

[MS-CUSTOMUI]: Custom UI XML Markup Specification

Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation for protocols, file formats, languages, standards as well as overviews of the interaction among each of these technologies.
- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you may make copies of it in order to develop implementations of the technologies described in the Open Specifications and may distribute portions of it in your implementations using these technologies or your documentation as necessary to properly document the implementation. You may also distribute in your implementation, with or without modification, any schema, IDL's, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that may cover your implementations of the technologies described in the Open Specifications. Neither this notice nor Microsoft's delivery of the documentation grants any licenses under those or any other Microsoft patents. However, a given Open Specification may be covered by Microsoft [Open Specification Promise](#) or the [Community Promise](#). If you would prefer a written license, or if the technologies described in the Open Specifications are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting iplg@microsoft.com.
- **Trademarks.** The names of companies and products contained in this documentation may be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights.
- **Fictitious Names.** The example companies, organizations, products, domain names, e-mail addresses, logos, people, places, and events depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

Reservation of Rights. All other rights are reserved, and this notice does not grant any rights other than specifically described above, whether by implication, estoppel, or otherwise.

Tools. The Open Specifications do not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments you are free to take advantage of them. Certain Open Specifications are intended for use in conjunction with publicly available standard specifications and network programming art, and assumes that the reader either is familiar with the aforementioned material or has immediate access to it.

Preliminary Documentation. This Open Specification provides documentation for past and current releases and/or for the pre-release (beta) version of this technology. This Open Specification is final

documentation for past or current releases as specifically noted in the document, as applicable; it is preliminary documentation for the pre-release (beta) versions. Microsoft will release final documentation in connection with the commercial release of the updated or new version of this technology. As the documentation may change between this preliminary version and the final version of this technology, there are risks in relying on preliminary documentation. To the extent that you incur additional development obligations or any other costs as a result of relying on this preliminary documentation, you do so at your own risk.

Revision Summary

Date	Revision History	Revision Class	Comments
01/15/2009	1.0	Major	Initial Availability
07/13/2009	1.01	Major	Revised and edited the technical content
08/28/2009	1.02	Editorial	Revised and edited the technical content
11/06/2009	1.03	Editorial	Revised and edited the technical content
02/19/2010	2.0	Editorial	Revised and edited the technical content
03/31/2010	2.01	Editorial	Revised and edited the technical content
04/30/2010	2.02	Editorial	Revised and edited the technical content
06/07/2010	2.03	Editorial	Revised and edited the technical content
06/29/2010	2.04	Editorial	Changed language and formatting in the technical content.
07/23/2010	2.04	No change	No changes to the meaning, language, or formatting of the technical content.
09/27/2010	2.04	No change	No changes to the meaning, language, or formatting of the technical content.
11/15/2010	2.04	No change	No changes to the meaning, language, or formatting of the technical content.
12/17/2010	2.04	No change	No changes to the meaning, language, or formatting of the technical content.
03/18/2011	2.04	No change	No changes to the meaning, language, or formatting of the technical content.
06/10/2011	2.04	No change	No changes to the meaning, language, or formatting of the technical content.
01/20/2012	2.5	Minor	Clarified the meaning of the technical content.

1 Introduction

In creating an interoperable implementation, it may be helpful to understand specific implementation choices made by other products implementing the same standard. For example, portions of the standard may provide only general guidance, leaving specific implementation choices up to the application implementer; in some circumstances it may be helpful for other implementers to understand those choices.

The information contained in this document provides information about how Microsoft® Office Word 2007, Microsoft® Office Excel® 2007, Microsoft® Office PowerPoint® 2007, Microsoft® Word 2010, Microsoft® Excel® 2010 and Microsoft® PowerPoint® 2010 implement UI customization in the context of ECMA-376 Office Open XML File Formats, as described in [\[ECMA-376\]](#).

1.1 Glossary

The following terms are defined in [\[MS-OFCGLOS\]](#):

XML schema

The following terms are specific to this document:

MAY, SHOULD, MUST, SHOULD NOT, MUST NOT: These terms (in all caps) are used as described in [\[RFC2119\]](#). All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

1.2 References

References to Microsoft Open Specification documents do not include a publishing year because links are to the latest version of the documents, which are updated frequently. References to other documents include a publishing year when one is available.

1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact dochelp@microsoft.com. We will assist you in finding the relevant information. Please check the archive site, <http://msdn2.microsoft.com/en-us/library/E4BD6494-06AD-4aed-9823-445E921C9624>, as an additional source.

[RFC2119] Bradner, S., "Key words for use in RFCs to Indicate Requirement Levels", BCP 14, RFC 2119, March 1997, <http://www.rfc-editor.org/rfc/rfc2119.txt>

1.2.2 Informative References

[MS-OFCGLOS] Microsoft Corporation, "[Microsoft Office Master Glossary](#)".

2 Custom UI

The subordinate clauses specify the semantics for the Custom UI XML markup contained within the ECMA-376 Office Open XML File Formats, as specified in [\[ECMA-376\]](#). These semantics describe customization of the UI interface. Examples in the following clauses highlight customizations in the context of the Microsoft Office Fluent interface (UI) but the concepts extend naturally to any user interface.

Customization of the UI is accomplished via the addition of parts containing Custom UI XML markup to the containing document package.

2.1 Parts

The parts described in the subordinate sections detail the additional part types utilized by CustomUI in an ECMA-376 Office Open XML File Formats [\[ECMA-376\]](#) file.

2.1.1 Quick Access Toolbar Customizations Part

Content Type:	application/xml
Root Namespace:	http://schemas.microsoft.com/office/2006/01/customui
Source Relationship:	http://schemas.microsoft.com/office/2006/relationships/ui/userCustomization

An instance of this part type contains information about the quick access toolbar customizations specific to the containing package.

For example, a user can customize the quick access toolbar for his WordProcessingML document to contain the UI controls that they commonly use.

A package is permitted to contain at most one Quick Access Toolbar Customizations part, and that part is the target of a relationship in the package-relationship item for the document.

For example, the following package part-relationship item contains a relationship to a Quick Access Toolbar Customizations part, which is stored in the ZIP item `/userCustomization/customUI.xml`:

```
<Relationships xmlns="...">
<Relationship Id="rId2"
Type="http://.../2006/relationships/ui/userCustomization"
Target="/userCustomization/customUI.xml" />
</Relationships>
```

The root element for a part of this content type is **customUI**.

For example, the following Quick Access Toolbar Customizations content markup specifies that the control with identifier "SpellingAndGrammar" is to be added to the quick access toolbar for the package:

```
<mso:customUI xmlns:mso="http://schemas.microsoft.com/office/2006/01/customui">
<mso:ribbon>
<mso:qat>
<mso:documentControls>
<mso:control idQ="mso:SpellingAndGrammar" visible="true" />
</mso:documentControls>
</mso:qat>
```

```
</mso:ribbon>
</mso:customUI>
```

A Quick Access Toolbar Customizations part is located within the package containing the source relationship. Expressed syntactically, the **TargetMode** attribute of the **Relationship** element is "Internal".

A Quick Access Toolbar Customizations part does not have implicit or explicit relationships to any other part defined by ECMA-376 Office Open XML File Formats, as specified in [\[ECMA-376\]](#).

2.1.2 Ribbon Extensibility Part

Content Type:	application/xml
Root Namespace:	http://schemas.microsoft.com/office/2006/01/customui
Source Relationship:	http://schemas.microsoft.com/office/2006/relationships/ui/extensibility

An instance of this part type contains information about the ribbon customizations specific to the containing package.

For example, a SpreadsheetML document that represents a timecard could contain custom UI controls to guide the user in filling out the timecard.

A package is permitted to contain at most one Ribbon Extensibility part, and that part is the target of a relationship in the package-relationship item for the document.

For example, the following package part-relationship item contains a relationship to a Ribbon Extensibility part, which is stored in the ZIP item /customUI/customUI.xml:

```
<Relationships xmlns="...">
<Relationship Id="rId5"
Type="http://.../2006/relationships/ui/extensibility"
Target="/customUI/customUI.xml" />
</Relationships>
```

The root element for a part of this content type is **customUI**.

For example, the following Ribbon Extensibility content markup specifies that the ribbon tab with identifier "TabHome" is to be hidden for the containing package:

```
<customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui">
<ribbon>
<tabs>
<tab idMso="TabHome" visible="false" />
</tabs>
</ribbon>
</customUI>
```

A Ribbon Extensibility part is located within the package containing the source relationship. Expressed syntactically, the **TargetMode** attribute of the **Relationship** element is "Internal".

A Ribbon Extensibility part is permitted to have explicit relationships to the following parts defined by ECMA-376 Office Open XML File Formats, as specified in [\[ECMA-376\]](#):

- Image Part, as specified in [\[ECMA-376\]](#) Part 1 section 15.2.13.

2.2 Elements

A Custom UI document contains customizations of an application's UI. Customizations are mainly of two types:

- Modifications of the application's built-in UI, such as hiding or disabling built-in UI controls or repurposing command actions.
- Creation of custom UI controls, such as a custom ribbon tab, menu item, or quick access toolbar button.

For example, consider the following Custom UI document:

```
<customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui">
  <commands>
    <command idMso="Bold" enabled="false" />
  </commands>
  <ribbon>
    <tabs>
      <tab idMso="TabHome" visible="false" />
      <tab id="CustomTab" label="Custom Tab">
        <group id="CustomGroup" label="Custom Group">
          <button id="CustomButton" label="Custom Button"
            size="large" imageMso="HappyFace" onAction="OnButtonClick" />
        </group>
      </tab>
    </tabs>
  </ribbon>
</customUI>
```

This example disables the command with an identifier of "Bold", hides the ribbon tab with an identifier of "TabHome", and creates a new custom ribbon tab with a custom button in it.

2.2.1 box (Box Grouping Container)

This element specifies a grouping container control that can be used to align controls vertically or horizontally. **Box** elements can be nested to create complex UI layouts.

For example, consider a group of controls that are laid out horizontally, as follows:

Figure 1: Controls grouped horizontally

This layout is specified using the following XML fragment:

```
<box id="box" boxStyle="horizontal">
  <button id="button1" label="Button 1" imageMso="HappyFace" />
  <button id="button2" label="Button 2" imageMso="HappyFace" />
</box>
```

</box>

This is contrasted to the default vertical layout that is used if the **box** element is not specified.

The following table summarizes the elements that are parents of this element.

Parent Elements	Section
box	2.2.1
group	2.2.23

The following table summarizes the elements that are children of this element.

Child Elements	Section
box (Box Grouping Container)	2.2.1
button (Button)	2.2.2
buttonGroup (Button Grouping Container)	2.2.5
checkBox (Check Box)	2.2.6
comboBox (Combo Box)	2.2.7
control (Control Clone)	2.2.12
dropDown (Drop-down Control)	2.2.17
dynamicMenu (Dynamic Menu)	2.2.19
editBox (Edit Box)	2.2.20
gallery (Gallery)	2.2.21
labelControl (Text Label)	2.2.25
menu (Menu)	2.2.28
splitButton (Split Button)	2.2.38
toggleButton (Toggle Button)	2.2.43

The following table summarizes the attributes of this element.

Attributes	Description
boxStyle (box style)	<p>Specifies the layout direction for the child controls inside of the box element. If this attribute is omitted, the child controls SHOULD be laid out horizontally. For example, consider a group of controls to be laid out vertically. This is specified using the following XML:</p> <pre><box id="box" boxStyle="vertical"> ... </box></pre>

Attributes	Description
	<p>The possible values for this attribute are defined by the ST_BoxStyle simple type, as specified in section 2.3.1.</p>
<p>getVisible (getVisible callback)</p>	<p>Specifies the name of a callback function that is called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 453 1174 478"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>id (control identifier)</p>	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes is to be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 842 1019 867"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an id of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
<p>idQ (qualified control identifier)</p>	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes is to be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1209 1312 1549"><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI></pre> <p>In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as</p>

Attributes	Description
	specified in section 2.3.9 .
insertAfterMso (identifier of built-in control to insert after)	<p>Specifies the identifier of a built-in control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 474 1289 548"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the built-in tab with an id of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertAfterQ (qualified identifier of control to insert after)	<p>Specifies the qualified identifier of a control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 940 1300 1014"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
insertBeforeMso (identifier of built-in control to insert before)	<p>Specifies the identifier of a built-in control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1402 1300 1476"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple, as specified in section 2.3.5.</p>
insertBeforeQ (qualified identifier of control to insert before)	<p>Specifies the qualified identifier of a control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p>

Attributes	Description
before)	<p>attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 338 1317 415"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
visible (control visibility)	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 726 1019 747"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is to be hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_Box">
  <group ref="EG_Controls" minOccurs="0" maxOccurs="1000"/>
  <attributeGroup ref="AG_IDCustom"/>
  <attributeGroup ref="AG_Visible"/>
  <attributeGroup ref="AG_PositionAttributes"/>
  <attribute name="boxStyle" type="ST_BoxStyle" use="optional"/>
</complexType>
```

2.2.2 button (Button)

This element specifies a standard push-button control that performs an action when clicked.

For example, consider a button control, as follows:

Figure 2: A button control

This is specified using the following XML fragment:

```
<button id="button" label="Button" imageMso="HappyFace" />
```

The following table summarizes the elements that are parents of this element.

Parent Elements	Section
box	2.2.1
group	2.2.23

The following table summarizes the attributes of this element.

Attributes	Description
description (description)	<p>Specifies a detailed description of the control, which is displayed in detailed views. The description and getDescription attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text.</p> <p>For example, consider a button with a detailed description, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre><button id="button" label="Button" imageMso="HappyFace" description="This is a verbose description that describes the function of this control in detail." /></pre> <p>The possible values for this attribute are defined by the ST_LongString simple type, as specified in section 2.3.8.</p>
enabled (enabled state)	<p>Specifies the enabled state of the control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is always disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
getDescription (getDescription callback)	<p>Specifies the name of a callback function that is called to determine the detailed description of this control.</p> <p>The getDescription and description attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" getDescription="GetButtonDescription" /></pre> <p>In this example, the GetButtonDescription callback function is called when the application needs to determine the detailed description of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>

Attributes	Description
getEnabled (getEnabled callback)	<p>Specifies the name of a callback function that is called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 380 1175 405"><button id="button" getEnabled="IsButtonEnabled" /></pre> <p>In this example, the IsButtonEnabled callback function is to be called when the application needs to determine the enabled state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getImage (getImage callback)	<p>Specifies the name of a callback function to be called to determine the icon of this control.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 741 1138 766"><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is to be called when the application needs to determine the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getKeytip (getKeytip callback)	<p>Specifies the name of a callback function that is called to determine the suggested KeyTip of this control.</p> <p>The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1100 1162 1125"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is to be called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getLabel (getLabel callback)	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1461 1138 1486"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is to be called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getScreentip (getScreentip callback)	<p>Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If neither</p>

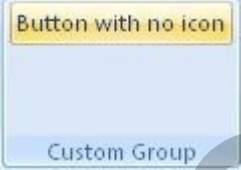

Attributes	Description
	<p>attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 310 1235 338"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is to be called when the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getShowImage (getShowImage callback)</p>	<p>Specifies the name of a callback function to be called to determine whether the application is to display the icon of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 730 1263 758"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p>In this example, the IsButtonImageVisible callback function is to be called when the application needs to determine whether to display the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getShowLabel (getShowLabel callback)</p>	<p>Specifies the name of a callback function to be called to determine whether the application is to display the label of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1150 1263 1178"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p>In this example, the IsButtonLabelVisible callback function is to be called when the application needs to determine whether to display the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getSize (getSize callback)</p>	<p>Specifies the name of a callback function to be called to determine the size of this control.</p> <p>The getSize and size attributes are mutually exclusive. If neither attribute is specified, the control's size SHOULD default to the normal size.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1507 1110 1535"><button id="button" getSize="GetButtonSize" /></pre> <p>In this example, the GetButtonSize callback function is to be called when the application needs to determine the size of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getSupertip</p>	<p>Specifies the name of a callback function to be called to determine the supertip of</p>

Attributes	Description
(getSupertip callback)	<p>this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 346 1211 369"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p>In this example, the GetButtonSupertip callback function is to be called when the application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getVisible (getVisible callback)	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 705 1174 728"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is to be called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
id (control identifier)	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control is passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1094 1019 1117"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an id of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
idMso (built-in control identifier)	<p>Specifies the identifier of a built-in control.</p> <p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1436 829 1459"><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
idQ (qualified control identifier)	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these</p>

Attributes	Description
	<p>attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 289 1317 632"> <customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI> </pre> <p>In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>image (custom image identifier)</p>	<p>Specifies the relationship identifier for an image that is to be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1045 1036 1073"> <button id="button" image="ForestPic" /> </pre> <p>This specifies a custom button whose icon is to be the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p>The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
<p>imageMso (built-in image identifier)</p>	<p>Specifies the identifier of a built-in image that is to be used as the icon of this control.</p> <p>The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1465 1008 1493"> <button id="button" imageMso="Bold" /> </pre> <p>This specifies a custom button that uses the built-in image with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterMso (identifier of built-in control to insert)</p>	<p>Specifies the identifier of a built-in control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p>

Attributes	Description
after)	<p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 365 1289 438"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertAfterQ (qualified identifier of control to insert after)	<p>Specifies the qualified identifier of a control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 831 1300 905"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
insertBeforeMso (identifier of built-in control to insert before)	<p>Specifies the identifier of a built-in control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1293 1300 1367"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertBeforeQ (qualified identifier of control to insert before)	<p>Specifies the qualified identifier of a control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p>

Attributes	Description
	<p>For example, consider the following XML fragment:</p> <pre data-bbox="521 254 1317 331"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>keytip (keytip)</p>	<p>Specifies a string to be used as the suggested KeyTip for this control.</p> <p>The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 772 1211 800"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
<p>label (label)</p>	<p>Specifies a string that is to be used as the label for this control.</p> <p>The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1052 1084 1079"><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>onAction (onAction callback)</p>	<p>Specifies the name of a callback function to be called when this control is invoked by the user.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1325 1317 1352"><button id="button" label="Button" onAction="ButtonClicked" /></pre> <p>This specifies a button that calls the ButtonClicked callback function when it is invoked.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>screentip (screentip)</p>	<p>Specifies a string to be shown as the screentip for this control.</p> <p>The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 596 1224 646"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>showImage (show image)</p>	<p>Specifies whether this control displays an icon. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider a button that does not display an icon, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1169 993 1220"><button id="button" showImage="false" label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>showLabel (show label)</p>	<p>Specifies whether this control displays its label. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1530 1172 1581"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p>This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

Attributes	Description
<p>size (control size)</p>	<p>Specifies the size of the control.</p> <p>The size and getSize attributes are mutually exclusive. If neither attribute is specified, the control's size SHOULD default to the normal size.</p> <p>For example, consider a large button, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 569 1057 594"><toggleButton idMso="Bold" size="large" /></pre> <p>The possible values for this attribute are defined by the ST_Size simple type, as specified in section 2.3.10.</p>
<p>supertip (supertip)</p>	<p>Specifies a string that is to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1268 1224 1339"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>tag (tag)</p>	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1646 1122 1692"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre>

Attributes	Description
	<p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>visible (control visibility)</p>	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 489 1019 512"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an id of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_Button">
  <complexContent>
    <extension base="CT_ButtonRegular">
      <attributeGroup ref="AG_SizeAttributes"/>
    </extension>
  </complexContent>
</complexType>
```

2.2.3 button (Unsize Button)

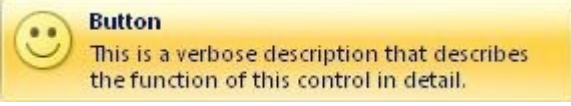

This element specifies a push-button that, due to its location, cannot have its size changed. The **size** attribute is not present. This element otherwise behaves like the regular **button** element, as specified in section [2.2.2](#).

The following table summarizes the elements that are parents of this element.

Parent Elements	Section
buttonGroup	2.2.5
dialogBoxLauncher	2.2.15
documentControls	2.2.16
dropDown	2.2.17
gallery	2.2.21
gallery	2.2.22
menu	2.2.28
menu	2.2.26
menu	2.2.29

Parent Elements	Section
menu	2.2.27
officeMenu	2.2.31
sharedControls	2.2.35

The following table summarizes the attributes of this element.

Attributes	Description
description	<p>Specifies a detailed description of the control, which is displayed in detailed views. The description and getDescription attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text. For example, consider a button with a detailed description, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre><button id="button" label="Button" imageMso="HappyFace" description="This is a verbose description that describes the function of this control in detail." /></pre> <p>The possible values for this attribute are defined by the ST_LongString simple type, as specified in section 2.3.8.</p>
enabled (enabled state)	<p>Specifies the enabled state of the control. The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled. This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application. For example, consider the following XML fragment:</p> <pre><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is always disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used. The possible values for this attribute are defined by the XML schema boolean datatype.</p>
getDescription (getDescription callback)	<p>Specifies the name of a callback function to be called to determine the detailed description of this control. The getDescription and description attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text. For example, consider the following XML fragment:</p> <pre><button id="button" getDescription="GetButtonDescription" /></pre> <p>In this example, the GetButtonDescription callback function is called when the application needs to determine the detailed description of the button. The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>

Attributes	Description
getEnabled (getEnabled callback)	<p>Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 380 1175 405"><button id="button" getEnabled="IsButtonEnabled" /></pre> <p>In this example, the IsButtonEnabled callback function is to be called when the application needs to determine the enabled state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getImage (getImage callback)	<p>Specifies the name of a callback function to be called to determine the icon of this control.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 741 1135 766"><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is to be called when the application needs to determine the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getKeytip (getKeytip callback)	<p>Specifies the name of a callback function that is called to determine the suggested KeyTip of this control.</p> <p>The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1100 1162 1125"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is to be called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getLabel (getLabel callback)	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1461 1135 1486"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is to be called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getScreentip (getScreentip callback)	<p>Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If neither</p>

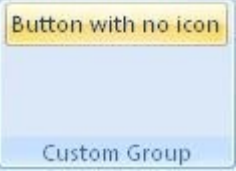

Attributes	Description
	<p>attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 310 1235 338"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is to be called when the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getShowImage (getShowImage callback)</p>	<p>Specifies the name of a callback function to be called to determine whether the application is to display the icon of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 730 1263 758"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p>In this example, the IsButtonImageVisible callback function is to be called when the application needs to determine whether to display the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getShowLabel (getShowLabel callback)</p>	<p>Specifies the name of a callback function to be called to determine whether the application is to display the label of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1150 1263 1178"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p>In this example, the IsButtonLabelVisible callback function is to be called when the application needs to determine whether to display the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getSupertip (getSupertip callback)</p>	<p>Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1507 1211 1535"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p>In this example, the GetButtonSupertip callback function is to be called when the application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getVisible</p>	<p>Specifies the name of a callback function to be called to determine the visibility</p>

Attributes	Description
(getVisible callback)	<p>state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 346 1174 369"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is to be called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
id (control identifier)	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 730 1019 753"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an id of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
idMso (built-in control identifier)	<p>Specifies the identifier of a built-in control.</p> <p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1073 829 1096"><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
idQ (qualified control identifier)	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1444 1312 1703"><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab></pre>

Attributes	Description
	<pre data-bbox="521 201 667 275"></tabs> </ribbon> </customUI></pre> <p data-bbox="493 310 1360 411">In this case, "ex" is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p data-bbox="493 422 1360 470">The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
image (custom image identifier)	<p data-bbox="493 495 1360 573">Specifies the relationship identifier for an image to be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p data-bbox="493 583 1360 632">The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p data-bbox="493 642 1040 667">For example, consider the following XML fragment:</p> <pre data-bbox="521 695 1032 720"><button id="button" image="ForestPic" /></pre> <p data-bbox="493 747 1305 798">This specifies a custom button whose icon is to be the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p data-bbox="493 808 1360 856">The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
imageMso (built-in image identifier)	<p data-bbox="493 884 1360 961">Specifies the identifier of a built-in image to be used as the icon of this control. The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p data-bbox="493 972 1360 1020">The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p data-bbox="493 1031 1040 1056">For example, consider the following XML fragment:</p> <pre data-bbox="521 1083 1008 1108"><button id="button" imageMso="Bold" /></pre> <p data-bbox="493 1136 1360 1186">This specifies a custom button that uses the built-in image with an identifier of "Bold".</p> <p data-bbox="493 1197 1360 1245">The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertAfterMso (identifier of built-in control to insert after)	<p data-bbox="493 1278 1360 1327">Specifies the identifier of a built-in control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p data-bbox="493 1337 1360 1436">The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p data-bbox="493 1446 1040 1472">For example, consider the following XML fragment:</p> <pre data-bbox="521 1499 1289 1577"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p data-bbox="493 1604 1360 1654">In this example, a new custom tab with an id of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p data-bbox="493 1665 1360 1713">The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>

Attributes	Description
insertAfterQ (qualified identifier of control to insert after)	<p>Specifies the qualified identifier of a control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 432 1300 506"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
insertBeforeMso (identifier of built-in control to insert before)	<p>Specifies the identifier of a built-in control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 898 1300 972"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertBeforeQ (qualified identifier of control to insert before)	<p>Specifies the qualified identifier of a control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1360 1300 1434"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
keytip (Keytip)	<p>Specifies a string to be used as the suggested KeyTip for this control.</p> <p>The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 352 1211 380"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
label (Label)	<p>Specifies a string to be used as the label for this control.</p> <p>The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 632 1084 659"><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
onAction (onAction callback)	<p>Specifies the name of a callback function to be called when this control is invoked by the user.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 905 1312 932"><button id="button" label="Button" onAction="ButtonClicked" /></pre> <p>This specifies a button that calls the ButtonClicked callback function when it is invoked.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
screentip (screentip)	<p>Specifies a string to be shown as the screentip for this control.</p> <p>The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1640 1224 1692"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre>

Attributes	Description
	<p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>showImage (show image)</p>	<p>Specifies whether this control displays an icon.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider a button that does not display an icon, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 701 992 751"><button id="button" showImage="false" label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>showLabel (Show Label)</p>	<p>Specifies whether this control displays its label.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1062 1170 1113"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p>This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>supertip (Supertip)</p>	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 640 1224 716"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
tag (Tag)	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1020 1122 1073"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
visible (control visibility)	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1381 1019 1409"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_ButtonRegular">
  <complexContent>
    <extension base="CT_Control">
      <attributeGroup ref="AG_Action"/>
    </extension>
  </complexContent>
</complexType>
```

```

<attributeGroup ref="AG_Enabled"/>
<attributeGroup ref="AG_Description"/>
<attributeGroup ref="AG_Image"/>
</extension>
</complexContent>
</complexType>

```

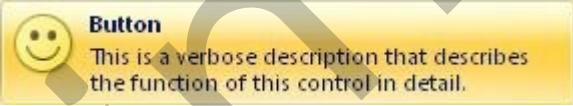

2.2.4 button (Button Inside of a Split Button)

This element specifies a push-button that is a child of a split button control. The **visible** and **getVisible** attributes are not present because the visibility is controlled by the split button. This element otherwise behaves in the same way as the **button** element, as specified in section [2.2.3](#).

The following table summarizes the elements that are parents of this element.

Parent Elements	Section
splitButton	2.2.38
splitButton	2.2.36
splitButton	2.2.37

The following table summarizes the attributes of this element.

Attributes	Description
description (description)	<p>Specifies a detailed description of the control, which is displayed in detailed views. The description and getDescription attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text. For example, consider a button with a detailed description, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre><button id="button" label="Button" imageMso="HappyFace" description="This is a verbose description that describes the function of this control in detail." /></pre> <p>The possible values for this attribute are defined by the ST_LongString simple type, as specified in section 2.3.8.</p>
enabled (enabled state)	<p>Specifies the enabled state of the control. The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled. This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application. For example, consider the following XML fragment:</p> <pre><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is always disabled. A permanently disabled button</p>

Attributes	Description
	<p>is not very useful, thus the enabled attribute is not commonly used.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>getDescription (getDescription callback)</p>	<p>Specifies the name of a callback function to be called to determine the detailed description of this control.</p> <p>The getDescription and description attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 478 1289 506"><button id="button" getDescription="GetButtonDescription" /></pre> <p>In this example, the GetButtonDescription callback function is called when the application needs to determine the detailed description of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getEnabled (getEnabled callback)</p>	<p>Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 842 1175 869"><button id="button" getEnabled="IsButtonEnabled" /></pre> <p>In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getImage (getImage callback)</p>	<p>Specifies the name of a callback function to be called to determine the icon of this control.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1203 1135 1230"><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getKeytip (getKeytip callback)</p>	<p>Specifies the name of a callback function to be called to determine the suggested KeyTip of this control.</p> <p>The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1564 1162 1591"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>

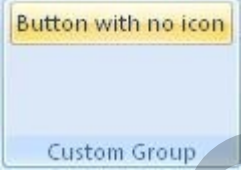

Attributes	Description
getLabel (getLabel callback)	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 380 1133 405"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getScreentip (getScreentip callback)	<p>Specifies the name of a callback function that is called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 764 1235 789"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowImage (getShowImage callback)	<p>Specifies the name of a callback function that is called to determine whether the application SHOULD display the icon of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1184 1260 1209"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p>In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowLabel (getShowLabel callback)	<p>Specifies the name of a callback function that is called to determine whether the application SHOULD display the label of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1604 1260 1629"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p>In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p>

Attributes	Description
	The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2 .
getSupertip (getSupertip callback)	<p>Specifies the name of a callback function that is called to determine the supertip of this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 449 1211 474"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p>In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getVisible (getVisible callback)	<p>Specifies the name of a callback function that is called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 810 1174 835"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
id (control identifier)	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1194 1019 1220"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an id of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
idMso (built-in control identifier)	<p>Specifies the identifier of a built-in control.</p> <p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1539 829 1564"><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
idQ (qualified)	Specifies a qualified identifier for a control.

Attributes	Description
control identifier)	<p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 373 1317 716"> <customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI> </pre> <p>In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
image (custom image identifier)	<p>Specifies the relationship identifier for an image that is used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1129 1036 1157"> <button id="button" image="ForestPic" /> </pre> <p>This specifies a custom button whose icon SHOULD be the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p>The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
imageMso (built-in image identifier)	<p>Specifies the identifier of a built-in image that is used as the icon of this control. The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1524 1008 1551"> <button id="button" imageMso="Bold" /> </pre> <p>This specifies a custom button that uses the built-in image with an id of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertAfterMso	Specifies the identifier of a built-in control that this control is to be inserted after. If

Attributes	Description
(identifier of built-in control to insert after)	<p>the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 401 1289 474"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertAfterQ (qualified identifier of control to insert after)	<p>Specifies the qualified identifier of a control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 863 1300 936"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
insertBeforeMso (identifier of built-in control to insert before)	<p>Specifies the identifier of a built-in control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1325 1300 1398"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertBeforeQ (qualified identifier of control to insert before)	<p>Specifies the qualified identifier of a control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are</p>

Attributes	Description
	<p>defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 285 1317 363"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted before the custom tab with a qualified identifier of x:OtherTab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>keytip (keytip)</p>	<p>Specifies a string to be used as the suggested KeyTip for this control.</p> <p>The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 806 1211 831"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
<p>label (label)</p>	<p>Specifies a string to be used as the label for this control.</p> <p>The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1083 1084 1108"><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>onAction (onAction callback)</p>	<p>Specifies the name of a callback function to be called when this control is invoked by the user.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1356 1317 1381"><button id="button" label="Button" onAction="ButtonClicked" /></pre> <p>This specifies a button that calls the ButtonClicked callback function when it is invoked.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>screentip (screentip)</p>	<p>Specifies a string to be shown as the screentip for this control.</p> <p>The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 596 1224 646"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
showImage (show image)	<p>Specifies whether this control displays an icon. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider a button that does not display an icon, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1169 993 1220"><button id="button" showImage="false" label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
showLabel (show label)	<p>Specifies whether this control displays its label. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1530 1172 1581"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p>This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

Attributes	Description
<p>supertip (supertip)</p>	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 772 1224 850"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>tag (tag)</p>	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1150 1122 1203"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>visible (control visibility)</p>	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1514 1019 1539"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```

<complexType name="CT_VisibleButton">
  <complexContent>
    <restriction base="CT_ButtonRegular">
      <attribute name="visible" use="prohibited"/>
      <attribute name="getVisible" use="prohibited"/>
    </restriction>
  </complexContent>
</complexType>

```

2.2.5 buttonGroup (Button Grouping Container)

This element specifies a grouping container that groups controls together visually. The child controls are laid out horizontally.

For example, consider a group of buttons, as follows:

Figure 3: A group of buttons

This is specified using the following XML fragment:

```

<buttonGroup id="buttonGroup">
  <button id="button1" imageMso="Bold" />
  <button id="button2" imageMso="Italic" />
  <button id="button3" imageMso="Underline" />
</buttonGroup>

```

The following table summarizes the elements that are parents of this element.

Parent Elements	Section
box	2.2.1
group	2.2.23

The following table summarizes the elements that are children of this element.

Child Elements	Section
button (Unsize Button)	2.2.3
control (Unsize Control Clone)	2.2.11
dynamicMenu (Unsize Dynamic Menu)	2.2.18
gallery (Unsize Gallery)	2.2.22
menu (Unsize Menu)	2.2.26

Child Elements	Section
splitButton (Unsize Split Button)	2.2.36
toggleButton (Unsize Toggle Button)	2.2.42

The following table summarizes the attributes of this element.

