

# [MS-ASDOC]: ActiveSync Document Class Protocol Specification

---

## Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation for protocols, file formats, languages, standards as well as overviews of the interaction among each of these technologies.
- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you may make copies of it in order to develop implementations of the technologies described in the Open Specifications and may distribute portions of it in your implementations using these technologies or your documentation as necessary to properly document the implementation. You may also distribute in your implementation, with or without modification, any schema, IDL's, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that may cover your implementations of the technologies described in the Open Specifications. Neither this notice nor Microsoft's delivery of the documentation grants any licenses under those or any other Microsoft patents. However, a given Open Specification may be covered by Microsoft's Open Specification Promise (available here: <http://www.microsoft.com/interop/osp>) or the Community Promise (available here: <http://www.microsoft.com/interop/cp/default.msp>). If you would prefer a written license, or if the technologies described in the Open Specifications are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting [iplg@microsoft.com](mailto:iplg@microsoft.com).
- **Trademarks.** The names of companies and products contained in this documentation may be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights.
- **Fictitious Names.** The example companies, organizations, products, domain names, e-mail addresses, logos, people, places, and events depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

**Reservation of Rights.** All other rights are reserved, and this notice does not grant any rights other than specifically described above, whether by implication, estoppel, or otherwise.

**Tools.** The Open Specifications do not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments you are free to take advantage of them. Certain Open Specifications are intended for use in conjunction with publicly available standard specifications and network programming art, and assumes that the reader either is familiar with the aforementioned material or has immediate access to it.

## Revision Summary

Date	Revision History	Revision Class	Comments
12/03/2008	1.0.0	Major	Initial Release.
02/04/2009	1.0.1	Editorial	Revised and edited technical content.
03/04/2009	1.0.2	Editorial	Revised and edited technical content.
04/10/2009	2.0.0	Major	Updated applicable product releases.
07/15/2009	3.0.0	Major	Revised and edited for technical content.
11/04/2009	4.0.0	Major	Updated and revised the technical content.
02/10/2010	5.0.0	Major	Updated and revised the technical content.
05/05/2010	6.0.0	Major	Updated and revised the technical content.
08/04/2010	7.0	Major	Significantly changed the technical content.

# 1 Introduction

ActiveSync supports accessing documents stored in Windows Sharepoint Services and on file shares specified using **Universal Naming Convention (UNC)** paths. The Document Class Protocol specifies how such document data is communicated from the server to the client in the ActiveSync Protocol.

## 1.1 Glossary

The following terms are defined in [\[MS-OXGLOS\]](#):

**base64 encoding**  
**class**  
**collection**  
**Coordinated Universal Time (UTC)**  
**folder**  
**header**  
**Multipurpose Internet Mail Extensions (MIME)**  
**Uniform Resource Identifier (URI)**  
**Wireless Application Protocol (WAP) Binary XML (WBXML)**  
**XML**  
**XML namespace**  
**XML schema**

The following terms are specific to this document:

**Uniform Naming Convention (UNC):** A format for referencing an object, such as a **folder** or computer, that is shared across a local area network (LAN).

**MAY, SHOULD, MUST, SHOULD NOT, MUST NOT:** These terms (in all caps) are used as described in [\[RFC2119\]](#). All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

## 1.2 References

### 1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact [dochelp@microsoft.com](mailto:dochelp@microsoft.com). We will assist you in finding the relevant information. Please check the archive site, <http://msdn2.microsoft.com/en-us/library/E4BD6494-06AD-4aed-9823-445E921C9624>, as an additional source.

## 1.2.2 Informative References

[MS-OXGLOS] Microsoft Corporation, "[Exchange Server Protocols Master Glossary](#)", April 2008.

## 1.3 Overview

The Document Class Protocol specifies the **XML** representation of documents used for client and server communication as specified in [\[MS-ASCMD\]](#).

## 1.4 Relationship to Other Protocols

The Document Class Protocol specifies the XML representation of documents that are used by commands specified in [\[MS-ASCMD\]](#). The protocol governing the transmission of these commands between the client and the server is specified in [\[MS-ASCMD\]](#).

All simple data types in this document conform to the data type definitions specified in [\[MS-ASDTYPE\]](#).

## 1.5 Prerequisites/Preconditions

None.

