

# [MS-3DMDTP]:

## Data Visualization: 3-D Map Data Tour File Format

---

### Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation (“this documentation”) for protocols, file formats, data portability, computer languages, and standards support. Additionally, overview documents cover inter-protocol relationships and interactions.
- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you can make copies of it in order to develop implementations of the technologies that are described in this documentation and can distribute portions of it in your implementations that use these technologies or in your documentation as necessary to properly document the implementation. You can also distribute in your implementation, with or without modification, any schemas, IDLs, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications documentation.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that might cover your implementations of the technologies described in the Open Specifications documentation. Neither this notice nor Microsoft's delivery of this documentation grants any licenses under those patents or any other Microsoft patents. However, a given Open Specifications document might be covered by the Microsoft [Open Specifications Promise](#) or the [Microsoft Community Promise](#). If you would prefer a written license, or if the technologies described in this documentation are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting [iplg@microsoft.com](mailto:iplg@microsoft.com).
- **Trademarks.** The names of companies and products contained in this documentation might be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights. For a list of Microsoft trademarks, visit [www.microsoft.com/trademarks](http://www.microsoft.com/trademarks).
- **Fictitious Names.** The example companies, organizations, products, domain names, email addresses, logos, people, places, and events that are depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

**Reservation of Rights.** All other rights are reserved, and this notice does not grant any rights other than as specifically described above, whether by implication, estoppel, or otherwise.

**Tools.** The Open Specifications documentation does not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments, you are free to take advantage of them. Certain Open Specifications documents are intended for use in conjunction with publicly available standards specifications and network programming art and, as such, assume that the reader either is familiar with the aforementioned material or has immediate access to it.

## Revision Summary

Date	Revision History	Revision Class	Comments
2/10/2014	0.1	New	Released new document.
4/30/2014	1.0	Major	Significantly changed the technical content.
7/31/2014	1.1	Minor	Clarified the meaning of the technical content.
10/30/2014	1.1	None	No changes to the meaning, language, or formatting of the technical content.
9/4/2015	2.0	Major	Significantly changed the technical content.
7/15/2016	2.0	None	No changes to the meaning, language, or formatting of the technical content.
9/14/2016	2.0	None	No changes to the meaning, language, or formatting of the technical content.

# 1 Introduction

The 3-D Map Data Tour file format is used to display an interactive 3-D visualization of data over a map. The visualization can contain multiple parts which focus on one or multiple places on the map and depict different time scales and the events associated with the data.

Sections 1.7 and 2 of this specification are normative. All other sections and examples in this specification are informative.

## 1.1 Glossary

This document uses the following terms:

**animation:** A record of synthetic, successive still images that produce an illusion of movement when played back.

**camera:** A virtual representation of a camera that controls the position of the viewer window inside the 3-D environment.

**data point:** An individual value that is plotted in a chart and is represented together with other data points by bars, columns (2), lines, pie or doughnut slices, dots, and various other shapes, which are referred to as data markers. Data markers of the same color constitute a data series.

**effect:** A user-specified **camera** motion that occurs for the duration of a **scene**.

**scene:** An independent part of a **tour** that has a beginning and end, and a specific time duration in which a particular data visualization on the map occurs.

**theme:** A set of unified design elements, such as colors, fonts, graphics, and styles, that define the appearance of a website, document, or data visualization.

**ToolTip:** A small pop-up window that provides brief context-sensitive help when users point to an item. Also referred to as ScreenTip.

**tour:** A **scene** or sequence of scenes that describe a story about geographical locations, time periods, and data visualization.

**transition:** The **camera** path and time period that connects one **scene** to another.

**workbook:** A container for a collection of sheets (1).

**XML:** The Extensible Markup Language, as described in [\[XML1.0\]](#).

**XML schema:** A description of a type of XML document that is typically expressed in terms of constraints on the structure and content of documents of that type, in addition to the basic syntax constraints that are imposed by **XML** itself. An XML schema provides a view of a document type at a relatively high level of abstraction.

**MAY, SHOULD, MUST, SHOULD NOT, MUST NOT:** These terms (in all caps) are used as defined in [\[RFC2119\]](#). All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

## 1.2 References

Links to a document in the Microsoft Open Specifications library point to the correct section in the most recently published version of the referenced document. However, because individual documents in the library are not updated at the same time, the section numbers in the documents may not match. You can confirm the correct section numbering by checking the [Errata](#).