Attributes	Description
getVisible (getVisible callback)	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
id (control identifier)	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an id of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
idQ (qualified control identifier)	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI></pre>

Attributes	Description
	<p>In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>insertAfterMso (identifier of built-in control to insert after)</p>	<p>Specifies the identifier of a built-in control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 617 1289 695"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterQ (qualified identifier of control to insert after)</p>	<p>Specifies the qualified identifier of a control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1083 1300 1161"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>insertBeforeMso (identifier of built-in control to insert before)</p>	<p>Specifies the identifier of a built-in control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1549 1300 1627"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted before the built-in tab with an id of "TabHome".</p>

Attributes	Description
	The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5 .
insertBeforeQ (qualified identifier of control to insert before)	<p>Specifies the qualified identifier of a control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
visible (control visibility)	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
complexType name="CT_ButtonGroup">
  <sequence>
    <choice minOccurs="0" maxOccurs="1000">
      <element name="control" type="CT_ControlCloneRegular"/>
      <element name="button" type="CT_ButtonRegular"/>
      <element name="toggleButton" type="CT_ToggleButtonRegular"/>
      <element name="gallery" type="CT_GalleryRegular"/>
      <element name="menu" type="CT_MenuRegular"/>
      <element name="dynamicMenu" type="CT_DynamicMenuRegular"/>
      <element name="splitButton" type="CT_SplitButtonRegular"/>
    </choice>
  </sequence>
  <attributeGroup ref="AG_IDCustom"/>
  <attributeGroup ref="AG_Visible"/>
  <attributeGroup ref="AG_PositionAttributes"/>
</complexType>
```

2.2.6 checkBox (Check Box)

This element specifies a standard checkbox control.

For example, consider a checkbox control, as follows:

Figure 4: A checkbox control

This is specified using the following XML fragment:

```
<checkBox id="checkBox" label="CheckBox" />
```

The following table summarizes the elements that are parents of this element.

Parent Elements	Section
box	2.2.1
group	2.2.23
menu	2.2.28
menu	2.2.26
menu	2.2.29
menu	2.2.27
officeMenu	2.2.31

The following table summarizes the attributes of this element.

Attributes	Description
description (description)	<p>Specifies a detailed description of the control, which is displayed in detailed views. The description and getDescription attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text. For example, consider a button with a detailed description, as follows:</p> <div data-bbox="493 1314 1065 1419" data-label="Image"> </div> <p>This is specified using the following XML fragment:</p> <pre><button id="button" label="Button" imageMso="HappyFace" description="This is a verbose description that describes the function of this control in detail." /></pre> <p>The possible values for this attribute are defined by the ST_LongString simple type, as specified in section 2.3.8.</p>
enabled (enabled state)	<p>Specifies the enabled state of the control. The getEnabled and enabled attributes are mutually exclusive. If neither</p>

Attributes	Description
	<p>attribute is specified, the control SHOULD default to being enabled.</p> <p>This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 344 1317 369"><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is always disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
getDescription (getDescription callback)	<p>Specifies the name of a callback function to be called to determine the detailed description of this control.</p> <p>The getDescription and description attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 705 1289 730"><button id="button" getDescription="GetButtonDescription" /></pre> <p>In this example, the GetButtonDescription callback function is called when the application needs to determine the detailed description of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getEnabled (getEnabled callback)	<p>Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1066 1175 1092"><button id="button" getEnabled="IsButtonEnabled" /></pre> <p>In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getImage (getImage callback)	<p>Specifies the name of a callback function to be called to determine the icon of this control.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1428 1138 1453"><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getKeytip (getKeytip callback)	<p>Specifies the name of a callback function to be called to determine the suggested KeyTip of this control.</p> <p>The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p>

Attributes	Description
	<p>For example, consider the following XML fragment:</p> <pre data-bbox="521 254 1162 279"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getLabel (getLabel callback)</p>	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 615 1135 640"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getPressed (getPressed callback)</p>	<p>Specifies the name of a callback function to be called to determine the toggled state of this control.</p> <p>If this attribute is omitted, the control SHOULD default to the off state.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 947 1252 972"><toggleButton id="toggle" getPressed="IsButtonToggled" /></pre> <p>In this example, the IsButtonToggled callback function is called when the application needs to determine the toggle state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getScreentip (getScreentip callback)</p>	<p>Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1335 1239 1360"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getShowImage (getShowImage callback)</p>	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the icon of this control.</p> <p>This attribute SHOULD have no effect if the size or getSIZE attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="521 218 1263 243"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p data-bbox="493 275 1365 327">In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p data-bbox="493 333 1386 386">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowLabel (getShowLabel callback)	<p data-bbox="493 411 1344 464">Specifies the name of a callback function to be called to determine whether the application displays the label of this control.</p> <p data-bbox="493 470 1382 522">This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p data-bbox="493 529 1365 581">The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p data-bbox="493 588 1040 615">For example, consider the following XML fragment:</p> <pre data-bbox="521 642 1263 667"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p data-bbox="493 695 1354 747">In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p data-bbox="493 753 1386 806">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getSupertip (getSupertip callback)	<p data-bbox="493 831 1377 884">Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p data-bbox="493 890 1308 942">The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p data-bbox="493 949 1040 976">For example, consider the following XML fragment:</p> <pre data-bbox="521 1003 1211 1029"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p data-bbox="493 1056 1328 1108">In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p data-bbox="493 1115 1386 1167">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getVisible (getVisible callback)	<p data-bbox="493 1188 1344 1241">Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p data-bbox="493 1247 1386 1299">The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p data-bbox="493 1306 1040 1333">For example, consider the following XML fragment:</p> <pre data-bbox="521 1360 1174 1386"><button id="button" getVisible="IsButtonVisible" /></pre> <p data-bbox="493 1413 1289 1465">In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p data-bbox="493 1472 1386 1524">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
id (control identifier)	<p data-bbox="493 1556 1382 1629">Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p data-bbox="493 1635 1344 1688">The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p data-bbox="493 1694 1040 1722">For example, consider the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="521 218 1019 241"><button id="MyButton" label="Button" /></pre> <p data-bbox="493 275 1393 359">This specifies a custom button control with an id of "MyButton". The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
idMso (built-in control identifier)	<p data-bbox="493 386 1065 443">Specifies the identifier of a built-in control. The contents of this attribute are application-defined.</p> <p data-bbox="493 453 1344 510">The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p data-bbox="493 512 1040 535">For example, consider the following XML fragment:</p> <pre data-bbox="521 562 829 585"><control idMso="Bold" /></pre> <p data-bbox="493 617 1341 701">This creates a clone of the control with an identifier of "Bold". The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
idQ (qualified control identifier)	<p data-bbox="493 728 1377 812">Specifies a qualified identifier for a control. The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p data-bbox="493 823 1344 879">The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p data-bbox="493 882 1040 905">For example, consider the following XML fragment:</p> <pre data-bbox="521 932 1312 1276"><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI></pre> <p data-bbox="493 1308 1357 1409">In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p data-bbox="493 1419 1357 1476">The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
image (custom image identifier)	<p data-bbox="493 1495 1360 1572">Specifies the relationship identifier for an image to be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p data-bbox="493 1583 1377 1640">The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p data-bbox="493 1642 1040 1665">For example, consider the following XML fragment:</p> <pre data-bbox="521 1692 1032 1715"><button id="button" image="ForestPic" /></pre>

Attributes	Description
	<p>This specifies a custom button whose icon is to be the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p>The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
<p>imageMso (built-in image identifier)</p>	<p>Specifies the identifier of a built-in image to be used as the icon of this control. The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 548 1008 569"><button id="button" imageMso="Bold" /></pre> <p>This specifies a custom button to use the built-in image with an id of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterMso (identifier of built-in control to insert after)</p>	<p>Specifies the identifier of a built-in control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 932 1289 1010"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterQ (qualified identifier of control to insert after)</p>	<p>Specifies the qualified identifier of a control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1398 1300 1476"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>insertBeforeMso (identifier of built-in control to insert</p>	<p>Specifies the identifier of a built-in control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ</p>

Attributes	Description
before)	<p>attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 338 1300 415"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertBeforeQ (qualified identifier of control to insert before)	<p>Specifies the qualified identifier of a control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 800 1300 877"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
keytip (keytip)	<p>Specifies a string to be used as the suggested KeyTip for this control.</p> <p>The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1325 1211 1346"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
label (label)	<p>Specifies a string to be used as the label for this control.</p> <p>The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1598 1081 1619"><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as</p>

Attributes	Description
	specified in section 2.3.11 .
onAction (onAction callback)	<p>Specifies the name of a callback function to be called when this control is invoked by the user.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Button" onAction="ButtonClicked" /></pre> <p>This specifies a button that calls the ButtonClicked callback function when it is invoked.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
screentip (screentip)	<p>Specifies a string to be shown as the screentip for this control.</p> <p>The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
showImage (show image)	<p>Specifies whether this control displays an icon.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider a button that does not display an icon, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre><button id="button" showImage="false"</pre>

Attributes	Description
	<pre>label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
showLabel (show label)	<p>Specifies whether this control displays its label.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p>This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
supertip (supertip)	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
tag (tag)	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Button" tag="123456"</pre>

Attributes	Description
	<p>onAction="ButtonClicked" /></p> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>visible (control visibility)</p>	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 533 1019 558"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an id of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_CheckBox">
  <complexContent>
    <restriction base="CT_ToggleButtonRegular">
      <attribute name="image" use="prohibited"/>
      <attribute name="imageMso" use="prohibited"/>
      <attribute name="getImage" use="prohibited"/>
      <attribute name="showImage" use="prohibited"/>
      <attribute name="getShowImage" use="prohibited"/>
      <attribute name="showLabel" use="prohibited"/>
      <attribute name="getShowLabel" use="prohibited"/>
    </restriction>
  </complexContent>
</complexType>
```

2.2.7 comboBox (Combo Box)

This element specifies a standard combo box control that allows a user to input a text **string** or select one from a list.

For example, consider a combo box control, as follows:

Figure 5: A combo box control

This is specified using the following XML fragment:

```
<comboBox id="comboBox" label="Combo Box">
```

```

<item id="item1" label="Item 1" />
<item id="item2" label="Item 2" />
<item id="item3" label="Item 3" />
</comboBox>

```

The following table summarizes the elements that are parents of this element.

Parent Elements
box (section 2.2.1); group (section 2.2.23)

The following table summarizes the elements that are children of this element.

Child Elements	Section
item (Selection Item)	2.2.24

The following table summarizes the attributes of this element.

Attributes	Description
enabled (enabled state)	<p>Specifies the enabled state of the control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
getEnabled (getEnabled callback)	<p>Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" getEnabled="IsButtonEnabled" /></pre> <p>In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getImage (getImage callback)	<p>Specifies the name of a callback function to be called to determine the icon of this control.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p>

Attributes	Description
	<p>For example, consider the following XML fragment:</p> <pre data-bbox="610 254 1224 275" style="background-color: #f0f0f0; padding: 5px;"><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getItemCount (getItemCount callback)</p>	<p>Specifies the name of a callback function to be called to determine the number of selection items in this control.</p> <p>If this attribute is omitted, the control SHOULD display any selection items that are specified as child elements. If no such items are specified, the control SHOULD be empty.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 642 1365 663" style="background-color: #f0f0f0; padding: 5px;"><gallery id="gallery" getItemCount="GetGalleryItemCount" /></pre> <p>In this example, the GetGalleryItemCount callback function is called when the application needs to determine the number of items in the gallery.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getItemID (getItemID callback)</p>	<p>Specifies the name of a callback function to be called to determine the identifier of a specific dynamically-created selection item, identified by index.</p> <p>If this attribute is omitted, dynamically-created selection items SHOULD have empty identifiers.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1052 1325 1104" style="background-color: #f0f0f0; padding: 5px;"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemID="GetGalleryItemID" /></pre> <p>In this example, the GetGalleryItemID callback function is called when the application needs to determine the identifier of a selection item.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getItemImage (getItemImage callback)</p>	<p>Specifies the name of a callback function to be called to determine the icon of a specific dynamically-created selection item, identified by index.</p> <p>If this attribute is omitted, dynamically-created selection items SHOULD NOT display icons.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1440 1325 1493" style="background-color: #f0f0f0; padding: 5px;"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemImage="GetGalleryItemImage" /></pre> <p>In this example, the GetGalleryItemImage callback function is called when the application needs to determine the icon of a selection item.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getItemLabel (getItemLabel callback)</p>	<p>Specifies the name of a callback function to be called to determine the label of a specific dynamically-created selection item, identified by index.</p>

Attributes	Description
	<p>If this attribute is omitted, dynamically-created selection items SHOULD NOT display labels.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 310 1325 363"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemLabel="GetGalleryItemLabel" /></pre> <p>In this example, the GetGalleryItemLabel callback function is called when the application needs to determine the label of a selection item.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getItemScreentip (getItemScreentip callback)</p>	<p>Specifies the name of a callback function to be called to determine the screentip of a specific dynamically-created selection item, identified by index.</p> <p>If this attribute is omitted, dynamically-created selection items SHOULD use their labels as their screentips, or display no screentips at all.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 722 1325 774"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemScreentip="GetGalleryItemScreentip" /></pre> <p>In this example, the GetGalleryItemScreentip callback function is called when the application needs to determine the screentip of a selection item.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getItemSupertip (getItemSupertip callback)</p>	<p>Specifies the name of a callback function to be called to determine the supertip of a specific dynamically-created selection item, identified by index.</p> <p>If this attribute is omitted, dynamically-created selection items SHOULD NOT display supertips.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1136 1325 1188"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemSupertip="GetGalleryItemSupertip" /></pre> <p>In this example, the GetGalleryItemSupertip callback function is called when the application needs to determine the supertip of a selection item.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getKeytip (getKeytip callback)</p>	<p>Specifies the name of a callback function to be called to determine the suggested KeyTip of this control.</p> <p>The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1545 1243 1577"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>

Attributes	Description
getLabel (getLabel callback)	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 380 1222 405"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getScreentip (getScreentip callback)	<p>Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 764 1325 789"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowImage (getShowImage callback)	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the icon of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1184 1349 1209"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p>In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowLabel (getShowLabel callback)	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the label of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1656 1349 1682"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre>

Attributes	Description
	<p>In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getSupertip (getSupertip callback)</p>	<p>Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 562 1295 590"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p>In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getText (getText callback)</p>	<p>Specifies the name of a callback function to be called to determine the text that is displayed in the control.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 863 1235 890"><editBox id="editBox" getText="GetEditBoxText" /></pre> <p>In this example, the GetEditBoxText callback function is called when the application needs to determine the text to display in the control.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getVisible (getVisible callback)</p>	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1224 1260 1251"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>id (control identifier)</p>	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1612 1105 1640"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an id of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID</p>

Attributes	Description
	simple type, as specified in section 2.3.13 .
idMso (built-in control identifier)	<p>Specifies the identifier of a built-in control.</p> <p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
idQ (qualified control identifier)	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI></pre> <p>In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
image (custom image identifier)	<p>Specifies the relationship identifier for an image to be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" image="ForestPic" /></pre> <p>This specifies a custom button whose icon is the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p>The possible values for this attribute are defined by the ST_Uri simple</p>

Attributes	Description
	type, as specified in section 2.3.14 .
imageMso (built-in image identifier)	<p>Specifies the identifier of a built-in image to be used as the icon of this control.</p> <p>The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 478 1094 506"><button id="button" imageMso="Bold" /></pre> <p>This specifies a custom button that uses the built-in image with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertAfterMso (identifier of built-in control to insert after)	<p>Specifies the identifier of a built-in control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 919 1377 995"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertAfterQ (qualified identifier of control to insert after)	<p>Specifies the qualified identifier of a control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1413 1386 1488"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
insertBeforeMso (identifier of built-in control)	<p>Specifies the identifier of a built-in control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be</p>

Attributes	Description
to insert before)	<p>ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="609 401 1390 474"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertBeforeQ (qualified identifier of control to insert before)	<p>Specifies the qualified identifier of a control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="609 890 1325 989"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
invalidateContentOnDrop (invalidate content on drop)	<p>Specifies whether this control invalidates its contents and re-queries for them when the user opens its drop-down menu.</p> <p>If this attribute is omitted, its value SHOULD default to "false".</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="609 1304 1360 1377"><comboBox id="comboBox" getItemCount="GetComboBoxItemCount" getItemLabel="GetComboBoxItemLabel" invalidateContentOnDrop="true" /></pre> <p>In this example, this combo box clears out its items and re-calls the GetComboBoxItemCount and GetComboBoxItemLabel callback functions in order to populate its contents each time the user opens it.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
keytip (keytip)	<p>Specifies a string to be used as the suggested KeyTip for this control.</p> <p>The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="609 352 1299 378"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
label (label)	<p>Specifies a string to be used as the label for this control. The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed. For example, consider the following XML fragment:</p> <pre data-bbox="609 630 1169 655"><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button". The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
maxLength (maximum input string length)	<p>Specifies an integer to be used as the maximum length of a string that can be entered into the control. If the maxLength attribute is omitted, the length of the input string SHOULD NOT be limited, except by application-specific constraints. For example, consider the following XML fragment:</p> <pre data-bbox="609 961 1104 987"><editBox id="editBox" maxLength="10" /></pre> <p>This specifies an edit box control that can only accept strings up to 10 characters in length. The possible values for this attribute are defined by the ST_StringLength simple type, as specified in section 2.3.12.</p>
onChange (onChange callback)	<p>Specifies the name of a callback function to be called when the text in the control has been changed by the user. For example, consider the following XML fragment:</p> <pre data-bbox="609 1264 1299 1289"><editBox id="editBox" onChange="EditBoxTextChanged" /></pre> <p>This specifies an edit box control that calls the EditBoxTextChanged callback function when the user inputs a text string. The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
screentip (screentip)	<p>Specifies a string to be shown as the screentip for this control. The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all. For example, consider a button with a screentip, as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="610 596 1312 646"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>showImage (show image)</p>	<p>Specifies whether this control displays an icon. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large". The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon. For example, consider a button that does not display an icon, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="610 1171 1081 1222"><button id="button" showImage="false" label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>showItemImage (show item image)</p>	<p>Specifies whether this control displays icons on its selection items. If this attribute is omitted, the items' icons SHOULD be shown by default. For example, consider the following XML fragment:</p> <pre data-bbox="610 1451 1390 1606"><gallery id="gallery" label="Gallery" showItemImage="false" > <item id="item1" label="Item 1" /> <item id="item2" label="Item 1" /> <item id="item3" label="Item 2" /> <item id="item4" label="Item 3" /> </gallery></pre> <p>This specifies a gallery control that does not show any icons on its selection items. The possible values for this attribute are defined by the XML schema</p>

Attributes	Description
	boolean datatype.
showLabel (show label)	<p>Specifies whether this control displays its label.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="613 485 1260 533"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p>This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
sizeString (size string)	<p>Specifies a string whose size is used to determine the width of the text input area of this control.</p> <p>If this attribute is omitted, the application SHOULD determine the width of the text input area of the control automatically.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="613 869 1260 894"><editBox id="editBox" sizeString="XXXXXXXXXXXX" /></pre> <p>This specifies an edit box control that SHOULD be wide enough to display the string "XXXXXXXXXXXX".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
supertip (supertip)	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="613 1625 1308 1703"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre>

Attributes	Description
	The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11 .
tag (tag)	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 478 1208 529"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
visible (control visibility)	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 840 1107 865"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_ComboBox">
  <complexContent>
    <extension base="CT_EditBox">
      <sequence>
        <element name="item" type="CT_Item" minOccurs="0" maxOccurs="1000"/>
      </sequence>
      <attributeGroup ref="AG_DropDownAttributes"/>
      <attributeGroup ref="AG_DynamicContentAttributes"/>
    </extension>
  </complexContent>
</complexType>
```

2.2.8 command (Repurposed Command)

This element specifies that a particular built-in command in the application is to be repurposed.

The **enabled** and **getEnabled** attributes can be specified in order to disable a command.

The **onAction** attribute allows the functionality of a command to be repurposed to run a callback function. Only commands which execute simple actions (for example, commands represented as button controls) can be repurposed using **onAction**.

For example, consider the following XML fragment:

```

<commands>
  <command idMso="Bold" enabled="false" />
  <command idMso="Paste" onAction="MyPasteFunction" />
</commands>

```

In this example, the **Bold** command is permanently disabled and that the callback function **MyPasteFunction** is called when the **Paste** command is invoked.

The following table summarizes the elements that are parents of this element.

Parent Elements
commands (section 2.2.9)

The following table summarizes the attributes of this element.

Attributes	Description
enabled (enabled state)	<p>Specifies the enabled state of the control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
getEnabled (getEnabled callback)	<p>Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" getEnabled="IsButtonEnabled" /></pre> <p>In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
idMso (built-in control identifier)	<p>Specifies the identifier of a built-in control.</p> <p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold".</p>

Attributes	Description
	The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5 .
onAction (onAction callback)	<p>Specifies the name of a callback function to be called when this control is invoked by the user.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Button" onAction="ButtonClicked" /></pre> <p>This specifies a button that calls the ButtonClicked callback function when it is invoked.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_Command" mixed="false">
  <attributeGroup ref="AG_Action"/>
  <attributeGroup ref="AG_Enabled"/>
  <attributeGroup ref="AG_IDMso"/>
</complexType>
```

2.2.9 commands (List of Repurposed Commands)

This element specifies a list of repurposed commands. This element SHOULD NOT be specified if the containing Custom UI XML document is a Quick Access Toolbar Customizations part.

The following table summarizes the elements that are parents of this element.

Parent Elements
customUI (section 2.2.14)

The following table summarizes the elements that are children of this element.

Child Elements	Subclause
command (Repurposed Command)	section 2.2.8

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_Commands">
  <sequence>
    <element name="command" type="CT_Command" minOccurs="1" maxOccurs="5000"/>
  </sequence>
</complexType>
```

2.2.10 contextualTabs (List of Contextual Tab Sets)

This element specifies a list of contextual tab sets. This element SHOULD NOT be specified if the containing Custom UI XML document is a Quick Access Toolbar Customizations part.

The following table summarizes the elements that are parents of this element.

Parent Elements
ribbon (section 2.2.33)

The following table summarizes the elements that are children of this element.

Child Elements	Subclause
tabSet (Contextual Tab Set)	section 2.2.41

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_ContextualTabs">
  <sequence>
    <element name="tabSet" type="CT_TabSet" minOccurs="1" maxOccurs="100"/>
  </sequence>
</complexType>
```

2.2.11 control (Unsize Control Clone)

This element specifies a clone of a control that, due to its location, cannot have its size changed. The **size** attribute is not present. The element otherwise behaves like the regular **control** element, as specified in section [2.2.12](#).

The following table summarizes the elements that are parents of this element.

Parent Elements
buttonGroup (section 2.2.5); menu (section 2.2.28); menu (section 2.2.26); menu (section 2.2.29); menu (section 2.2.27); officeMenu (section 2.2.31)

The following table summarizes the attributes of this element.

Attributes	Description
enabled (enabled state)	<p>Specifies the enabled state of the control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
getEnabled (getEnabled callback)	<p>Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither</p>

Attributes	Description
	<p>attribute is specified, the control SHOULD default to being enabled. For example, consider the following XML fragment:</p> <pre data-bbox="521 285 1175 310"><button id="button" getEnabled="IsButtonEnabled" /></pre> <p>In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button. The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getImage (getImage callback)</p>	<p>Specifies the name of a callback function to be called to determine the icon of this control. The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed. For example, consider the following XML fragment:</p> <pre data-bbox="521 646 1135 672"><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button. The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getKeytip (getKeytip callback)</p>	<p>Specifies the name of a callback function to be called to determine the suggested KeyTip of this control. The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically. For example, consider the following XML fragment:</p> <pre data-bbox="521 1005 1162 1031"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button. The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getLabel (getLabel callback)</p>	<p>Specifies the name of a callback function to be called to determine the label of this control. The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed. For example, consider the following XML fragment:</p> <pre data-bbox="521 1367 1138 1392"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button. The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getScreentip (getScreentip callback)</p>	<p>Specifies the name of a callback function to be called to determine the screentip of this control. The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all. For example, consider the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="521 218 1235 243"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p data-bbox="493 275 1341 325">In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p data-bbox="493 333 1386 384">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowImage (getShowImage callback)	<p data-bbox="493 411 1341 462">Specifies the name of a callback function to be called to determine whether the application SHOULD display the icon of this control.</p> <p data-bbox="493 470 1386 520">This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p data-bbox="493 529 1386 579">The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p data-bbox="493 588 1040 613">For example, consider the following XML fragment:</p> <pre data-bbox="521 640 1263 665"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p data-bbox="493 695 1365 745">In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p data-bbox="493 753 1386 804">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowLabel (getShowLabel callback)	<p data-bbox="493 831 1341 882">Specifies the name of a callback function to be called to determine whether the application SHOULD display the label of this control.</p> <p data-bbox="493 890 1386 940">This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p data-bbox="493 949 1365 999">The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p data-bbox="493 1008 1040 1033">For example, consider the following XML fragment:</p> <pre data-bbox="521 1060 1263 1085"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p data-bbox="493 1115 1354 1165">In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p data-bbox="493 1173 1386 1224">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getSupertip (getSupertip callback)	<p data-bbox="493 1251 1373 1302">Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p data-bbox="493 1310 1308 1360">The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p data-bbox="493 1369 1040 1394">For example, consider the following XML fragment:</p> <pre data-bbox="521 1421 1211 1446"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p data-bbox="493 1476 1328 1526">In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p data-bbox="493 1535 1386 1585">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getVisible (getVisible callback)	<p data-bbox="493 1608 1341 1659">Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p data-bbox="493 1667 1386 1717">The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p>

Attributes	Description
	<p>For example, consider the following XML fragment:</p> <pre data-bbox="521 254 1175 279"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
id (control identifier)	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 642 1019 667"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an identifier of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
idMso (built-in control identifier)	<p>Specifies the identifier of a built-in control.</p> <p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 982 829 1008"><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
idQ (qualified control identifier)	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1352 1313 1692"><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI></pre>

Attributes	Description
	<p>In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>image (custom image identifier)</p>	<p>Specifies the relationship identifier for an image to be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 590 1036 615"><button id="button" image="ForestPic" /></pre> <p>This specifies a custom button whose icon is the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p>The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
<p>imageMso (built-in image identifier)</p>	<p>Specifies the identifier of a built-in image to be used as the icon of this control. The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 982 1008 1008"><button id="button" imageMso="Bold" /></pre> <p>This specifies a custom button that uses the built-in image with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterMso (identifier of built-in control to insert after)</p>	<p>Specifies the identifier of a built-in control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1396 1287 1472"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterQ (qualified identifier of control to insert after)</p>	<p>Specifies the qualified identifier of a control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ</p>

Attributes	Description
after)	<p>attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 338 1300 415"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
insertBeforeMso (identifier of built-in control to insert before)	<p>Specifies the identifier of a built-in control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 800 1300 877"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertBeforeQ (qualified identifier of control to insert before)	<p>Specifies the qualified identifier of a control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1262 1300 1339"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
keytip (keytip)	<p>Specifies a string to be used as the suggested KeyTip for this control.</p> <p>The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 352 1211 380"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
label (label)	<p>Specifies a string to be used as the label for this control.</p> <p>The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 632 1084 659"><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
screentip (screentip)	<p>Specifies a string to be shown as the screentip for this control.</p> <p>The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1339 1224 1388"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
showImage (show image)	<p>Specifies whether this control displays an icon.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider a button that does not display an icon, as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 432 995 485"><button id="button" showImage="false" label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
showLabel (show label)	<p>Specifies whether this control displays its label.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 793 1174 846"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p>This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
supertip (supertip)	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1577 1222 1650"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as</p>

Attributes	Description
	specified in section 2.3.11 .
tag (tag)	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 449 1122 499"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
visible (control visibility)	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 810 1019 835"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_ControlCloneRegular">
  <complexContent>
    <restriction base="CT_Control">
      <attribute name="id" use="prohibited"/>
    </restriction>
  </complexContent>
</complexType>
```

2.2.12 control (Control Clone)

This element specifies a clone of an existing control. Built-in controls can be cloned using the **idMso** attribute. Custom controls can be cloned using the **idQ** attribute. Custom controls cannot be created using the **control** element.

When an existing control is cloned, its non-location-specific properties, such as the icon and label, are copied to the clone. Location-specific properties, such as the size and visibility of the control, are not copied. These properties can be set by specifying additional attributes on the **control** element.

For example, consider the following XML fragment:

```
<control idMso="Paste" size="large" />
```

This results in a large copy of the **Paste** control, as follows:

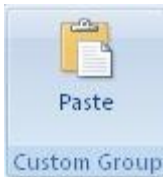

Figure 6: A Paste control

The following table summarizes the elements that are parents of this element.

Parent Elements
box (section 2.2.1); group (section 2.2.23)

The following table summarizes the attributes of this element.

Attributes	Description
description (description)	<p>Specifies a detailed description of the control, which is displayed in detailed views. The description and getDescription attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text. For example, consider a button with a detailed description, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre><button id="button" label="Button" imageMso="HappyFace" description="This is a verbose description that describes the function of this control in detail." /></pre> <p>The possible values for this attribute are defined by the ST_LongString simple type, as specified in section 2.3.8.</p>
enabled (enabled state)	<p>Specifies the enabled state of the control. The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled. This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application. For example, consider the following XML fragment:</p> <pre><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used. The possible values for this attribute are defined by the XML schema boolean datatype.</p>
getDescription (getDescription callback)	<p>Specifies the name of a callback function to be called to determine the detailed description of this control. The getDescription and description attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text. For example, consider the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="521 218 1289 243"><button id="button" getDescription="GetButtonDescription" /></pre> <p data-bbox="493 275 1365 325">In this example, the GetButtonDescription callback function is called when the application needs to determine the detailed description of the button.</p> <p data-bbox="493 331 1386 382">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getEnabled (getEnabled callback)	<p data-bbox="493 411 1341 462">Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p data-bbox="493 468 1300 518">The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p data-bbox="493 525 1040 554">For example, consider the following XML fragment:</p> <pre data-bbox="521 581 1175 606"><button id="button" getEnabled="IsButtonEnabled" /></pre> <p data-bbox="493 634 1305 684">In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button.</p> <p data-bbox="493 690 1386 741">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getImage (getImage callback)	<p data-bbox="493 768 1377 819">Specifies the name of a callback function to be called to determine the icon of this control.</p> <p data-bbox="493 825 1382 875">The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p data-bbox="493 882 1040 911">For example, consider the following XML fragment:</p> <pre data-bbox="521 938 1133 963"><button id="button" getImage="GetButtonImage" /></pre> <p data-bbox="493 991 1305 1041">In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button.</p> <p data-bbox="493 1047 1386 1098">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getKeytip (getKeytip callback)	<p data-bbox="493 1131 1369 1182">Specifies the name of a callback function to be called to determine the suggested KeyTip of this control.</p> <p data-bbox="493 1188 1382 1239">The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p data-bbox="493 1245 1040 1274">For example, consider the following XML fragment:</p> <pre data-bbox="521 1302 1162 1327"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p data-bbox="493 1354 1305 1404">In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p data-bbox="493 1411 1386 1461">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getLabel (getLabel callback)	<p data-bbox="493 1495 1382 1545">Specifies the name of a callback function to be called to determine the label of this control.</p> <p data-bbox="493 1551 1357 1602">The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p data-bbox="493 1608 1040 1638">For example, consider the following XML fragment:</p> <pre data-bbox="521 1665 1133 1690"><button id="button" getLabel="GetButtonLabel" /></pre>

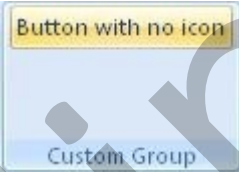

Attributes	Description
	<p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getScreentip (getScreentip callback)</p>	<p>Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 537 1235 562"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getShowImage (getShowImage callback)</p>	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the icon of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 957 1263 982"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p>In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getShowLabel (getShowLabel callback)</p>	<p>Specifies the name of a callback function to be called to determine whether the application displays the label of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1377 1263 1402"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p>In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getSize (getSize callback)</p>	<p>Specifies the name of a callback function to be called to determine the size of this control.</p> <p>The getSize and size attributes are mutually exclusive. If neither attribute is specified, the control's size SHOULD default to the normal size.</p> <p>For example, consider the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="521 218 1110 241"><button id="button" getSize="GetButtonSize" /></pre> <p data-bbox="493 275 1276 325">In this example, the GetButtonSize callback function is called when the application needs to determine the size of the button.</p> <p data-bbox="493 333 1386 384">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getSupertip (getSupertip callback)	<p data-bbox="493 411 1373 462">Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p data-bbox="493 470 1308 520">The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p data-bbox="493 529 1040 554">For example, consider the following XML fragment:</p> <pre data-bbox="521 581 1211 604"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p data-bbox="493 634 1328 684">In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p data-bbox="493 693 1386 743">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getVisible (getVisible callback)	<p data-bbox="493 768 1344 819">Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p data-bbox="493 827 1390 877">The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p data-bbox="493 886 1040 911">For example, consider the following XML fragment:</p> <pre data-bbox="521 938 1175 961"><button id="button" getVisible="IsButtonVisible" /></pre> <p data-bbox="493 991 1289 1041">In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p data-bbox="493 1050 1386 1100">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
id (control identifier)	<p data-bbox="493 1131 1383 1207">Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p data-bbox="493 1215 1344 1266">The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p data-bbox="493 1274 1040 1299">For example, consider the following XML fragment:</p> <pre data-bbox="521 1327 1019 1350"><button id="MyButton" label="Button" /></pre> <p data-bbox="493 1379 1252 1404">This specifies a custom button control with an identifier of "MyButton".</p> <p data-bbox="493 1413 1393 1463">The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
idMso (built-in control identifier)	<p data-bbox="493 1495 954 1520">Specifies the identifier of a built-in control.</p> <p data-bbox="493 1528 1065 1554">The contents of this attribute are application-defined.</p> <p data-bbox="493 1562 1344 1612">The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p data-bbox="493 1621 1040 1646">For example, consider the following XML fragment:</p> <pre data-bbox="521 1673 829 1696"><control idMso="Bold" /></pre>

Attributes	Description
	<p>This creates a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>idQ (qualified control identifier)</p>	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 527 1317 863"> <customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI> </pre> <p>In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>image (custom image identifier)</p>	<p>Specifies the relationship identifier for an image to be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1276 1036 1304"> <button id="button" image="ForestPic" /> </pre> <p>This specifies a custom button whose icon is the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p>The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
<p>imageMso (built-in image identifier)</p>	<p>Specifies the identifier of a built-in image to be used as the icon of this control.</p> <p>The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1675 1008 1703"> <button id="button" imageMso="Bold" /> </pre>

Attributes	Description
	<p>This specifies a custom button that uses the built-in image with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterMso (identifier of built-in control to insert after)</p>	<p>Specifies the identifier of a built-in control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 562 1289 638"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterQ (qualified identifier of control to insert after)</p>	<p>Specifies the qualified identifier of a control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1031 1300 1106"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>insertBeforeMso (identifier of built-in control to insert before)</p>	<p>Specifies the identifier of a built-in control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1493 1300 1568"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>

Attributes	Description
insertBeforeQ (qualified identifier of control to insert before)	<p>Specifies the qualified identifier of a control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
keytip (keytip)	<p>Specifies a string to be used as the suggested KeyTip for this control.</p> <p>The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
label (label)	<p>Specifies a string to be used as the label for this control.</p> <p>The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
onAction (onAction callback)	<p>Specifies the name of a callback function to be called when this control is invoked by the user.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Button" onAction="ButtonClicked" /></pre> <p>This specifies a button that calls the ButtonClicked callback function when it is invoked.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
screentip	<p>Specifies a string to be shown as the screentip for this control.</p>

Attributes	Description
(screentip)	<p>The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 716 1224 764"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
showImage (show image)	<p>Specifies whether this control displays an icon.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider a button that does not display an icon, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1289 997 1337"><button id="button" showImage="false" label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
showLabel (show label)	<p>Specifies whether this control displays its label.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1650 1175 1698"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre>

Attributes	Description
	<p>This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>size (control size)</p>	<p>Specifies the size of the control.</p> <p>The size and getSize attributes are mutually exclusive. If neither attribute is specified, the control's size SHOULD default to the normal size.</p> <p>For example, consider a large button, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 701 1057 726"><toggleButton idMso="Bold" size="large" /></pre> <p>The possible values for this attribute are defined by the ST_Size simple type, as specified in section 2.3.10.</p>
<p>supertip (supertip)</p>	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1398 1224 1472"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>tag (tag)</p>	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p>

Attributes	Description
	<p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
visible (control visibility)	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_ControlClone">
  <complexContent>
    <restriction base="CT_Button">
      <attribute name="id" use="prohibited"/>
      <attribute name="onAction" use="prohibited"/>
    </restriction>
  </complexContent>
</complexType>
```

2.2.13 control (Quick Access Toolbar Control Clone)

This element specifies a clone of an existing control. It is specific to control clones on the quick access toolbar, but otherwise behaves the same way as the regular **control** element, as specified in section [2.2.12](#).