## 1.6 Applicability Statement

This protocol specifies a set of elements for use in communicating document data using the commands specified in [\[MS-ASCMD\]](#). This set of elements is applicable when communicating document data such as the document's name, location, estimated size, and visibility between a mobile device and a server. These elements are not applicable when sending calendar, e-mail, note, contact, or task data between a mobile device and a server.

## 1.7 Versioning and Capability Negotiation

None.

## 1.8 Vendor-Extensible Fields

None.

## 1.9 Standards Assignments

None.

## 2 Messages

### 2.1 Transport

The Document **class** consists of a series of XML elements that are embedded inside of a command or a **collection** sent in accordance with [\[MS-ASCMD\]](#). The XML block containing the class elements is transmitted in either the request body of a request, or the response body of a response.

The elements of the Document class are defined in two namespaces: DocumentLibrary and AirSyncBase. All of the Document class elements are specified in this document; however, elements defined in the AirSyncBase namespace are further specified in [\[MS-ASAIRS\]](#).

The parent element of the Document class elements depends upon the ActiveSync protocol command used to retrieve the class data. Commands and parent elements for the Document class **XML schema** are specified in section [3.1.5](#).

### 2.2 Message Syntax

The markup MUST be well-formed XML, as specified in [\[XML\]](#).

The XML markup that constitutes the request body or the response body is transmitted between the client and the server using **Wireless Application Protocol (WAP) Binary XML (WBXML)**. For more details, see [\[MS-ASWBXML\]](#).

The XML schema definition for the Document class in ActiveSync is as follows, in accordance with the rules specified in [\[XMLSCHEMA1\]](#)

```
<?xml version="1.0" ?><xs:schema xmlns:tns="DocumentLibrary:"
attributeFormDefault="unqualified" elementFormDefault="qualified"
targetNamespace="DocumentLibrary:" xmlns:xs="http://www.w3.org/2001/XMLSchema"
xmlns:airsyncbase="AirSyncBase:">
  <xs:import namespace="AirSyncBase" />
  <xs:element name="LinkId" type="xs:string" />
  <xs:element name="DisplayName" type="xs:string" />
  <xs:element name="IsFolder" type="xs:unsignedByte" />
  <xs:element name="CreationDate" type="xs:dateTime" />
  <xs:element name="LastModifiedDate" type="xs:dateTime" />
  <xs:element name="IsHidden" type="xs:unsignedByte" />
  <xs:element name="ContentLength" type="xs:unsignedByte" />
  <xs:element name="ContentType" type="xs:unsignedByte" />
</xs:schema>
```

#### 2.2.1 Namespaces

This specification defines and references various **XML namespaces** using the mechanisms specified in [\[XMLNS\]](#). Although this specification associates a specific XML namespace prefix for each XML namespace that is used, the choice of any particular XML namespace prefix is implementation-specific and is not significant for interoperability.

Prefix	Namespace URI	Reference
None	DocumentLibrary	
airsyncbase	AirSyncBase	<a href="#">[MS-ASAIRS]</a>

Prefix	Namespace URI	Reference
itemoperations	ItemOperations	<a href="#">[MS-ASCMD]</a> section 2.2.2.8
search	Search	<a href="#">[MS-ASCMD]</a> section 2.2.2.14
xs	http://www.w3.org/2001/XMLSchema	<a href="#">[XMLSCHEMA1]</a>

## 2.2.2 Elements

The following table summarizes the set of common XML schema element definitions defined by this specification. XML schema elements that are specific to a particular operation are described with the operation.

Value	Description
<a href="#">LinkId</a>	The link to the document, specified as a <b>Uniform Resource Identifier (URI)</b> .
<a href="#">DisplayName</a>	The name of the document, as displayed by the client.
<a href="#">IsFolder</a>	Specifies whether the item is a <b>folder</b> or a document.
<a href="#">CreationDate</a>	The date and time when the document was first created.
<a href="#">LastModifiedDate</a>	The date and time when the document or its properties was last modified.
<a href="#">IsHidden</a>	Specifies whether this is a hidden object.
<a href="#">ContentLength</a>	The estimated size of the document, in bytes.
<a href="#">ContentType</a>	The <b>Multipurpose Internet Mail Extension (MIME)</b> type of the binary- or <b>base64-encoded</b> content.

