## Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation for protocols, file formats, languages, standards as well as overviews of the interaction among each of these technologies.
- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you may make copies of it in order to develop implementations of the technologies described in the Open Specifications and may distribute portions of it in your implementations using these technologies or your documentation as necessary to properly document the implementation. You may also distribute in your implementation, with or without modification, any schema, IDL's, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that may cover your implementations of the technologies described in the Open Specifications. Neither this notice nor Microsoft's delivery of the documentation grants any licenses under those or any other Microsoft patents. However, a given Open Specification may be covered by Microsoft's Open Specification Promise (available here: <http://www.microsoft.com/interop/osp>) or the Community Promise (available here: <http://www.microsoft.com/interop/cp/default.mspx>). If you would prefer a written license, or if the technologies described in the Open Specifications are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting [iplq@microsoft.com](mailto:iplq@microsoft.com).
- **Trademarks.** The names of companies and products contained in this documentation may be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights.
- **Fictitious Names.** The example companies, organizations, products, domain names, e-mail addresses, logos, people, places, and events depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

**Reservation of Rights.** All other rights are reserved, and this notice does not grant any rights other than specifically described above, whether by implication, estoppel, or otherwise.

**Tools.** The Open Specifications do not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments you are free to take advantage of them. Certain Open Specifications are intended for use in conjunction with publicly available standard specifications and network programming art, and assumes that the reader either is familiar with the aforementioned material or has immediate access to it.

# 1 Introduction

This document specifies a protocol for the **Wireless Application Protocol (WAP) Binary XML (WBXML)** features utilized by the ActiveSync protocols. This document specifies which WBXML functionality is used by the protocol and which is not. It also specifies the **token** codes and **code pages** used by the ActiveSync protocols.

## 1.1 Glossary

The following terms are defined in [\[MS-OXGLOS\]](#):

**Charset**  
**contacts**  
**Secure Sockets Layer (SSL)**  
**Wireless Application Protocol (WAP)**  
**Wireless Application Protocol (WAP) Binary XML (WBXML)**  
**XML**

The following terms are specific to this document:

**code page:** A numeric encoding specifier used to tokenize **XML** tags.

**token:** A single-byte code that represents a specific **XML** tag.

**MAY, SHOULD, MUST, SHOULD NOT, MUST NOT:** These terms (in all caps) are used as described in [\[RFC2119\]](#). All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

## 1.3 Overview

This document specifies how WBXML functionality is utilized by the ActiveSync protocols. This document also specifies the tokens and code pages used to perform the WBXML encoding.

## 1.4 Relationship to Other Protocols

The WBXML tokens and code pages specified in this protocol are used to compress the **XML** tags in request and response messages. The following table defines the ActiveSync protocol that specifies the XML namespace that corresponds to each of the code pages. Code pages are hard-coded on the server and cannot be changed by the client.

The code page numbers below are listed in decimal format.

Code page	Specification
Code page 0: AirSync	<a href="#">[MS-ASCMD]</a> section 2.2.2.19
Code page 1: Contacts	<a href="#">[MS-ASCNTC]</a>

## 1.5 Prerequisites/Preconditions

None.

## 1.6 Applicability Statement

WBXML encoding of XML tags is appropriate for all messages sent and received by the ActiveSync protocol. This specification assumes that the reader is familiar with the WBXML standard. For more information about WBXML, see [\[WBXML1.2\]](#).

## 1.7 Versioning and Capability Negotiation

None.

## 1.8 Vendor-Extensible Fields

None.

## 2 Messages

### 2.1 Transport

ActiveSync messages are transported as HTTP POST messages, where the body of the message contains WBXML formatted data. The HTTP POST message header is specified in [\[MS-ASHTTP\]](#). The body of the HTTP message contains the XML required by the command being communicated in the message. The ActiveSync commands are specified in [\[MS-ASCMD\]](#).

### 2.2 Message Syntax

#### 2.2.1 Namespaces

None.

#### 2.2.2 WBXML

The XML tags in both request and response messages are encoded by using WBXML tokenization. WBXML is a standard for compressing an XML data stream for efficient transmission over a low bandwidth connection, such as wireless. The format used by the ActiveSync protocol is a subset of the WBXML standard.

##### 2.2.2.1 WBXML Features Used in the Protocol

The XML format that is used by the ActiveSync protocol is a subset of the WBXML standard, as specified in [\[WBXML1.2\]](#). However, not all of the WBXML features specified in [\[WBXML1.2\]](#) are used by this specification.

The ActiveSync protocol uses the following [\[WBXML1.2\]](#) features:

- Tokens to encode XML tags
- Code pages to support multiple XML namespaces
- Inline strings

The ActiveSync protocol notifications use the following [\[WBXML1.2\]](#) features:

- Attribute encoding
- Opaque data

The ActiveSync protocols do not use the following [\[WBXML1.2\]](#) features:

- String tables
- Entities
- Processing instructions

##### 2.2.2.2 Code Pages

The ActiveSync protocol supports the following code pages.