The following table summarizes the elements that are parents of this element.

Parent Elements
documentControls (section 2.2.16); sharedControls (section 2.2.35)

The following table summarizes the attributes of this element.

Attributes	Description
description (description)	<p>Specifies a detailed description of the control, which is displayed in detailed views.</p> <p>The description and getDescription attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text.</p>

Attributes	Description
	<p>For example, consider a button with a detailed description, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="542 401 1295 478"><button id="button" label="Button" imageMso="HappyFace" description="This is a verbose description that describes the function of this control in detail." /></pre> <p>The possible values for this attribute are defined by the <code>ST_LongString</code> simple type, as specified in section 2.3.8.</p>
<p>enabled (enabled state)</p>	<p>Specifies the enabled state of the control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 785 1333 810"><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>getDescription (getDescription callback)</p>	<p>Specifies the name of a callback function to be called to determine the detailed description of this control.</p> <p>The getDescription and description attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 1146 1305 1171"><button id="button" getDescription="GetButtonDescription" /></pre> <p>In this example, the GetButtonDescription callback function is called when the application needs to determine the detailed description of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getEnabled (getEnabled callback)</p>	<p>Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 1507 1192 1533"><button id="button" getEnabled="IsButtonEnabled" /></pre> <p>In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getImage</p>	<p>Specifies the name of a callback function to be called to determine the icon of this</p>

Attributes	Description
(getImage callback)	<p>control.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 344 1154 369"><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getKeytip (getKeytip callback)	<p>Specifies the name of a callback function to be called to determine the suggested KeyTip of this control.</p> <p>The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 730 1179 756"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getLabel (getLabel callback)	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 1094 1154 1119"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getScreentip (getScreentip callback)	<p>Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 1478 1256 1503"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowImage (getShowImage)	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the icon of this control.</p>

Attributes	Description
callback)	<p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 373 1279 394" style="background-color: #f0f0f0; padding: 5px;"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p>In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowLabel (getShowLabel callback)	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the label of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 793 1279 814" style="background-color: #f0f0f0; padding: 5px;"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p>In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getSize (getSize callback)	<p>Specifies the name of a callback function to be called to determine the size of this control.</p> <p>The getSize and size attributes are mutually exclusive. If neither attribute is specified, the control's size SHOULD default to the normal size.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 1150 1127 1171" style="background-color: #f0f0f0; padding: 5px;"><button id="button" getSize="GetButtonSize" /></pre> <p>In this example, the GetButtonSize callback function is called when the application needs to determine the size of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getSupertip (getSupertip callback)	<p>Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 1514 1230 1535" style="background-color: #f0f0f0; padding: 5px;"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p>In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getVisible	Specifies the name of a callback function to be called to determine the visibility

Attributes	Description
(getVisible callback)	<p>state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 344 1192 369"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
id (custom control identifier)	<p>Specifies the identifier for a custom control. All new custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 705 1040 730"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an identifier of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
idMso (built-in control identifier)	<p>Specifies the identifier of a built-in control.</p> <p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 1050 850 1075"><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
idQ (qualified control identifier)	<p>Specifies a qualified identifier for a control. The identifier is qualified with an XML namespace prefix that specifies the owner of the control. If the namespace is equal to the Custom UI namespace, the idQ attribute behaves in the same manner as the idMso attribute. If the namespace is equal to the name of the current file, the idQ attribute behaves like the id attribute. If the namespace is equal to the name of a different file, the attribute references a control from that file.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 1545 1040 1675"><tab idQ="x:OtherTab"> <group id="MyGroup" label="My Group"> ... </group> </tab></pre> <p>In this case x is an XML namespace equal to the name of another file that has a</p>

Attributes	Description
	<p>Custom UI document with a tab with an identifier of "OtherTab". This example adds a custom group to that tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>image (custom image identifier)</p>	<p>Specifies the relationship identifier for an image to be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 533 1052 558"><button id="button" image="ForestPic" /></pre> <p>This specifies a custom button whose icon is the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p>The possible values for this attribute are defined by the ST Uri simple type, as specified in section 2.3.14.</p>
<p>imageMso (built-in image identifier)</p>	<p>Specifies the identifier of a built-in image to be used as the icon of this control. The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 928 1026 953"><button id="button" imageMso="Bold" /></pre> <p>This specifies a custom button that uses the built-in image with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterMso (identifier of built-in control to insert after)</p>	<p>Specifies the identifier of a built-in control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 1339 1305 1415"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterQ (qualified identifier of control to insert after)</p>	<p>Specifies the qualified identifier of a control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they</p>

Attributes	Description
	<p>are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="540 289 1320 363"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>insertBeforeMso (identifier of built-in control to insert before)</p>	<p>Specifies the identifier of a built-in control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="540 751 1320 825"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertBeforeQ (qualified identifier of control to insert before)</p>	<p>Specifies the qualified identifier of a control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="540 1220 1320 1293"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>keytip (keytip)</p>	<p>Specifies a string to be used as the suggested KeyTip for this control.</p> <p>The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p> 

Attributes	Description
	<p>This is specified using the following XML fragment:</p> <pre data-bbox="542 254 1230 279"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
<p>label (label)</p>	<p>Specifies a string to be used as the label for this control.</p> <p>The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 531 1101 556"><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>screentip (screentip)</p>	<p>Specifies a string to be shown as the screentip for this control.</p> <p>The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="542 1241 1240 1291"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>showImage (show image)</p>	<p>Specifies whether this control displays an icon.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider a button that does not display an icon, as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="542 432 1013 485"><button id="button" showImage="false" label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
showLabel (show label)	<p>Specifies whether this control displays its label. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 793 1192 846"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p>This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
size (control size)	<p>Specifies the size of the control.</p> <p>The size and getSize attributes are mutually exclusive. If neither attribute is specified, the control's size SHOULD default to the normal size.</p> <p>For example, consider a large button, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="542 1371 1078 1392"><toggleButton idMso="Bold" size="large" /></pre> <p>The possible values for this attribute are defined by the ST_Size simple type, as specified in section 2.3.10.</p>
supertip (supertip)	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="542 638 1240 716"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>visible (control visibility)</p>	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="542 968 1040 993"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_ControlCloneQat">
  <complexContent>
    <extension base="CT_ControlBase">
      <attribute name="id" type="ST_ID" use="optional"/>
      <attribute name="idQ" type="ST_QID" use="optional"/>
      <attributeGroup ref="AG_IDMso"/>
      <attributeGroup ref="AG_Description"/>
      <attributeGroup ref="AG_SizeAttributes"/>
    </extension>
  </complexContent>
</complexType>
```

2.2.14 customUI (Custom UI Document Root)

This element specifies the root tag in a Custom UI XML document.

The following table summarizes the elements that are children of this element.

Child Elements	Section
commands (List of Repurposed Commands)	2.2.9
ribbon (Ribbon)	2.2.33

The following table summarizes the attributes of this element.

Attributes	Description
loadImage (loadImage callback)	<p>Specifies the name of a callback function to be called when the application needs to load an image for a control's icon.</p> <p>For example, consider the following XML fragment:</p> <pre><customUI xmlns="..." loadImage="LoadImageFunction" /></pre> <p>In this example, the LoadImageFunction callback is called to load icon images.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
onLoad (onLoad callback)	<p>Specifies the name of a callback function to be called when the Custom UI file is loaded by the application.</p> <p>For example, consider the following XML fragment:</p> <pre><customUI xmlns="..." onLoad="OnCustomUILoaded" /></pre> <p>In this example, the OnCustomUILoaded callback function is called when the containing Custom UI file is loaded.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_CustomUI">
  <sequence>
    <element name="commands" type="CT_Commands" minOccurs="0" maxOccurs="1"/>
    <element name="ribbon" type="CT_Ribbon" minOccurs="0" maxOccurs="1"/>
  </sequence>
  <attribute name="onLoad" type="ST_Delegate" use="optional"/>
  <attribute name="loadImage" type="ST_Delegate" use="optional"/>
</complexType>
```

2.2.15 dialogBoxLauncher (Dialog Box Launcher)

This element specifies a button that is the dialog box launcher control for a ribbon group.

For example, consider a dialog box launcher control, as follows:

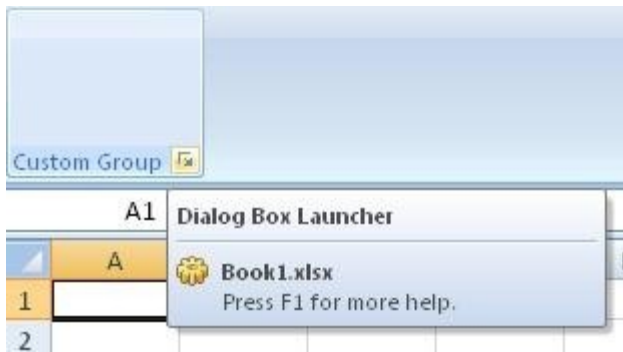

Figure 7: A dialog box launcher control

This is specified using the following XML fragment:

```
<group id="customGroup" label="Custom Group">
  <dialogBoxLauncher>
    <button id="button" screentip="Dialog Box Launcher" />
  </dialogBoxLauncher>
</group>
```

The following table summarizes the elements that are parents of this element.

Parent Elements
group (section 2.2.23)

The following table summarizes the elements that are children of this element.

Child Elements	Section
button (Unsize Button)	2.2.3

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_DialogLauncher">
  <sequence>
    <element name="button" type="CT_ButtonRegular" minOccurs="1" maxOccurs="1"/>
  </sequence>
</complexType>
```

2.2.16 documentControls (List of Document-Specific Quick Access Toolbar Controls)

This element specifies the list of controls on the quick access toolbar which are specific to the containing file.

For example, consider a set of controls on the document-specific quick access toolbar, as follows:

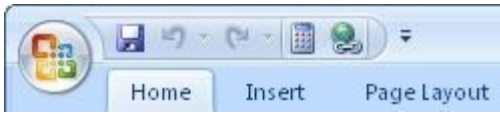

Figure 8: A set of controls on the document-specific quick access toolbar

This is specified using the following XML fragment:

```
<documentControls>
  <control idMso="CalculateNow" />
  <control idMso="HyperlinkInsert" />
</documentControls>
```

The following table summarizes the elements that are parents of this element.

Parent Elements
qat (section 2.2.32)

The following table summarizes the elements that are children of this element.

Child Elements	Section
button (Unsize Button)	2.2.3
control (Quick Access Toolbar Control Clone)	2.2.13
separator (Separator)	2.2.34

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_QatItems">
  <sequence>
    <choice minOccurs="0" maxOccurs="1000">
      <element name="control" type="CT_ControlCloneQat"/>
      <element name="button" type="CT_ButtonRegular"/>
      <element name="separator" type="CT_Separator"/>
    </choice>
  </sequence>
</complexType>
```

2.2.17 dropDown (Drop-down Control)

This element specifies a drop-down control that allows users to make a selection from a list of options. A drop-down control can optionally have buttons below its selection items.

For example, consider a drop-down control, as follows:

Figure 9: A drop-down control

This is specified using the following XML fragment:

```
<dropDown id="dropDown" label="DropDown">
  <item id="item1" label="Item 1" />
  <item id="item2" label="Item 2" />
  <item id="item3" label="Item 3" />
  <button id="button" label="Button..." />
</dropDown>
```

The following table summarizes the elements that are parents of this element.

Parent Elements
box (section 2.2.1); group (section 2.2.23)

The following table summarizes the elements that are children of this element.

Child Elements	Section
button (Unsize Button)	2.2.3
item (Selection Item)	2.2.24

The following table summarizes the attributes of this element.

Attributes	Description
enabled (enabled state)	<p>Specifies the enabled state of the control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
getEnabled (getEnabled callback)	<p>Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither</p>

Attributes	Description
	<p>attribute is specified, the control SHOULD default to being enabled. For example, consider the following XML fragment:</p> <pre data-bbox="591 289 1240 310" style="background-color: #f0f0f0; padding: 5px;"><button id="button" getEnabled="IsButtonEnabled" /></pre> <p>In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button. The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getImage (getImage callback)</p>	<p>Specifies the name of a callback function to be called to determine the icon of this control.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed. For example, consider the following XML fragment:</p> <pre data-bbox="591 646 1203 667" style="background-color: #f0f0f0; padding: 5px;"><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button. The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getItemCount (getItemCount callback)</p>	<p>Specifies the name of a callback function to be called to determine the number of selection items in this control.</p> <p>If this attribute is omitted, the control SHOULD display any selection items that are specified as child elements. If no such items are specified, the control SHOULD be empty. For example, consider the following XML fragment:</p> <pre data-bbox="591 1031 1344 1052" style="background-color: #f0f0f0; padding: 5px;"><gallery id="gallery" getItemCount="GetGalleryItemCount" /></pre> <p>In this example, the GetGalleryItemCount callback function is called when the application needs to determine the number of items in the gallery. The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getItemID (getItemID callback)</p>	<p>Specifies the name of a callback function to be called to determine the identifier of a specific dynamically-created selection item, identified by index. If this attribute is omitted, dynamically-created selection items SHOULD have empty identifiers. For example, consider the following XML fragment:</p> <pre data-bbox="591 1394 1305 1444" style="background-color: #f0f0f0; padding: 5px;"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemID="GetGalleryItemID" /></pre> <p>In this example, the GetGalleryItemID callback function is called when the application needs to determine the identifier of a selection item. The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getItemImage (getItemImage callback)</p>	<p>Specifies the name of a callback function to be called to determine the icon of a specific dynamically-created selection item, identified by index. If this attribute is omitted, dynamically-created selection items SHOULD NOT display icons.</p>

Attributes	Description
	<p>For example, consider the following XML fragment:</p> <pre data-bbox="591 254 1305 306"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemImage="GetGalleryItemImage" /></pre> <p>In this example, the GetGalleryItemImage callback function is called when the application needs to determine the icon of a selection item.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getItemLabel (getItemLabel callback)</p>	<p>Specifies the name of a callback function to be called to determine the label of a specific dynamically-created selection item, identified by index.</p> <p>If this attribute is omitted, dynamically-created selection items SHOULD NOT display labels.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="591 642 1305 695"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemLabel="GetGalleryItemLabel" /></pre> <p>In this example, the GetGalleryItemLabel callback function is called when the application needs to determine the label of a selection item.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getItemScreentip (getItemScreentip callback)</p>	<p>Specifies the name of a callback function to be called to determine the screentip of a specific dynamically-created selection item, identified by index.</p> <p>If this attribute is omitted, dynamically-created selection items SHOULD use their labels as their screentips, or display no screentips at all.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="591 1031 1305 1083"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemScreentip="GetGalleryItemScreentip" /></pre> <p>In this example, the GetGalleryItemScreentip callback function is called when the application needs to determine the screentip of a selection item.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getItemSupertip (getItemSupertip callback)</p>	<p>Specifies the name of a callback function to be called to determine the supertip of a specific dynamically-created selection item, identified by index.</p> <p>If this attribute is omitted, dynamically-created selection items SHOULD NOT display supertips.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="591 1419 1305 1472"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemSupertip="GetGalleryItemSupertip" /></pre> <p>In this example, the GetGalleryItemSupertip callback function is called when the application needs to determine the supertip of a selection item.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getKeytip (getKeytip callback)</p>	<p>Specifies the name of a callback function to be called to determine the suggested KeyTip of this control.</p> <p>The getKeytip and keytip attributes are mutually exclusive. If neither</p>

Attributes	Description
	<p>attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="591 310 1227 338"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getLabel (getLabel callback)</p>	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="591 674 1203 701"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getScreentip (getScreentip callback)</p>	<p>Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="591 1058 1305 1085"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getSelectedItemID (getSelectedItemID callback)</p>	<p>Specifies the name of a callback function to be called to determine the identifier of the item to be selected in this control.</p> <p>The getSelectedItemID and getSelectedItemIndex attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display a selected item.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="591 1444 1305 1520"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemID="GetItemID" getSelectedItemID="GetGallerySelectedItemID" /></pre> <p>In this example, the GetGallerySelectedItemID callback function is called when the application needs to determine the selected item in the gallery. In this example the callback function returns one of the identifiers returned by the GetItemID callback function.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>

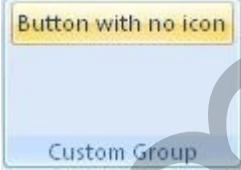

Attributes	Description
getSelectedItemIndex (getSelectedItemIndex callback)	<p>Specifies the name of a callback function to be called to determine the index of the item to be selected in this control.</p> <p>The getSelectedItemID and getSelectedItemIndex attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display a selected item.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="589 407 1304 457"><gallery id="gallery" getItemCount="GetGalleryItemCount" getSelectedItemIndex="GetGallerySelectedItemIndex" /></pre> <p>In this example, the GetGallerySelectedItemIndex callback function is called when the application needs to determine the selected item in the gallery.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowImage (getShowImage callback)	<p>Specifies the name of a callback function to be called to determine whether the application displays the icon of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="589 877 1328 905"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p>In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowLabel (getShowLabel callback)	<p>Specifies the name of a callback function to be called to determine whether the application displays the label of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="589 1297 1328 1325"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p>In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getSupertip (getSupertip callback)	<p>Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="589 1661 1279 1688"><button id="button" getSupertip="GetButtonSupertip" /></pre>

Attributes	Description
	<p>In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getVisible (getVisible callback)	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="589 512 1240 537"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
id (control identifier)	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="589 898 1086 924"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an id of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
idMso (built-in control identifier)	<p>Specifies the identifier of a built-in control.</p> <p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="589 1243 894 1268"><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
idQ (qualified control identifier)	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="589 1612 1382 1711"><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon></pre>

Attributes	Description
	<pre data-bbox="589 205 1190 436"> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI> </pre> <p data-bbox="561 470 1390 569">In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p data-bbox="561 579 1390 632">The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
image (custom image identifier)	<p data-bbox="561 657 1357 730">Specifies the relationship identifier for an image to be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p data-bbox="561 741 1390 793">The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p data-bbox="561 804 1109 825">For example, consider the following XML fragment:</p> <pre data-bbox="589 856 1101 877"> <button id="button" image="ForestPic" /> </pre> <p data-bbox="561 909 1320 961">This specifies a custom button whose icon is the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p data-bbox="561 972 1390 1024">The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
imageMso (built-in image identifier)	<p data-bbox="561 1045 1320 1098">Specifies the identifier of a built-in image to be used as the icon of this control.</p> <p data-bbox="561 1108 1390 1161">The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p data-bbox="561 1171 1390 1224">The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p data-bbox="561 1234 1109 1255">For example, consider the following XML fragment:</p> <pre data-bbox="589 1287 1076 1308"> <button id="button" imageMso="Bold" /> </pre> <p data-bbox="561 1339 1390 1392">This specifies a custom button that uses the built-in image with an identifier of "Bold".</p> <p data-bbox="561 1402 1390 1455">The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertAfterMso (identifier of built-in control to insert after)	<p data-bbox="561 1465 1373 1518">Specifies the identifier of a built-in control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p data-bbox="561 1528 1390 1623">The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p data-bbox="561 1633 1109 1654">For example, consider the following XML fragment:</p> <pre data-bbox="589 1686 1352 1707"> <tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> </pre>

Attributes	Description
	<p>...</p> <pre></tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterQ (qualified identifier of control to insert after)</p>	<p>Specifies the qualified identifier of a control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>insertBeforeMso (identifier of built-in control to insert before)</p>	<p>Specifies the identifier of a built-in control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertBeforeQ (qualified identifier of control to insert before)</p>	<p>Specifies the qualified identifier of a control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p>

Attributes	Description
	The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9 .
keytip (keytip)	<p>Specifies a string to be used as the suggested KeyTip for this control. The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="589 583 1279 604"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
label (label)	<p>Specifies a string to be used as the label for this control. The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="589 856 1149 877"><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
onAction (onAction callback)	<p>Specifies the name of a callback function to be called when this control is invoked by the user.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="589 1140 1385 1161"><button id="button" label="Button" onAction="ButtonClicked" /></pre> <p>This specifies a button that calls the ButtonClicked callback function when it is invoked.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
screentip (sScreentip)	<p>Specifies a string to be shown as the screentip for this control. The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="589 596 1289 646"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>showImage (show image)</p>	<p>Specifies whether this control displays an icon. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large". The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon. For example, consider a button that does not display an icon, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="589 1169 1058 1220"><button id="button" showImage="false" label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>showItemImage (show item image)</p>	<p>Specifies whether this control displays icons on its selection items. If this attribute is omitted, the items' icons SHOULD be shown by default. For example, consider the following XML fragment:</p> <pre data-bbox="589 1444 1365 1600"><gallery id="gallery" label="Gallery" showItemImage="false" > <item id="item1" label="Item 1" /> <item id="item2" label="Item 1" /> <item id="item3" label="Item 2" /> <item id="item4" label="Item 3" /> </gallery></pre> <p>This specifies a gallery control that does not show any icons on its selection items. The possible values for this attribute are defined by the XML schema</p>

Attributes	Description
	boolean datatype.
showItemLabel (show item label)	<p>Specifies whether this control displays labels on its selection items. If this attribute is omitted, the item's labels SHOULD be shown by default. For example, consider the following XML fragment:</p> <pre data-bbox="589 373 1369 531"><gallery id="gallery" label="Gallery" showItemLabel="false" > <item id="item1" image="Forest" /> <item id="item2" image="Desert" /> <item id="item3" image="Mountain" /> <item id="item4" image="Ocean" /> </gallery></pre> <p>This specifies a gallery control that does not show any labels on its selection items.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
showLabel (show label)	<p>Specifies whether this control displays its label. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label. For example, consider the following XML fragment:</p> <pre data-bbox="589 898 1239 951"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p>This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
sizeString (size string)	<p>Specifies a string whose size is used to determine the width of the text input area of this control.</p> <p>If this attribute is omitted, the application SHOULD determine the width of the text input area of the control automatically. For example, consider the following XML fragment:</p> <pre data-bbox="589 1287 1239 1308"><editBox id="editBox" sizeString="XXXXXXXXXXXXXXXX" /></pre> <p>This specifies an edit box control that is wide enough to display the string "XXXXXXXXXXXXXXXX".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
supertip (supertip)	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown. For example, consider a control with a supertip, as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="589 640 1291 716"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
tag (tag)	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="589 1018 1187 1073"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
visible (control visibility)	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="589 1381 1084 1404"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_DropDownRegular">
  <complexContent>
    <extension base="CT_Control">
      <sequence>
```

```

<element name="item" type="CT_Item" minOccurs="0" maxOccurs="1000"/>
<element name="button" type="CT_ButtonRegular" minOccurs="0" maxOccurs="16"/>
</sequence>
<attributeGroup ref="AG_Action"/>
<attributeGroup ref="AG_Enabled"/>
<attributeGroup ref="AG_Image"/>
<attributeGroup ref="AG_DropDownAttributes"/>
<attribute name="getSelectedItemID" type="ST_Delegate" use="optional"/>
<attribute name="getSelectedItemIndex" type="ST_Delegate" use="optional"/>
<attribute name="showItemLabel" type="xsd:boolean" use="optional"/>
</extension>
</complexContent>
</complexType>

```

2.2.18 dynamicMenu (Unsize Dynamic Menu)

This element specifies a dynamic menu control that, due to its location, cannot have its anchor size changed. The **size** attribute is not present. It otherwise behaves identically to the regular **dynamicMenu** element, as specified in section [2.2.19](#).

The following table summarizes the elements that are parents of this element.

Parent Elements
buttonGroup (section 2.2.5); menu (section 2.2.28); menu (section 2.2.26); menu (section 2.2.29); menu (section 2.2.27); officeMenu (section 2.2.31)

The following table summarizes the attributes of this element.

Attributes	Description
description (description)	<p>Specifies a detailed description of the control, which SHOULD be displayed in detailed views.</p> <p>The description and getDescription attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text.</p> <p>For example, consider a button with a detailed description, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre><button id="button" label="Button" imageMso="HappyFace" description="This is a verbose description that describes the function of this control in detail." /></pre> <p>The possible values for this attribute are defined by the ST_LongString simple type, as specified in section 2.3.8.</p>
enabled (enabled state)	<p>Specifies the enabled state of the control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application.</p>

Attributes	Description
	<p>For example, consider the following XML fragment:</p> <pre data-bbox="609 254 1360 300"><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used. The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>getContent (getContent callback)</p>	<p>Specifies the name of a callback function to be called when the application needs to determine the contents of the control. For example, consider a dynamic menu control, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="609 825 1193 871"><dynamicMenu id="dynamic" label="Dynamic Menu" getContent="GetMenuContent" /></pre> <p>The GetMenuContent callback function is called when the menu is dropped, and in this case would return a string with the following XML:</p> <pre data-bbox="609 982 1388 1161"><menu xmlns="http://schemas.microsoft.com/office/2006/01/customui" <button id="button1" label="Button 1" /> <button id="button2" label="Button 2" /> <button id="button3" label="Button 3" /> </menu></pre> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getDescription (getDescription callback)</p>	<p>Specifies the name of a callback function to be called to determine the detailed description of this control. The getDescription and description attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text. For example, consider the following XML fragment:</p> <pre data-bbox="609 1465 1372 1491"><button id="button" getDescription="GetButtonDescription" /></pre> <p>In this example, the GetButtonDescription callback function is called when the application needs to determine the detailed description of the button. The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getEnabled (getEnabled callback)</p>	<p>Specifies the name of a callback function to be called to determine the</p>

Attributes	Description
callback)	<p>enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 344 1256 369"><button id="button" getEnabled="IsButtonEnabled" /></pre> <p>In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getImage (getImage callback)	<p>Specifies the name of a callback function to be called to determine the icon of this control.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 705 1219 730"><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getKeytip (getKeytip callback)	<p>Specifies the name of a callback function to be called to determine the suggested KeyTip of this control.</p> <p>The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 1094 1243 1119"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getLabel (getLabel callback)	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 1451 1219 1476"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getScreentip (getScreentip callback)	<p>Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If</p>

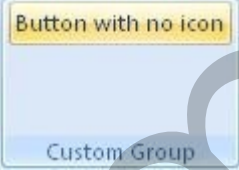

Attributes	Description
	<p>neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 310 1321 338"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getShowImage (getShowImage callback)</p>	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the icon of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 730 1349 758"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p>In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getShowLabel (getShowLabel callback)</p>	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the label of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 1203 1349 1230"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p>In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getSupertip (getSupertip callback)</p>	<p>Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 1587 1300 1614"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p>In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate</p>

Attributes	Description
	simple type, as specified in section 2.3.2 .
getVisible (getVisible callback)	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="609 422 1258 447"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
id (control identifier)	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="609 810 1105 835"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an identifier of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
idMso (built-in control identifier)	<p>Specifies the identifier of a built-in control.</p> <p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="609 1152 915 1178"><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
idQ (qualified control identifier)	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="609 1522 1373 1726"><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"></pre>

Attributes	Description
	<pre data-bbox="607 212 813 359"> ... </group> </tab> </tabs> </ribbon> </customUI> </pre> <p data-bbox="578 390 1382 491">In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p data-bbox="578 499 1354 552">The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p data-bbox="237 575 480 627">image (custom image identifier)</p>	<p data-bbox="578 575 1386 653">Specifies the relationship identifier for an image which SHOULD be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p data-bbox="578 661 1382 714">The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p data-bbox="578 722 1127 747">For example, consider the following XML fragment:</p> <pre data-bbox="607 772 1118 795"> <button id="button" image="ForestPic" /> </pre> <p data-bbox="578 827 1325 879">This specifies a custom button whose icon SHOULD be the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p data-bbox="578 888 1341 940">The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
<p data-bbox="237 959 526 1012">imageMso (built-in image identifier)</p>	<p data-bbox="578 959 1354 1012">Specifies the identifier of a built-in image that is used as the icon of this control.</p> <p data-bbox="578 1020 1325 1073">The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p data-bbox="578 1081 1382 1134">The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p data-bbox="578 1142 1127 1167">For example, consider the following XML fragment:</p> <pre data-bbox="607 1192 1094 1215"> <button id="button" imageMso="Bold" /> </pre> <p data-bbox="578 1247 1297 1299">This specifies a custom button that uses the built-in image with an identifier of "Bold".</p> <p data-bbox="578 1308 1395 1360">The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p data-bbox="237 1379 529 1457">insertAfterMso (identifier of built-in control to insert after)</p>	<p data-bbox="578 1379 1395 1432">Specifies the identifier of a built-in control that this control is to be inserted after. Attributes	Description
	<p>inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterQ (qualified identifier of control to insert after)</p>	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 562 1386 638"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>insertBeforeMso (identifier of built-in control to insert before)</p>	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 1052 1386 1127"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertBeforeQ (qualified identifier of control to insert before)</p>	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 1541 1321 1640"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p>

Attributes	Description
	<p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>invalidateContentOnDrop (invalidate content on drop)</p>	<p>Specifies whether this control SHOULD invalidate its contents and re-query for them when the user opens its drop-down menu.</p> <p>If this attribute is omitted, its value SHOULD default to false.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 422 1360 499"><comboBox id="comboBox" getItemCount="GetComboBoxItemCount" getItemLabel="GetComboBoxItemLabel" invalidateContentOnDrop="true" /></pre> <p>In this example, this combo box clears out its items and re-calls the GetComboBoxItemCount and GetComboBoxItemLabel callback functions in order to populate its contents each time the user opens it.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>keytip (keytip)</p>	<p>Specifies a string to be used as the suggested KeyTip for this control.</p> <p>The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="607 995 1295 1020"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
<p>label (label)</p>	<p>Specifies a string to be used as the label for this control.</p> <p>The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 1270 1170 1295"><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>screentip (screentip)</p>	<p>Specifies a string to be shown as the screentip for this control.</p> <p>The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="607 596 1308 646"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
showImage (show image)	<p>Specifies whether this control displays an icon. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider a button that does not display an icon, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="607 1169 1078 1220"><button id="button" showImage="false" label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
showLabel (show label)	<p>Specifies whether this control SHOULD display its label. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 1556 1256 1606"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p>This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema</p>

Attributes	Description
	boolean datatype.
supertip (supertip)	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="607 814 1308 894"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
tag (tag)	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 1192 1208 1247"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
visible (control visibility)	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 1556 1105 1581"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_DynamicMenuRegular">
  <complexContent>
    <extension base="CT_ControlBase">
      <attributeGroup ref="AG_Description"/>
      <attributeGroup ref="AG_IDAttributes"/>
      <attributeGroup ref="AG_GetContentAttributes"/>
      <attributeGroup ref="AG_DynamicContentAttributes"/>
    </extension>
  </complexContent>
</complexType>
```

2.2.19 dynamicMenu (Dynamic Menu)

This element specifies a dynamic menu control that populates its contents dynamically.

For example, consider a dynamic menu control, as follows:

Figure 10: A dynamic menu control

This is specified using the following XML fragment:

```
<dynamicMenu id="dynamic" label="Dynamic Menu" getContent="GetMenuContent" />
```

The **GetMenuContent** callback function is called when the menu is dropped, and in this case would return a string with the following XML:

```
<menu xmlns="http://schemas.microsoft.com/office/2006/01/customui">
  <button id="button1" label="Button 1" />
  <button id="button2" label="Button 2" />
  <button id="button3" label="Button 3" />
</menu>
```

The following table summarizes the elements that are parents of this element.

Parent Elements
box (section 2.2.1); group (section 2.2.23)

The following table summarizes the attributes of this element.