### 2.2.2.1 LinkId

The <LinkId> element is a required element that specifies the link to the document in the form of a **URI**.

### 2.2.2.2 DisplayName

The <DisplayName> element is an element that specifies the name of the document as it is displayed to the user.

The <DisplayName> element is not included in a command request. If this element is included in a command request, then the server **MUST** respond with a protocol error.

A **Search** command response has a minimum of one <DisplayName> element per response. For more information on the **Search** command, see section [3.2.5.2](#).

### 2.2.2.3 IsFolder

The <IsFolder> element is an element that specifies whether the item is a folder.

The <IsFolder> element **MUST NOT** be included in a command request. If it is included in a command request, then the server **MUST** return a protocol error.

The <IsFolder> element is required in a **Search** command response. For more information on the **Search** command, see section [3.2.5.2](#).

Valid values for this element are as follows.

Value	Description
0	The item is not a folder.
1	The item is a folder.

#### 2.2.2.4 CreationDate

The <CreationDate> element is an element that specifies the date and time when the document was first created.

The <CreationDate> element **MUST NOT** be included in a server request. If it is included in a server request, then the server **MUST** respond with a protocol error.

The <CreationDate> element is required in a **Search** command server response. The **Search** command response is specified section [3.2.5.2](#).

The value of this element is in **Coordinated Universal Time (UTC)** format, as specified in [\[MS-ASDTYPE\]](#) section 2.3.

#### 2.2.2.5 LastModifiedDate

The <LastModifiedDate> element is an element that specifies the date and time that the document or its properties was last modified.

The <LastModifiedDate> element **MUST NOT** be included in a command request. If it is included, then the server **MUST** respond with a protocol error.

The <LastModifiedDate> element is required in a **Search** command response. For more information, see section [3.2.5.2](#).

The value of this element is in UTC format, as specified in [\[MS-ASDTYPE\]](#) section 2.3.

#### 2.2.2.6 IsHidden

The <IsHidden> element is an element that specifies that the document or folder is a hidden object.

The <IsHidden> element **MUST NOT** be included in a command request. When it is included, the server **MUST** return a protocol error.

The <IsHidden> element is required in a **Search** command response.

The <IsHidden> element is an unsigned byte, as specified in [\[MS-ASDTYPE\]](#) section 2.7.

The value of the <IsHidden> element **MUST** be one of the following.

Value	Description
0	Is not hidden.
1	Is hidden.

### 2.2.2.7 ContentLength

The <ContentLength> element specifies the estimated size, in bytes, of the document.

The <ContentLength> element MUST NOT be included in a command request. If the element is included in a command request, the server MUST respond with a protocol error.

The <ContentLength> element is required in a **Search** command response. The **Search** command response is specified in section [3.2.5.2](#).

Because documents accessed using the ActiveSync protocol can be shared across a network, the value of the <ContentLength> element may differ between the time the document description is retrieved and the time the document is accessed.

### 2.2.2.8 ContentType

The <ContentType> element is an element that specifies the MIME type of the binary- or base64-encoded document, if known.

The <ContentType> element MUST NOT be included in a command request. If it is included in a command request, then the server MUST return a protocol error.

The <ContentType> element is not included in an **ItemOperations** command response ([\[MS-ASCMD\]](#) section 2.2.2.8). It is required in a **Search** command response ([\[MS-ASCMD\]](#) section 2.2.2.14).

## 3 Protocol Details

### 3.1 Client Details

#### 3.1.1 Abstract Data Model

This section describes a conceptual model of possible data organization that an implementation maintains to participate in this protocol. The described organization is provided to facilitate the explanation of how the protocol behaves. This document does not mandate that implementations adhere to this model as long as their external behavior is consistent with that described in this document.

Document class: A structured XML text block that adheres to the XML schema defined in section [2.2](#). It is returned by the server as part of a full XML response to the client commands specified in section [3.1.5](#).

Command request: A WBXML formatted message that adheres to the command schemas specified in [\[MS-ASCMD\]](#).

#### 3.1.2 Timers

None.

#### 3.1.3 Initialization

None.

#### 3.1.4 Higher-Layer Triggered Events

##### 3.1.4.1 Searching for Documents

A client searches for Document class data on a server by sending a **Search** command request.