### 1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact [dochelp@microsoft.com](mailto:dochelp@microsoft.com). We will assist you in finding the relevant information.

### 1.2.2 Informative References

None.

## 1.3 Overview

This structure allows the exploration and visualization of data on a map, which can be a flat 3-D surface or a 3-D globe. This structure allows for animating over time and visualization of historical trends of the data over time. This structure also allows for various levels of visualization using 2-D visuals which can be anchored to the top level of the 3D environment. These 2-D visuals can be text boxes or flat 2-D charts that provide more insights into the data. This structure is capable of displaying multiple layers of data and users can change specific visual properties of the extrusions representing the accumulated data on the globe. It is also possible to animate the data using different aggregation options over time, or partition the **animation** over common units of time – such as days, weeks, or months. This structure supports annotations that are anchored to data extrusions, and the annotations can contain custom text and/or generic **ToolTips** which are derived from the data. This structure can support different styles of data shapes and visual map **themes**, and different chart types, such as heat maps or pie charts which appear as data extrusions in the data. The structure supports sequencing of different parts which are called **scenes**; a specific sequence of these scenes is called a **tour**. Each scene has a specific motion to it, called a **transition**, as well as motion which is an option for the duration of the scene, called an **effect**.

## 1.4 Relationship to Protocols and Other Structures

This structure depends on geocoding and mapping services. These are public and can be provided from a variety of vendors. This structure also depends on data query APIs for data rendering in the 3-D environment.

## 1.5 Applicability Statement

This structure should be used when an application renders a 3-D geospatial data collection of scenes which collectively describe a story about data on a map inside a 3-D mapped environment.

## 1.6 Versioning and Localization

Structure Versions: This structure specifies the only version of the 3-D Map Data Tour file format.

- Localization: The file format allows one or more of the following elements to be stored in their localized form.
  - Workbook column names

- Tour name
- Scene name
- Layer name
- Text box content
- Annotation content
- Date and time format

## **1.7 Vendor-Extensible Fields**

None.

## 2 Structures

### 2.1 Complex Types

#### 2.1.1 CT\_Camera

*Target namespace:* <http://microsoft.data.visualization.engine.tours/1.0>

*Referenced by:* [CT\\_Frame](#)

Specifies the position of the **camera** in the initial frame of a scene.

*Child Elements:*

**Latitude:** An **xs:decimal** ([\[XMLSCHEMA2\]](#) section 3.2.3) element that specifies the latitude of the camera target in degrees.

**Longitude:** An **xs:decimal** ([\[XMLSCHEMA2\]](#) section 3.2.3) element that specifies the longitude of the camera target in degrees.

**Rotation:** An **xs:decimal** ([\[XMLSCHEMA2\]](#) section 3.2.3) element that specifies the rotation angle of the camera in radians. This value is zero when the camera is pointing north.

**PivotAngle:** An **xs:decimal** ([\[XMLSCHEMA2\]](#) section 3.2.3) element that specifies the vertical angle between a tangential plane at the target point and the line drawn from the target to the camera.

**Distance:** An **xs:decimal** ([\[XMLSCHEMA2\]](#) section 3.2.3) element that specifies the normalized camera distance to the target position. A distance of 1.0 equals the radius of the earth.

The following W3C XML Schema ([\[XMLSCHEMA1\]](#) section 2.1) fragment specifies the contents of this complex type.

```
<xsd:complexType name="CT_Camera">
  <xsd:sequence>
    <xsd:element name="Latitude" type="xsd:decimal"/>
    <xsd:element name="Longitude" type="xsd:decimal"/>
    <xsd:element name="Rotation" type="xsd:decimal"/>
    <xsd:element name="PivotAngle" type="xsd:decimal"/>
    <xsd:element name="Distance" type="xsd:decimal"/>
  </xsd:sequence>
</xsd:complexType>
```

See section [5.1](#) for the full W3C XML Schema ([\[XMLSCHEMA1\]](#) section 2.1).

#### 2.1.2 CT\_CustomMapList

*Target namespace:* <http://microsoft.data.visualization.Client.Excel.CustomMapList/1.0>

*Referenced by:* [CustomMapList](#)

Specifies the custom maps stored in a **workbook**.