Attributes	Description
description (description)	Specifies a detailed description of the control, which SHOULD be displayed

Attributes	Description
	<p>in detailed views.</p> <p>The description and getDescription attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text.</p> <p>For example, consider a button with a detailed description, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="607 520 1360 592"><button id="button" label="Button" imageMso="HappyFace" description="This is a verbose description that describes the function of this control in detail." /></pre> <p>The possible values for this attribute are defined by the ST_LongString simple type, as specified in section 2.3.8.</p>
enabled (enabled state)	<p>Specifies the enabled state of the control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 907 1360 949"><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
getContent (getContent callback)	<p>Specifies the name of a callback function to be called when the application needs to determine the contents of the control.</p> <p>For example, consider a dynamic menu control, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="607 1474 1198 1528"><dynamicMenu id="dynamic" label="Dynamic Menu" getContent="GetMenuContent" /></pre> <p>The GetMenuContent callback function is called when the menu is dropped, and in this case would return a string with the following XML:</p> <pre data-bbox="607 1633 1393 1736"><menu xmlns="http://schemas.microsoft.com/office/2006/01/customui"> <button id="button1" label="Button 1" /></pre>

Attributes	Description
	<pre data-bbox="607 201 1146 275"><button id="button2" label="Button 2" /> <button id="button3" label="Button 3" /> </menu></pre> <p data-bbox="578 306 1333 359">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getDescription (getDescription callback)	<p data-bbox="578 384 1333 436">Specifies the name of a callback function to be called to determine the detailed description of this control.</p> <p data-bbox="578 443 1382 516">The getDescription and description attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text.</p> <p data-bbox="578 527 1122 552">For example, consider the following XML fragment:</p> <pre data-bbox="607 579 1373 604"><button id="button" getDescription="GetButtonDescription" /></pre> <p data-bbox="578 632 1341 705">In this example, the GetButtonDescription callback function is called when the application needs to determine the detailed description of the button.</p> <p data-bbox="578 716 1333 768">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getEnabled (getEnabled callback)	<p data-bbox="578 793 1333 846">Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p data-bbox="578 852 1382 905">The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p data-bbox="578 915 1122 940">For example, consider the following XML fragment:</p> <pre data-bbox="607 968 1260 993"><button id="button" getEnabled="IsButtonEnabled" /></pre> <p data-bbox="578 1020 1390 1073">In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button.</p> <p data-bbox="578 1083 1333 1136">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getImage (getImage callback)	<p data-bbox="578 1150 1382 1203">Specifies the name of a callback function to be called to determine the icon of this control.</p> <p data-bbox="578 1209 1373 1262">The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p data-bbox="578 1272 1122 1297">For example, consider the following XML fragment:</p> <pre data-bbox="607 1325 1219 1350"><button id="button" getImage="GetButtonImage" /></pre> <p data-bbox="578 1377 1390 1430">In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button.</p> <p data-bbox="578 1440 1333 1493">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getKeytip (getKeytip callback)	<p data-bbox="578 1518 1333 1570">Specifies the name of a callback function to be called to determine the suggested KeyTip of this control.</p> <p data-bbox="578 1577 1349 1650">The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p data-bbox="578 1661 1122 1686">For example, consider the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="610 218 1243 243"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p data-bbox="578 275 1386 327">In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p data-bbox="578 333 1333 386">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getLabel (getLabel callback)	<p data-bbox="578 411 1386 464">Specifies the name of a callback function to be called to determine the label of this control.</p> <p data-bbox="578 470 1317 522">The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p data-bbox="578 529 1125 554">For example, consider the following XML fragment:</p> <pre data-bbox="610 581 1219 606"><button id="button" getLabel="GetButtonLabel" /></pre> <p data-bbox="578 634 1373 686">In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p data-bbox="578 693 1333 745">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getScreentip (getScreentip callback)	<p data-bbox="578 768 1333 821">Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p data-bbox="578 827 1360 900">The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p data-bbox="578 907 1125 932">For example, consider the following XML fragment:</p> <pre data-bbox="610 959 1321 984"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p data-bbox="578 1012 1382 1064">In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p data-bbox="578 1071 1333 1123">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowImage (getShowImage callback)	<p data-bbox="578 1157 1386 1209">Specifies the name of a callback function to be called to determine whether the application SHOULD display the icon of this control.</p> <p data-bbox="578 1215 1333 1268">This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p data-bbox="578 1274 1393 1327">The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p data-bbox="578 1333 1125 1358">For example, consider the following XML fragment:</p> <pre data-bbox="610 1386 1349 1411"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p data-bbox="578 1438 1386 1512">In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p data-bbox="578 1518 1333 1570">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowLabel (getShowLabel callback)	<p data-bbox="578 1598 1386 1650">Specifies the name of a callback function to be called to determine whether the application SHOULD display the label of this control.</p> <p data-bbox="578 1656 1333 1709">This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p>

Attributes	Description
	<p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="609 338 1349 363"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p>In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getSize (getSize callback)</p>	<p>Specifies the name of a callback function to be called to determine the size of this control.</p> <p>The getSize and size attributes are mutually exclusive. If neither attribute is specified, the control's size SHOULD default to the normal size.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="609 726 1195 751"><button id="button" getSize="GetButtonSize" /></pre> <p>In this example, the GetButtonSize callback function is called when the application needs to determine the size of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getSupertip (getSupertip callback)</p>	<p>Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="609 1087 1297 1113"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p>In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getVisible (getVisible callback)</p>	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="609 1451 1256 1476"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>id (control identifier)</p>	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p>

Attributes	Description
	<p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 310 1105 338"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an identifier of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
<p>idMso (built-in control identifier)</p>	<p>Specifies the identifier of a built-in control.</p> <p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 653 915 680"><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>idQ (qualified control identifier)</p>	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 1024 1373 1388"><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI></pre> <p>In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>image (custom image identifier)</p>	<p>Specifies the relationship identifier for an image which SHOULD be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive.</p>

Attributes	Description
	<p>If none of these attributes are specified, no icon SHOULD be displayed. For example, consider the following XML fragment:</p> <pre data-bbox="607 285 1117 310"><button id="button" image="ForestPic" /></pre> <p>This specifies a custom button whose icon SHOULD be the embedded image file referenced by the relationship identifier of "ForestPic". The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
<p>imageMso (built-in image identifier)</p>	<p>Specifies the identifier of a built-in image which SHOULD be used as the icon of this control.</p> <p>The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed. For example, consider the following XML fragment:</p> <pre data-bbox="607 705 1091 730"><button id="button" imageMso="Bold" /></pre> <p>This specifies a custom button that SHOULD use the built-in image with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterMso (identifier of built-in control to insert after)</p>	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 1146 1373 1222"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterQ (qualified identifier of control to insert after)</p>	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 1633 1386 1688"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ...</pre>

Attributes	Description
	<p></tab></p> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab". The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>insertBeforeMso (identifier of built-in control to insert before)</p>	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 638 1386 716"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome". The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertBeforeQ (qualified identifier of control to insert before)</p>	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 1129 1325 1228"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab". The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>invalidateContentOnDrop (invalidate content on drop)</p>	<p>Specifies whether this control SHOULD invalidate its contents and re-query for them when the user opens its drop-down menu.</p> <p>If this attribute is omitted, its value SHOULD default to false.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 1541 1360 1619"><comboBox id="comboBox" getItemCount="GetComboBoxItemCount" getItemLabel="GetComboBoxItemLabel" invalidateContentOnDrop="true" /></pre> <p>In this example, this combo box clears out its items and re-calls the GetComboBoxItemCount and GetComboBoxItemLabel callback functions in order to populate its contents each time the user opens it.</p>

Attributes	Description
	<p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>keytip (keytip)</p>	<p>Specifies a string to be used as the suggested KeyTip for this control. The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="607 579 1295 604"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
<p>label (label)</p>	<p>Specifies a string to be used as the label for this control. The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 852 1170 877"><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>screentip (screentip)</p>	<p>Specifies a string to be shown as the screentip for this control. The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="607 1566 1308 1617"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>

Attributes	Description
<p>showImage (show image)</p>	<p>Specifies whether this control displays an icon.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider a button that does not display an icon, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="607 625 1078 674"><button id="button" showImage="false" label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>showLabel (show label)</p>	<p>Specifies whether this control SHOULD display its label.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 1010 1256 1058"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p>This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>size (control size)</p>	<p>Specifies the size of the control.</p> <p>The size and getSize attributes are mutually exclusive. If neither attribute is specified, the control's size SHOULD default to the normal size.</p> <p>For example, consider a large button, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="607 1587 1143 1614"><toggleButton idMso="Bold" size="large" /></pre> <p>The possible values for this attribute are defined by the ST_Size simple type, as specified in section 2.3.10.</p>

Attributes	Description
<p>supertip (supertip)</p>	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="607 772 1308 852"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>tag (tag)</p>	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 1150 1208 1205"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>visible (control visibility)</p>	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="607 1514 1105 1539"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```

<complexType name="CT_DynamicMenu">
  <complexContent>
    <extension base="CT_DynamicMenuRegular">
      <attributeGroup ref="AG_SizeAttributes"/>
    </extension>
  </complexContent>
</complexType>

```

2.2.20 editBox (Edit Box)

This element specifies an edit box control that allows a user to enter a **string** of text.

For example, consider an edit box control, as follows:

Figure 11: An edit box control

This is specified using the following XML fragment:

```
<editBox id="editBox" label="Edit Box" />
```

The following table summarizes the elements that are parents of this element.

Parent Elements
box (section 2.2.1); group (section 2.2.23)

The following table summarizes the attributes of this element.

Attributes	Description
enabled (Enabled State)	<p>Specifies the enabled state of the control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
getEnabled (getEnabled callback)	<p>Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither</p>

Attributes	Description
	<p>attribute is specified, the control SHOULD default to being enabled. For example, consider the following XML fragment:</p> <pre data-bbox="521 289 1175 310" style="background-color: #f0f0f0; padding: 5px;"> <button id="button" getEnabled="IsButtonEnabled" /> </pre> <p>In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button. The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getImage (getImage callback)</p>	<p>Specifies the name of a callback function to be called to determine the icon of this control. The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed. For example, consider the following XML fragment:</p> <pre data-bbox="521 646 1133 667" style="background-color: #f0f0f0; padding: 5px;"> <button id="button" getImage="GetButtonImage" /> </pre> <p>In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button. The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getKeytip (getKeytip callback)</p>	<p>Specifies the name of a callback function to be called to determine the suggested KeyTip of this control. The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically. For example, consider the following XML fragment:</p> <pre data-bbox="521 1003 1159 1024" style="background-color: #f0f0f0; padding: 5px;"> <button id="button" getKeytip="GetButtonKeytip" /> </pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button. The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getLabel (getLabel callback)</p>	<p>Specifies the name of a callback function to be called to determine the label of this control. The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed. For example, consider the following XML fragment:</p> <pre data-bbox="521 1367 1133 1388" style="background-color: #f0f0f0; padding: 5px;"> <button id="button" getLabel="GetButtonLabel" /> </pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button. The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getScreentip (getScreentip callback)</p>	<p>Specifies the name of a callback function to be called to determine the screentip of this control. The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all. For example, consider the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="521 218 1235 243"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p data-bbox="493 275 1341 325">In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p data-bbox="493 333 1386 384">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowImage (getShowImage callback)	<p data-bbox="493 411 1341 462">Specifies the name of a callback function to be called to determine whether the application SHOULD display the icon of this control.</p> <p data-bbox="493 470 1386 520">This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p data-bbox="493 529 1386 579">The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p data-bbox="493 588 1040 613">For example, consider the following XML fragment:</p> <pre data-bbox="521 640 1263 665"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p data-bbox="493 695 1365 745">In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p data-bbox="493 753 1386 804">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowLabel (getShowLabel callback)	<p data-bbox="493 831 1341 882">Specifies the name of a callback function to be called to determine whether the application SHOULD display the label of this control.</p> <p data-bbox="493 890 1386 940">This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p data-bbox="493 949 1365 999">The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p data-bbox="493 1008 1040 1033">For example, consider the following XML fragment:</p> <pre data-bbox="521 1060 1263 1085"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p data-bbox="493 1115 1354 1165">In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p data-bbox="493 1173 1386 1224">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getSupertip (getSupertip callback)	<p data-bbox="493 1251 1373 1302">Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p data-bbox="493 1310 1308 1360">The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p data-bbox="493 1369 1040 1394">For example, consider the following XML fragment:</p> <pre data-bbox="521 1421 1211 1446"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p data-bbox="493 1476 1328 1526">In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p data-bbox="493 1535 1386 1585">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getText (getText callback)	<p data-bbox="493 1612 1349 1663">Specifies the name of a callback function to be called to determine the text that SHOULD be displayed in the control.</p> <p data-bbox="493 1671 1040 1696">For example, consider the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="521 218 1149 241"><editBox id="editBox" getText="GetEditBoxText" /></pre> <p data-bbox="493 275 1289 325">In this example, the GetEditBoxText callback function is called when the application needs to determine the text to display in the control.</p> <p data-bbox="493 333 1386 384">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getVisible (getVisible callback)	<p data-bbox="493 411 1344 462">Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p data-bbox="493 470 1386 520">The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p data-bbox="493 529 1040 554">For example, consider the following XML fragment:</p> <pre data-bbox="521 581 1174 604"><button id="button" getVisible="IsButtonVisible" /></pre> <p data-bbox="493 634 1289 684">In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p data-bbox="493 693 1386 743">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
id (control identifier)	<p data-bbox="493 768 1386 848">Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p data-bbox="493 856 1347 907">The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p data-bbox="493 915 1040 940">For example, consider the following XML fragment:</p> <pre data-bbox="521 968 1019 991"><button id="MyButton" label="Button" /></pre> <p data-bbox="493 1020 1252 1045">This specifies a custom button control with an identifier of "MyButton".</p> <p data-bbox="493 1054 1386 1104">The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
idMso (built-in control identifier)	<p data-bbox="493 1131 954 1157">Specifies the identifier of a built-in control.</p> <p data-bbox="493 1165 1068 1190">The contents of this attribute are application-defined.</p> <p data-bbox="493 1199 1347 1249">The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p data-bbox="493 1257 1040 1283">For example, consider the following XML fragment:</p> <pre data-bbox="521 1310 829 1333"><control idMso="Bold" /></pre> <p data-bbox="493 1362 1154 1388">This creates a clone of the control with an identifier of "Bold".</p> <p data-bbox="493 1396 1344 1446">The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
idQ (qualified control identifier)	<p data-bbox="493 1474 954 1499">Specifies a qualified identifier for a control.</p> <p data-bbox="493 1507 1386 1558">The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p data-bbox="493 1566 1347 1617">The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p data-bbox="493 1625 1040 1650">For example, consider the following XML fragment:</p> <pre data-bbox="521 1680 1312 1728"><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui"</pre>

Attributes	Description
	<pre data-bbox="521 201 1122 489"> xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI> </pre> <p data-bbox="493 520 1357 621">In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p data-bbox="493 632 1357 680">The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
image (custom image identifier)	<p data-bbox="493 705 1390 783">Specifies the relationship identifier for an image which SHOULD be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p data-bbox="493 793 1390 842">The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p data-bbox="493 852 1040 877">For example, consider the following XML fragment:</p> <pre data-bbox="521 905 1032 930"> <button id="button" image="ForestPic" /> </pre> <p data-bbox="493 957 1349 1008">This specifies a custom button whose icon SHOULD be the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p data-bbox="493 1018 1349 1066">The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
imageMso (built-in image identifier)	<p data-bbox="493 1094 1390 1142">Specifies the identifier of a built-in image which SHOULD be used as the icon of this control.</p> <p data-bbox="493 1152 1390 1201">The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p data-bbox="493 1211 1390 1260">The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p data-bbox="493 1270 1040 1295">For example, consider the following XML fragment:</p> <pre data-bbox="521 1323 1008 1348"> <button id="button" imageMso="Bold" /> </pre> <p data-bbox="493 1375 1295 1425">This specifies a custom button that SHOULD use the built-in image with an identifier of "Bold".</p> <p data-bbox="493 1436 1341 1484">The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertAfterMso (identifier of built-in control to insert after)	<p data-bbox="493 1514 1349 1562">Specifies the identifier of a built-in control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p data-bbox="493 1572 1390 1671">The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p data-bbox="493 1682 1040 1707">For example, consider the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="521 218 1289 296"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p data-bbox="493 325 1360 380">In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p data-bbox="493 386 1341 438">The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p data-bbox="235 464 443 564">insertAfterQ (qualified identifier of control to insert after)</p>	<p data-bbox="493 464 1360 516">Specifies the qualified identifier of a control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p data-bbox="493 522 1382 623">The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p data-bbox="493 630 1040 657">For example, consider the following XML fragment:</p> <pre data-bbox="521 684 1300 762"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p data-bbox="493 791 1360 844">In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p data-bbox="493 850 1360 903">The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p data-bbox="235 928 453 1029">insertBeforeMso (identifier of built-in control to insert before)</p>	<p data-bbox="493 928 1349 980">Specifies the identifier of a built-in control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p data-bbox="493 987 1382 1087">The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p data-bbox="493 1094 1040 1121">For example, consider the following XML fragment:</p> <pre data-bbox="521 1148 1300 1226"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p data-bbox="493 1255 1360 1308">In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p data-bbox="493 1314 1341 1367">The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p data-bbox="235 1392 443 1493">insertBeforeQ (qualified identifier of control to insert before)</p>	<p data-bbox="493 1392 1360 1444">Specifies the qualified identifier of a control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p data-bbox="493 1451 1382 1551">The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p data-bbox="493 1558 1040 1585">For example, consider the following XML fragment:</p> <pre data-bbox="521 1612 1313 1690"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre>

Attributes	Description
	<p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>keytip (keytip)</p>	<p>Specifies a string to be used as the suggested KeyTip for this control.</p> <p>The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 621 1211 646"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
<p>label (label)</p>	<p>Specifies a string to be used as the label for this control.</p> <p>The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 894 1084 919"><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>maxLength (maximum input string length)</p>	<p>Specifies an integer to be used as the maximum length of a string that can be entered into the control.</p> <p>If the maxLength attribute is omitted, the length of the input string SHOULD NOT be limited except by application-specific constraints.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1230 1019 1255"><editBox id="editBox" maxLength="10" /></pre> <p>This specifies an edit box control that can only accept strings up to 10 characters in length.</p> <p>The possible values for this attribute are defined by the ST_StringLength simple type, as specified in section 2.3.12.</p>
<p>onChange (onChange callback)</p>	<p>Specifies the name of a callback function to be called when the text in the control has been changed by the user.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1528 1211 1554"><editBox id="editBox" onChange="EditBoxTextChanged" /></pre> <p>This specifies an edit box control that calls the EditBoxTextChanged callback function when the user inputs a text string.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>

Attributes	Description
<p>screentip (screentip)</p>	<p>Specifies a string to be shown as the screentip for this control.</p> <p>The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 751 1224 806"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>showImage (show image)</p>	<p>Specifies whether this control displays an icon.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider a button that does not display an icon, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1329 995 1383"><button id="button" showImage="false" label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>showLabel (Show Label)</p>	<p>Specifies whether this control displays its label.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1688 1174 1715"><button id="button" label="Label" showLabel="false"</pre>

Attributes	Description
	<p><code>imageMso="HappyFace" /></code></p> <p>This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>sizeString (size string)</p>	<p>Specifies a string whose size is used to determine the width of the text input area of this control.</p> <p>If this attribute is omitted, the application SHOULD determine the width of the text input area of the control automatically.</p> <p>For example, consider the following XML fragment:</p> <pre><editBox id="editBox" sizeString="WWWWWWWWWWWW" /></pre> <p>This specifies an edit box control that is wide enough to display the string "WWWWWWWWWWWW".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>supertip (supertip)</p>	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>tag (tag)</p>	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Button" tag="123456"</pre>

Attributes	Description
	<p><code>onAction="ButtonClicked" /></code></p> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>visible (control visibility)</p>	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 533 1019 558"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_EditBox">
  <complexContent>
    <extension base="CT_Control">
      <attributeGroup ref="AG_Enabled"/>
      <attributeGroup ref="AG_Image"/>
      <attribute name="maxLength" type="ST_StringLength" use="optional"/>
      <attribute name="getText" type="ST_Delegate" use="optional"/>
      <attribute name="onChange" type="ST_Delegate" use="optional"/>
      <attribute name="sizeString" type="ST_String" use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

2.2.21 gallery (Gallery)

This element specifies a gallery control, which displays a drop-down grid of items that the user can select from. A gallery can optionally have buttons below its selection items.

For example, consider a gallery control that shows a selection of pictures, as follows:

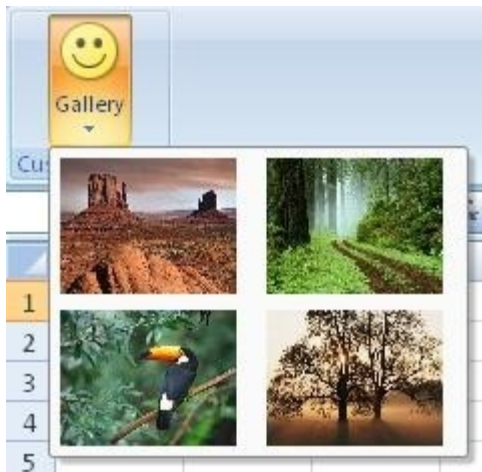

Figure 12: A gallery control

This is specified using the following XML fragment:

```
<gallery id="gallery" label="Gallery" itemWidth="88" itemHeight="68"
  size="large" imageMso="HappyFace" >
  <item id="item1" image="Desert" />
  <item id="item2" image="Forest" />
  <item id="item3" image="Toucan" />
  <item id="item4" image="Tree" />
</gallery>
```

The following table summarizes the elements that are parents of this element.

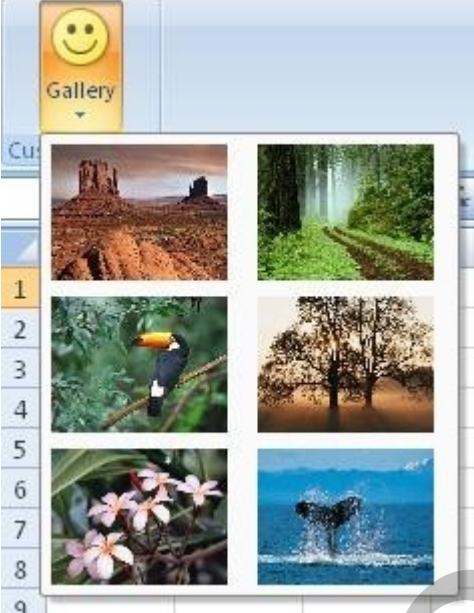

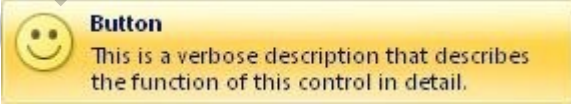

Parent Elements
box (section 2.2.1); group (section 2.2.23)

The following table summarizes the elements that are children of this element.

Child Elements	Section
button (Unsize Button)	2.2.3
item (Selection Item)	2.2.24

The following table summarizes the attributes of this element.

Attributes	Description
columns (column count)	Specifies the number of columns that the gallery's items SHOULD be arranged into. If the columns attribute is omitted, the application SHOULD choose the number of columns automatically based on the number of items. For example, consider a gallery control with six items arranged into two columns, as follows:

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="609 877 1234 1117"><gallery id="gallery" label="Gallery" columns="2" size="large" imageMso="HappyFace" > <item id="item1" image="Desert" /> <item id="item2" image="Forest" /> <item id="item3" image="Toucan" /> <item id="item4" image="Tree" /> <item id="item5" image="Flowers" /> <item id="item6" image="Whale" /> </gallery></pre> <p>The possible values for this attribute are defined by the ST_GalleryRowColumnCount simple type, as specified in section 2.3.4.</p>
<p>description (description)</p>	<p>Specifies a detailed description of the control, which SHOULD be displayed in detailed views.</p> <p>The description and getDescription attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text.</p> <p>For example, consider a button with a detailed description, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="609 1570 1364 1642"><button id="button" label="Button" imageMso="HappyFace" description="This is a verbose description that describes the function of this control in detail." /></pre> <p>The possible values for this attribute are defined by the ST_LongString simple type, as specified in section 2.3.8.</p>

Attributes	Description
<p>enabled (enabled state)</p>	<p>Specifies the enabled state of the control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 415 1360 464"><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>getDescription (getDescription callback)</p>	<p>Specifies the name of a callback function to be called to determine the detailed description of this control.</p> <p>The getDescription and description attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 827 1373 848"><button id="button" getDescription="GetButtonDescription" /></pre> <p>In this example, the GetButtonDescription callback function is called when the application needs to determine the detailed description of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getEnabled (getEnabled callback)</p>	<p>Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1213 1260 1234"><button id="button" getEnabled="IsButtonEnabled" /></pre> <p>In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getImage (getImage callback)</p>	<p>Specifies the name of a callback function to be called to determine the icon of this control.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1575 1221 1596"><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate</p>

Attributes	Description
	simple type, as specified in section 2.3.2 .
getItemCount (getItemCount callback)	<p>Specifies the name of a callback function to be called to determine the number of selection items in this control.</p> <p>If this attribute is omitted, the control SHOULD display any selection items that are specified as child elements. If no such items are specified, the control SHOULD be empty.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="609 449 1365 474"><gallery id="gallery" getItemCount="GetGalleryItemCount" /></pre> <p>In this example, the GetGalleryItemCount callback function is called when the application needs to determine the number of items in the gallery.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getItemHeight (getItemHeight callback)	<p>Specifies the name of a callback function to be called to determine the height of the selection items in this control.</p> <p>The itemHeight and getItemHeight attributes are mutually exclusive. If neither attribute is specified, the items SHOULD all take the size of the first item, based on its contents.</p> <p>The getItemHeight and getItemWidth attributes are mutually required. If only one of the attributes is specified, its value is ignored.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="609 919 1325 995"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemHeight="GetGalleryItemHeight" getItemWidth="GetGalleryItemWidth" /></pre> <p>In this example, the GetGalleryItemHeight callback function is called when the application needs to determine the height of the items in the gallery.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getItemID (getItemID callback)	<p>Specifies the name of a callback function to be called to determine the identifier of a specific dynamically-created selection item, identified by index.</p> <p>If this attribute is omitted, dynamically-created selection items SHOULD have empty identifiers.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="609 1383 1325 1436"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemID="GetGalleryItemID" /></pre> <p>In this example, the GetGalleryItemID callback function is called when the application needs to determine the identifier of a selection item.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getItemImage (getItemImage callback)	<p>Specifies the name of a callback function to be called to determine the icon of a specific dynamically-created selection item, identified by index.</p> <p>If this attribute is omitted, dynamically-created selection items SHOULD NOT display icons.</p>

Attributes	Description
	<p>For example, consider the following XML fragment:</p> <pre data-bbox="610 254 1321 302"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemImage="GetGalleryItemImage" /></pre> <p>In this example, the GetGalleryItemImage callback function is called when the application needs to determine the icon of a selection item.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getItemLabel (getItemLabel callback)</p>	<p>Specifies the name of a callback function to be called to determine the label of a specific dynamically-created selection item, identified by index. If this attribute is omitted, dynamically-created selection items SHOULD NOT display labels.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 642 1321 690"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemLabel="GetGalleryItemLabel" /></pre> <p>In this example, the GetGalleryItemLabel callback function is called when the application needs to determine the label of a selection item.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getItemScreentip (getItemScreentip callback)</p>	<p>Specifies the name of a callback function to be called to determine the screentip of a specific dynamically-created selection item, identified by index. If this attribute is omitted, dynamically-created selection items SHOULD use their labels as their screentips, or display no screentips at all.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1056 1321 1104"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemScreentip="GetGalleryItemScreentip" /></pre> <p>In this example, the GetGalleryItemScreentip callback function is called when the application needs to determine the screentip of a selection item.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getItemSupertip (getItemSupertip callback)</p>	<p>Specifies the name of a callback function to be called to determine the supertip of a specific dynamically-created selection item, identified by index. If this attribute is omitted, dynamically-created selection items SHOULD NOT display supertips.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1465 1321 1514"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemSupertip="GetGalleryItemSupertip" /></pre> <p>In this example, the GetGalleryItemSupertip callback function is called when the application needs to determine the supertip of a selection item.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getItemWidth</p>	<p>Specifies the name of a callback function to be called to determine the</p>

Attributes	Description
(getItemWidth callback)	<p>width of the selection items in this control.</p> <p>The itemWidth and getItemWidth attributes are mutually exclusive. If neither attribute is specified, the items SHOULD all take the size of the first item, based on its contents.</p> <p>The getItemHeight and getItemWidth attributes are mutually required. If only one of the attributes is specified, its value is ignored.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="613 436 1328 510"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemHeight="GetGalleryItemHeight" getItemWidth="GetGalleryItemWidth" /></pre> <p>In this example, the GetGalleryItemWidth callback function is called when the application needs to determine the width of the items in the gallery.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getKeytip (getKeytip callback)	<p>Specifies the name of a callback function to be called to determine the suggested KeyTip of this control.</p> <p>The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="613 898 1247 926"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getLabel (getLabel callback)	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="613 1262 1222 1289"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getScreentip (getScreentip callback)	<p>Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="613 1646 1328 1673"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is called when</p>

Attributes	Description
	<p>the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getSelectedItemID (getSelectedItemID callback)</p>	<p>Specifies the name of a callback function to be called to determine the identifier of the item that is selected in this control.</p> <p>The getSelectedItemID and getSelectedItemIndex attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display a selected item.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 506 1321 583"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemID="GetItemID" getSelectedItemID="GetGallerySelectedItemID" /></pre> <p>In this example, the GetGallerySelectedItemID callback function is called when the application needs to determine the selected item in the gallery. In this example the callback function returns one of the identifiers returned by the GetItemID callback function.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getSelectedItemIndex (getSelectedItemIndex callback)</p>	<p>Specifies the name of a callback function to be called to determine the index of the item to be selected in this control.</p> <p>The getSelectedItemID and getSelectedItemIndex attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display a selected item.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 999 1321 1052"><gallery id="gallery" getItemCount="GetGalleryItemCount" getSelectedItemIndex="GetGallerySelectedItemIndex" /></pre> <p>In this example, the GetGallerySelectedItemIndex callback function is called when the application needs to determine the selected item in the gallery.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getShowImage (getShowImage callback)</p>	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the icon of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1467 1349 1493"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p>In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getShowLabel</p>	<p>Specifies the name of a callback function to be called to determine whether</p>

Attributes	Description
(getShowLabel callback)	<p>the application SHOULD display the label of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 432 1349 457"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p>In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getSize (getSize callback)	<p>Specifies the name of a callback function to be called to determine the size of this control.</p> <p>The getSize and size attributes are mutually exclusive. If neither attribute is specified, the control's size SHOULD default to the normal size.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 821 1195 846"><button id="button" getSize="GetButtonSize" /></pre> <p>In this example, the GetButtonSize callback function is called when the application needs to determine the size of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getSupertip (getSupertip callback)	<p>Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1209 1295 1234"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p>In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getVisible (getVisible callback)	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1566 1260 1591"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate</p>

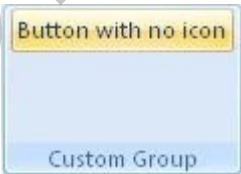

Attributes	Description
	simple type, as specified in section 2.3.2 .
id (control identifier)	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 449 1105 470"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an identifier of "MyButton". The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
idMso (built-in control identifier)	<p>Specifies the identifier of a built-in control.</p> <p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 789 915 810"><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold". The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
idQ (qualified control identifier)	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1163 1373 1524"><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI></pre> <p>In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>

Attributes	Description
image (custom image identifier)	<p>Specifies the relationship identifier for an image which SHOULD be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 407 1122 428"><button id="button" image="ForestPic" /></pre> <p>This specifies a custom button whose icon SHOULD be the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p>The possible values for this attribute are defined by the ST Uri simple type, as specified in section 2.3.14.</p>
imageMso (built-in image identifier)	<p>Specifies the identifier of a built-in image which SHOULD be used as the icon of this control.</p> <p>The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 827 1094 848"><button id="button" imageMso="Bold" /></pre> <p>This specifies a custom button that SHOULD use the built-in image with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST ID simple type, as specified in section 2.3.5.</p>
insertAfterMso (identifier of built-in control to insert after)	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1268 1377 1339"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST ID simple type, as specified in section 2.3.5.</p>
insertAfterQ (qualified identifier of control to insert after)	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="610 218 1390 296"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p data-bbox="581 325 1357 436">In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab". The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p data-bbox="237 464 537 541">insertBeforeMso (identifier of built-in control to insert before)</p>	<p data-bbox="581 464 1382 541">Specifies the identifier of a built-in control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p data-bbox="581 548 1377 646">The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p data-bbox="581 653 1127 684">For example, consider the following XML fragment:</p> <pre data-bbox="610 709 1390 787"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p data-bbox="581 816 1357 869">In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p data-bbox="581 875 1338 928">The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p data-bbox="237 957 537 1035">insertBeforeQ (qualified identifier of control to insert before)</p>	<p data-bbox="581 957 1382 1035">Specifies the qualified identifier of a control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p data-bbox="581 1041 1377 1140">The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p data-bbox="581 1146 1127 1178">For example, consider the following XML fragment:</p> <pre data-bbox="610 1203 1328 1302"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p data-bbox="581 1331 1370 1383">In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p data-bbox="581 1390 1357 1442">The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p data-bbox="237 1472 537 1524">invalidateContentOnDrop (invalidate content on drop)</p>	<p data-bbox="581 1472 1390 1524">Specifies whether this control SHOULD invalidate its contents and re-query for them when the user opens its drop-down menu.</p> <p data-bbox="581 1530 1235 1562">If this attribute is omitted, its value SHOULD default to false.</p> <p data-bbox="581 1568 1127 1600">For example, consider the following XML fragment:</p> <pre data-bbox="610 1625 1360 1692"><comboBox id="comboBox" getItemCount="GetComboBoxItemCount" getItemLabel="GetComboBoxItemLabel" invalidateContentOnDrop="true" /></pre>

Attributes	Description
	<p>In this example, this combo box SHOULD clear out its items and re-call the GetComboBoxItemCount and GetComboBoxItemLabel callback functions in order to populate its contents each time the user opens it.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>itemHeight (selection item height)</p>	<p>Specifies the height of the selection items in this control.</p> <p>The itemHeight and getItemHeight attributes are mutually exclusive. If neither attribute is specified, the items SHOULD all take the size of the first item, based on its contents.</p> <p>The itemHeight and itemWidth attributes are mutually required. If only one of the attributes is specified, its value is ignored.</p> <p>For example, consider a gallery control with 68 pixel tall items. This is specified using the following XML fragment:</p> <pre data-bbox="610 625 1289 806"><gallery id="gallery" label="Gallery" itemWidth="88" itemHeight="68" size="large" imageMso="HappyFace" > <item id="item1" image="Desert" /> <item id="item2" image="Forest" /> <item id="item3" image="Toucan" /> <item id="item4" image="Tree" /> </gallery></pre> <p>The possible values for this attribute are defined by the ST_GalleryItemWidthHeight simple type, as specified in section 2.3.3.</p>
<p>itemWidth (selection item width)</p>	<p>Specifies the width of the selection items in this control.</p> <p>The itemWidth and getItemWidth attributes are mutually exclusive. If neither attribute is specified, the items SHOULD all take the size of the first item, based on its contents.</p> <p>The itemHeight and itemWidth attributes are mutually required. If only one of the attributes is specified, its value is ignored.</p> <p>For example, consider a gallery control with 88 pixel wide items. This is specified using the following XML fragment:</p> <pre data-bbox="610 1171 1289 1352"><gallery id="gallery" label="Gallery" itemWidth="88" itemHeight="68" size="large" imageMso="HappyFace" > <item id="item1" image="Desert" /> <item id="item2" image="Forest" /> <item id="item3" image="Toucan" /> <item id="item4" image="Tree" /> </gallery></pre> <p>The possible values for this attribute are defined by the ST_GalleryItemWidthHeight simple type, as specified in section 2.3.3.</p>
<p>keytip (keytip)</p>	<p>Specifies a string to be used as the suggested KeyTip for this control.</p> <p>The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p> 

Attributes	Description
	<p>This is specified using the following XML fragment:</p> <pre data-bbox="610 254 1300 279"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
<p>label (label)</p>	<p>Specifies a string to be used as the label for this control.</p> <p>The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 531 1170 556"><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>onAction (onAction callback)</p>	<p>Specifies the name of a callback function to be called when this control is invoked by the user.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 804 1360 852"><button id="button" label="Button" onAction="ButtonClicked" /></pre> <p>In this example, the button calls the ButtonClicked callback function when it is invoked.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>rows (row count)</p>	<p>Specifies the number of rows that the gallery's items are arranged into. If the rows attribute is omitted, the application SHOULD choose the number of rows automatically based on the number of items.</p> <p>For example, consider a gallery control with six items arranged into two rows, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="610 1692 1195 1717"><gallery id="gallery" label="Gallery" rows="2"></pre>

Attributes	Description
	<pre> size="large" imageMso="HappyFace" > <item id="item1" image="Desert" /> <item id="item2" image="Forest" /> <item id="item3" image="Toucan" /> <item id="item4" image="Tree" /> <item id="item5" image="Flowers" /> <item id="item6" image="Whale" /> </gallery> </pre> <p>The possible values for this attribute are defined by the ST_GalleryRowColumnCount simple type, as specified in section 2.3.4.</p>
<p>screentip (screentip)</p>	<p>Specifies a string to be shown as the screentip for this control.</p> <p>The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre> <button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /> </pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>showImage (show image)</p>	<p>Specifies whether this control displays an icon.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider a button that does not display an icon, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre> <button id="button" showImage="false" label="Button with no icon" /> </pre>

Attributes	Description
	<p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>showItemImage (show item image)</p>	<p>Specifies whether this control displays icons on its selection items. If this attribute is omitted, the items' icons SHOULD be shown by default. For example, consider the following XML fragment:</p> <pre data-bbox="609 405 1393 562"><gallery id="gallery" label="Gallery" showItemImage="false" > <item id="item1" label="Item 1" /> <item id="item2" label="Item 1" /> <item id="item3" label="Item 2" /> <item id="item4" label="Item 3" /> </gallery></pre> <p>This specifies a gallery control that does not show any icons on its selection items.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>showItemLabel (show item label)</p>	<p>Specifies whether this control displays labels on its selection items. For example, consider the following XML fragment:</p> <pre data-bbox="609 814 1393 972"><gallery id="gallery" label="Gallery" showItemLabel="false" > <item id="item1" image="Forest" /> <item id="item2" image="Desert" /> <item id="item3" image="Mountain " /> <item id="item4" image="Ocean" /> </gallery></pre> <p>In this example, the gallery control does not show any labels on its selection items.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>showItemLabel (show item label)</p>	<p>Specifies whether this control displays labels on its selection items. If this attribute is omitted, the item's labels SHOULD be shown by default. For example, consider the following XML fragment:</p> <pre data-bbox="609 1255 1393 1413"><gallery id="gallery" label="Gallery" showItemLabel="false" > <item id="item1" image="Forest" /> <item id="item2" image="Desert" /> <item id="item3" image="Mountain " /> <item id="item4" image="Ocean" /> </gallery></pre> <p>In this example, the gallery control does not show any labels on its selection items.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>showLabel (show label)</p>	<p>Specifies whether this control SHOULD display its label. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its</p>

Attributes	Description
	<p>label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 289 1260 338"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p>This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>size (control size)</p>	<p>Specifies the size of the control.</p> <p>The size and getSize attributes are mutually exclusive. If neither attribute is specified, the control's size SHOULD default to the normal size.</p> <p>For example, consider a large button, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="610 863 1146 890"><toggleButton idMso="Bold" size="large" /></pre> <p>The possible values for this attribute are defined by the ST_Size simple type, as specified in section 2.3.10.</p>
<p>sizeString (size string)</p>	<p>Specifies a string whose size is used to determine the width of the text input area of this control.</p> <p>If this attribute is omitted, the application SHOULD determine the width of the text input area of the control automatically.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1163 1260 1190"><editBox id="editBox" sizeString="XXXXXXXXXXXXXXXX" /></pre> <p>This specifies an edit box control that is wide enough to display the string "XXXXXXXXXXXXXXXX".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>supertip (supertip)</p>	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="609 640 1312 716"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
tag (tag)	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="609 1018 1209 1073"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
visible (control visibility)	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="609 1375 1112 1409"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_Gallery">
  <complexContent>
    <extension base="CT_GalleryRegular">
      <attributeGroup ref="AG_SizeAttributes"/>
    </extension>
  </complexContent>
</complexType>
```

```

    </extension>
  </complexContent>
</complexType>

```

2.2.22 gallery (Unsize Gallery)

This element specifies a gallery which, due to its location, cannot have its size changed. The **size** attribute is not present. It otherwise behaves identically to the regular **gallery** element, as specified in section [2.2.21](#).