##### 3.1.4.2 Requesting Details for a Specific Document

Document class data for one or more individual documents is requested by the client sending an **ItemOperations** command request, which is a wrapper for the **itemoperations:Fetch** element. An **ItemOperations** command can contain multiple <itemoperations:Fetch> elements.

##### 3.1.4.3 Requesting the Document Body from the Server

The body of the document is not returned in the Document class. A client submits the value of the <LinkID> element (section [2.2.2.1](#)) in a separate **ItemOperations** request to obtain the body of the document as either base64-encoded text in the <itemoperations:Data> element of the response or as binary data, depending on the content type requested. Content type requests for the **ItemOperations** command are specified in section [3.1.5.1](#). The <itemoperations:Data> element is specified in [\[MS-ASCMD\]](#) section 2.2.2.8.3.1.2.3.6.3.

#### 3.1.5 Message Processing Events and Sequencing Rules

The following sections define how various elements of the Document class are used in the context of specific commands. For more details about the commands themselves, see [\[MS-ASCMD\]](#).

### 3.1.5.1 ItemOperations Command Request

A client uses the <ItemOperations> command to retrieve specific documents items from the server using the <itemoperations:Fetch> element. An **ItemOperations** request can contain multiple <itemoperations:Fetch> elements.

The <LinkId> element (section [2.2.2.1](#)) is the only Document class element that can be included in an **ItemOperations** command request. The <LinkId> element is transmitted as a child of the <itemoperations:Fetch> element ([\[MS-ASCMD\]](#) section 2.2.2.8.2.1.2).

A client can use the HTTP **header MS-ASAcceptMultiPart: T** to specify that the server return the document data in multipart binary format. Otherwise, the document is returned as text. This **header** is specified in [\[MS-ASCMD\]](#) section 2.2.2.8.1.

The **ItemOperations** command is specified in [\[MS-ASCMD\]](#) section 2.2.2.8.

### 3.1.5.2 Search Command Request

A client uses the **Search** command to retrieve Document class items that match the criteria specified by the client.

The <LinkId> element (section [2.2.2.1](#)) is required in a document search request. The <LinkId> element (section [2.2.2.1](#)) is transmitted as a child of the <search:EqualTo> element ([\[MS-ASCMD\]](#) section 2.2.2.14.1.1.1.2.2). The <search:Value> element ([\[MS-ASCMD\]](#) section 2.2.2.14.1.1.1.2.1.5.2) can also be included as a child of the <search:EqualTo> element. The value of the <search:Value> element is a string describing the **uniform naming convention (UNC)** path of a file on a file share. A full example of this usage is provided in [\[MS-ASCMD\]](#) section 4.22.1.

If the <LinkId> element is not included in a **Search** command request, then the server **MUST** respond with protocol error 2.

**Search** is specified in [\[MS-ASCMD\]](#) section 2.2.2.14.

### 3.1.6 Timer Events

None.

### 3.1.7 Other Local Events

None.

## 3.2 Server Details

### 3.2.1 Abstract Data Model

This section describes a conceptual model of possible data organization that an implementation maintains to participate in this protocol. The described organization is provided to facilitate the explanation of how the protocol behaves. This document does not mandate that implementations adhere to this model as long as their external behavior is consistent with that described in this document.

Document class: A structured XML text block that adheres to the XML schema defined in section [2.2](#). It is returned by the server as part of a full XML response to the client commands specified in section [3.1.5](#).

Command response: A WBXML formatted message that adheres to the command schemas specified in [\[MS-ASCMD\]](#). The server MUST return a document class XML block for every item that matches the criteria specified in the client command request. The server can return zero or more Document class blocks in its response, depending on how many document items match the criteria specified in the client command request.

### 3.2.2 Timers

None.

### 3.2.3 Initialization

None.

### 3.2.4 Higher-Layered Triggered Events

#### 3.2.4.1 Searching for Documents

A client searches for Document class data on a server by sending a **Search** command request. The server responds with a **Search** command response.

#### 3.2.4.2 Requesting Details for a Specific Document

Document class data for one or more individual documents is requested by the client sending an **ItemOperations** command request, which is a wrapper for the <itemoperations:Fetch> element. An **ItemOperations** command can contain multiple <itemoperations:Fetch> elements. The server responds with an **ItemOperations** command response.