*Child Elements:*

**ml:** A **xs:string** ([\[XMLSCHEMA2\]](#) section 3.2.1) element that specifies the image for a custom map.

The following W3C XML Schema ([\[XMLSCHEMA1\]](#) section 2.1) fragment specifies the contents of this complex type.

```

<xsd:complexType name="CT_CustomMapList">
  <xsd:sequence>
    <xsd:element name="ml" type="xsd:string"/>
  </xsd:sequence>
</xsd:complexType>

```

See section [5.6](#) for the full W3C XML Schema ([XMLSCHEMA1] section 2.1).

### 2.1.3 CT\_CustomRegionState

*Target namespace:* <http://microsoft.data.visualization.Client.Excel.CustomRegionState/1.0>

*Referenced by:* [CustomRegionState](#)

Specifies the custom regions stored in a workbook.

*Child Elements:*

**rl:** A `xs:string` ([XMLSCHEMA2] section 3.2.1) element that specifies the compressed contents of a set of custom regions.

The following W3C XML Schema ([XMLSCHEMA1] section 2.1) fragment specifies the contents of this complex type.

```

<xsd:complexType name="CT_CustomRegionState">
  <xsd:sequence>
    <xsd:element name="rl" type="xsd:string"/>
  </xsd:sequence>
</xsd:complexType>

```

See section [5.5](#) for the full W3C XML Schema ([XMLSCHEMA1] section 2.1).

### 2.1.4 CT\_Frame

*Target namespace:* <http://microsoft.data.visualization.engine.tours/1.0>

*Referenced by:* [CT\\_Scene](#)

Specifies the initial frame of a scene.

*Child Elements:*

**Camera:** A **CT\_Camera** (section [2.1.1](#)) element that specifies the parameters of the camera in its initial position in the frame.

**Image:** A `xs:string` ([XMLSCHEMA2] section 3.2.1) element that specifies the image for the frame.

The following W3C XML Schema ([XMLSCHEMA1] section 2.1) fragment specifies the contents of this complex type.

```

<xsd:complexType name="CT_Frame">
  <xsd:sequence>
    <xsd:element name="Camera" type="tns:CT_Camera"/>
    <xsd:element name="Image" type="xsd:string"/>
  </xsd:sequence>
</xsd:complexType>

```

See section [5.1](#) for the full W3C XML Schema ([XMLSCHEMA1] section 2.1).

## 2.1.5 CT\_Scene

Target namespace: <http://microsoft.data.visualization.engine.tours/1.0>

Referenced by: [CT Scenes](#)

Specifies a scene in the tour.

Child Elements:

**Transition:** An **xs:string** ([XMLSCHEMA2] section 3.2.1) element that specifies the type of camera transition for this scene. Can only be set to "MoveTo".

**Effect:** An **xs:string** ([XMLSCHEMA2] section 3.2.1) element that specifies the camera motion effect. Possible values are "Station", "Circle", "Dolly", "FlyOver", "PushIn", "Figure8" and "RotateGlobe".

**Theme:** An **xs:string** ([XMLSCHEMA2] section 3.2.1) element that specifies the type of theme applied to this scene. Possible values are "BingRoad", "BingRoadHighContrast", "Aerial", "Grey", "Dark", "Light", "Mono", "White", "Earthy", "Modern", "Organic", and "Radiate".

**ThemeWithLabel:** An **xs:boolean** ([XMLSCHEMA2] section 3.2.2) element that specifies whether a theme with labels enabled has been applied to this scene. A value of 1 indicates that a theme with labels enabled has been applied to this scene; a value of 0 indicates that a theme with labels enabled has not been applied to this scene.

**FlatModeEnabled:** An **xs:boolean** ([XMLSCHEMA2] section 3.2.2) element that specifies whether the scene has a 3-D map represented as a globe. A value of 1 indicates that the map is represented in as a globe; a value of 0 indicates that the map is represented as a flat surface.

**Duration:** An **xs:unsignedInt** ([XMLSCHEMA2] section 3.3.22) element that specifies the scene duration in 100-nanosecond units.

**TransitionDuration:** An **xs:unsignedInt** ([XMLSCHEMA2] section 3.3.22) element that specifies the duration of the scene transition in 100-nanosecond units.

**Speed:** An **xs:decimal** ([XMLSCHEMA2] section 3.2.3) element that specifies the relative speed of the scene effect. Possible values lie between 0 and 1.