The following table summarizes the elements that are parents of this element.

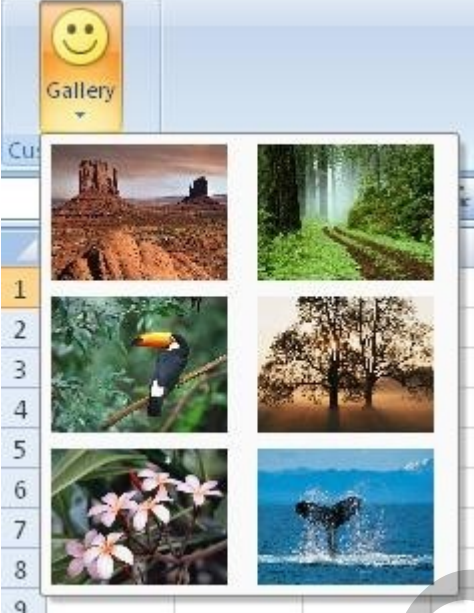

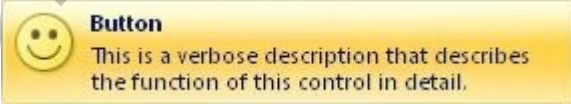

Parent Elements
buttonGroup (section 2.2.5); menu (section 2.2.28); menu (section 2.2.26); menu (section 2.2.29); menu (section 2.2.27); officeMenu (section 2.2.31)

The following table summarizes the elements that are children of this element.

Child Elements	Section
button (Unsize Button)	2.2.3
item (Selection Item)	2.2.24

The following table summarizes the attributes of this element.

Attributes	Description
columns (column count)	Specifies the number of columns that the gallery's items are arranged into. If the columns attribute is omitted, the application SHOULD choose the number of columns automatically based on the number of items. For example, consider a gallery control with six items arranged into two columns, as follows:

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="609 877 1234 1117"><gallery id="gallery" label="Gallery" columns="2" size="large" imageMso="HappyFace" > <item id="item1" image="Desert" /> <item id="item2" image="Forest" /> <item id="item3" image="Toucan" /> <item id="item4" image="Tree" /> <item id="item5" image="Flowers" /> <item id="item6" image="Whale" /> </gallery></pre> <p>The possible values for this attribute are defined by the ST_GalleryRowColumnCount simple type, as specified in section 2.3.4.</p>
<p>description (description)</p>	<p>Specifies a detailed description of the control, which SHOULD be displayed in detailed views.</p> <p>The description and getDescription attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text.</p> <p>For example, consider a button with a detailed description, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="609 1570 1364 1642"><button id="button" label="Button" imageMso="HappyFace" description="This is a verbose description that describes the function of this control in detail." /></pre> <p>The possible values for this attribute are defined by the ST_LongString simple type, as specified in section 2.3.8.</p>

Attributes	Description
<p>enabled (enabled state)</p>	<p>Specifies the enabled state of the control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 415 1360 464"><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>getDescription (getDescription callback)</p>	<p>Specifies the name of a callback function to be called to determine the detailed description of this control.</p> <p>The getDescription and description attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 827 1373 848"><button id="button" getDescription="GetButtonDescription" /></pre> <p>In this example, the GetButtonDescription callback function is called when the application needs to determine the detailed description of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getEnabled (getEnabled callback)</p>	<p>Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1209 1260 1230"><button id="button" getEnabled="IsButtonEnabled" /></pre> <p>In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getImage (getImage callback)</p>	<p>Specifies the name of a callback function to be called to determine the icon of this control.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1570 1221 1591"><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate</p>

Attributes	Description
	simple type, as specified in section 2.3.2 .
getItemCount (getItemCount callback)	<p>Specifies the name of a callback function to be called to determine the number of selection items in this control.</p> <p>If this attribute is omitted, the control SHOULD display any selection items that are specified as child elements. If no such items are specified, the control SHOULD be empty.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 449 1365 474"><gallery id="gallery" getItemCount="GetGalleryItemCount" /></pre> <p>In this example, the GetGalleryItemCount callback function is called when the application needs to determine the number of items in the gallery.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getItemHeight (getItemHeight callback)	<p>Specifies the name of a callback function to be called to determine the height of the selection items in this control.</p> <p>The itemHeight and getItemHeight attributes are mutually exclusive. If neither attribute is specified, the items SHOULD all take the size of the first item, based on its contents.</p> <p>The getItemHeight and getItemWidth attributes are mutually required. If only one of the attributes is specified, its value is ignored.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 919 1325 995"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemHeight="GetGalleryItemHeight" getItemWidth="GetGalleryItemWidth" /></pre> <p>In this example, the GetGalleryItemHeight callback function is called when the application needs to determine the height of the items in the gallery.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getItemID (getItemID callback)	<p>Specifies the name of a callback function to be called to determine the identifier of a specific dynamically-created selection item, identified by index.</p> <p>If this attribute is omitted, dynamically-created selection items SHOULD have empty identifiers.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1381 1325 1436"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemID="GetGalleryItemID" /></pre> <p>In this example, the GetGalleryItemID callback function is called when the application needs to determine the identifier of a selection item.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getItemImage (getItemImage callback)	<p>Specifies the name of a callback function to be called to determine the icon of a specific dynamically-created selection item, identified by index.</p> <p>If this attribute is omitted, dynamically-created selection items SHOULD NOT display icons.</p>

Attributes	Description
	<p>For example, consider the following XML fragment:</p> <pre data-bbox="610 254 1321 302"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemImage="GetGalleryItemImage" /></pre> <p>In this example, the GetGalleryItemImage callback function is called when the application needs to determine the icon of a selection item.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getItemLabel (getItemLabel callback)</p>	<p>Specifies the name of a callback function to be called to determine the label of a specific dynamically-created selection item, identified by index. If this attribute is omitted, dynamically-created selection items SHOULD NOT display labels.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 642 1321 690"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemLabel="GetGalleryItemLabel" /></pre> <p>In this example, the GetGalleryItemLabel callback function is called when the application needs to determine the label of a selection item.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getItemScreentip (getItemScreentip callback)</p>	<p>Specifies the name of a callback function to be called to determine the screentip of a specific dynamically-created selection item, identified by index. If this attribute is omitted, dynamically-created selection items SHOULD use their labels as their screentips, or display no screentips at all.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1056 1321 1104"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemScreentip="GetGalleryItemScreentip" /></pre> <p>In this example, the GetGalleryItemScreentip callback function is called when the application needs to determine the screentip of a selection item.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getItemSupertip (getItemSupertip callback)</p>	<p>Specifies the name of a callback function to be called to determine the supertip of a specific dynamically-created selection item, identified by index. If this attribute is omitted, dynamically-created selection items SHOULD NOT display supertips.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1467 1321 1516"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemSupertip="GetGalleryItemSupertip" /></pre> <p>In this example, the GetGalleryItemSupertip callback function is called when the application needs to determine the supertip of a selection item.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getItemWidth</p>	<p>Specifies the name of a callback function to be called to determine the</p>

Attributes	Description
<p>(getItemWidth callback)</p>	<p>width of the selection items in this control.</p> <p>The itemWidth and getItemWidth attributes are mutually exclusive. If neither attribute is specified, the items SHOULD all take the size of the first item, based on its contents.</p> <p>The getItemHeight and getItemWidth attributes are mutually required. If only one of the attributes is specified, its value is ignored.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="613 432 1325 506"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemHeight="GetGalleryItemHeight" getItemWidth="GetGalleryItemWidth" /></pre> <p>In this example, the GetGalleryItemWidth callback function is called when the application needs to determine the width of the items in the gallery.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getKeytip (getKeytip callback)</p>	<p>Specifies the name of a callback function to be called to determine the suggested KeyTip of this control.</p> <p>The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="613 894 1247 926"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getLabel (getLabel callback)</p>	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="613 1251 1222 1283"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getScreentip (getScreentip callback)</p>	<p>Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="613 1640 1325 1671"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is called when</p>

Attributes	Description
	<p>the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getSelectedItemID (getSelectedItemID callback)</p>	<p>Specifies the name of a callback function to be called to determine the identifier of the item to be selected in this control.</p> <p>The getSelectedItemID and getSelectedItemIndex attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display a selected item.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 506 1321 583"><gallery id="gallery" getItemCount="GetGalleryItemCount" getItemID="GetItemID" getSelectedItemID="GetGallerySelectedItemID" /></pre> <p>In this example, the GetGallerySelectedItemID callback function is called when the application needs to determine the selected item in the gallery. The callback function returns one of the identifiers returned by the GetItemID callback function.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getSelectedItemIndex (getSelectedItemIndex callback)</p>	<p>Specifies the name of a callback function to be called to determine the index of the item to be selected in this control.</p> <p>The getSelectedItemID and getSelectedItemIndex attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display a selected item.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 999 1321 1052"><gallery id="gallery" getItemCount="GetGalleryItemCount" getSelectedItemIndex="GetGallerySelectedItemIndex" /></pre> <p>In this example, the GetGallerySelectedItemIndex callback function is called when the application needs to determine the selected item in the gallery.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getShowImage (getShowImage callback)</p>	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the icon of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1472 1349 1497"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p>In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getShowLabel</p>	<p>Specifies the name of a callback function to be called to determine whether</p>

Attributes	Description
(getShowLabel callback)	<p>the application SHOULD display the label of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 432 1349 457"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p>In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getSupertip (getSupertip callback)	<p>Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 842 1300 867"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p>In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getVisible (getVisible callback)	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1203 1260 1228"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
id (control identifier)	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1587 1105 1612"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an identifier of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID</p>

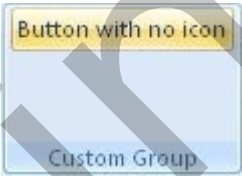

Attributes	Description
	simple type, as specified in section 2.3.13 .
idMso (built-in control identifier)	<p>Specifies the identifier of a built-in control. The contents of this attribute are application-defined. The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified. For example, consider the following XML fragment:</p> <pre><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold". The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
idQ (qualified control identifier)	<p>Specifies a qualified identifier for a control. The idQ attribute can be used to reference controls or containers created by other Custom UI documents. The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified. For example, consider the following XML fragment:</p> <pre><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI></pre> <p>In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab. The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
image (custom image identifier)	<p>Specifies the relationship identifier for an image which SHOULD be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file. The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed. For example, consider the following XML fragment:</p> <pre><button id="button" image="ForestPic" /></pre> <p>This specifies a custom button whose icon SHOULD be the embedded image file referenced by the relationship identifier of "ForestPic". The possible values for this attribute are defined by the ST_Uri simple</p>

Attributes	Description
	type, as specified in section 2.3.14 .
imageMso (built-in image identifier)	<p>Specifies the identifier of a built-in image which SHOULD be used as the icon of this control.</p> <p>The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 478 1094 506"><button id="button" imageMso="Bold" /></pre> <p>This specifies a custom button that SHOULD use the built-in image with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertAfterMso (identifier of built-in control to insert after)	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 919 1377 995"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertAfterQ (qualified identifier of control to insert after)	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1409 1390 1484"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
insertBeforeMso (identifier of built-in control)	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD</p>

Attributes	Description
to insert before)	<p>be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="609 401 1390 474"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertBeforeQ (qualified identifier of control to insert before)	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="609 890 1325 989"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
invalidateContentOnDrop (invalidate content on drop)	<p>Specifies whether this control SHOULD invalidate its contents and re-query for them when the user opens its drop-down menu.</p> <p>If this attribute is omitted, its value SHOULD default to false.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="609 1304 1360 1377"><comboBox id="comboBox" getItemCount="GetComboBoxItemCount" getItemLabel="GetComboBoxItemLabel" invalidateContentOnDrop="true" /></pre> <p>In this example, this combo box SHOULD clear out its items and re-call the GetComboBoxItemCount and GetComboBoxItemLabel callback functions in order to populate its contents each time the user opens it.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
itemHeight (selection item height)	<p>Specifies the height of the selection items in this control.</p> <p>The itemHeight and getItemHeight attributes are mutually exclusive. If neither attribute is specified, the items SHOULD all take the size of the first item, based on its contents.</p> <p>The itemHeight and itemWidth attributes are mutually required. If only</p>

Attributes	Description
	<p>one of the attributes is specified, its value is ignored.</p> <p>For example, consider a gallery control with 68 pixel tall items. This is specified using the following XML fragment:</p> <pre data-bbox="610 310 1287 495"><gallery id="gallery" label="Gallery" itemWidth="88" itemHeight="68" size="large" imageMso="HappyFace" > <item id="item1" image="Desert" /> <item id="item2" image="Forest" /> <item id="item3" image="Toucan" /> <item id="item4" image="Tree" /> </gallery></pre> <p>The possible values for this attribute are defined by the ST_GalleryItemWidthHeight simple type, as specified in section 2.3.3.</p>
itemWidth (selection item width)	<p>Specifies the width of the selection items in this control.</p> <p>The itemWidth and getItemWidth attributes are mutually exclusive. If neither attribute is specified, the items SHOULD all take the size of the first item, based on its contents.</p> <p>The itemHeight and itemWidth attributes are mutually required. If only one of the attributes is specified, its value is ignored.</p> <p>For example, consider a gallery control with 88 pixel wide items. This is specified using the following XML fragment:</p> <pre data-bbox="610 856 1287 1041"><gallery id="gallery" label="Gallery" itemWidth="88" itemHeight="68" size="large" imageMso="HappyFace" > <item id="item1" image="Desert" /> <item id="item2" image="Forest" /> <item id="item3" image="Toucan" /> <item id="item4" image="Tree" /> </gallery></pre> <p>The possible values for this attribute are defined by the ST_GalleryItemWidthHeight simple type, as specified in section 2.3.3.</p>
keytip (keytip)	<p>Specifies a string to be used as the suggested KeyTip for this control.</p> <p>The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="610 1451 1287 1476"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
label (label)	<p>Specifies a string to be used as the label for this control.</p> <p>The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="610 218 1170 239"><button id="button" label="Custom Button" /></pre> <p data-bbox="581 275 1382 359">This specifies a custom button with a label of "Custom Button". The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
onAction (onAction callback)	<p data-bbox="581 386 1365 436">Specifies the name of a callback function to be called when this control is invoked by the user.</p> <p data-bbox="581 445 1127 470">For example, consider the following XML fragment:</p> <pre data-bbox="610 497 1360 541"><button id="button" label="Button" onAction="ButtonClicked" /></pre> <p data-bbox="581 573 1333 623">In this example, the button calls the ButtonClicked callback function when it is invoked.</p> <p data-bbox="581 632 1338 682">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
rows (row count)	<p data-bbox="581 709 1349 793">Specifies the number of rows that the gallery's items are arranged into. If the rows attribute is omitted, the application SHOULD choose the number of rows automatically based on the number of items.</p> <p data-bbox="581 802 1354 852">For example, consider a gallery control with six items arranged into two rows, as follows:</p> <div data-bbox="581 858 1256 1318" data-label="Image"> </div> <p data-bbox="581 1329 1122 1354">This is specified using the following XML fragment:</p> <pre data-bbox="610 1381 1195 1619"><gallery id="gallery" label="Gallery" rows="2" size="large" imageMso="HappyFace" > <item id="item1" image="Desert" /> <item id="item2" image="Forest" /> <item id="item3" image="Toucan" /> <item id="item4" image="Tree" /> <item id="item5" image="Flowers" /> <item id="item6" image="Whale" /> </gallery></pre> <p data-bbox="581 1650 1377 1701">The possible values for this attribute are defined by the ST_GalleryRowColumnCount simple type, as specified in section 2.3.4.</p>

Attributes	Description
<p>screentip (screentip)</p>	<p>Specifies a string to be shown as the screentip for this control.</p> <p>The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="610 751 1312 806"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>showImage (show image)</p>	<p>Specifies whether this control displays an icon.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider a button that does not display an icon, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="610 1325 1081 1379"><button id="button" showImage="false" label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>showItemImage (show item image)</p>	<p>Specifies whether this control displays icons on its selection items.</p> <p>If this attribute is omitted, the items' icons SHOULD be shown by default.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1604 1390 1709"><gallery id="gallery" label="Gallery" showItemImage="false" > <item id="item1" label="Item 1" /> <item id="item2" label="Item 1" /> <item id="item3" label="Item 2" /></pre>

Attributes	Description
	<pre data-bbox="610 201 1068 254"><item id="item4" label="Item 3" /> </gallery></pre> <p data-bbox="581 281 1393 333">This specifies a gallery control that does not show any icons on its selection items.</p> <p data-bbox="581 340 1318 392">The possible values for this attribute are defined by the XML schema boolean datatype.</p>
showItemLabel (show item label)	<p data-bbox="581 417 1300 445">Specifies whether this control displays labels on its selection items.</p> <p data-bbox="581 451 1127 478">For example, consider the following XML fragment:</p> <pre data-bbox="610 506 1386 663"><gallery id="gallery" label="Gallery" showItemLabel="false" > <item id="item1" image="Forest" /> <item id="item2" image="Desert" /> <item id="item3" image="Mountain" /> <item id="item4" image="Ocean" /> </gallery></pre> <p data-bbox="581 690 1304 743">In this example, the gallery control does not show any labels on its selection items.</p> <p data-bbox="581 749 1318 802">The possible values for this attribute are defined by the XML schema boolean datatype.</p>
showLabel (show label)	<p data-bbox="581 827 1175 854">Specifies whether this control SHOULD display its label.</p> <p data-bbox="581 861 1338 913">This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p data-bbox="581 919 1370 997">The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p data-bbox="581 1003 1127 1031">For example, consider the following XML fragment:</p> <pre data-bbox="610 1058 1260 1110"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p data-bbox="581 1138 1393 1190">This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p data-bbox="581 1197 1318 1249">The possible values for this attribute are defined by the XML schema boolean datatype.</p>
sizeString (size string)	<p data-bbox="581 1274 1344 1327">Specifies a string whose size is used to determine the width of the text input area of this control.</p> <p data-bbox="581 1333 1383 1386">If this attribute is omitted, the application SHOULD determine the width of the text input area of the control automatically.</p> <p data-bbox="581 1392 1127 1419">For example, consider the following XML fragment:</p> <pre data-bbox="610 1446 1260 1474"><editBox id="editBox" sizeString="WWWWWWWWWWWW" /></pre> <p data-bbox="581 1501 1383 1554">This specifies an edit box control that is wide enough to display the string "WWWWWWWWWWWW".</p> <p data-bbox="581 1560 1383 1612">The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
supertip (supertip)	<p data-bbox="581 1635 1235 1663">Specifies a string to be shown as the supertip of the control.</p> <p data-bbox="581 1669 1383 1722">The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified no supertip for this control SHOULD be shown.</p>

Attributes	Description
	<p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="610 674 1312 751"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
tag (tag)	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1052 1211 1108"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
visible (control visibility)	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="610 1409 1109 1444"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_GalleryRegular">
  <complexContent>
    <extension base="CT_DropDownRegular">
```

```

<attributeGroup ref="AG_Description"/>
<attributeGroup ref="AG_DynamicContentAttributes"/>
<attribute name="columns" type="ST_GalleryRowColumnCount" use="optional"/>
<attribute name="rows" type="ST_GalleryRowColumnCount" use="optional"/>
<attribute name="itemWidth" type="ST_GalleryItemWidthHeight" use="optional"/>
<attribute name="itemHeight" type="ST_GalleryItemWidthHeight" use="optional"/>
<attribute name="getItemWidth" type="ST_Delegate" use="optional"/>
<attribute name="getItemHeight" type="ST_Delegate" use="optional"/>
<attribute name="showItemLabel" type="xsd:boolean" use="optional"/>
</extension>
</complexContent>
</complexType>

```

2.2.23 group (Group)

This element specifies a grouping of controls on a ribbon tab. All controls displayed in a ribbon tab MUST be contained within a **group**.

For example, consider a group with a single button, as follows:

Figure 13: A group with a single button

This is specified using the following XML fragment:

```

<group id="group" label="Custom Group">
  <button id="button" label="Button" imageMso="HappyFace" />
</group>

```

The following table summarizes the elements that are parents of this element.

Parent Elements
tab (section 2.2.39)

The following table summarizes the elements that are children of this element.

Child Elements	Section
box (Box Grouping Container)	2.2.1
button (Button)	2.2.2
buttonGroup (Button Grouping Container)	2.2.5
checkBox (Check Box)	2.2.6
comboBox (Combo Box)	2.2.7

Child Elements	Section
control (Control Clone)	2.2.12
dialogBoxLauncher (Dialog Box Launcher)	2.2.15
dropDown (Drop-down Control)	2.2.17
dynamicMenu (Dynamic Menu)	2.2.19
editBox (Edit Box)	2.2.20
gallery (Gallery)	2.2.21
labelControl (Text Label)	2.2.25
menu (Menu)	2.2.28
separator (Separator)	2.2.34
splitButton (Split Button)	2.2.38
toggleButton (Toggle Button)	2.2.43

The following table summarizes the attributes of this element.

Attributes	Description
getImage (getImage callback)	<p>Specifies the name of a callback function to be called to determine the icon of this control.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getKeytip (getKeytip callback)	<p>Specifies the name of a callback function to be called to determine the suggested KeyTip of this control.</p> <p>The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getLabel (getLabel callback)	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p>

Attributes	Description
	<p>For example, consider the following XML fragment:</p> <pre data-bbox="521 254 1133 275" style="background-color: #f0f0f0; padding: 5px;"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getScreentip (getScreentip callback)</p>	<p>Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 642 1235 663" style="background-color: #f0f0f0; padding: 5px;"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getSupertip (getSupertip callback)</p>	<p>Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 999 1211 1020" style="background-color: #f0f0f0; padding: 5px;"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p>In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getVisible (getVisible callback)</p>	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1360 1174 1381" style="background-color: #f0f0f0; padding: 5px;"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>id (control identifier)</p>	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="521 218 1019 241"><button id="MyButton" label="Button" /></pre> <p data-bbox="493 275 1393 359">This specifies a custom button control with an id of "MyButton". The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
idMso (built-in control identifier)	<p data-bbox="493 386 1065 443">Specifies the identifier of a built-in control. The contents of this attribute are application-defined.</p> <p data-bbox="493 453 1344 510">The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p data-bbox="493 512 1040 535">For example, consider the following XML fragment:</p> <pre data-bbox="521 562 829 585"><control idMso="Bold" /></pre> <p data-bbox="493 617 1341 701">This creates a clone of the control with an identifier of "Bold". The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
idQ (qualified control identifier)	<p data-bbox="493 728 1377 812">Specifies a qualified identifier for a control. The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p data-bbox="493 823 1344 879">The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p data-bbox="493 882 1040 905">For example, consider the following XML fragment:</p> <pre data-bbox="521 932 1312 1272"><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI></pre> <p data-bbox="493 1304 1357 1409">In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p data-bbox="493 1419 1357 1476">The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
image (custom image identifier)	<p data-bbox="493 1495 1390 1572">Specifies the relationship identifier for an image which SHOULD be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p data-bbox="493 1583 1377 1640">The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p data-bbox="493 1642 1040 1665">For example, consider the following XML fragment:</p> <pre data-bbox="521 1692 1036 1715"><button id="button" image="ForestPic" /></pre>

Attributes	Description
	<p>This specifies a custom button whose icon SHOULD be the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p>The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
<p>imageMso (built-in image identifier)</p>	<p>Specifies the identifier of a built-in image which SHOULD be used as the icon of this control.</p> <p>The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 573 1008 596"><button id="button" imageMso="Bold" /></pre> <p>This specifies a custom button that SHOULD use the built-in image with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterMso (identifier of built-in control to insert after)</p>	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 984 1289 1058"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterQ (qualified identifier of control to insert after)</p>	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1451 1300 1524"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>insertBeforeMso</p>	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted</p>

Attributes	Description
(identifier of built-in control to insert before)	<p>before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 401 1300 474"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertBeforeQ (qualified identifier of control to insert before)	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 863 1300 936"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
keytip (keytip)	<p>Specifies a string to be used as the suggested KeyTip for this control.</p> <p>The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1381 1211 1409"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
label (label)	<p>Specifies a string to be used as the label for this control.</p> <p>The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1661 1084 1688"><button id="button" label="Custom Button" /></pre>

Attributes	Description
	<p>This specifies a custom button with a label of "Custom Button".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>screentip (screentip)</p>	<p>Specifies a string to be shown as the screentip for this control.</p> <p>The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 863 1224 915"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>supertip (supertip)</p>	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1583 1224 1661"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as</p>

Attributes	Description
	specified in section 2.3.11 .
tag (tag)	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 449 1122 499"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
visible (control visibility)	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 810 1019 835"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_Group">
  <sequence>
    <sequence>
      <choice minOccurs="0" maxOccurs="1000">
        <group ref="EG_Controls"/>

```

2.2.24 item (Selection Item)

This element specifies an item in a selection-type control.

For example, consider a drop-down control with three selection items, as follows:

Figure 14: A drop-down control with selection items

This is specified using the following XML fragment:

```
<dropDown id="dropDown" label="DropDown">
  <item id="item1" label="Item 1" />
  <item id="item2" label="Item 2" />
  <item id="item3" label="Item 3" />
  <button id="button" label="Button..." />
</dropDown>
```

The following table summarizes the elements that are parents of this element.

Parent Elements
comboBox (section 2.2.7); dropDown (section 2.2.17); gallery (section 2.2.21); gallery (section 2.2.22)

The following table summarizes the attributes of this element.

Attributes	Description
id (custom control identifier)	<p>Specifies the identifier for a custom control. All new custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an identifier of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
image (custom image identifier)	<p>Specifies the identification information for an image to be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified a blank icon SHOULD be displayed, unless the showImage or getShowImage attributes are specified and used to hide the icon.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" image="ForestPic" /></pre>

Attributes	Description
	<p>In this example, the custom button has an icon that is the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p>The possible values for this attribute are defined by the ST Uri simple type, as specified in section 2.3.14.</p>
<p>imageMso (built-in image identifier)</p>	<p>Specifies the identifier of a built-in image to be used as the icon of this control.</p> <p>The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified a blank icon SHOULD be displayed, unless the showImage or getShowImage attributes are specified and used to hide the icon.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="483 573 967 596"><button id="button" imageMso="Bold" /></pre> <p>In this example, the custom button uses the built-in image with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST ID simple type, as specified in section 2.3.5.</p>
<p>label (label)</p>	<p>Specifies a string to be used as the label for this control.</p> <p>The label and getLabel attributes are mutually exclusive. If neither attribute is specified, the label for the control SHOULD be blank.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="483 884 1040 907"><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button".</p> <p>The possible values for this attribute are defined by the ST String simple type, as specified in section 2.3.11.</p>
<p>screentip (screentip)</p>	<p>Specifies a string to be shown as the screentip for this control.</p> <p>The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="483 1591 1182 1644"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST String simple type, as specified in section 2.3.11.</p>

Attributes	Description
supertip (supertip)	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified no supertip SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="483 772 1182 852"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_Item">
  <attribute name="id" type="ST_UniqueID" use="optional"/>
  <attribute name="label" type="ST_String" use="optional"/>
  <attribute name="image" type="ST Uri" use="optional"/>
  <attribute name="imageMso" type="ST_ID" use="optional"/>
  <attribute name="screentip" type="ST_String" use="optional"/>
  <attribute name="supertip" type="ST_String" use="optional"/>
</complexType>
```

2.2.25 labelControl (Text Label)

This element specifies a control that displays a simple string of text.

For example, consider a label control, as follows:

Figure 15: A label control

This is specified using the following XML fragment:

```
<labelControl id="label" label="Label Control" />
```

The following table summarizes the elements that are parents of this element.

Parent Elements
box (section 2.2.1); group (section 2.2.23)

The following table summarizes the attributes of this element.

Attributes	Description
enabled (enabled state)	<p>Specifies the enabled state of the control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
getEnabled (getEnabled callback)	<p>Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" getEnabled="IsButtonEnabled" /></pre> <p>In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getImage (getImage callback)	<p>Specifies the name of a callback function to be called to determine the icon of this control.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getKeytip	Specifies the name of a callback function to be called to determine the suggested

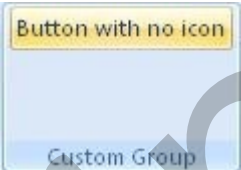

Attributes	Description
(getKeytip callback)	<p>KeyTip of this control.</p> <p>The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically. For example, consider the following XML fragment:</p> <pre data-bbox="521 344 1162 369"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getLabel (getLabel callback)	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed. For example, consider the following XML fragment:</p> <pre data-bbox="521 705 1133 730"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getScreentip (getScreentip callback)	<p>Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all. For example, consider the following XML fragment:</p> <pre data-bbox="521 1094 1239 1119"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowImage (getShowImage callback)	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the icon of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon. For example, consider the following XML fragment:</p> <pre data-bbox="521 1514 1263 1539"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p>In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowLabel	<p>Specifies the name of a callback function to be called to determine whether the</p>

Attributes	Description
(getShowLabel callback)	<p>application SHOULD display the label of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 407 1263 428"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p>In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getSupertip (getSupertip callback)	<p>Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 764 1211 785"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p>In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getVisible (getVisible callback)	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1125 1174 1146"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
id (control identifier)	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1514 1019 1535"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an identifier of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
idMso (built-in control identifier)	<p>Specifies the identifier of a built-in control.</p>

Attributes	Description
	<p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 348 829 369"><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>idQ (qualified control identifier)</p>	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 716 1312 1056"><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI></pre> <p>In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>image (custom image identifier)</p>	<p>Specifies the relationship identifier for an image which SHOULD be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1472 1032 1493"><button id="button" image="ForestPic" /></pre> <p>This specifies a custom button whose icon SHOULD be the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p>The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
<p>imageMso (built-in image identifier)</p>	<p>Specifies the identifier of a built-in image which SHOULD be used as the icon of this control.</p>

Attributes	Description
	<p>The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 373 1008 394"><button id="button" imageMso="Bold" /></pre> <p>This specifies a custom button that SHOULD use the built-in image with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterMso (identifier of built-in control to insert after)</p>	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 785 1289 856"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterQ (qualified identifier of control to insert after)</p>	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1251 1300 1323"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>insertBeforeMso (identifier of built-in control to insert before)</p>	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="521 218 1300 296"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p data-bbox="493 325 1360 380">In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p data-bbox="493 386 1341 438">The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertBeforeQ (qualified identifier of control to insert before)	<p data-bbox="493 464 1360 516">Specifies the qualified identifier of a control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p data-bbox="493 522 1382 625">The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p data-bbox="493 632 1040 659">For example, consider the following XML fragment:</p> <pre data-bbox="521 684 1312 762"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p data-bbox="493 791 1360 844">In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p data-bbox="493 850 1360 903">The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
keytip (keytip)	<p data-bbox="493 928 1247 955">Specifies a string to be used as the suggested KeyTip for this control.</p> <p data-bbox="493 961 1382 1014">The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p data-bbox="493 1020 1122 1047">For example, consider a button with KeyTip 'K', as follows:</p>  <p data-bbox="493 1155 1036 1182">This is specified using the following XML fragment:</p> <pre data-bbox="521 1207 1211 1234"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p data-bbox="493 1264 1390 1316">The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
label (label)	<p data-bbox="493 1337 1109 1365">Specifies a string to be used as the label for this control.</p> <p data-bbox="493 1371 1354 1423">The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p data-bbox="493 1430 1040 1457">For example, consider the following XML fragment:</p> <pre data-bbox="521 1482 1084 1509"><button id="button" label="Custom Button" /></pre> <p data-bbox="493 1539 1187 1566">This specifies a custom button with a label of "Custom Button".</p> <p data-bbox="493 1572 1386 1625">The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
screentip (screentip)	<p data-bbox="493 1648 1174 1675">Specifies a string to be shown as the screentip for this control.</p> <p data-bbox="493 1682 1390 1734">The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the</p>

Attributes	Description
	<p>screentip or display no screentip at all. For example, consider a button with a screentip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 663 1224 716"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>showImage (show image)</p>	<p>Specifies whether this control displays an icon. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large". The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon. For example, consider a button that does not display an icon, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1234 995 1287"><button id="button" showImage="false" label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>showLabel (show label)</p>	<p>Specifies whether this control SHOULD display its label. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large". The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label. For example, consider the following XML fragment:</p> <pre data-bbox="521 1598 1174 1650"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p>This specifies a button that has a label, but does not show it. Even though the</p>

Attributes	Description
	<p>label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>supertip (supertip)</p>	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 877 1224 953"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>tag (tag)</p>	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1255 1122 1310"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>visible (control visibility)</p>	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1619 1019 1640"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean</p>

Attributes	Description
	datatype.

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_LabelControl">
  <complexContent>
    <restriction base="CT_Control">
      <attribute name="image" use="prohibited"/>
      <attribute name="imageMso" use="prohibited"/>
      <attribute name="getImage" use="prohibited"/>
      <attribute name="keytip" use="prohibited"/>
      <attribute name="getKeytip" use="prohibited"/>
      <attribute name="showImage" use="prohibited"/>
      <attribute name="getShowImage" use="prohibited"/>
    </restriction>
  </complexContent>
</complexType>
```

2.2.26 menu (Unsize Menu)

This element specifies a menu control that, due to its location, cannot have its size changed. The **size** attribute is not present. It otherwise behaves identically to the regular **menu** element, as specified in section [2.2.28](#).