#### 3.2.4.3 Requesting the Document Body from the Server

The body of the document is not returned in the Document class. A client can submit the value of the [LinkID](#) element in a separate **ItemOperations** request to obtain the body of the document. The server responds with an **ItemOperations** command response, which returns the body of the document either as base64-encoded text in the <itemoperations:Data> element of the response or as binary text in multiple parts if the command request was a multi-part request. The <itemoperations:Data> element is specified in [\[MS-ASCMD\]](#) section 2.2.2.8.3.1.2.3.6.3.

### 3.2.5 Message Processing Events and Sequencing Rules

The following sections define how various elements of the Document class are used in the context of specific commands. For more details about the commands themselves, see [\[MS-ASCMD\]](#).

#### 3.2.5.1 ItemOperations Command Response

A client uses the **ItemOperations** command to retrieve specific document items from the server using the <itemoperations:Fetch> element. An **ItemOperations** request can contain multiple <itemoperations:Fetch> elements.

The <LinkId> element (section [2.2.2.1](#)) is the only Document class element returned in an **ItemOperations** command response.

Document class elements are returned as children of the <Fetch> element ([\[MS-ASCMD\]](#) section 2.2.2.8.2.1.2).

If an **ItemOperations** command request for the body of the document was made using the **MS-ASAcceptMultiPart: T header**, then the server MUST respond by providing the document body as binary data in multiple parts. Otherwise, the server MUST transmit the document as base64-encoded data within the <itemoperations:Data> element ([\[MS-ASCMD\]](#) section 2.2.2.8.3.1.2.3.6.3). The behavior of content delivery for documents is specified in [\[MS-ASCMD\]](#) section 2.2.2.8.1.

**ItemOperations** is specified in [\[MS-ASCMD\]](#) section 2.2.2.8.

### 3.2.5.2 Search Command Response

A client uses the **Search** command to retrieve Document class items that match the criteria specified by the client.

Any of the elements for the Document class can be included in a **Search** command response.

Document class elements are returned as children of the <search:Properties> element ([\[MS-ASCMD\]](#) section 2.2.2.14.2.1.2.1.2.4).

**Search** is specified in [\[MS-ASCMD\]](#) section 2.2.2.14.

### 3.2.6 Timer Events

None.

### 3.2.7 Other Local Events

None.

## 4 Protocol Examples

### 4.1 Searching for a Document by LinkID

The following example demonstrates searching for a document by matching its <LinkId> element (section [2.2.2.1](#)), which in this example is the **Uniform Naming Convention (UNC)** path of the document.

Request:

```
POST /Microsoft-Server-ActiveSync?Cmd=Search&User=deviceuser1&DeviceId=Device1&DeviceType=SmartPhone HTTP/1.1
Content-Type: application/vnd.ms-sync.wbxml
MS-ASProtocolVersion: 14.0
User-Agent: ASOM
Host: mail.contoso.com
Content-Length: 92

<?xml version="1.0" encoding="utf-8"?>
<Search xmlns="Search:" xmlns:A="DocumentLibrary:">
  <Store>
    <Name>DocumentLibrary</Name>
    <Query>
      <EqualTo>
        <A:LinkId/>
        <Value>\\EXCH-D-810\DocumentShare\document.txt</Value>
      </EqualTo>
    </Query>
    <Options>
      <Range>0-999</Range>
    </Options>
  </Store>
</Search>
```

Response:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.ms-sync.wbxml
Date: Wed, 11 Nov 2009 18:07:38 GMT
Content-Length: 187

<?xml version="1.0" encoding="utf-8"?>
<Search
xmlns:documentlibrary="DocumentLibrary:" >
  <Status>1 Success</Status>
  <Response>
    <Store>
      <Status>1 Success</Status>
      <Result>
        <Properties>
          <documentlibrary:LinkId>\\exch-d-810\DocumentShare\document.txt</documentlibrary:LinkId>
          <documentlibrary:DisplayName>document.txt</documentlibrary:DisplayName>
          <documentlibrary:IsFolder>0</documentlibrary:IsFolder>
          <documentlibrary:CreationDate>2009-11-11T17:07:08.156Z</documentlibrary:CreationDate>
```