**Frame:** A **CT\_Frame** (section [2.1.4](#)) element that specifies the first frame of this scene in the 3D Map tour.

**LayersContent:** An **xs:string** ([XMLSCHEMA2] section 3.2.1) element that specifies the contents of a scene in the tour.

The following W3C XML Schema ([XMLSCHEMA1] section 2.1) fragment specifies the contents of this complex type.

```
<xsd:complexType name="CT_Scene">
  <xsd:sequence>
    <xsd:element name="Transition" type="xsd:string"/>
    <xsd:element name="Effect" type="xsd:string"/>
    <xsd:element name="Theme" type="xsd:string"/>
    <xsd:element name="ThemeWithLabel" type="xsd:boolean"/>
    <xsd:element name="FlatModeEnabled" type="xsd:boolean"/>
    <xsd:element name="Duration" type="xsd:unsignedInt"/>
    <xsd:element name="TransitionDuration" type="xsd:unsignedInt"/>
    <xsd:element name="Speed" type="xsd:decimal"/>
    <xsd:element name="Frame" type="tns:CT_Frame"/>
    <xsd:element name="LayersContent" type="xsd:string"/>
  </xsd:sequence>
</xsd:complexType>
```

See section [5.1](#) for the full W3C XML Schema ([XMLSCHEMA1] section 2.1).

### 2.1.6 CT\_Scenes

*Target namespace:* <http://microsoft.data.visualization.engine.tours/1.0>

*Referenced by:* [CT Tour](#)

Specifies the collection of scenes in the 3D Map tour. There is at least one scene per tour.

*Child Elements:*

**Scene:** A **CT\_Scene** (section [2.1.5](#)) element that specifies a scene in a 3D Map tour.

The following W3C XML Schema ([\[XMLSCHEMA1\]](#) section 2.1) fragment specifies the contents of this complex type.

```
<xsd:complexType name="CT_Scenes">
  <xsd:sequence>
    <xsd:element maxOccurs="unbounded" name="Scene" type="tns:CT_Scene"/>
  </xsd:sequence>
</xsd:complexType>
```

See section [5.1](#) for the full W3C XML Schema ([XMLSCHEMA1] section 2.1).

### 2.1.7 CT\_Tour

*Target namespace:* <http://microsoft.data.visualization.engine.tours/1.0>

*Referenced by:* [Tour](#)

Specifies a tour comprised of one or more scenes in a 3D Map.

*Child Elements:*

**Scenes:** A **CT\_Scenes** (section [2.1.6](#)) element that specifies a collection of scenes within the tour.

*Attributes:*

**Name:** An **xs:string** ([\[XMLSCHEMA2\]](#) section 3.2.1) attribute that specifies the name of the tour.

**Description:** An **xs:string** ([\[XMLSCHEMA2\]](#) section 3.2.1) attribute that specifies the description of the tour.

The following W3C XML Schema ([\[XMLSCHEMA1\]](#) section 2.1) fragment specifies the contents of this complex type.

```
<xsd:complexType name="CT_Tour">
  <xsd:sequence>
    <xsd:element name="Scenes" type="tns:CT_Scenes"/>
  </xsd:sequence>
  <xsd:attribute name="Name" type="xsd:string" use="required"/>
  <xsd:attribute name="Description" type="xsd:string" use="required"/>
</xsd:complexType>
```

See section [5.1](#) for the full W3C XML Schema ([XMLSCHEMA1] section 2.1).

## 2.1.8 CT\_Tour

*Target namespace:* <http://microsoft.data.visualization.Client.Excel/1.0>

*Referenced by:* [CT Tours](#)

Specifies a 3D Map tour.

*Child Elements:*

**Description:** An **xs:string** ([XMLSCHEMA2] section 3.2.1) element that specifies the description of the tour.

**Image:** An **xs:string** ([XMLSCHEMA2] section 3.2.1) element that specifies the image that represents the tour.

*Attributes:*

**Name:** An **xs:string** ([XMLSCHEMA2] section 3.2.1) attribute that specifies the name of the tour.

**Id:** An **xs:string** ([XMLSCHEMA2] section 3.2.1) attribute that specifies a unique identifier for the version of the tour.

**TourId:** An **xs:string** ([XMLSCHEMA2] section 3.2.1) attribute that specifies a unique identifier for the tour.

**XmlVer:** An **xs:unsignedByte** ([XMLSCHEMA2] section 3.3.24) attribute that specifies the current version of the **XML** representation of the tour.