The following table summarizes the elements that are parents of this element.

Parent Elements
buttonGroup (section 2.2.5); menu (section 2.2.28); menu (section 2.2.26); menu (section 2.2.29); splitButton (section 2.2.38); splitButton (section 2.2.36)

The following table summarizes the elements that are children of this element.

Child Elements	Section
button (Unsize Button)	2.2.3
checkBox (Check Box)	2.2.6
control (Unsize Control Clone)	2.2.11
dynamicMenu (Unsize Dynamic Menu)	2.2.18
gallery (Unsize Gallery)	2.2.22
menu (Unsize Menu)	2.2.26
menuSeparator (Menu Separator)	2.2.30
splitButton (Unsize Split Button)	2.2.36
toggleButton (Unsize Toggle Button)	2.2.42

The following table summarizes the attributes of this element.

Attributes	Description
description (description)	<p>Specifies a detailed description of the control, which SHOULD be displayed in detailed views.</p> <p>The description and getDescription attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text.</p> <p>For example, consider a button with a detailed description, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 527 1276 600"><button id="button" label="Button" imageMso="HappyFace" description="This is a verbose description that describes the function of this control in detail." /></pre> <p>The possible values for this attribute are defined by the ST_LongString simple type, as specified in section 2.3.8.</p>
enabled (enabled state)	<p>Specifies the enabled state of the control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 915 1313 936"><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
getDescription (getDescription callback)	<p>Specifies the name of a callback function to be called to determine the detailed description of this control.</p> <p>The getDescription and description attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1272 1289 1293"><button id="button" getDescription="GetButtonDescription" /></pre> <p>In this example, the GetButtonDescription callback function is called when the application needs to determine the detailed description of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getEnabled (getEnabled callback)	<p>Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1629 1175 1650"><button id="button" getEnabled="IsButtonEnabled" /></pre> <p>In this example, the IsButtonEnabled callback function is called when the</p>

Attributes	Description
	<p>application needs to determine the enabled state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getImage (getImage callback)</p>	<p>Specifies the name of a callback function to be called to determine the icon of this control.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 478 1133 506"><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getKeytip (getKeytip callback)</p>	<p>Specifies the name of a callback function to be called to determine the suggested KeyTip of this control.</p> <p>The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 842 1159 869"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getLabel (getLabel callback)</p>	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1203 1133 1230"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getScreentip (getScreentip callback)</p>	<p>Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1587 1235 1614"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type,</p>

Attributes	Description
	as specified in section 2.3.2 .
getShowImage (getShowImage callback)	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the icon of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="524 478 1263 506"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p>In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowLabel (getShowLabel callback)	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the label of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control SHOULD be large.</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="524 898 1263 926"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p>In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getSupertip (getSupertip callback)	<p>Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="524 1262 1211 1289"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p>In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getVisible (getVisible callback)	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="524 1623 1174 1650"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p>

Attributes	Description
	The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2 .
id (control identifier)	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 474 1019 495"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an identifier of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
idMso (built-in control identifier)	<p>Specifies the identifier of a built-in control.</p> <p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 821 829 842"><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
idQ (qualified control identifier)	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1188 1312 1524"><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI></pre> <p>In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>

Attributes	Description
image (custom image identifier)	<p>Specifies the relationship identifier for an image which SHOULD be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 407 1032 428"><button id="button" image="ForestPic" /></pre> <p>This specifies a custom button whose icon SHOULD be the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p>The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
imageMso (built-in image identifier)	<p>Specifies the identifier of a built-in image which SHOULD be used as the icon of this control.</p> <p>The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 827 1008 848"><button id="button" imageMso="Bold" /></pre> <p>This specifies a custom button that SHOULD use the built-in image with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertAfterMso (identifier of built-in control to insert after)	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1241 1289 1314"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertAfterQ (qualified identifier of control to insert after)	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1703 1300 1724"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"></pre>

Attributes	Description
	<p>...</p> <p></tab></p> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>insertBeforeMso (identifier of built-in control to insert before)</p>	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 642 1300 716"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertBeforeQ (qualified identifier of control to insert before)</p>	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1104 1313 1178"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>itemSize (item size)</p>	<p>Specifies the size of the child controls in this menu.</p> <p>If this attribute is omitted, the menu's child controls SHOULD default to the normal size.</p> <p>For example, consider a menu control with large menu items, as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 600 1328 730"><menu id="menu" label="Menu with large items" itemSize="large"> <button id="button1" label="Button 1" imageMso="HappyFace" /> <button id="button2" label="Button 2" imageMso="Paste" /> <button id="button3" label="Button 3" imageMso="Copy" /> </menu></pre> <p>The possible values for this attribute are defined by the ST_ItemSize simple type, as specified in section 2.3.6.</p>
keytip (keytip)	<p>Specifies a string to be used as the suggested KeyTip for this control.</p> <p>The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1115 1211 1140"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
label (label)	<p>Specifies a string to be used as the label for this control.</p> <p>The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1392 1084 1417"><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
screentip (screentip)	<p>Specifies a string to be shown as the screentip for this control.</p> <p>The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 596 1224 646"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>showImage (show image)</p>	<p>Specifies whether this control displays an icon. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider a button that does not display an icon, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1169 995 1220"><button id="button" showImage="false" label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>showLabel (show label)</p>	<p>Specifies whether this control SHOULD display its label. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1530 1174 1581"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p>This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

Attributes	Description
<p>supertip (supertip)</p>	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 772 1224 850"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>tag (tag)</p>	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1150 1122 1203"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>visible (control visibility)</p>	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1514 1019 1535"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```

<complexType name="CT_MenuRegular">
  <complexContent>
    <extension base="CT_ControlBase">
      <sequence>
        <choice minOccurs="0" maxOccurs="1000">
          <group ref="EG_MenuControlsBase"/>
          <group ref="EG_MenuOrSplitButtonRegular"/>
        </choice>
      </sequence>
      <attribute name="itemSize" type="ST_ItemSize" use="optional"/>
      <attributeGroup ref="AG_Description"/>
      <attributeGroup ref="AG_IDAttributes"/>
    </extension>
  </complexContent>
</complexType>

```

2.2.27 menu (Menu with Title)

This element specifies a menu control that, due to its location, can optionally include a title string via the **title** or **getTitle** attributes. It otherwise behaves identically to the regular **menu** element, as specified in section [2.2.28](#).

For example, consider a menu control with a title, as follows:

Figure 16: A menu control with title

This is specified with the following XML fragment:

```

<menu id="menu" label="Menu With Title" title="Title String">
  <button id="button" label="Button" />
</menu>

```

The following table summarizes the elements that are parents of this element.

Parent Elements
menu (section 2.2.27); officeMenu (section 2.2.31); splitButton (section 2.2.37)

The following table summarizes the elements that are children of this element.

Child Elements	Section
button (Unsize Button)	2.2.3
checkBox (Check Box)	2.2.6
control (Unsize Control Clone)	2.2.11
dynamicMenu (Unsize Dynamic Menu)	2.2.18

Child Elements	Section
gallery (Unsize Gallery)	2.2.22
menu (Menu with Title)	2.2.27
menuSeparator (Menu Separator)	2.2.30
splitButton (Split Button with Title)	2.2.37
toggleButton (Unsize Toggle Button)	2.2.42

The following table summarizes the attributes of this element.

Attributes	Description
enabled (enabled state)	<p>Specifies the enabled state of the control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
getEnabled (getEnabled callback)	<p>Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" getEnabled="IsButtonEnabled" /></pre> <p>In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getImage (getImage callback)	<p>Specifies the name of a callback function to be called to determine the icon of this control.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getKeytip	<p>Specifies the name of a callback function to be called to determine the suggested</p>

Attributes	Description
(getKeytip callback)	<p>KeyTip of this control.</p> <p>The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically. For example, consider the following XML fragment:</p> <pre data-bbox="521 344 1162 369"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getLabel (getLabel callback)	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed. For example, consider the following XML fragment:</p> <pre data-bbox="521 705 1133 730"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getScreentip (getScreentip callback)	<p>Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all. For example, consider the following XML fragment:</p> <pre data-bbox="521 1094 1235 1119"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowImage (getShowImage callback)	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the icon of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon. For example, consider the following XML fragment:</p> <pre data-bbox="521 1514 1263 1539"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p>In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowLabel	<p>Specifies the name of a callback function to be called to determine whether the</p>

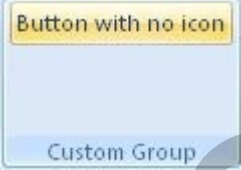

Attributes	Description
(getShowLabel callback)	<p>application SHOULD display the label of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 407 1263 428"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p>In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getSupertip (getSupertip callback)	<p>Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 764 1211 785"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p>In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getTitle (getTitle callback)	<p>Specifies the name of a callback function to be called to determine the title of this control.</p> <p>The title and getTitle attributes are mutually exclusive. If neither attribute is specified no title SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1129 1198 1199"><menu id="menu" label="Menu" getTitle="GetMenuTitle"> ... </menu></pre> <p>In this example, the GetMenuTitle callback function is called when the application needs to determine the title of the menu.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getVisible (getVisible callback)	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1541 1174 1562"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>

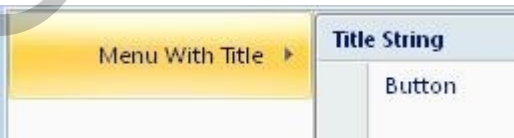

Attributes	Description
id (control identifier)	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an identifier of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
idMso (built-in control identifier)	<p>Specifies the identifier of a built-in control.</p> <p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
idQ (qualified control identifier)	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI></pre> <p>In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
image (custom)	<p>Specifies the relationship identifier for an image which SHOULD be used as the icon for this control. This attribute is used to specify an embedded picture that resides</p>

Attributes	Description
image identifier)	<p>locally within the containing file.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 346 1036 369"><button id="button" image="ForestPic" /></pre> <p>This specifies a custom button whose icon SHOULD be the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p>The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
imageMso (built-in image identifier)	<p>Specifies the identifier of a built-in image which SHOULD be used as the icon of this control.</p> <p>The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 766 1008 789"><button id="button" imageMso="Bold" /></pre> <p>This specifies a custom button that SHOULD use the built-in image with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertAfterMso (identifier of built-in control to insert after)	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1178 1289 1255"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertAfterQ (qualified identifier of control to insert after)	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1644 1304 1696"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ...</pre>

Attributes	Description
	<p></tab></p> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>insertBeforeMso (identifier of built-in control to insert before)</p>	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 615 1300 688"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertBeforeQ (qualified identifier of control to insert before)</p>	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1077 1300 1150"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>itemSize (item size)</p>	<p>Specifies the size of the child controls in this menu.</p> <p>If this attribute is omitted, the menu's child controls SHOULD default to the normal size.</p> <p>For example, consider a menu control with large menu items, as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 600 1328 730"><menu id="menu" label="Menu with large items" itemSize="large"> <button id="button1" label="Button 1" imageMso="HappyFace" /> <button id="button2" label="Button 2" imageMso="Paste" /> <button id="button3" label="Button 3" imageMso="Copy" /> </menu></pre> <p>The possible values for this attribute are defined by the ST_ItemSize simple type, as specified in section 2.3.6.</p>
keytip (keytip)	<p>Specifies a string to be used as the suggested KeyTip for this control.</p> <p>The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1115 1214 1140"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
label (label)	<p>Specifies a string to be used as the label for this control.</p> <p>The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1392 1084 1417"><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
screentip (screentip)	<p>Specifies a string to be shown as the screentip for this control.</p> <p>The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 596 1224 646"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>showImage (show image)</p>	<p>Specifies whether this control displays an icon. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider a button that does not display an icon, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1169 993 1220"><button id="button" showImage="false" label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>showLabel (show label)</p>	<p>Specifies whether this control SHOULD display its label. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1530 1172 1581"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p>This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

Attributes	Description
<p>supertip (supertip)</p>	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="519 766 1226 850"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>tag (tag)</p>	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="519 1144 1120 1207"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>title (title)</p>	<p>Specifies a string to be displayed as the title of the control.</p> <p>The title and getTitle attributes are mutually exclusive. If neither attribute is specified, no title SHOULD be shown.</p> <p>For example, consider a menu control with a title, as follows:</p>  <p>This is specified with the following XML fragment:</p> <pre data-bbox="519 1690 1299 1711"><menu id="menu" label="Menu With Title" title="Title String"></pre>

Attributes	Description
	<pre data-bbox="521 201 1019 247"><button id="button" label="Button" /> </menu></pre> <p data-bbox="493 281 1386 331">The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
visible (control visibility)	<p data-bbox="493 359 943 384">Specifies the visibility state of the control.</p> <p data-bbox="493 392 1357 443">The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p data-bbox="493 451 1040 476">For example, consider the following XML fragment:</p> <pre data-bbox="521 504 1019 529"><tab idMso="TabHome" visible="false" /></pre> <p data-bbox="493 556 1289 581">In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p data-bbox="493 590 1333 640">The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_MenuWithTitle">
  <complexContent>
    <extension base="CT_ControlBase">
      <sequence>
        <choice minOccurs="0" maxOccurs="1000">
          <group ref="EG_MenuControlsBase"/>
          <group ref="EG_MenuOrSplitButtonWithTitle"/>
        </choice>
      </sequence>
      <attributeGroup ref="AG_IDAttributes"/>
      <attribute name="itemSize" type="ST_ItemSize" use="optional"/>
      <attributeGroup ref="AG_Title"/>
    </extension>
  </complexContent>
</complexType>
```

2.2.28 menu (Menu)

This element specifies a drop-menu control.

For example, consider a menu control, as follows:

Figure 17: A menu control

This is specified using the following XML fragment:

```
<menu id="menu" label="Menu" imageMso="HappyFace" >
```

```

<button id="button1" label="Button 1" imageMso="FileSave" />
<button id="button2" label="Button 2" imageMso="Bold" />
<button id="button3" label="Button 3" imageMso="Undo" />
</menu>

```

The following table summarizes the elements that are parents of this element.

Parent Elements
box (section 2.2.1); group (section 2.2.23)

The following table summarizes the elements that are children of this element.

Child Elements	Section
button (Unsize Button)	2.2.3
checkBox (Check Box)	2.2.6
control (Unsize Control Clone)	2.2.11
dynamicMenu (Unsize Dynamic Menu)	2.2.18
gallery (Unsize Gallery)	2.2.22
menu (Unsize Menu)	2.2.26
menuSeparator (Menu Separator)	2.2.30
splitButton (Unsize Split Button)	2.2.36
toggleButton (Unsize Toggle Button)	2.2.42

The following table summarizes the attributes of this element.

Attributes	Description
description (description)	<p>Specifies a detailed description of the control, which SHOULD be displayed in detailed views.</p> <p>The description and getDescription attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text.</p> <p>For example, consider a button with a detailed description, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre> <button id="button" label="Button" imageMso="HappyFace" description="This is a verbose description that describes the function of this control in detail." /> </pre> <p>The possible values for this attribute are defined by the ST_LongString simple type, as specified in section 2.3.8.</p>
enabled (enabled)	Specifies the enabled state of the control.

Attributes	Description
state)	<p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 373 1317 394"><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
getDescription (getDescription callback)	<p>Specifies the name of a callback function to be called to determine the detailed description of this control.</p> <p>The getDescription and description attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 730 1292 751"><button id="button" getDescription="GetButtonDescription" /></pre> <p>In this example, the GetButtonDescription callback function is called when the application needs to determine the detailed description of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getEnabled (getEnabled callback)	<p>Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1094 1175 1115"><button id="button" getEnabled="IsButtonEnabled" /></pre> <p>In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getImage (getImage callback)	<p>Specifies the name of a callback function to be called to determine the icon of this control.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1451 1138 1472"><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getKeytip (getKeytip callback)	<p>Specifies the name of a callback function to be called to determine the suggested KeyTip of this control.</p> <p>The getKeytip and keytip attributes are mutually exclusive. If neither attribute is</p>

Attributes	Description
	<p>specified, the application SHOULD generate a KeyTip for the control automatically. For example, consider the following XML fragment:</p> <pre data-bbox="521 285 1162 310"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getLabel (getLabel callback)	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 646 1133 672"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getScreentip (getScreentip callback)	<p>Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1035 1239 1060"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowImage (getShowImage callback)	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the icon of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1455 1263 1480"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p>In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowLabel (getShowLabel callback)	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the label of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that</p>

Attributes	Description
	<p>the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 344 1263 369"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p>In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getSize (getSize callback)</p>	<p>Specifies the name of a callback function to be called to determine the size of this control.</p> <p>The getSize and size attributes are mutually exclusive. If neither attribute is specified, the control's size SHOULD default to the normal size.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 705 1109 730"><button id="button" getSize="GetButtonSize" /></pre> <p>In this example, the GetButtonSize callback function is called when the application needs to determine the size of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getSupertip (getSupertip callback)</p>	<p>Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1066 1211 1092"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p>In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getVisible (getVisible callback)</p>	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1430 1174 1455"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>id (control identifier)</p>	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these</p>

Attributes	Description
	<p>attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 289 1019 310"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an identifier of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
<p>idMso (built-in control identifier)</p>	<p>Specifies the identifier of a built-in control.</p> <p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 632 829 653"><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>idQ (qualified control identifier)</p>	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1003 1312 1339"><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI></pre> <p>In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>image (custom image identifier)</p>	<p>Specifies the relationship identifier for an image which SHOULD be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p>

Attributes	Description
	<p>For example, consider the following XML fragment:</p> <pre data-bbox="521 254 1036 275"><button id="button" image="ForestPic" /></pre> <p>This specifies a custom button whose icon SHOULD be the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p>The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
<p>imageMso (built-in image identifier)</p>	<p>Specifies the identifier of a built-in image which SHOULD be used as the icon of this control.</p> <p>The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 674 1008 695"><button id="button" imageMso="Bold" /></pre> <p>This specifies a custom button that SHOULD use the built-in image with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterMso (identifier of built-in control to insert after)</p>	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1083 1289 1157"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterQ (qualified identifier of control to insert after)</p>	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1549 1300 1623"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p>

Attributes	Description
	<p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>insertBeforeMso (identifier of built-in control to insert before)</p>	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 499 1300 575"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertBeforeQ (qualified identifier of control to insert before)</p>	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 968 1300 1043"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>itemSize (item size)</p>	<p>Specifies the size of the child controls in this menu.</p> <p>If this attribute is omitted, the menu's child controls SHOULD default to the normal size.</p> <p>For example, consider a menu control with large menu items, as follows:</p>  <p>This is specified using the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="521 218 1328 348"><menu id="menu" label="Menu with large items" itemSize="large"> <button id="button1" label="Button 1" imageMso="HappyFace" /> <button id="button2" label="Button 2" imageMso="Paste" /> <button id="button3" label="Button 3" imageMso="Copy" /> </menu></pre> <p data-bbox="493 380 1386 432">The possible values for this attribute are defined by the ST_ItemSize simple type, as specified in section 2.3.6.</p>
keytip (keytip)	<p data-bbox="493 457 1386 575">Specifies a string to be used as the suggested KeyTip for this control. The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically. For example, consider a button with KeyTip 'K', as follows:</p>  <p data-bbox="493 682 1036 709">This is specified using the following XML fragment:</p> <pre data-bbox="521 735 1211 758"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p data-bbox="493 787 1386 840">The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
label (label)	<p data-bbox="493 863 1354 951">Specifies a string to be used as the label for this control. The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed. For example, consider the following XML fragment:</p> <pre data-bbox="521 1010 1084 1033"><button id="button" label="Custom Button" /></pre> <p data-bbox="493 1062 1386 1150">This specifies a custom button with a label of "Custom Button". The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
screentip (screentip)	<p data-bbox="493 1171 1386 1289">Specifies a string to be shown as the screentip for this control. The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all. For example, consider a button with a screentip, as follows:</p>  <p data-bbox="493 1669 1036 1696">This is specified using the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="521 218 1224 268"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p data-bbox="493 300 1386 350">The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p data-bbox="237 380 456 430">showImage (show image)</p>	<p data-bbox="493 380 1386 464">Specifies whether this control displays an icon. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p data-bbox="493 470 1386 520">The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p data-bbox="493 527 1273 556">For example, consider a button that does not display an icon, as follows:</p> <div data-bbox="496 562 732 730" style="border: 1px solid #ccc; padding: 5px; margin: 5px 0;">  </div> <p data-bbox="493 741 1036 770">This is specified using the following XML fragment:</p> <pre data-bbox="521 793 992 844"><button id="button" showImage="false" label="Button with no icon" /></pre> <p data-bbox="493 873 1333 924">The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p data-bbox="237 953 456 1003">showLabel (show label)</p>	<p data-bbox="493 953 1089 982">Specifies whether this control SHOULD display its label.</p> <p data-bbox="493 989 1386 1039">This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p data-bbox="493 1045 1365 1096">The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p data-bbox="493 1102 1040 1131">For example, consider the following XML fragment:</p> <pre data-bbox="521 1155 1170 1205"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p data-bbox="493 1234 1349 1285">This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p data-bbox="493 1291 1333 1341">The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p data-bbox="237 1373 456 1402">size (control size)</p>	<p data-bbox="493 1373 837 1402">Specifies the size of the control.</p> <p data-bbox="493 1409 1328 1459">The size and getSize attributes are mutually exclusive. If neither attribute is specified, the control's size SHOULD default to the normal size.</p> <p data-bbox="493 1465 1019 1495">For example, consider a large button, as follows:</p> <div data-bbox="496 1501 656 1669" style="border: 1px solid #ccc; padding: 5px; margin: 5px 0;">  </div> <p data-bbox="493 1680 1036 1709">This is specified using the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="521 218 1060 243"><toggleButton idMso="Bold" size="large" /></pre> <p data-bbox="493 275 1362 323">The possible values for this attribute are defined by the ST_Size simple type, as specified in section 2.3.10.</p>
supertip (supertip)	<p data-bbox="493 350 1308 470">Specifies a string to be shown as the supertip of the control. The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified no supertip for this control SHOULD be shown. For example, consider a control with a supertip, as follows:</p>  <p data-bbox="493 863 1036 888">This is specified using the following XML fragment:</p> <pre data-bbox="521 915 1224 989"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p data-bbox="493 1020 1386 1068">The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
tag (tag)	<p data-bbox="493 1098 1393 1234">Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control. If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p data-bbox="493 1245 1040 1270">For example, consider the following XML fragment:</p> <pre data-bbox="521 1297 1122 1346"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p data-bbox="493 1377 1317 1425">This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p data-bbox="493 1436 1386 1484">The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
visible (control visibility)	<p data-bbox="493 1514 1359 1593">Specifies the visibility state of the control. The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p data-bbox="493 1604 1040 1629">For example, consider the following XML fragment:</p> <pre data-bbox="521 1656 1019 1682"><tab idMso="TabHome" visible="false" /></pre>

Attributes	Description
	In this example, the built-in tab with an identifier of "TabHome" is hidden. The possible values for this attribute are defined by the XML schema boolean datatype.

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_Menu">
  <complexContent>
    <extension base="CT_MenuRegular">
      <attributeGroup ref="AG_SizeAttributes"/>
      <attribute name="itemSize" type="ST_ItemSize" use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

2.2.29 menu (Dynamic Menu Root XML Element)

This element specifies the root tag of the XML **string** returned by a dynamic menu control.

For example, consider a dynamic menu control, as follows:

Figure 18: A dynamic menu control

This is specified using the following XML fragment:

```
<dynamicMenu id="dynamic" label="Dynamic Menu" getContent="GetMenuContent" />
```

The **GetMenuContent** callback function is called when the menu is dropped, and in this case returns a string with the following XML:

```
<menu xmlns="http://schemas.microsoft.com/office/2006/01/customui">
  <button id="button1" label="Button 1" />
  <button id="button2" label="Button 2" />
  <button id="button3" label="Button 3" />
</menu>
```

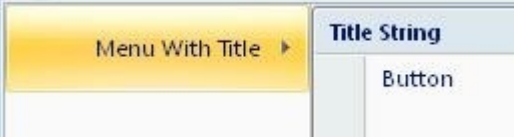

The following table summarizes the elements that are children of this element.

Child Elements	Section
button (Unsize Button)	2.2.3
checkBox (Check Box)	2.2.6

Child Elements	Section
control (Unsize Control Clone)	2.2.11
dynamicMenu (Unsize Dynamic Menu)	2.2.18
gallery (Unsize Gallery)	2.2.22
menu (Unsize Menu)	2.2.26
menuSeparator (Menu Separator)	2.2.30
splitButton (Unsize Split Button)	2.2.36
toggleButton (Unsize Toggle Button)	2.2.42

The following table summarizes the attributes of this element.

Attributes	Description
getTitle (getTitle callback)	<p>Specifies the name of a callback function to be called to determine the title of this control.</p> <p>The title and getTitle attributes are mutually exclusive. If neither attribute is specified no title SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre><menu id="menu" label="Menu" getTitle="GetMenuTitle"> ... </menu></pre> <p>In this example, the GetMenuTitle callback function is to be called when the application needs to determine the title of the menu.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
itemSize (item size)	<p>Specifies the size of the child controls in this menu.</p> <p>If this attribute is not specified, the menu's child controls SHOULD default to the normal size.</p> <p>For example, consider a menu control with large menu items, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre><menu id="menu" label="Menu with large items" itemSize="large"> <button id="button1" label="Button 1" imageMso="HappyFace" /> <button id="button2" label="Button 2" imageMso="Paste" /></pre>

Attributes	Description
	<pre data-bbox="505 201 1247 247"><button id="button3" label="Button 3" imageMso="Copy" /> </menu></pre> <p data-bbox="475 281 1370 331">The possible values for this attribute are defined by the ST_ItemSize simple type, as specified in section 2.3.6.</p>
title (title)	<p data-bbox="475 359 1118 384">Specifies a string to be displayed as the title of the control.</p> <p data-bbox="475 392 1317 443">The title and getTitle attributes are mutually exclusive. If neither attribute is specified, no title SHOULD be shown.</p> <p data-bbox="475 451 1130 476">For example, consider a menu control with a title, as follows:</p> <div data-bbox="480 485 992 621" style="border: 1px solid gray; padding: 5px;">  </div> <p data-bbox="475 632 1008 657">This is specified with the following XML fragment:</p> <pre data-bbox="505 684 1284 758"><menu id="menu" label="Menu With Title" title="Title String"> <button id="button" label="Button" /> </menu></pre> <p data-bbox="475 789 1370 840">The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_MenuRoot">
  <sequence>
    <choice minOccurs="0" maxOccurs="1000">
      <group ref="EG_MenuControlsBase"/>
      <group ref="EG_MenuOrSplitButtonRegular"/>
    </choice>
  </sequence>
  <attributeGroup ref="AG_Title"/>
  <attribute name="itemSize" type="ST_ItemSize" use="optional"/>
</complexType>
```

2.2.30 menuSeparator (Menu Separator)

This element specifies a horizontal separator line in a menu control. Menu separators can optionally have title strings, which SHOULD display as headers in the menu.

For example, consider a menu with a separator in between two of its items, as follows:

Figure 19: Menu control with separator

This is specified using the following XML fragment:

```

<menu id="menu" label="Menu" imageMso="HappyFace" >
  <button id="button1" label="Button 1" imageMso="FileSave" />
  <menuSeparator id="separator" />
  <button id="button2" label="Button 2" imageMso="Bold" />
</menu>

```

The following table summarizes the elements that are parents of this element.

Parent Elements
menu (section 2.2.28); menu (section 2.2.26); menu (section 2.2.29); menu (section 2.2.27); officeMenu (section 2.2.31)

The following table summarizes the attributes of this element.

Attributes	Description
getTitle (getTitle callback)	<p>Specifies the name of a callback function to be called to determine the title of this control.</p> <p>The title and getTitle attributes are mutually exclusive. If neither attribute is specified no title SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre> <menu id="menu" label="Menu" getTitle="GetMenuTitle"> ... </menu> </pre> <p>In this example, the GetMenuTitle callback function is called when the application needs to determine the title of the menu.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
id (control identifier)	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre> <button id="MyButton" label="Button" /> </pre> <p>This specifies a custom button control with an identifier of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
idQ (qualified control identifier)	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre> <customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> </pre>

Attributes	Description
	<pre data-bbox="521 201 1122 464"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI> </pre> <p data-bbox="493 495 1357 596">In this case, ex is an XML namespace prefix for the namespace http://www.example.com. Attributes	Description
	<p>controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 310 1300 390"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertBeforeQ (qualified identifier of control to insert before)</p>	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 779 1300 858"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>title (title)</p>	<p>Specifies a string to be displayed as the title of the control.</p> <p>The title and getTitle attributes are mutually exclusive. If neither attribute is specified, no title SHOULD be shown.</p> <p>For example, consider a menu control with a title, as follows:</p>  <p>This is specified with the following XML fragment:</p> <pre data-bbox="521 1346 1300 1425"><menu id="menu" label="Menu With Title" title="Title String"> <button id="button" label="Button" /> </menu></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_MenuSeparator">
  <attributeGroup ref="AG_IDCustom"/>
  <attributeGroup ref="AG_PositionAttributes"/>
  <attributeGroup ref="AG_Title"/>
</complexType>
```

</complexType>

2.2.31 officeMenu (Office Menu)

This element specifies the Office Menu of the application. It is used to reference the built-in **Office** Menu. This element SHOULD NOT be specified if the containing Custom UI XML document is a Quick Access Toolbar Customizations part.

For example, consider the following XML fragment:

```
<officeMenu>
  <control idMso="FileSave" visible="false" />
</officeMenu>
```

This XML fragment specifies that the command with an identifier of "FileSave" on the Office Menu is hidden.

The following table summarizes the elements that are parents of this element.

Parent Elements
ribbon (section 2.2.33)

The following table summarizes the elements that are children of this element.

Child Elements	Section
button (Unsize Button)	2.2.3
checkBox (Check Box)	2.2.6
control (Unsize Control Clone)	2.2.11
dynamicMenu (Unsize Dynamic Menu)	2.2.18
gallery (Unsize Gallery)	2.2.22
menu (Menu with Title)	2.2.27
menuSeparator (Menu Separator)	2.2.30
splitButton (Split Button with Title)	2.2.37
toggleButton (Unsize Toggle Button)	2.2.42

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_OfficeMenu">
  <sequence>
    <choice minOccurs="0" maxOccurs="1000">
      <group ref="EG_MenuControlsBase"/>
      <group ref="EG_MenuOrSplitButtonWithTitle"/>
    </choice>
  </sequence>
```

</complexType>

2.2.32 qat (Quick Access Toolbar)

This element specifies the quick access toolbar. If the containing Custom UI file is a Ribbon Extensibility part the **qat** element cannot be used unless the **startFromScratch** attribute on the ribbon element is set to "true". In this case only the **sharedControls** child element SHOULD be used. If the containing Custom UI file is a Quick Access Toolbar Customizations part, the **documentControls** child element SHOULD be used.

For example, consider the following controls on the document-specific quick access toolbar:

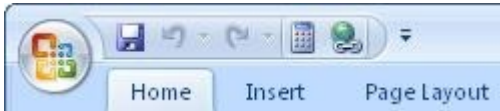

Figure 20: Controls on the quick access toolbar

This is specified using the following XML fragment:

```
<qat>
  <documentControls>
    <control idMso="CalculateNow" />
    <control idMso="HyperlinkInsert" />
  </documentControls>
</qat>
```

The following table summarizes the elements that are parents of this element.

Parent Elements
ribbon (section 2.2.33)

The following table summarizes the elements that are children of this element.

Child Elements	Section
documentControls (List of Document-Specific Quick Access Toolbar Controls)	2.2.16
sharedControls (List of Shared Quick Access Toolbar Controls)	2.2.35

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_Qat">
  <sequence>
    <element name="sharedControls" type="CT_QatItems" minOccurs="0"/>
    <element name="documentControls" type="CT_QatItems" minOccurs="0"/>
  </sequence>
</complexType>
```

2.2.33 ribbon (Ribbon)

This element is used to reference the Ribbon of the application and its contents.

The following table summarizes the elements that are parents of this element.

Parent Elements
customUI (section 2.2.14)

The following table summarizes the elements that are children of this element.

Child Elements	Section
contextualTabs (List of Contextual Tab Sets)	2.2.10
officeMenu (Office Menu)	2.2.31
qat (Quick Access Toolbar)	2.2.32
tabs (List of Tabs)	2.2.40

The following table summarizes the attributes of this element.