```

        <documentlibrary:LastModifiedDate>2009-11-
11T17:07:17.613Z</documentlibrary:LastModifiedDate>
        <documentlibrary:IsHidden>0</documentlibrary:IsHidden>
        <documentlibrary:ContentLength>13</documentlibrary:ContentLength>
        <documentlibrary:ContentType>text/plain</documentlibrary:ContentType>
    </Properties>
</Result>
<Range>0-0</Range>
<Total>1</Total>
</Store>
</Response>
</Search>

```

## 4.2 Retrieving the Text of Document Using ItemOperations Command

The following example demonstrates the client requesting the data for a Microsoft Word document using the **ItemOperations** command ([\[MS-ASCMD\]](#) section 2.2.2.8). (Note that, in the XML Response below, the value of the <Data> element has been truncated for the sake of brevity.)

Request:

```

POST /Microsoft-Server-
ActiveSync?Cmd=ItemOperations&User=deviceuser1&DeviceId=Device1&DeviceType=SmartPhone
HTTP/1.1
Content-Type: application/vnd.ms-sync.wbxml
MS-ASProtocolVersion: 14.0
User-Agent: ASOM
Host: mail.contoso.com
Content-Length: 80

<?xml version="1.0" encoding="utf-8"?>
<ItemOperations xmlns:documentlibrary="DocumentLibrary:" xmlns="ItemOperations:">
  <Fetch>
    <Store>DocumentLibrary</Store>
    <documentlibrary:LinkId>\\EXCH-D-810\DocumentShare\Word
Document.docx</documentlibrary:LinkId>
  </Fetch>
</ItemOperations>

```

Response:

```

HTTP/1.1 200 OK
Content-Type: application/vnd.ms-sync.wbxml
Date: Wed, 11 Nov 2009 19:16:21 GMT
Content-Length: 13373

<?xml version="1.0" encoding="utf-8"?>
<ItemOperations
xmlns:documentlibrary="DocumentLibrary:"
>
  <Status>1</Status>
  <Response>
    <Fetch>
      <Status>1</Status>
      <documentlibrary:LinkId>\\EXCH-D-810\DocumentShare\Word
Document.docx</documentlibrary:LinkId>

```

```

    <Properties>

    <Data>UESDBBQABgAIAAAAIQDd/+ImYzsKNchci+VLqQHEkJU4+RzBv1jKu6vsf0VwOamabaWQ1pZ+9AtcdYN1/WD103G

+gAAADEDAACAAgBd29yZC9fcmVscy9kb2N1bWVudC54bWwucmVscyCiBAEooAABAAAAAAAAAAAAAAAAAAAAAAAAAAAA
AAAAAAAAAAAAAAAA...</Data>
    <Version>2009-11-11T19:15:45.177Z</Version>
  </Properties>
</Fetch>
</Response>
</ItemOperations>

```

### 4.3 Browsing a Document Folder

The following example demonstrates browsing a folder on a remote share. The client submits a request for a folder to view, and the server responds with a list of the folder's contents.

#### Request:

```

POST /Microsoft-Server-
ActiveSync?Cmd=Search&User=deviceuser1&DeviceId=Device1&DeviceType=SmartPhone HTTP/1.1
Content-Type: application/vnd.ms-sync.wbxml
MS-ASProtocolVersion: 14.0
User-Agent: ASOM
Host: mail.contoso.com
Content-Length: 316

<?xml version="1.0" encoding="utf-8"?>
<Search xmlns="Search:" xmlns:documentlibrary="DocumentLibrary:">
  <Store>
    <Name>DocumentLibrary</Name>
    <Query>
      <EqualTo>
        <documentlibrary:LinkId/>
        <Value>\\myserver\myshare</Value>
      </EqualTo>
    </Query>
    <Options>
      <Range>0-999</Range>
    </Options>
  </Store>
</Search>

```

#### Response:

```

HTTP/1.1 200 OK
Content-Type: application/vnd.ms-sync.wbxml
Date: Wed, 11 Nov 2009 18:07:38 GMT
Content-Length: 1383

<?xml version="1.0" encoding="utf-8"?>
<Search xmlns="Search:" xmlns:documentlibrary="DocumentLibrary:">
  <Status>1</Status>

```