**MinXmlVer:** An **xs:unsignedByte** ([XMLSCHEMA2] section 3.3.24) attribute that specifies the minimum compatible XML version of the tour.

The following W3C XML Schema ([XMLSCHEMA1] section 2.1) fragment specifies the contents of this complex type.

```
<xsd:complexType name="CT_Tour">
  <xsd:sequence>
    <xsd:element name="Description" type="xsd:string"/>
    <xsd:element name="Image" type="xsd:string"/>
  </xsd:sequence>
  <xsd:attribute name="Name" type="xsd:string" use="required"/>
  <xsd:attribute name="Id" type="xsd:string" use="required"/>
  <xsd:attribute name="TourId" type="xsd:string" use="required"/>
  <xsd:attribute name="XmlVer" type="xsd:unsignedByte" use="required"/>
  <xsd:attribute name="MinXmlVer" type="xsd:unsignedByte" use="required"/>
</xsd:complexType>
```

See section [5.4](#) for the full W3C XML Schema ([XMLSCHEMA1] section 2.1).

## 2.1.9 CT\_Tours

*Target namespace:* <http://microsoft.data.visualization.Client.Excel/1.0>

*Referenced by:* [CT Visualization](#)

Specifies the collection of tours contained within a workbook.

*Child Elements:*

**Tour:** A **CT\_Tour** (section [2.1.8](#)) element that specifies a tour.

The following W3C XML Schema ([\[XMLSCHEMA1\]](#) section 2.1) fragment specifies the contents of this complex type.

```
<xsd:complexType name="CT_Tours">
  <xsd:sequence>
    <xsd:element maxOccurs="unbounded" name="Tour" type="tns:CT_Tour"/>
  </xsd:sequence>
</xsd:complexType>
```

See section [5.4](#) for the full W3C XML Schema ([\[XMLSCHEMA1\]](#) section 2.1).

### 2.1.10 CT\_Visualization

*Target namespace:* <http://microsoft.data.visualization.Client.Excel/1.0>

*Referenced by:* [Visualization](#)

Specifies the 3-D visualizations stored in a workbook.

*Child Elements:*

**Tours:** A **CT\_Tours** (section [2.1.9](#)) element that specifies the collection of tours stored in the workbook.

**Colors:** An **xs:anyType** ([\[XMLSCHEMA1\]](#) section 3.4.7) element that specifies the custom color palette selected by the user for the visualizations.

The following W3C XML Schema ([\[XMLSCHEMA1\]](#) section 2.1) fragment specifies the contents of this complex type.

```
<xsd:complexType name="CT_Visualization">
  <xsd:sequence>
    <xsd:element name="Tours" type="tns:CT_Tours"/>
    <xsd:element name="Colors"/>
  </xsd:sequence>
</xsd:complexType>
```

See section [5.4](#) for the full W3C XML Schema ([\[XMLSCHEMA1\]](#) section 2.1).

### 2.1.11 CT\_VisualizationLState

*Target namespace:* <http://microsoft.data.visualization.Client.Excel.LState/1.0>

*Referenced by:* [VisualizationLState](#)

Specifies a container for geocoded **data points** within a 3D Map.

*Child Elements:*

**cg:** An **xs:string** ([\[XMLSCHEMA2\]](#) section 3.2.1) element that specifies the geocoded data points.

The following W3C XML Schema ([\[XMLSCHEMA1\]](#) section 2.1) fragment specifies the contents of this complex type.

```
<xsd:complexType name="CT_VisualizationLState">
  <xsd:sequence>
    <xsd:element name="cg" type="xsd:string"/>
  </xsd:sequence>
```

```
</xsd:complexType>
```

See section [5.2](#) for the full W3C XML Schema ([XMLSCHEMA1] section 2.1).

### 2.1.12 CT\_VisualizationPState

*Target namespace:* <http://microsoft.data.visualization.Client.Excel.PState/1.0>

*Referenced by:* [VisualizationPState](#)

Specifies the container for data used for mapping regions.

*Child Elements:*

**rp:** An **xs:string** ([XMLSCHEMA2] section 3.2.1) element that specifies the region polygons.

The following W3C XML Schema ([XMLSCHEMA1] section 2.1) fragment specifies the contents of this complex type.

```
<xsd:complexType name="CT_VisualizationPState">
  <xsd:sequence>
    <xsd:element name="rp" type="xsd:string"/>
  </xsd:sequence>
</xsd:complexType>
```

See section [5.3](#) for the full W3C XML Schema ([XMLSCHEMA1] section 2.1).