Code page	XML Namespace
0x0	AirSync
0x1	Contacts
0x2	Email
0x3	AirNotify
0x4	Calendar
0x5	Move
0x6	ItemEstimate

## **3 Protocol Details**

### **3.1 Common Details**

#### **3.1.1 Abstract Data Model**

This section describes a conceptual model of possible data organization that an implementation maintains to participate in this protocol. The described organization is provided to facilitate the explanation of how the protocol behaves. This document does not mandate that implementations adhere to this model as long as their external behavior is consistent with that described in this document.

The abstract data model follows what is specified in [\[WBXML1.2\]](#).

#### **3.1.2 Timers**

None.

#### **3.1.3 Initialization**

None.

#### **3.1.4 Higher-Layer Triggered Events**

None.

#### **3.1.5 Message Processing Events and Sequencing Rules**

Message processing is specified in [\[WBXML1.2\]](#), in the Document Tokenisation section.

#### **3.1.6 Timer Events**

None.

#### **3.1.7 Other Local Events**

None.

## 4 Protocol Examples

The following examples show the WBXML encoding of the messages, and provide a byte-by-byte description of the encoding.

### 4.1 Example 1

The following example shows the WBXML encoding of a server response that contains a new **contact**.

#### 4.1.1 XML Message

```
<?xml version="1.0" encoding="utf-8"?>
<Sync xmlns="AirSync:" xmlns:airsyncbase="AirSyncBase:" xmlns:contacts="Contacts:">

## 5 Security

### 5.1 Security Considerations for Implementers

In most cases, all communication between the client and server happens across an HTTP connection secured by the Secure Sockets Layer (SSL) protocol as specified in [\[RFC2616\]](#). The **SSL** connection is assumed to be secure enough to transmit confidential data, such as user credentials and sensitive e-mail. The SSL certificate on the server is assumed to be trusted by the client application.

### 5.2 Index of Security Parameters

None.

## 6 Appendix A: Product Behavior

The information in this specification is applicable to the following Microsoft products:

- Microsoft® Exchange Server 2007 Service Pack 1 (SP1)
- Microsoft® Exchange Server 2010
- Microsoft® Exchange Server 2010 Service Pack 1 (SP1)

Exceptions, if any, are noted below. If a service pack number appears with the product version, behavior changed in that service pack. The new behavior also applies to subsequent service packs of the product unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification prescribed using the terms SHOULD or SHOULD NOT implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies that product does not follow the prescription.

## 7 Change Tracking

This section identifies changes that were made to the [MS-ASWBXML] protocol document between the August 2010 and November 2010 releases. Changes are classified as New, Major, Minor, Editorial, or No change.

The revision class **New** means that a new document is being released.

The revision class **Major** means that the technical content in the document was significantly revised. Major changes affect protocol interoperability or implementation. Examples of major changes are:

- A document revision that incorporates changes to interoperability requirements or functionality.
- An extensive rewrite, addition, or deletion of major portions of content.
- Changes made for template compliance.
- Removal of a document from the documentation set.

The revision class **Minor** means that the meaning of the technical content was clarified. Minor changes do not affect protocol interoperability or implementation. Examples of minor changes are updates to clarify ambiguity at the sentence, paragraph, or table level.

The revision class **Editorial** means that the language and formatting in the technical content was changed. Editorial changes apply to grammatical, formatting, and style issues.

The revision class **No change** means that no new technical or language changes were introduced. The technical content of the document is identical to the last released version, but minor editorial and formatting changes, as well as updates to the header and footer information, and to the revision summary, may have been made.

Major and minor changes can be described further using the following change types:

- New content added.
- Content updated.
- Content removed.
- New product behavior note added.
- Product behavior note updated.
- Product behavior note removed.
- New protocol syntax added.
- Protocol syntax updated.
- Protocol syntax removed.
- New content added due to protocol revision.
- Content updated due to protocol revision.

- Protocol syntax updated due to protocol revision.
- Protocol syntax removed due to protocol revision.
- New content added for template compliance.
- Content updated for template compliance.
- Content removed for template compliance.
- Obsolete document removed.

Editorial changes are always classified with the change type "Editorially updated."

Some important terms used in revision type descriptions are defined as follows:

- **Protocol syntax** refers to data elements (such as packets, structures, enumerations, and methods) as well as interfaces.
- **Protocol revision** refers to changes made to a protocol that affect the bits that are sent over the wire.

The changes made to this document are listed in the following table. For more information, please contact [protocol@microsoft.com](mailto:protocol@microsoft.com).