```

<Response>
  <Store>
    <Status>1</Status>
    <Result>
      <Properties>
        <documentlibrary:LinkId>\\myserver\myshare</documentlibrary:LinkId>
        <documentlibrary:DisplayName>d$</documentlibrary:DisplayName>
        <documentlibrary:IsFolder>1</documentlibrary:IsFolder>
        <documentlibrary:CreationDate>2007-10-
02T00:34:28.686Z</documentlibrary:CreationDate>
        <documentlibrary:LastModifiedDate>2009-11-
13T21:48:20.919Z</documentlibrary:LastModifiedDate>
        <documentlibrary:IsHidden>1</documentlibrary:IsHidden>
      </Properties>
    </Result>
    <Result>
      <Properties>
        <documentlibrary:LinkId>\\myserver\myshare\blah.txt</documentlibrary:LinkId>
        <documentlibrary:DisplayName>blah.txt</documentlibrary:DisplayName>
        <documentlibrary:IsFolder>0</documentlibrary:IsFolder>
        <documentlibrary:CreationDate>2007-10-

      </Properties>
    </Result>
    <Range>0-2</Range>
    <Total>3</Total>
  </Store>
</Response>
</Search>

```

## **5 Security**

### **5.1 Security Considerations for Implementers**

None.

### **5.2 Index of Security Parameters**

None.

## 6 Appendix A: Product Behavior

The information in this specification is applicable to the following Microsoft products:

- Microsoft® Exchange Server 2007 Service Pack 3 (SP3)
- Microsoft® Exchange Server 2010

Exceptions, if any, are noted below. If a service pack number appears with the product version, behavior changed in that service pack. The new behavior also applies to subsequent service packs of the product unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification prescribed using the terms SHOULD or SHOULD NOT implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies that product does not follow the prescription.

## 7 Change Tracking

This section identifies changes that were made to the [MS-ASDOC] protocol document between the May 2010 and August 2010 releases. Changes are classified as New, Major, Minor, Editorial, or No change.

The revision class **New** means that a new document is being released.

The revision class **Major** means that the technical content in the document was significantly revised. Major changes affect protocol interoperability or implementation. Examples of major changes are:

- A document revision that incorporates changes to interoperability requirements or functionality.
- An extensive rewrite, addition, or deletion of major portions of content.
- The removal of a document from the documentation set.
- Changes made for template compliance.

The revision class **Minor** means that the meaning of the technical content was clarified. Minor changes do not affect protocol interoperability or implementation. Examples of minor changes are updates to clarify ambiguity at the sentence, paragraph, or table level.

The revision class **Editorial** means that the language and formatting in the technical content was changed. Editorial changes apply to grammatical, formatting, and style issues.

The revision class **No change** means that no new technical or language changes were introduced. The technical content of the document is identical to the last released version, but minor editorial and formatting changes, as well as updates to the header and footer information, and to the revision summary, may have been made.

Major and minor changes can be described further using the following change types:

- New content added.
- Content updated.
- Content removed.
- New product behavior note added.
- Product behavior note updated.
- Product behavior note removed.
- New protocol syntax added.
- Protocol syntax updated.
- Protocol syntax removed.
- New content added due to protocol revision.
- Content updated due to protocol revision.
- Content removed due to protocol revision.
- New protocol syntax added due to protocol revision.

- Protocol syntax updated due to protocol revision.
- Protocol syntax removed due to protocol revision.
- New content added for template compliance.
- Content updated for template compliance.
- Content removed for template compliance.
- Obsolete document removed.

Editorial changes are always classified with the change type "Editorially updated."

Some important terms used in the change type descriptions are defined as follows:

- **Protocol syntax** refers to data elements (such as packets, structures, enumerations, and methods) as well as interfaces.
- **Protocol revision** refers to changes made to a protocol that affect the bits that are sent over the wire.

The changes made to this document are listed in the following table. For more information, please contact [protocol@microsoft.com](mailto:protocol@microsoft.com).