## 2.2 Elements

### 2.2.1 CustomMapList

*Target namespace:* <http://microsoft.data.visualization.Client.Excel.CustomMapList/1.0>

A [CT\\_CustomMapList](#) element that specifies the custom maps stored in the workbook.

The following W3C XML Schema ([XMLSCHEMA1] section 2.1) fragment specifies the contents of this element.

```
<xsd:element name="CustomMapList" type="tns:CT_CustomMapList"/>
```

See section [5.6](#) for the full W3C XML Schema ([XMLSCHEMA1] section 2.1).

### 2.2.2 CustomRegionState

*Target namespace:* <http://microsoft.data.visualization.Client.Excel.CustomRegionState/1.0>

A [CT\\_CustomRegionState](#) element that specifies the custom regions stored in the workbook.

The following W3C XML Schema ([XMLSCHEMA1] section 2.1) fragment specifies the contents of this element.

```
<xsd:element name="CustomRegionState" type="tns:CT_CustomRegionState"/>
```

See section [5.5](#) for the full W3C XML Schema ([XMLSCHEMA1] section 2.1).

### 2.2.3 Tour

*Target namespace:* <http://microsoft.data.visualization.engine.tours/1.0>

A **CT\_Tour** (section [2.1.7](#)) element that specifies a tour in a 3D Map.

The following W3C XML Schema ([\[XMLSCHEMA1\]](#) section 2.1) fragment specifies the contents of this element.

```
<xsd:element name="Tour" type="tns:CT_Tour"/>
```

See section [5.1](#) for the full W3C XML Schema ([\[XMLSCHEMA1\]](#) section 2.1).

### 2.2.4 Visualization

*Target namespace:* <http://microsoft.data.visualization.Client.Excel/1.0>

A **CT\_Visualization** (section [2.1.10](#)) element that specifies the 3-D visualizations stored in the workbook.

The following W3C XML Schema ([\[XMLSCHEMA1\]](#) section 2.1) fragment specifies the contents of this element.

```
<xsd:element name="Visualization" type="tns:CT_Visualization"/>
```

See section [5.4](#) for the full W3C XML Schema ([\[XMLSCHEMA1\]](#) section 2.1).

### 2.2.5 VisualizationLState

*Target namespace:* <http://microsoft.data.visualization.Client.Excel.LState/1.0>

A **CT\_VisualizationLState** (section [2.1.11](#)) element that specifies a container for geocoded data points.

The following W3C XML Schema ([\[XMLSCHEMA1\]](#) section 2.1) fragment specifies the contents of this element.

```
<xsd:element name="VisualizationLState" type="tns:CT_VisualizationLState"/>
```

See section [5.2](#) for the full W3C XML Schema ([\[XMLSCHEMA1\]](#) section 2.1).

### 2.2.6 VisualizationPState

*Target namespace:* <http://microsoft.data.visualization.Client.Excel.PState/1.0>

A **CT\_VisualizationPState** (section [2.1.12](#)) element that specifies a container for data used for region mappings.

The following W3C XML Schema ([\[XMLSCHEMA1\]](#) section 2.1) fragment specifies the contents of this element.

```
<xsd:element name="VisualizationPState" type="tns:CT_VisualizationPState"/>
```

See section [5.3](#) for the full W3C XML Schema ([\[XMLSCHEMA1\]](#) section 2.1).

### 3 Structure Examples

The following is an example of the structure with a tour that has a single scene.

```
<?xml version="1.0" encoding="UTF-16"?>

  <xsd:complexType name="CT_CustomMapList">
    <xsd:sequence>
      <xsd:element name="ml" type="xsd:string"/>
    </xsd:sequence>
  </xsd:complexType>
  <xsd:element name="CustomMapList" type="tns:CT_CustomMapList"/>
</xs:schema>

```

## 6 Appendix B: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include released service packs.

- Microsoft Office 2016

Exceptions, if any, are noted below. If a service pack or Quick Fix Engineering (QFE) number appears with the product version, behavior changed in that service pack or QFE. The new behavior also applies to subsequent service packs of the product unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms SHOULD or SHOULD NOT implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies that the product does not follow the prescription.

## 7 Change Tracking

No table of changes is available. The document is either new or has had no changes since its last release.
