1 query1003 scope all sites
2012 1 query1012 scope all sites
2012 1 query1012 scope all sites
2012 1 query1012 scope all sites
2012 1 query1012 scope all sites
2012 1 query1012 scope all sites
2012 1 query1012 scope all sites
2012 1 query1012 scope all sites
```

3.2.16 semi_local_querycnt_pre_token.<sf>

The following is an example of a semi_local_querycnt_pre_token.<sf> file.

```
2002 1 1 query1002 scope:"all sites"
2002 1 1 query1002 scope:"all sites"
2004 1 1 query1004 scope:"all sites"
2004 1 1 query1004 scope:"all sites"
2004 1 1 query1004 scope:"all sites"
2004 1 1 query1004 scope:"all sites"
2006 1 1 query1006 scope:"all sites"
2006 1 1 query1006 scope:"all sites"
2006 1 1 query1006 scope:"all sites"
```

3.2.17 uris_by_contentid_ts.<sf>

The following is an example of an uris_by_contentid_ts.<sf> file.

```
ssic://2143300394 1239888256 ADD http://www.alpineskihouse.com/2022
ssic://2143300398 1239888256 ADD http://www.alpineskihouse.com/2026

```

The first 4 bytes specify the header size, which is 124 bytes.

Deserializing the following 124 bytes as described in [\[MS-FSWCU\]](#) results in the following file header:

```

{'offset_step': 32, 'len_field_type': 'I', 'serializer': 'pyfastmarshal', 'compression_type':
'gzip'}

```

The next 4 bytes specify the size of the next compressed record, which is 124 bytes. Adding the zlib header as described in [\[RFC1950\]](#), in front of the following 124 bytes results in the following raw data:

```

0000000: 78 9c ab 2e e6 64 60 60 48 ce cf 2b 49 cd 2b c9 x....d`H..+I.+

0000070: 4f ba 17 eb 55 e9 dc ef O...U...

```

The 128-bit MD5 hash value of the first record in section [3.3.1](#), "ssic://2146300409", is 0x025a728a0086c0491a829bb32176ea12. The 32 most significant bits of this hash value corresponds to the first 4 bytes in this file. The bytes are described in little-endian order.

3.3.3 <gen>.sharepoint.rel.<part_num>.idx ofs

The following is raw data from the <gen>.sharepoint.rel. <part_num>.idx ofs file.

```

0000000: 00 00 00 00 04 00 00 00 07 00 00 00 0b 00 00 00 .....
0000010: 0f 00 00 00 13 00 00 00 17 00 00 00 1b 00 00 00 .....
0000020: 1e 00 00 00 21 00 00 00 25 00 00 00 29 00 00 00 ....!...%...)...
0000030: 2d 00 00 00 31 00 00 00 35 00 00 00 38 00 00 00 -...1...5...8...
0000040: 3b 00 00 00 3e 00 00 00 42 00 00 00 45 00 00 00 ;...>...B...E...
0000050: 49 00 00 00 4d 00 00 00 51 00 00 00 55 00 00 00 I...M...Q...U...
0000060: 59 00 00 00 5c 00 00 00 60 00 00 00 64 00 00 00 Y...\...`...d...
0000070: 68 00 00 00 6c 00 00 00 h...l...

```

The first 4 bytes, 0x000000, contain the offset to the first record entry in the <gen>.sharepoint.rel. <part_num>.bin file. The size of the file header, 124 bytes, and the record size integer, 4 bytes, are added to this offset. Thus, the first record begins at 128 bytes from the beginning of the file described in section [3.3.1](#). The following 4 bytes, 0x04000000, contain an offset of 4. This value is multiplied by 32, which results in an offset of 128. In addition, the header is added to this offset. Thus, the second record starts at 256 bytes from the start of the file.

4 Security Considerations

None.

5 Appendix A: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include released service packs:

- Microsoft® FAST™ Search Server 2010

Exceptions, if any, are noted below. If a service pack or Quick Fix Engineering (QFE) number appears with the product version, behavior changed in that service pack or QFE. The new behavior also applies to subsequent service packs of the product unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms SHOULD or SHOULD NOT implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies that the product does not follow the prescription.

6 Change Tracking

No table of changes is available. The document is either new or has had no changes since its last release.