Section	Tracking number (if applicable) and description	Major change (Y or N)	Change type
<a href="#">1.1 Glossary</a>	55150 Added "XML namespace" to the list of terms defined in [MS-OXGLOS].	N	Content update.
<a href="#">1.1 Glossary</a>	55910 Changed "WAP Binary XML" to "Wireless Application Protocol (WAP) Binary XML."	N	Content update.
<a href="#">1.1 Glossary</a>	56243 Added "base64 encoding" to the list of terms defined in [MS-OXGLOS].	N	New content added.
<a href="#">1.1 Glossary</a>	57452 Added "header" to the list of terms defined in [MS-OXGLOS].	N	Content update.
<a href="#">1.2.1 Normative References</a>	55751 Moved [MS-OXGLOS] from Normative References section to Informative References section.	N	Content update.
<a href="#">1.2.1 Normative References</a>	55689 Added reference to [XMLSCHEMA1].	N	Content update.
<a href="#">1.2.1 Normative References</a>	57604 Added reference to [XMLNS]. Removed reference to [RFC822].	N	Content update.
<a href="#">1.6</a>	55554	N	Content

<b>Section</b>	<b>Tracking number (if applicable) and description</b>	<b>Major change (Y or N)</b>	<b>Change type</b>
<a href="#">Applicability Statement</a>	Removed phrase "complex types".		update.
<a href="#">2.1 Transport</a>	55150 Changed namespace from Doc to DocumentLibrary.	N	Content update.
<a href="#">2.1 Transport</a>	55554 Removed phrases "types" and "complex types".	N	Content update.
<a href="#">2.2 Message Syntax</a>	55150 Changed namespace URI from DOC: to DocumentLibrary:.	N	Content update.
<a href="#">2.2 Message Syntax</a>	55689 Added reference to [XMLSCHEMA1].	Y	Content update.
<a href="#">2.2 Message Syntax</a>	55910 Changed "WAP Binary XML" to "Wireless Application Protocol (WAP) Binary XML."	N	Content update.
<a href="#">2.2.1 Namespaces</a>	55150 Added new section.	Y	New content added.
<a href="#">2.2.2.8 ContentType</a>	54569 Clarified that this element is not returned in an ItemOperations command response, and is optional in a Search command response.	N	Content update.
<a href="#">2.2.2.8 ContentType</a>	54508 Changed description of element from optional to required.	Y	Content update.
<a href="#">3.1.4.2 Requesting Details for a Specific Document</a>	57452 Added the "itemoperations:" namespace prefixes to the Fetch element name and changed description of Fetch from "command" to "element".	N	Content update.
<a href="#">3.1.4.3 Requesting the Document Body from the Server</a>	57452 Added the "itemoperations:" namespace prefix to the Data element name.	N	Content update.
<a href="#">3.1.5.1 ItemOperations Command Request</a>	57452 Added namespace prefixes to element names. Changed description of Fetch from "command" to "element".	N	Content update.
<a href="#">3.1.5.2 Search Command Request</a>	55554 Changed description of EqualTo from "type" to "element".	N	Content update.
<a href="#">3.1.5.2 Search Command Request</a>	57452 Added the "search:" namespace prefix to the EqualTo and Value element names.	N	Content update.

Section	Tracking number (if applicable) and description	Major change (Y or N)	Change type
<a href="#">3.2.4.2 Requesting Details for a Specific Document</a>	57452 Added the "itemoperations:" namespace prefix to the Fetch element name. Changed description of Fetch from "command" to "element".	N	Content update.
<a href="#">3.2.4.3 Requesting the Document Body from the Server</a>	57452 Added the "itemoperations:" namespace prefix to the Data element name.	N	Content update.
<a href="#">3.2.5.1 ItemOperations Command Response</a>	55554 Changed description of Data from "type" to "element".	N	Content update.
<a href="#">3.2.5.1 ItemOperations Command Response</a>	57452 Added the "itemoperations:" namespace prefix to the Fetch element name.	N	Content update.
<a href="#">3.2.5.2 Search Command Response</a>	55554 Changed description of Properties from "type" to "element".	N	Content update.
<a href="#">3.2.5.2 Search Command Response</a>	57452 Added the "search:" namespace prefix to the Properties element name.	N	Content update.
<a href="#">4.1 Searching for a Document by LinkID</a>	57452 Changed namespace prefixes for consistency with other ActiveSync documents.	N	Content update.
<a href="#">4.2 Retrieving the Text of Document Using ItemOperations Command</a>	57452 Changed namespace prefixes for consistency with other ActiveSync documents.	N	Content update.
<a href="#">4.3 Browsing a Document Folder</a>	57452 Changed namespace prefixes for consistency with other ActiveSync documents.	N	Content update.
<a href="#">6 Appendix A: Product Behavior</a>	56981 Changed product behavior note from an RTM version to a service pack.	N	Content update.
2.2.1 Complex Types	55554 Removed the Complex Types section.	Y	Content removed.