Attributes	Description
startFromScratch (start from scratch)	<p>Specifies that the application's built-in ribbon UI is reduced to a minimal set of features, providing a clean slate on which to build custom UI. If this attribute is omitted, its value SHOULD default to "false". For example, consider the following XML fragment:</p> <pre><ribbon startFromScratch="true"> ... </ribbon></pre> <p>In this example, the application's ribbon is put into start from scratch mode. The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_Ribbon">
  <all>
    <element name="officeMenu" type="CT_OfficeMenu" minOccurs="0" maxOccurs="1"/>
    <element name="qat" type="CT_Qat" minOccurs="0" maxOccurs="1">
      <unique name="qatControls">
        <selector xpath="*/**"/>
        <field xpath="@id"/>
      </unique>
    </element>
    <element name="tabs" type="CT_Tabs" minOccurs="0" maxOccurs="1"/>
    <element name="contextualTabs" type="CT_ContextualTabs" minOccurs="0" maxOccurs="1"/>
  </all>
  <attribute name="startFromScratch" type="xsd:boolean" use="optional"/>
</complexType>
```

2.2.34 separator (Separator)

This element specifies a vertical separator line between two sets of controls, either in the Quick Access Toolbar or within **group** elements.

For example, consider a vertical separator control between two buttons, as follows:

Figure 21: A vertical separator control

This is specified using the following XML fragment:

```
<button id="button1" label="Button 1" imageMso="HappyFace" size="large" />
<separator id="separator" />
<button id="button2" label="Button 2" imageMso="HappyFace" size="large" />
```

The following table summarizes the elements that are parents of this element.

Parent Elements
documentControls (section 2.2.16); group (section 2.2.23); sharedControls (section 2.2.35)

The following table summarizes the attributes of this element.

Attributes	Description
getVisible (getVisible callback)	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
id (control identifier)	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an identifier of "MyButton".</p>

Attributes	Description
	<p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
<p>idQ (qualified control identifier)</p>	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 485 1317 825"> <customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI> </pre> <p>In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>insertAfterMso (identifier of built-in control to insert after)</p>	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1266 1287 1346"> <tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab> </pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterQ (qualified identifier of control to insert after)</p>	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="521 218 1300 296"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p data-bbox="493 325 1360 380">In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p data-bbox="493 386 1360 438">The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
insertBeforeMso (identifier of built-in control to insert before)	<p data-bbox="493 464 1349 518">Specifies the identifier of a built-in control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p data-bbox="493 525 1382 625">The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p data-bbox="493 632 1040 659">For example, consider the following XML fragment:</p> <pre data-bbox="521 684 1300 762"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p data-bbox="493 791 1360 846">In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p data-bbox="493 852 1341 905">The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertBeforeQ (qualified identifier of control to insert before)	<p data-bbox="493 926 1360 980">Specifies the qualified identifier of a control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p data-bbox="493 987 1382 1087">The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p data-bbox="493 1094 1040 1121">For example, consider the following XML fragment:</p> <pre data-bbox="521 1146 1300 1224"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p data-bbox="493 1253 1360 1308">In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p data-bbox="493 1314 1360 1367">The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
visible (control visibility)	<p data-bbox="493 1388 943 1415">Specifies the visibility state of the control.</p> <p data-bbox="493 1421 1360 1476">The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p data-bbox="493 1482 1040 1509">For example, consider the following XML fragment:</p> <pre data-bbox="521 1535 1019 1562"><tab idMso="TabHome" visible="false" /></pre> <p data-bbox="493 1591 1289 1619">In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p data-bbox="493 1625 1333 1677">The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_Separator">
  <attributeGroup ref="AG_IDCustom"/>
  <attributeGroup ref="AG_Visible"/>
  <attributeGroup ref="AG_PositionAttributes"/>
</complexType>
```

2.2.35 sharedControls (List of Shared Quick Access Toolbar Controls)

This element specifies the section of the quick access toolbar that is shared among all documents. This element SHOULD NOT be specified if the containing Custom UI XML document is a Quick Access Toolbar Customizations part. If the containing Custom UI XML document is a Ribbon Extensibility part, this element can be used if the **startFromScratch** attribute is set to "true" on the ribbon element.

For example, consider a Ribbon Extensibility XML document that adds the two buttons to the shared section of the quick access toolbar:

Figure 22: Shared controls on the quick access toolbar

This is specified using the following XML fragment:

```
<qat>
  <sharedControls>
    <button id="button1" imageMso="HappyFace" />
    <button idMso="Cut" />
  </sharedControls>
</qat>
```

The following table summarizes the elements that are parents of this element.

Parent Elements
qat (section 2.2.32)

The following table summarizes the elements that are children of this element.

Child Elements	Section
button (Unsize Button)	2.2.3
control (Quick Access Toolbar Control Clone)	2.2.13
separator (Separator)	2.2.34

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_QatItems">
```

```

<sequence>
  <choice minOccurs="0" maxOccurs="1000">
    <element name="control" type="CT_ControlCloneQat"/>
    <element name="button" type="CT_ButtonRegular"/>
    <element name="separator" type="CT_Separator"/>
  </choice>
</sequence>
</complexType>

```

2.2.36 splitButton (Unsize Split Button)

This element specifies a split button control that, due to its location, cannot have its size changed. The **size** attribute is not present. It otherwise behaves identically to the regular **splitButton** element, as specified in section [2.2.38](#).

The following table summarizes the elements that are parents of this element.

Parent Elements
buttonGroup (section 2.2.5); menu (section 2.2.28); menu (section 2.2.26); menu (section 2.2.29)

The following table summarizes the elements that are children of this element.

Child Elements	Section
button (Button Inside of a Split Button)	2.2.4
menu (Unsize Menu)	2.2.26
toggleButton (Toggle Button Inside of a Split Button)	2.2.44

The following table summarizes the attributes of this element.

Attributes	Description
enabled (enabled state)	<p>Specifies the enabled state of the control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
getEnabled (getEnabled callback)	<p>Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>For example, consider the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="521 218 1175 243"><button id="button" getEnabled="IsButtonEnabled" /></pre> <p data-bbox="493 275 1305 327">In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button.</p> <p data-bbox="493 333 1386 386">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getImage (getImage callback)	<p data-bbox="493 411 1377 464">Specifies the name of a callback function to be called to determine the icon of this control.</p> <p data-bbox="493 470 1377 522">The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p data-bbox="493 529 1040 554">For example, consider the following XML fragment:</p> <pre data-bbox="521 581 1133 606"><button id="button" getImage="GetButtonImage" /></pre> <p data-bbox="493 634 1305 686">In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button.</p> <p data-bbox="493 693 1386 745">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getKeytip (getKeytip callback)	<p data-bbox="493 768 1365 821">Specifies the name of a callback function to be called to determine the suggested KeyTip of this control.</p> <p data-bbox="493 827 1382 879">The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p data-bbox="493 886 1040 911">For example, consider the following XML fragment:</p> <pre data-bbox="521 938 1159 963"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p data-bbox="493 991 1305 1043">In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p data-bbox="493 1050 1386 1102">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getLabel (getLabel callback)	<p data-bbox="493 1131 1382 1184">Specifies the name of a callback function to be called to determine the label of this control.</p> <p data-bbox="493 1190 1354 1243">The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p data-bbox="493 1249 1040 1274">For example, consider the following XML fragment:</p> <pre data-bbox="521 1302 1133 1327"><button id="button" getLabel="GetButtonLabel" /></pre> <p data-bbox="493 1354 1289 1407">In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p data-bbox="493 1413 1386 1465">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getScreentip (getScreentip callback)	<p data-bbox="493 1495 1386 1547">Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p data-bbox="493 1554 1386 1629">The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p data-bbox="493 1635 1040 1661">For example, consider the following XML fragment:</p> <pre data-bbox="521 1688 1235 1713"><button id="button" getScreentip="GetButtonScreentip" /></pre>

Attributes	Description
	<p>In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getShowImage (getShowImage callback)</p>	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the icon of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>size and getSize attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 573 1263 596"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p>In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getShowLabel (getShowLabel callback)</p>	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the label of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 993 1263 1016"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p>In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getSupertip (getSupertip callback)</p>	<p>Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1350 1211 1373"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p>In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getVisible (getVisible callback)</p>	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="521 218 1175 241"><button id="button" getVisible="IsButtonVisible" /></pre> <p data-bbox="493 275 1289 325">In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p data-bbox="493 331 1386 382">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
id (control identifier)	<p data-bbox="493 411 1386 487">Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p data-bbox="493 493 1347 546">The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p data-bbox="493 552 1040 577">For example, consider the following XML fragment:</p> <pre data-bbox="521 604 1019 627"><button id="MyButton" label="Button" /></pre> <p data-bbox="493 657 1252 682">This specifies a custom button control with an identifier of "MyButton".</p> <p data-bbox="493 688 1393 741">The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
idMso (built-in control identifier)	<p data-bbox="493 768 954 793">Specifies the identifier of a built-in control.</p> <p data-bbox="493 800 1065 825">The contents of this attribute are application-defined.</p> <p data-bbox="493 831 1347 884">The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p data-bbox="493 890 1040 915">For example, consider the following XML fragment:</p> <pre data-bbox="521 942 829 966"><control idMso="Bold" /></pre> <p data-bbox="493 995 1154 1020">This creates a clone of the control with an identifier of "Bold".</p> <p data-bbox="493 1026 1343 1079">The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
idQ (qualified control identifier)	<p data-bbox="493 1115 954 1140">Specifies a qualified identifier for a control.</p> <p data-bbox="493 1146 1380 1199">The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p data-bbox="493 1205 1347 1257">The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p data-bbox="493 1264 1040 1289">For example, consider the following XML fragment:</p> <pre data-bbox="521 1316 1312 1656"><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI></pre> <p data-bbox="493 1686 1175 1711">In this case, ex is an XML namespace prefix for the namespace</p>

Attributes	Description
	<p>http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>image (custom image identifier)</p>	<p>Specifies the relationship identifier for an image which SHOULD be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 558 1036 583"><button id="button" image="ForestPic" /></pre> <p>This specifies a custom button whose icon SHOULD be the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p>The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
<p>imageMso (built-in image identifier)</p>	<p>Specifies the identifier of a built-in image which SHOULD be used as the icon of this control.</p> <p>The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 978 1008 1003"><button id="button" imageMso="Bold" /></pre> <p>This specifies a custom button that SHOULD use the built-in image with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterMso (identifier of built-in control to insert after)</p>	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1388 1289 1465"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterQ (qualified identifier of control to insert after)</p>	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ</p>

Attributes	Description
after)	<p>attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 338 1300 415"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
insertBeforeMso (identifier of built-in control to insert before)	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 800 1300 877"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertBeforeQ (qualified identifier of control to insert before)	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1262 1300 1339"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
keytip (keytip)	<p>Specifies a string to be used as the suggested KeyTip for this control.</p> <p>The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 352 1211 380"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
label (label)	<p>Specifies a string to be used as the label for this control.</p> <p>The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 632 1084 659"><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
screentip (screentip)	<p>Specifies a string to be shown as the screentip for this control.</p> <p>The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1339 1224 1392"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
showImage (show image)	<p>Specifies whether this control displays an icon.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider a button that does not display an icon, as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 432 995 485"><button id="button" showImage="false" label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
showLabel (show label)	<p>Specifies whether this control SHOULD display its label.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 793 1174 846"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p>This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
supertip (supertip)	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1577 1222 1650"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as</p>

Attributes	Description
	specified in section 2.3.11 .
tag (tag)	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 449 1122 499"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
visible (control visibility)	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 810 1019 835"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_SplitButtonRegular">
  <complexContent>
    <extension base="CT_SplitButtonRestricted">
      <sequence minOccurs="0">
        <choice minOccurs="0">
          <element name="button" type="CT_VisibleButton"/>
          <element name="toggleButton" type="CT_VisibleToggleButton"/>
        </choice>
          <element name="menu" type="CT_MenuRegular"/>
        </sequence>
      </extension>
    </complexContent>
  </complexType>
```

2.2.37 splitButton (Split Button with Title)

This element specifies a split button control that, due to its location, can optionally include a title string via the **title** or **getTitle** attributes. It otherwise behaves identically to the regular **splitButton** element, as specified in section [2.2.38](#).

The following table summarizes the elements that are parents of this element.

Parent Elements
menu (section 2.2.27); officeMenu (section 2.2.31)

The following table summarizes the elements that are children of this element.

Child Elements	Section
button (Button Inside of a Split Button)	2.2.4
menu (Menu with Title)	2.2.27
toggleButton (Toggle Button Inside of a Split Button)	2.2.44

The following table summarizes the attributes of this element.

Attributes	Description
enabled (enabled state)	<p>Specifies the enabled state of the control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
getEnabled (getEnabled callback)	<p>Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" getEnabled="IsButtonEnabled" /></pre> <p>In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getImage (getImage callback)	<p>Specifies the name of a callback function to be called to determine the icon of this control.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type,</p>

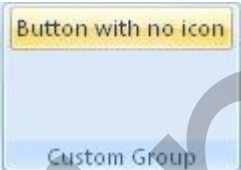

Attributes	Description
	as specified in section 2.3.2 .
getKeytip (getKeytip callback)	<p>Specifies the name of a callback function to be called to determine the suggested KeyTip of this control.</p> <p>The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically. For example, consider the following XML fragment:</p> <pre data-bbox="521 422 1162 447"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getLabel (getLabel callback)	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed. For example, consider the following XML fragment:</p> <pre data-bbox="521 783 1138 808"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getScreentip (getScreentip callback)	<p>Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all. For example, consider the following XML fragment:</p> <pre data-bbox="521 1167 1239 1192"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowImage (getShowImage callback)	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the icon of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon. For example, consider the following XML fragment:</p> <pre data-bbox="521 1587 1263 1612"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p>In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type,</p>

Attributes	Description
	as specified in section 2.3.2 .
getShowLabel (getShowLabel callback)	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the label of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 478 1263 506"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p>In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getSupertip (getSupertip callback)	<p>Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 842 1211 869"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p>In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getVisible (getVisible callback)	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1203 1174 1230"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
id (control identifier)	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1587 1019 1614"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an identifier of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>

Attributes	Description
idMso (built-in control identifier)	<p>Specifies the identifier of a built-in control. The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 390 829 411"><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
idQ (qualified control identifier)	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 758 1312 1098"><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI></pre> <p>In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
image (custom image identifier)	<p>Specifies the relationship identifier for an image which SHOULD be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1514 1032 1535"><button id="button" image="ForestPic" /></pre> <p>This specifies a custom button whose icon SHOULD be the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p>The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
imageMso (built-in	<p>Specifies the identifier of a built-in image which SHOULD be used as the icon of this</p>

Attributes	Description
image identifier)	<p>control.</p> <p>The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 407 1008 428"><button id="button" imageMso="Bold" /></pre> <p>This specifies a custom button that SHOULD use the built-in image with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertAfterMso (identifier of built-in control to insert after)	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 821 1289 894"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertAfterQ (qualified identifier of control to insert after)	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1283 1300 1356"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
insertBeforeMso (identifier of built-in control to insert before)	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="521 218 1300 296"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p data-bbox="493 325 1360 380">In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p data-bbox="493 386 1341 438">The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertBeforeQ (qualified identifier of control to insert before)	<p data-bbox="493 464 1360 516">Specifies the qualified identifier of a control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p data-bbox="493 522 1382 625">The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p data-bbox="493 632 1040 659">For example, consider the following XML fragment:</p> <pre data-bbox="521 684 1312 762"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p data-bbox="493 791 1360 844">In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p data-bbox="493 850 1360 903">The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
keytip (keytip)	<p data-bbox="493 928 1247 955">Specifies a string to be used as the suggested KeyTip for this control.</p> <p data-bbox="493 961 1382 1014">The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p data-bbox="493 1020 1122 1047">For example, consider a button with KeyTip 'K', as follows:</p>  <p data-bbox="493 1155 1036 1182">This is specified using the following XML fragment:</p> <pre data-bbox="521 1207 1211 1234"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p data-bbox="493 1264 1390 1316">The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
label (label)	<p data-bbox="493 1337 1109 1365">Specifies a string to be used as the label for this control.</p> <p data-bbox="493 1371 1354 1423">The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p data-bbox="493 1430 1040 1457">For example, consider the following XML fragment:</p> <pre data-bbox="521 1482 1084 1509"><button id="button" label="Custom Button" /></pre> <p data-bbox="493 1539 1187 1566">This specifies a custom button with a label of "Custom Button".</p> <p data-bbox="493 1572 1386 1625">The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
screentip (screentip)	<p data-bbox="493 1646 1174 1673">Specifies a string to be shown as the screentip for this control.</p> <p data-bbox="493 1680 1390 1732">The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the</p>

Attributes	Description
	<p>screentip or display no screentip at all. For example, consider a button with a screentip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 661 1224 716"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>showImage (show image)</p>	<p>Specifies whether this control displays an icon. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large". The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon. For example, consider a button that does not display an icon, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1234 995 1289"><button id="button" showImage="false" label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>showLabel (show label)</p>	<p>Specifies whether this control SHOULD display its label. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large". The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label. For example, consider the following XML fragment:</p> <pre data-bbox="521 1598 1174 1652"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p>This specifies a button that has a label, but does not show it. Even though the</p>

Attributes	Description
	<p>label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>supertip (supertip)</p>	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 877 1224 953"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>tag (tag)</p>	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1255 1122 1310"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>visible (control visibility)</p>	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1619 1019 1640"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean</p>

Attributes	Description
	datatype.

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_SplitButtonWithTitle">
  <complexContent>
    <extension base="CT_SplitButtonRestricted">
      <sequence minOccurs="0">
        <choice minOccurs="0">
          <element name="button" type="CT_VisibleButton"/>
          <element name="toggleButton" type="CT_VisibleToggleButton"/>
        </choice>
        <element name="menu" type="CT_MenuWithTitle"/>
      </sequence>
    </extension>
  </complexContent>
</complexType>
```

2.2.38 splitButton (Split Button)

This element specifies a split button control. A split button control is composed of either a button or a toggle button, and a drop-down menu. The icon and label shown on the split button come from the **button** or **toggleButton** child element.

For example, consider a split button control, as follows:

Figure 23: A split button control

This is specified using the following XML fragment:

```
<splitButton id="splitButton" size="large" >
  <button id="button" imageMso="HappyFace" label="Split Button" />
  <menu id="menu">
    <button id="button1" label="Button 1" />
    <button id="button2" label="Button 2" />
  </menu>
</splitButton>
```

The following table summarizes the elements that are parents of this element.

Parent Elements
box (section 2.2.1); group (section 2.2.23)

The following table summarizes the elements that are children of this element.

Child Elements	Section
button (Button Inside of a Split Button)	2.2.4
menu (Unsize Menu)	2.2.26
toggleButton (Toggle Button Inside of a Split Button)	2.2.44

The following table summarizes the attributes of this element.

Attributes	Description
enabled (enabled state)	<p>Specifies the enabled state of the control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
getEnabled (getEnabled callback)	<p>Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" getEnabled="IsButtonEnabled" /></pre> <p>In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getImage (getImage callback)	<p>Specifies the name of a callback function to be called to determine the icon of this control.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getKeytip (getKeytip)	<p>Specifies the name of a callback function to be called to determine the suggested KeyTip of this control.</p>

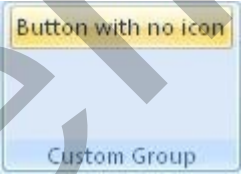

Attributes	Description
callback)	<p>The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically. For example, consider the following XML fragment:</p> <pre data-bbox="521 310 1162 338"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getLabel (getLabel callback)	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed. For example, consider the following XML fragment:</p> <pre data-bbox="521 674 1138 701"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getScreentip (getScreentip callback)	<p>Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all. For example, consider the following XML fragment:</p> <pre data-bbox="521 1058 1239 1085"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowImage (getShowImage callback)	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the icon of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon. For example, consider the following XML fragment:</p> <pre data-bbox="521 1478 1263 1505"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p>In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowLabel (getShowLabel	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the label of this control.</p>

Attributes	Description
callback)	<p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 373 1263 394"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p>In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getSize (getSize callback)	<p>Specifies the name of a callback function to be called to determine the size of this control.</p> <p>The getSize and size attributes are mutually exclusive. If neither attribute is specified, the control's size SHOULD default to the normal size.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 730 1110 751"><button id="button" getSize="GetButtonSize" /></pre> <p>In this example, the GetButtonSize callback function is called when the application needs to determine the size of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getSupertip (getSupertip callback)	<p>Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1094 1211 1115"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p>In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getVisible (getVisible callback)	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1451 1175 1472"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
id (control identifier)	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p>

Attributes	Description
	<p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 310 1019 338"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an identifier of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
<p>idMso (built-in control identifier)</p>	<p>Specifies the identifier of a built-in control.</p> <p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 657 829 684"><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>idQ (qualified control identifier)</p>	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1024 1312 1367"><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI></pre> <p>In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>image (custom image identifier)</p>	<p>Specifies the relationship identifier for an image which SHOULD be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p>

Attributes	Description
	<p>For example, consider the following XML fragment:</p> <pre data-bbox="521 254 1036 275"><button id="button" image="ForestPic" /></pre> <p>This specifies a custom button whose icon SHOULD be the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p>The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
<p>imageMso (built-in image identifier)</p>	<p>Specifies the identifier of a built-in image which SHOULD be used as the icon of this control.</p> <p>The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 674 1008 695"><button id="button" imageMso="Bold" /></pre> <p>This specifies a custom button that SHOULD use the built-in image with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterMso (identifier of built-in control to insert after)</p>	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1083 1289 1157"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterQ (qualified identifier of control to insert after)</p>	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1549 1300 1623"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p>

Attributes	Description
	<p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>insertBeforeMso (identifier of built-in control to insert before)</p>	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 499 1300 575"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertBeforeQ (qualified identifier of control to insert before)</p>	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 968 1300 1043"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>keytip (keytip)</p>	<p>Specifies a string to be used as the suggested KeyTip for this control.</p> <p>The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1486 1211 1514"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
<p>label (label)</p>	<p>Specifies a string to be used as the label for this control.</p> <p>The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p>

Attributes	Description
	<p>For example, consider the following XML fragment:</p> <pre data-bbox="521 254 1084 275" style="background-color: #f0f0f0; padding: 5px;"><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>screentip (screentip)</p>	<p>Specifies a string to be shown as the screentip for this control.</p> <p>The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 961 1224 1014" style="background-color: #f0f0f0; padding: 5px;"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>showImage (show image)</p>	<p>Specifies whether this control displays an icon.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider a button that does not display an icon, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1539 995 1591" style="background-color: #f0f0f0; padding: 5px;"><button id="button" showImage="false" label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>showLabel (show</p>	<p>Specifies whether this control SHOULD display its label.</p>

Attributes	Description
label)	<p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 373 1174 422"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p>This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
size (control size)	<p>Specifies the size of the control.</p> <p>The size and getSize attributes are mutually exclusive. If neither attribute is specified, the control's size SHOULD default to the normal size.</p> <p>For example, consider a large button, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 947 1060 972"><toggleButton idMso="Bold" size="large" /></pre> <p>The possible values for this attribute are defined by the ST_Size simple type, as specified in section 2.3.10.</p>
supertip (supertip)	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1644 1222 1692"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip"</pre>

Attributes	Description
	<p>supertip="This is the supertip string" /></p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>tag (tag)</p>	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 527 1122 579"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p>This example is a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>visible (control visibility)</p>	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 888 1019 909"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_SplitButton">
  <complexContent>
    <extension base="CT_SplitButtonRegular">
      <attributeGroup ref="AG_SizeAttributes"/>
    </extension>
  </complexContent>
</complexType>
```

2.2.39 tab (Tab)

This element specifies a ribbon tab control.

For example, consider the following XML fragment:

```
<tab id="MyTab" label="My Custom Tab">
  ...
</tab>
```

This XML fragment specifies a custom tab with the **label** "My Custom Tab".

The following table summarizes the elements that are parents of this element.

Parent Elements
tabs (section 2.2.40); tabSet (section 2.2.41)

The following table summarizes the elements that are children of this element.

Child Elements	Section
group (Group)	2.2.23

The following table summarizes the attributes of this element.

Attributes	Description
getKeytip (getKeytip callback)	<p>Specifies the name of a callback function to be called to determine the suggested KeyTip of this control.</p> <p>The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getLabel (getLabel callback)	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getVisible (getVisible callback)	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
id (control)	Specifies the identifier for a custom control. All custom controls MUST have unique

Attributes	Description
identifier)	<p>identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 373 1019 394"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an identifier of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
idMso (built-in control identifier)	<p>Specifies the identifier of a built-in control.</p> <p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 716 829 737"><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
idQ (qualified control identifier)	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1083 1312 1423"><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI></pre> <p>In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
insertAfterMso (identifier of built-in control to insert)	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ</p>

Attributes	Description
after)	<p>attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 338 1289 415"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertAfterQ (qualified identifier of control to insert after)	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 804 1300 882"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
insertBeforeMso (identifier of built-in control to insert before)	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1266 1300 1344"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertBeforeQ (qualified identifier of control to insert before)	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="521 218 1317 296"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p data-bbox="493 325 1360 380">In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p data-bbox="493 386 1360 438">The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
keytip (keytip)	<p data-bbox="493 464 1247 489">Specifies a string to be used as the suggested KeyTip for this control.</p> <p data-bbox="493 495 1382 550">The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p data-bbox="493 556 1122 581">For example, consider a button with KeyTip 'K', as follows:</p>  <p data-bbox="493 688 1036 714">This is specified using the following XML fragment:</p> <pre data-bbox="521 741 1211 766"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p data-bbox="493 793 1390 846">The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
label (label)	<p data-bbox="493 873 1109 898">Specifies a string to be used as the label for this control.</p> <p data-bbox="493 905 1354 959">The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p data-bbox="493 966 1040 991">For example, consider the following XML fragment:</p> <pre data-bbox="521 1018 1084 1043"><button id="button" label="Custom Button" /></pre> <p data-bbox="493 1071 1187 1096">This specifies a custom button with a label of "Custom Button".</p> <p data-bbox="493 1102 1386 1155">The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
tag (tag)	<p data-bbox="493 1180 1393 1255">Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p data-bbox="493 1262 1349 1316">If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p data-bbox="493 1323 1040 1348">For example, consider the following XML fragment:</p> <pre data-bbox="521 1375 1122 1430"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p data-bbox="493 1457 1317 1512">This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p data-bbox="493 1518 1386 1570">The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
visible (control visibility)	<p data-bbox="493 1591 943 1617">Specifies the visibility state of the control.</p> <p data-bbox="493 1623 1360 1680">The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p data-bbox="493 1686 1040 1711">For example, consider the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="521 218 1019 241"><tab idMso="TabHome" visible="false" /></pre> <p data-bbox="493 275 1333 359">In this example, the built-in tab with an identifier of "TabHome" is hidden. The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_Tab">
  <sequence>
    <choice minOccurs="0" maxOccurs="100">
      <element name="group" type="CT_Group"/>
    </choice>
  </sequence>
  <attributeGroup ref="AG_IDAttributes"/>
  <attributeGroup ref="AG_Label"/>
  <attributeGroup ref="AG_PositionAttributes"/>
  <attributeGroup ref="AG_Visible"/>
  <attributeGroup ref="AG_Keytip"/>
</complexType>
```

2.2.40 tabs (List of Tabs)

This element specifies a list of ribbon tab controls. This element SHOULD NOT be specified if the containing Custom UI XML document is a Quick Access Toolbar Customizations part.

The following table summarizes the elements that are parents of this element.

Parent Elements
ribbon (section 2.2.33)

The following table summarizes the elements that are children of this element.

Child Elements	Section
tab (Tab)	2.2.39

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_Tabs">
  <sequence>
    <element name="tab" type="CT_Tab" minOccurs="1" maxOccurs="100"/>
  </sequence>
</complexType>
```

2.2.41 tabSet (Contextual Tab Set)

This element specifies a contextual tab set control. As the **id** and **idQ** attributes are not present, this element can only be used to refer to existing built-in tab sets. This element cannot be used to create new contextual tab sets.

For example, consider the following XML fragment:

```
<tabSet idMso="TabSetPictureTools">
  <tab id="tab" label="Custom Tab">
    ...
  </tab>
</tabSet>
```

This XML fragment is used to add a new custom tab to the tab set with an identifier of "TabSetPictureTools".

The following table summarizes the elements that are parents of this element.

Parent Elements
contextualTabs (section 2.2.10)

The following table summarizes the elements that are children of this element.

Child Elements	Subclause
tab (Tab)	section 2.2.39

The following table summarizes the attributes of this element.

Attributes	Description
getVisible (getVisible callback)	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
idMso (built-in control identifier)	<p>Specifies the identifier of a built-in control.</p> <p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive.</p> <p>For example, consider the following XML fragment:</p> <pre><control idMso="Bold" /></pre> <p>This is used to create a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
visible (control visibility)	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p>

Attributes	Description
	<p>For example, consider the following XML fragment:</p> <pre><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden. The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_TabSet">
  <sequence>
    <element name="tab" type="CT_Tab" minOccurs="0" maxOccurs="50"/>
  </sequence>
  <attribute name="idMso" type="ST_ID" use="required"/>
  <attributeGroup ref="AG_Visible"/>
</complexType>
```

2.2.42 toggleButton (Unsize Toggle Button)

This element specifies a toggle button control that, due to its location, cannot have its size changed. The **size** attribute is not present. It otherwise behaves identically to the regular **toggleButton** element, as specified in section [2.2.43](#).

The following table summarizes the elements that are parents of this element.

Parent Elements
buttonGroup (section 2.2.5); menu (section 2.2.28); menu (section 2.2.26); menu (section 2.2.29); menu (section 2.2.27); officeMenu (section 2.2.31)

The following table summarizes the attributes of this element.

Attributes	Description
description (description)	<p>Specifies a detailed description of the control, which SHOULD be displayed in detailed views.</p> <p>The description and getDescription attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text.</p> <p>For example, consider a button with a detailed description, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre><button id="button" label="Button" imageMso="HappyFace" description="This is a verbose description that describes the function of this control in detail." /></pre> <p>The possible values for this attribute are defined by the ST_LongString simple type, as specified in section 2.3.8.</p>

Attributes	Description
enabled (enabled state)	<p>Specifies the enabled state of the control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 415 1317 436"><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
getDescription (getDescription callback)	<p>Specifies the name of a callback function to be called to determine the detailed description of this control.</p> <p>The getDescription and description attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 772 1289 793"><button id="button" getDescription="GetButtonDescription" /></pre> <p>In this example, the GetButtonDescription callback function is called when the application needs to determine the detailed description of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getEnabled (getEnabled callback)	<p>Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1136 1175 1157"><button id="button" getEnabled="IsButtonEnabled" /></pre> <p>In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getImage (getImage callback)	<p>Specifies the name of a callback function to be called to determine the icon of this control.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1493 1138 1514"><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getKeytip (getKeytip)	<p>Specifies the name of a callback function to be called to determine the suggested</p>

Attributes	Description
callback)	<p>KeyTip of this control.</p> <p>The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically. For example, consider the following XML fragment:</p> <pre data-bbox="521 344 1162 369"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getLabel (getLabel callback)	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed. For example, consider the following XML fragment:</p> <pre data-bbox="521 705 1133 730"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getPressed (getPressed callback)	<p>Specifies the name of a callback function to be called to determine the toggled state of this control.</p> <p>If this attribute is omitted, the control SHOULD default to the off state. For example, consider the following XML fragment:</p> <pre data-bbox="521 1041 1252 1066"><toggleButton id="toggle" getPressed="IsButtonToggled" /></pre> <p>In this example, the IsButtonToggled callback function is called when the application needs to determine the toggle state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getScreentip (getScreentip callback)	<p>Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all. For example, consider the following XML fragment:</p> <pre data-bbox="521 1430 1235 1455"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowImage (getShowImage callback)	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the icon of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p>

Attributes	Description
	<p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 310 1263 338"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p>In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getShowLabel (getShowLabel callback)</p>	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the label of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 730 1263 758"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p>In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getSupertip (getSupertip callback)</p>	<p>Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1094 1211 1121"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p>In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getVisible (getVisible callback)</p>	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1455 1174 1482"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>id (control identifier)</p>	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p>

Attributes	Description
	<p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 310 1019 338"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an identifier of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
<p>idMso (built-in control identifier)</p>	<p>Specifies the identifier of a built-in control.</p> <p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 657 829 684"><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>idQ (qualified control identifier)</p>	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1024 1312 1367"><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI></pre> <p>In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>image (custom image identifier)</p>	<p>Specifies the relationship identifier for an image which SHOULD be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p>

Attributes	Description
	<p>For example, consider the following XML fragment:</p> <pre data-bbox="521 254 1036 275"><button id="button" image="ForestPic" /></pre> <p>This specifies a custom button whose icon SHOULD be the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p>The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
<p>imageMso (built-in image identifier)</p>	<p>Specifies the identifier of a built-in image which SHOULD be used as the icon of this control.</p> <p>The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 674 1008 695"><button id="button" imageMso="Bold" /></pre> <p>This specifies a custom button that SHOULD use the built-in image with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterMso (identifier of built-in control to insert after)</p>	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1083 1289 1157"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterQ (qualified identifier of control to insert after)</p>	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1549 1300 1623"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p>

Attributes	Description
	The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9 .
insertBeforeMso (identifier of built-in control to insert before)	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertBeforeQ (qualified identifier of control to insert before)	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
keytip (keytip)	<p>Specifies a string to be used as the suggested KeyTip for this control.</p> <p>The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
label (label)	<p>Specifies a string that SHOULD be used as the label for this control.</p> <p>The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p>

Attributes	Description
	<p>For example, consider the following XML fragment:</p> <pre data-bbox="521 254 1084 275" style="background-color: #f0f0f0; padding: 5px;"><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button". The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>onAction (onAction callback)</p>	<p>Specifies the name of a callback function to be called when this control is invoked by the user.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 527 1312 548" style="background-color: #f0f0f0; padding: 5px;"><button id="button" label="Button" onAction="ButtonClicked" /></pre> <p>In this example, the button calls the ButtonClicked callback function when it is invoked.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>screentip (screentip)</p>	<p>Specifies a string to be shown as the screentip for this control.</p> <p>The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1262 1224 1314" style="background-color: #f0f0f0; padding: 5px;"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>showImage (show image)</p>	<p>Specifies whether this control displays an icon.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider a button that does not display an icon, as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 432 993 485"><button id="button" showImage="false" label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
showLabel (show label)	<p>Specifies whether this control SHOULD display its label.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 793 1172 846"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p>This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
supertip (supertip)	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1577 1224 1650"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as</p>

Attributes	Description
	specified in section 2.3.11 .
tag (tag)	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 449 1122 499"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
visible (control visibility)	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 810 1019 835"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_ToggleButtonRegular">
  <complexContent>
    <extension base="CT_ButtonRegular">
      <attribute name="getPressed" type="ST_Delegate" use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

2.2.43 toggleButton (Toggle Button)

This element specifies a toggle button control that can be toggled between the pressed and unpressed states by the end-user.

For example, consider a toggle button control, as follows:

Figure 24: A toggle button control

This is specified with the following XML fragment:

```
<toggleButton id="toggleButton" label="Toggle Button" />
```

The following table summarizes the elements that are parents of this element.

Parent Elements
box (section 2.2.1); group (section 2.2.23)

The following table summarizes the attributes of this element.

Attributes	Description
description (description)	<p>Specifies a detailed description of the control, which is displayed in detailed views. The description and getDescription attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text. For example, consider a button with a detailed description, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre><button id="button" label="Button" imageMso="HappyFace" description="This is a verbose description that describes the function of this control in detail." /></pre> <p>The possible values for this attribute are defined by the ST_LongString simple type, as specified in section 2.3.8.</p>
enabled (enabled state)	<p>Specifies the enabled state of the control. The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled. This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application. For example, consider the following XML fragment:</p> <pre><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used. The possible values for this attribute are defined by the XML schema boolean datatype.</p>
getDescription (getDescription callback)	<p>Specifies the name of a callback function to be called to determine the detailed description of this control. The getDescription and description attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text. For example, consider the following XML fragment:</p> <pre><button id="button" getDescription="GetButtonDescription" /></pre> <p>In this example, the GetButtonDescription callback function is called when the application needs to determine the detailed description of the button.</p>

Attributes	Description
	<p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getEnabled (getEnabled callback)</p>	<p>Specifies the name of a callback function to be called to determine the enabled state of this control.</p> <p>The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 449 1175 474"><button id="button" getEnabled="IsButtonEnabled" /></pre> <p>In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getImage (getImage callback)</p>	<p>Specifies the name of a callback function to be called to determine the icon of this control.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 810 1138 835"><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getKeytip (getKeytip callback)</p>	<p>Specifies the name of a callback function to be called to determine the suggested KeyTip of this control.</p> <p>The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1167 1162 1192"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getLabel (getLabel callback)</p>	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1528 1138 1554"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>

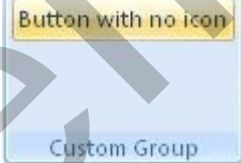

Attributes	Description
getPressed (getPressed callback)	<p>Specifies the name of a callback function to be called to determine the toggled state of this control.</p> <p>If this attribute is omitted, the control SHOULD default to the "off" state.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 352 1252 380"><toggleButton id="toggle" getPressed="IsButtonToggled" /></pre> <p>In this example, the IsButtonToggled callback function is called when the application needs to determine the toggle state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getScreentip (getScreentip callback)	<p>Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 741 1235 768"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowImage (getShowImage callback)	<p>Specifies the name of a callback function to be called to determine whether the application displays the icon of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1161 1260 1188"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p>In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowLabel (getShowLabel callback)	<p>Specifies the name of a callback function to be called to determine whether the application displays the label of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1581 1260 1608"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p>In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type,</p>

Attributes	Description
	as specified in section 2.3.2 .
getSize (getSize callback)	<p>Specifies the name of a callback function to be called to determine the size of this control.</p> <p>The getSize and size attributes are mutually exclusive. If neither attribute is specified, the control's size SHOULD default to the normal size.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 422 1110 447"><button id="button" getSize="GetButtonSize" /></pre> <p>In this example, the GetButtonSize callback function is called when the application needs to determine the size of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getSupertip (getSupertip callback)	<p>Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 783 1211 808"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p>In this example, the GetButtonSupertip callback function is called when the application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getVisible (getVisible callback)	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1142 1175 1167"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
id (control identifier)	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1528 1021 1554"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an id of ""MyButton"".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
idMso (built-in)	<p>Specifies the identifier of a built-in control.</p>

Attributes	Description
control identifier)	<p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 348 829 369"><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
idQ (qualified control identifier)	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 716 1312 1056"><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs> <tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI></pre> <p>In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
image (custom image identifier)	<p>Specifies the relationship identifier for an image to be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1472 1032 1493"><button id="button" image="ForestPic" /></pre> <p>This specifies a custom button whose icon is the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p>The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
imageMso (built-in image identifier)	<p>Specifies the identifier of a built-in image to be used as the icon of this control.</p> <p>The contents of this attribute are application-defined and SHOULD be ignored if not</p>

Attributes	Description
	<p>understood.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 346 1008 369"><button id="button" imageMso="Bold" /></pre> <p>This specifies a custom button that uses the built-in image with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterMso (identifier of built-in control to insert after)</p>	<p>Specifies the identifier of a built-in control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 758 1289 835"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterQ (qualified identifier of control to insert after)</p>	<p>Specifies the qualified identifier of a control that this control is to be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1226 1300 1304"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>insertBeforeMso (identifier of built-in control to insert before)</p>	<p>Specifies the identifier of a built-in control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1688 1300 1711"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"></pre>

Attributes	Description
	<p>...</p> <p></tab></p> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertBeforeQ (qualified identifier of control to insert before)</p>	<p>Specifies the qualified identifier of a control that this control is to be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an id of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>keytip (keytip)</p>	<p>Specifies a string to be used as the suggested KeyTip for this control.</p> <p>The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
<p>label (label)</p>	<p>Specifies a string to be used as the label for this control.</p> <p>The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button".</p> <p>The possible values for this attribute are defined by the ST_String simple typ, as specified in section 2.3.11.</p>
<p>onAction (onAction callback)</p>	<p>Specifies the name of a callback function to be called when this control is invoked by the user.</p> <p>For example, consider the following XML fragment:</p>

Attributes	Description
	<pre data-bbox="521 218 1317 243"><button id="button" label="Button" onAction="ButtonClicked" /></pre> <p data-bbox="493 275 1365 323">This specifies a button that calls the ButtonClicked callback function when it is invoked.</p> <p data-bbox="493 333 1386 382">The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p data-bbox="237 411 358 464">screentip (screentip)</p>	<p data-bbox="493 411 1175 436">Specifies a string to be shown as the screentip for this control.</p> <p data-bbox="493 447 1390 520">The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p data-bbox="493 531 1135 556">For example, consider a button with a screentip, as follows:</p>  <p data-bbox="493 905 1036 930">This is specified using the following XML fragment:</p> <pre data-bbox="521 957 1224 1010"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p data-bbox="493 1037 1386 1085">The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p data-bbox="237 1115 451 1167">showImage (show image)</p>	<p data-bbox="493 1115 997 1140">Specifies whether this control displays an icon.</p> <p data-bbox="493 1150 1382 1199">This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p data-bbox="493 1209 1390 1262">The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p data-bbox="493 1272 1273 1297">For example, consider a button that does not display an icon, as follows:</p>  <p data-bbox="493 1476 1036 1501">This is specified using the following XML fragment:</p> <pre data-bbox="521 1528 992 1581"><button id="button" showImage="false" label="Button with no icon" /></pre> <p data-bbox="493 1608 1333 1661">The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p data-bbox="237 1692 440 1717">showLabel (show</p>	<p data-bbox="493 1692 1003 1717">Specifies whether this control displays its label.</p>

Attributes	Description
label)	<p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 373 1174 422"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p>This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
size (control size)	<p>Specifies the size of the control.</p> <p>The size and getSize attributes are mutually exclusive. If neither attribute is specified, the control's size SHOULD default to the normal size.</p> <p>For example, consider a large button, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 947 1060 972"><toggleButton idMso="Bold" size="large" /></pre> <p>The possible values for this attribute are defined by the ST_Size simple type, as specified in section 2.3.10.</p>
supertip (supertip)	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1644 1222 1692"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip"</pre>

Attributes	Description
	<p>supertip="This is the supertip string" /></p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
tag (tag)	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
visible (control visibility)	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```
<complexType name="CT_ToggleButton">
  <complexContent>
    <extension base="CT_ToggleButtonRegular">
      <attributeGroup ref="AG_SizeAttributes"/>
    </extension>
  </complexContent>
</complexType>
```

2.2.44 toggleButton (Toggle Button Inside of a Split Button)

This element specifies a toggle button control that is part of a split button control. The **visible** and **getVisible** attributes are not present because the visibility is controlled by the split button. This element otherwise behaves in the same way as the regular **toggleButton** element, as specified in section [2.2.43](#).

The following table summarizes the elements that are parents of this element.

Parent Elements
splitButton (section 2.2.38); splitButton (section 2.2.36); splitButton (section 2.2.37)

The following table summarizes the attributes of this element.

Attributes	Description
description (description)	<p>Specifies a detailed description of the control, which is displayed in detailed views. The description and getDescription attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text. For example, consider a button with a detailed description, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 552 1276 627"><button id="button" label="Button" imageMso="HappyFace" description="This is a verbose description that describes the function of this control in detail." /></pre> <p>The possible values for this attribute are defined by the ST_LongString simple type, as specified in section 2.3.8.</p>
enabled (enabled state)	<p>Specifies the enabled state of the control. The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled. This attribute cannot be used to enable a built-in control that would otherwise be disabled by the application. For example, consider the following XML fragment:</p> <pre data-bbox="521 940 1313 961"><button id="button" label="Disabled Button" enabled="false" /></pre> <p>This specifies a new button that is disabled. A permanently disabled button is not very useful, thus the enabled attribute is not commonly used. The possible values for this attribute are defined by the XML schema boolean datatype.</p>
getDescription (getDescription callback)	<p>Specifies the name of a callback function to be called to determine the detailed description of this control. The getDescription and description attributes are mutually exclusive. If neither attribute is specified, the control SHOULD NOT display any detailed text. For example, consider the following XML fragment:</p> <pre data-bbox="521 1299 1289 1320"><button id="button" getDescription="GetButtonDescription" /></pre> <p>In this example, the GetButtonDescription callback function is called when the application needs to determine the detailed description of the button. The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getEnabled (getEnabled callback)	<p>Specifies the name of a callback function to be called to determine the enabled state of this control. The getEnabled and enabled attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being enabled. For example, consider the following XML fragment:</p> <pre data-bbox="521 1661 1175 1682"><button id="button" getEnabled="IsButtonEnabled" /></pre>

Attributes	Description
	<p>In this example, the IsButtonEnabled callback function is called when the application needs to determine the enabled state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getImage (getImage callback)</p>	<p>Specifies the name of a callback function to be called to determine the icon of this control.</p> <p>The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 512 1133 537"><button id="button" getImage="GetButtonImage" /></pre> <p>In this example, the GetButtonImage callback function is called when the application needs to determine the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getKeytip (getKeytip callback)</p>	<p>Specifies the name of a callback function to be called to determine the suggested KeyTip of this control.</p> <p>The getKeytip and keytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 869 1162 894"><button id="button" getKeytip="GetButtonKeytip" /></pre> <p>In this example, the GetButtonKeytip callback function is called when the application needs to determine the KeyTip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getLabel (getLabel callback)</p>	<p>Specifies the name of a callback function to be called to determine the label of this control.</p> <p>The getLabel and label attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1230 1133 1255"><button id="button" getLabel="GetButtonLabel" /></pre> <p>In this example, the GetButtonLabel callback function is called when the application needs to determine the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getPressed (getPressed callback)</p>	<p>Specifies the name of a callback function to be called to determine the toggled state of this control.</p> <p>If this attribute is omitted, the control SHOULD default to the off state.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1566 1247 1591"><toggleButton id="toggle" getPressed="IsButtonToggled" /></pre> <p>In this example, the IsButtonToggled callback function is called when the application needs to determine the toggle state of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type,</p>

Attributes	Description
	as specified in section 2.3.2 .
getScreentip (getScreentip callback)	<p>Specifies the name of a callback function to be called to determine the screentip of this control.</p> <p>The getScreentip and screentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 449 1235 474"><button id="button" getScreentip="GetButtonScreentip" /></pre> <p>In this example, the GetButtonScreentip callback function is called when the application needs to determine the screentip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowImage (getShowImage callback)	<p>Specifies the name of a callback function to be called to determine whether the application displays the icon of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 869 1260 894"><button id="button" getShowImage="IsButtonImageVisible" /></pre> <p>In this example, the IsButtonImageVisible callback function is called when the application needs to determine whether to display the icon of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getShowLabel (getShowLabel callback)	<p>Specifies the name of a callback function to be called to determine whether the application SHOULD display the label of this control.</p> <p>This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1289 1260 1314"><button id="button" getShowLabel="IsButtonLabelVisible" /></pre> <p>In this example, the IsButtonLabelVisible callback function is called when the application needs to determine whether to display the label of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
getSupertip (getSupertip callback)	<p>Specifies the name of a callback function to be called to determine the supertip of this control.</p> <p>The getSupertip and supertip attributes are mutually exclusive. If neither attribute is specified, no supertip for this control SHOULD be shown.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1646 1211 1671"><button id="button" getSupertip="GetButtonSupertip" /></pre> <p>In this example, the GetButtonSupertip callback function is called when the</p>

Attributes	Description
	<p>application needs to determine the supertip of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>getVisible (getVisible callback)</p>	<p>Specifies the name of a callback function to be called to determine the visibility state of this control.</p> <p>The getVisible and visible attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 478 1175 506"><button id="button" getVisible="IsButtonVisible" /></pre> <p>In this example, the IsButtonVisible callback function is called when the application needs to determine the visibility of the button.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
<p>id (control identifier)</p>	<p>Specifies the identifier for a custom control. All custom controls MUST have unique identifiers. The identifier of a control SHOULD be passed to callback functions in order to identify which control corresponds to the function call.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 867 1019 894"><button id="MyButton" label="Button" /></pre> <p>This specifies a custom button control with an identifier of "MyButton".</p> <p>The possible values for this attribute are defined by the ST_UniqueID simple type, as specified in section 2.3.13.</p>
<p>idMso (built-in control identifier)</p>	<p>Specifies the identifier of a built-in control.</p> <p>The contents of this attribute are application-defined.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1209 829 1236"><control idMso="Bold" /></pre> <p>This creates a clone of the control with an identifier of "Bold".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>idQ (qualified control identifier)</p>	<p>Specifies a qualified identifier for a control.</p> <p>The idQ attribute can be used to reference controls or containers created by other Custom UI documents.</p> <p>The id, idQ, and idMso attributes are mutually exclusive. At least one of these attributes MUST be specified.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1581 1313 1705"><customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui" xmlns:ex="http://www.example.com"> <ribbon> <tabs></pre>

Attributes	Description
	<pre data-bbox="521 201 1122 411"><tab idQ="ex:OtherTab" label="Shared Tab"> <group id="MyGroup" label="My Group"> ... </group> </tab> </tabs> </ribbon> </customUI></pre> <p data-bbox="493 443 1357 548">In this case, ex is an XML namespace prefix for the namespace http://www.example.com. This XML fragment refers to a tab in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the tab.</p> <p data-bbox="493 554 1357 606">The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
image (custom image identifier)	<p data-bbox="493 632 1390 705">Specifies the relationship identifier for an image which SHOULD be used as the icon for this control. This attribute is used to specify an embedded picture that resides locally within the containing file.</p> <p data-bbox="493 716 1390 768">The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p data-bbox="493 779 1040 800">For example, consider the following XML fragment:</p> <pre data-bbox="521 831 1032 852"><button id="button" image="ForestPic" /></pre> <p data-bbox="493 884 1357 936">This specifies a custom button whose icon SHOULD be the embedded image file referenced by the relationship identifier of "ForestPic".</p> <p data-bbox="493 947 1357 999">The possible values for this attribute are defined by the ST_Uri simple type, as specified in section 2.3.14.</p>
imageMso (built-in image identifier)	<p data-bbox="493 1016 1390 1068">Specifies the identifier of a built-in image which SHOULD be used as the icon of this control.</p> <p data-bbox="493 1079 1390 1131">The contents of this attribute are application-defined and SHOULD be ignored if not understood.</p> <p data-bbox="493 1142 1390 1194">The getImage, image, and imageMso attributes are mutually exclusive. If none of these attributes are specified, no icon SHOULD be displayed.</p> <p data-bbox="493 1205 1040 1226">For example, consider the following XML fragment:</p> <pre data-bbox="521 1257 1008 1278"><button id="button" imageMso="Bold" /></pre> <p data-bbox="493 1310 1300 1362">This specifies a custom button that SHOULD use the built-in image with an identifier of "Bold".</p> <p data-bbox="493 1373 1357 1425">The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
insertAfterMso (identifier of built-in control to insert after)	<p data-bbox="493 1436 1357 1488">Specifies the identifier of a built-in control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p data-bbox="493 1499 1390 1604">The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p data-bbox="493 1614 1040 1635">For example, consider the following XML fragment:</p> <pre data-bbox="521 1667 1292 1709"><tab id="MyTab" insertAfterMso="TabHome" label="Custom Tab"> ...</pre>

Attributes	Description
	<p></tab></p> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertAfterQ (qualified identifier of control to insert after)</p>	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted after. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 615 1300 688"><tab id="MyTab" insertAfterQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted after the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as specified in section 2.3.9.</p>
<p>insertBeforeMso (identifier of built-in control to insert before)</p>	<p>Specifies the identifier of a built-in control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1077 1300 1150"><tab id="MyTab" insertBeforeMso="TabHome" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the built-in tab with an identifier of "TabHome".</p> <p>The possible values for this attribute are defined by the ST_ID simple type, as specified in section 2.3.5.</p>
<p>insertBeforeQ (qualified identifier of control to insert before)</p>	<p>Specifies the qualified identifier of a control that this control SHOULD be inserted before. If the value of this attribute is not understood, it SHOULD be ignored.</p> <p>The insertAfterMso, insertAfterQ, insertBeforeMso, and insertBeforeQ attributes are mutually exclusive. If none of these attributes are specified, the controls SHOULD be appended to the existing set of controls, in the order they are defined in the XML.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1541 1300 1614"><tab id="MyTab" insertBeforeQ="x:OtherTab" label="Custom Tab"> ... </tab></pre> <p>In this example, a new custom tab with an identifier of "MyTab" is to be inserted before the custom tab with a qualified identifier of "x:OtherTab".</p> <p>The possible values for this attribute are defined by the ST_QID simple type, as</p>

Attributes	Description
	specified in section 2.3.9 .
keytip (keytip)	<p>Specifies a string to be used as the suggested KeyTip for this control.</p> <p>The keytip and getKeytip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD generate a KeyTip for the control automatically.</p> <p>For example, consider a button with KeyTip 'K', as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 531 1211 554"><button id="button" imageMso="HappyFace" keytip="K" /></pre> <p>The possible values for this attribute are defined by the ST_Keytip simple type, as specified in section 2.3.7.</p>
label (label)	<p>Specifies a string to be used as the label for this control.</p> <p>The label and getLabel attributes are mutually exclusive. If neither attribute is specified, no label SHOULD be displayed.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 806 1084 829"><button id="button" label="Custom Button" /></pre> <p>This specifies a custom button with a label of "Custom Button".</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
onAction (onAction callback)	<p>Specifies the name of a callback function to be called when this control is invoked by the user.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1079 1317 1102"><button id="button" label="Button" onAction="ButtonClicked" /></pre> <p>In this example, the button calls the ButtonClicked callback function when it is invoked.</p> <p>The possible values for this attribute are defined by the ST_Delegate simple type, as specified in section 2.3.2.</p>
screentip (screentip)	<p>Specifies a string to be shown as the screentip for this control.</p> <p>The screentip and getScreentip attributes are mutually exclusive. If neither attribute is specified, the application SHOULD display the label of the control as the screentip or display no screentip at all.</p> <p>For example, consider a button with a screentip, as follows:</p>

Attributes	Description
	 <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 596 1224 646"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="This is the screentip" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>showImage (show image)</p>	<p>Specifies whether this control displays an icon. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showImage and getShowImage attributes are mutually exclusive. If neither attribute is specified, the control SHOULD display its icon.</p> <p>For example, consider a button that does not display an icon, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="521 1167 995 1218"><button id="button" showImage="false" label="Button with no icon" /></pre> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>
<p>showLabel (show label)</p>	<p>Specifies whether this control SHOULD display its label. This attribute SHOULD have no effect if the size or getSize attributes specify that the control is "large".</p> <p>The showLabel and getShowLabel attributes are mutually exclusive. If neither attribute is specified, the control SHOULD default to showing its label.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="521 1528 1174 1579"><button id="button" label="Label" showLabel="false" imageMso="HappyFace" /></pre> <p>This specifies a button that has a label, but does not show it. Even though the label is hidden, it is provided to accessibility tools.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

Attributes	Description
<p>supertip (supertip)</p>	<p>Specifies a string to be shown as the supertip of the control.</p> <p>The supertip and getSupertip attributes are mutually exclusive. If neither attribute is specified no supertip for this control SHOULD be shown.</p> <p>For example, consider a control with a supertip, as follows:</p>  <p>This is specified using the following XML fragment:</p> <pre data-bbox="519 766 1226 850"><button id="button" imageMso="HappyFace" label="Button" size="large" screentip="Screentip" supertip="This is the supertip string" /></pre> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>tag (tag)</p>	<p>Specifies an arbitrary string that can be used to hold data or identify the control. The contents of this attribute SHOULD be passed to any callback functions specified on this control.</p> <p>If this attribute is omitted, the control's tag value SHOULD default to an empty string.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="519 1144 1120 1207"><button id="button" label="Button" tag="123456" onAction="ButtonClicked" /></pre> <p>This specifies a button with a tag value of "123456", which is passed to the ButtonClicked callback function.</p> <p>The possible values for this attribute are defined by the ST_String simple type, as specified in section 2.3.11.</p>
<p>visible (control visibility)</p>	<p>Specifies the visibility state of the control.</p> <p>The getVisible and visible attributes are mutually exclusive. If these attributes are omitted, the control SHOULD default to being visible.</p> <p>For example, consider the following XML fragment:</p> <pre data-bbox="519 1512 1023 1543"><tab idMso="TabHome" visible="false" /></pre> <p>In this example, the built-in tab with an identifier of "TabHome" is hidden.</p> <p>The possible values for this attribute are defined by the XML schema boolean datatype.</p>

The following XML schema fragment defines the contents of this element:

```

<complexType name="CT_VisibleToggleButton">
  <complexContent>
    <restriction base="CT_ToggleButtonRegular">
      <attribute name="visible" use="prohibited"/>
      <attribute name="getVisible" use="prohibited"/>
    </restriction>
  </complexContent>
</complexType>

```

2.3 Simple Types

This is the complete list of simple types in the <http://schemas.microsoft.com/office/2006/01/customui> namespace.

2.3.1 ST_BoxStyle (Box Style)

Specifies the layout style of a **box** control.

This simple type's contents are a restriction of the XML schema **string** datatype.

The following are possible **enumeration** values for this type:

Enumeration Value	Description
horizontal (Horizontal)	Specifies that the child controls are laid out horizontally.
vertical (Vertical)	Specifies that the child controls are laid out vertically.

Referenced By
box@boxStyle (section 2.2.1)

The following XML schema fragment defines the contents of this simple type:

```

<simpleType name="ST_BoxStyle">
  <restriction base="xsd:string">
    <enumeration value="horizontal"/>
    <enumeration value="vertical"/>
  </restriction>
</simpleType>

```

2.3.2 ST_Delegate (Callback Function Name)

Specifies the name of a callback function. The format of this string is application-defined and SHOULD be ignored if not understood.

Examples of this simple type are macro scripts and add-in callback functions.

This simple type's contents are a restriction of the XML schema string datatype.

This simple type also specifies the following restrictions:

- This simple type's contents have a minimum length of 1 characters.
- This simple type's contents have a maximum length of 1024 characters.

The following XML schema fragment defines the contents of this simple type:

```
<simpleType name="ST_Delegate">  
  <restriction base="xsd:string">  
    <minLength value="1"/>  
    <maxLength value="1024"/>  
  </restriction>  
</simpleType>
```

2.3.3 ST_GalleryItemWidthHeight (Gallery Item Width or Height)

Specifies the width or height of gallery items, in pixels.

This simple type's contents are a restriction of the XML schema positiveInteger datatype.

This simple type also specifies the following restrictions:

- This simple type has a minimum value of greater than or equal to 1.
- This simple type has a maximum value of less than or equal to 4096.

Referenced By

[gallery@itemHeight \(section 2.2.21\)](#); [gallery@itemHeight \(section 2.2.22\)](#); [gallery@itemWidth \(section 2.2.21\)](#); [gallery@itemWidth \(section 2.2.22\)](#)

The following XML schema fragment defines the contents of this simple type:

```
<simpleType name="ST_GalleryItemWidthHeight">  
  <restriction base="xsd:positiveInteger">  
    <minInclusive value="1"/>  
    <maxInclusive value="4096"/>  
  </restriction>  
</simpleType>
```

2.3.4 ST_GalleryRowColumnCount (Gallery Row or Column Count)

Specifies the count of rows or columns in a **gallery** control.

This simple type's contents are a restriction of the XML schema `positiveInteger` datatype.

This simple type also specifies the following restrictions:

- This simple type has a minimum value of greater than or equal to 1.
- This simple type has a maximum value of less than or equal to 1024.

Referenced By
gallery@columns (section 2.2.21); gallery@columns (section 2.2.22); gallery@rows (section 2.2.21); gallery@rows (section 2.2.22)

The following XML schema fragment defines the contents of this simple type:

```
<simpleType name="ST_GalleryRowColumnCount">  
  <restriction base="xsd:positiveInteger">  
    <minInclusive value="1"/>  
    <maxInclusive value="1024"/>  
  </restriction>  
</simpleType>
```

2.3.5 ST_ID (Control ID)

Specifies the identifier of a built-in control. The format of this **string** is defined by per application by the Custom UI Control identifier Tables, as specified in section [3](#).

This simple type's contents are a restriction of the XML schema **NCName** datatype.

This simple type also specifies the following restrictions:

- This simple type's contents have a minimum length of 1 character.
- This simple type's contents have a maximum length of 1024 characters.

The following XML schema fragment defines the contents of this simple type:

```
<simpleType name="ST_ID">
  <restriction base="xsd:NCName">
    <minLength value="1"/>
    <maxLength value="1024"/>
  </restriction>
</simpleType>
```

2.3.6 ST_ItemSize (Menu Item Size)

Specifies the size of the child controls in a **menu** control.

This simple type's contents are a restriction of the XML schema **string** datatype.

The following are possible **enumeration** values for this type:

Enumeration Value	Description
large (Large)	Specifies that the child controls have large sizes.
normal (Normal)	Specifies that the child controls have normal sizes.

Referenced By

menu@itemSize (section [2.2.28](#)); menu@itemSize (section [2.2.26](#)); menu@itemSize (section [2.2.29](#)); menu@itemSize (section [2.2.27](#))

The following XML schema fragment defines the contents of this simple type:

```
<simpleType name="ST_ItemSize">
  <restriction base="xsd:string">
    <enumeration value="normal"/>
    <enumeration value="large"/>
  </restriction>
</simpleType>
```

2.3.7 ST_Keytip (Keytip)

Specifies a KeyTip string.

This simple type's contents are a restriction of the XML schema **token** datatype.

This simple type also specifies the following restrictions:

- This simple type's contents have a minimum length of 1 character.
- This simple type's contents have a maximum length of 3 characters.

Referenced By

button@keytip (section [2.2.2](#)); button@keytip (section [2.2.3](#)); button@keytip (section [2.2.4](#)); checkBox@keytip (section [2.2.6](#)); comboBox@keytip (section [2.2.7](#)); control@keytip (section [2.2.12](#)); control@keytip (section [2.2.13](#)); control@keytip (section [2.2.11](#)); dropDown@keytip (section [2.2.17](#)); dynamicMenu@keytip (section [2.2.19](#)); dynamicMenu@keytip (section [2.2.18](#)); editBox@keytip (section [2.2.20](#)); gallery@keytip (section [2.2.21](#)); gallery@keytip (section [2.2.22](#)); group@keytip (section [2.2.23](#)); labelControl@keytip (section [2.2.25](#)); menu@keytip (section [2.2.28](#)); menu@keytip (section [2.2.26](#)); menu@keytip (section [2.2.27](#)); splitButton@keytip (section [2.2.38](#)); splitButton@keytip (section [2.2.36](#)); splitButton@keytip (section [2.2.37](#)); tab@keytip (section [2.2.39](#)); toggleButton@keytip (section [2.2.43](#)); toggleButton@keytip (section [2.2.42](#)); toggleButton@keytip (section [2.2.44](#))

The following XML schema fragment defines the contents of this simple type:

```
<simpleType name="ST_Keytip">
  <restriction base="xsd:token">
    <minLength value="1"/>
    <maxLength value="3"/>
    <whiteSpace value="collapse"/>
  </restriction>
</simpleType>
```

2.3.8 ST_LongString (Long String)

Specifies a string that can have an extended length.

This simple type's contents are a restriction of the XML schema **string** datatype.

This simple type also specifies the following restrictions:

- This simple type's contents have a minimum length of 1 character.
- This simple type's contents have a maximum length of 4096 characters.

Referenced By
button@description (section 2.2.2); button@description (section 2.2.3); button@description (section 2.2.4); checkBox@description (section 2.2.6); control@description (section 2.2.12); control@description (section 2.2.13); dynamicMenu@description (section 2.2.19); dynamicMenu@description (section 2.2.18); gallery@description (section 2.2.21); gallery@description (section 2.2.22); menu@description (section 2.2.28); menu@description (section 2.2.26); toggleButton@description (section 2.2.43); toggleButton@description (section 2.2.42); toggleButton@description (section 2.2.44)

The following XML schema fragment defines the contents of this simple type:

```
<simpleType name="ST_LongString">  
  <restriction base="xsd:string">  
    <minLength value="1"/>  
    <maxLength value="4096"/>  
  </restriction>  
</simpleType>
```

2.3.9 ST_QID (Qualified Control ID)

Specifies a control identifier that is qualified by an XML namespace prefix. The prefix determines which namespace to which the control belongs.

If the namespace is equal to the Custom UI namespace, the qualified identifier references the application's built-in control set.

For example, consider the following XML fragment:

```
<customUI xmlns="http://schemas.microsoft.com/office/2006/01/customui"  
  xmlns:mso="http://schemas.microsoft.com/office/2006/01/customui">  
  <ribbon>  
    <tabs>  
      <tab idQ="mso:TabHome" visible="false" />  
    </tabs>  
  </ribbon>  
</customUI>
```

In this example the **mso** namespace prefix is set to the Custom UI namespace, so names qualified with **mso** refer to built-in controls. Thus, the use of the **idQ** attribute on the **tab** element is equivalent to using the **idMso** attribute, as follows:

```
<tab idMso="TabHome" visible="false" />
```

If the prefix is set to any other value, qualified identifiers reference controls in a unique custom namespace. If multiple Custom UI documents refer to controls in the same namespace, they can share common containers.

For example, consider the following XML fragment:

```

<customUI
  xmlns="http://schemas.microsoft.com/office/2006/01/customui"
  xmlns:ex="http://www.example.com">
  <ribbon>
    <tabs>
      <tab idQ="ex:OtherTab" label="Shared Tab">
        <group id="MyGroup" label="My Group">
          ...
        </group>
      </tab>
    </tabs>
  </ribbon>
</customUI>

```

In this case, **ex** is an XML namespace prefix for the namespace <http://www.example.com>. This XML fragment refers to a **tab** in that namespace with an identifier of "OtherTab". If that tab cannot be found, it is created. A new group belonging to this file is added to the **tab**.

This simple type's contents are a restriction of the XML schema **QName** datatype.

This simple type also specifies the following restrictions:

- This simple type's contents have a minimum length of 1 character.
- This simple type's contents have a maximum length of 1024 characters.

The following XML schema fragment defines the contents of this simple type:

```
<simpleType name="ST_String">  
  <restriction base="xsd:string">  
    <minLength value="1"/>  
    <maxLength value="1024"/>  
  </restriction>  
</simpleType>
```

2.3.12 ST_StringLength (String Length)

Specifies the length of a string, in characters.

This simple type's contents are a restriction of the XML schema **positiveInteger** datatype.

This simple type also specifies the following restrictions:

- This simple type has a minimum value of greater than or equal to 1.
- This simple type has a maximum value of less than or equal to 1024.

Referenced By
comboBox@maxLength (section 2.2.7); editBox@maxLength (section 2.2.20)

The following XML schema fragment defines the contents of this simple type:

```
<simpleType name="ST_StringLength">  
  <restriction base="xsd:positiveInteger">  
    <minInclusive value="1"/>  
    <maxInclusive value="1024"/>  
  </restriction>  
</simpleType>
```

2.3.13 ST_UniqueID (Custom Control ID)

Specifies a custom control identifier.

This simple type's contents are a restriction of the XML schema **identifier** datatype.

This simple type also specifies the following restrictions:

- This simple type's contents have a minimum length of 1 character.
- This simple type's contents have a maximum length of 1024 characters.

Referenced By
box@id (section 2.2.1); button@id (section 2.2.2); button@id (section 2.2.3); button@id (section 2.2.4); buttonGroup@id (section 2.2.5); checkBox@id (section 2.2.6); comboBox@id (section 2.2.7); control@id (section 2.2.12); control@id (section 2.2.11); dropDown@id (section 2.2.17); dynamicMenu@id (section 2.2.19); dynamicMenu@id (section 2.2.18); editBox@id (section 2.2.20); gallery@id (section 2.2.21); gallery@id (section 2.2.22); group@id (section 2.2.23); item@id (section 2.2.24); labelControl@id (section 2.2.25); menu@id (section 2.2.28); menu@id (section 2.2.26); menu@id (section 2.2.27); menuSeparator@id (section 2.2.30); separator@id (section 2.2.34); splitButton@id (section 2.2.38); splitButton@id (section 2.2.36); splitButton@id (section 2.2.37); tab@id (section 2.2.39); toggleButton@id (section 2.2.43); toggleButton@id (section 2.2.42); toggleButton@id (section 2.2.44)

The following XML schema fragment defines the contents of this simple type:

```
<simpleType name="ST_UniqueID">  
  <restriction base="xsd:identifier">  
    <minLength value="1"/>  
    <maxLength value="1024"/>  
  </restriction>
```

</simpleType>

2.3.14 ST_Uri (Image Relationship ID)

Specifies the relationship identifier of a part that is the target of a relationship from the containing Custom UI document.

The target part is an image part type, as specified in [\[ECMA-376\]](#) Part 1 section 15.2.13.

This simple type's contents are a restriction of the XML schema **string** datatype.

This simple type also specifies the following restrictions:

- This simple type's contents have a minimum length of 1 characters.
- This simple type's contents have a maximum length of 1024 characters.

4 Appendix B: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include released service packs:

- The 2007 Microsoft® Office system
- Microsoft® Office 2010 suites
- Microsoft® Office 15 Technical Preview

Exceptions, if any, are noted below. If a service pack or Quick Fix Engineering (QFE) number appears with the product version, behavior changed in that service pack or QFE. The new behavior also applies to subsequent service packs of the product unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms SHOULD or SHOULD NOT implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies that the product does not follow the prescription.

5 Change Tracking

This section identifies changes that were made to the [MS-CUSTOMUI] protocol document between the June 2011 and January 2012 releases. Changes are classified as New, Major, Minor, Editorial, or No change.

The revision class **New** means that a new document is being released.

The revision class **Major** means that the technical content in the document was significantly revised. Major changes affect protocol interoperability or implementation. Examples of major changes are:

- A document revision that incorporates changes to interoperability requirements or functionality.
- An extensive rewrite, addition, or deletion of major portions of content.
- The removal of a document from the documentation set.
- Changes made for template compliance.

The revision class **Minor** means that the meaning of the technical content was clarified. Minor changes do not affect protocol interoperability or implementation. Examples of minor changes are updates to clarify ambiguity at the sentence, paragraph, or table level.

The revision class **Editorial** means that the language and formatting in the technical content was changed. Editorial changes apply to grammatical, formatting, and style issues.

The revision class **No change** means that no new technical or language changes were introduced. The technical content of the document is identical to the last released version, but minor editorial and formatting changes, as well as updates to the header and footer information, and to the revision summary, may have been made.

Major and minor changes can be described further using the following change types:

- New content added.
- Content updated.
- Content removed.
- New product behavior note added.
- Product behavior note updated.
- Product behavior note removed.
- New protocol syntax added.
- Protocol syntax updated.
- Protocol syntax removed.
- New content added due to protocol revision.
- Content updated due to protocol revision.
- Content removed due to protocol revision.
- New protocol syntax added due to protocol revision.

- Protocol syntax updated due to protocol revision.
- Protocol syntax removed due to protocol revision.
- New content added for template compliance.
- Content updated for template compliance.
- Content removed for template compliance.
- Obsolete document removed.

Editorial changes are always classified with the change type **Editorially updated**.

Some important terms used in the change type descriptions are defined as follows:

- **Protocol syntax** refers to data elements (such as packets, structures, enumerations, and methods) as well as interfaces.
- **Protocol revision** refers to changes made to a protocol that affect the bits that are sent over the wire.

The changes made to this document are listed in the following table. For more information, please contact protocol@microsoft.com.

Section	Tracking number (if applicable) and description	Major change (Y or N)	Change type
2.2.1 box (Box Grouping Container)	Updated the table of Parent elements.	N	Content updated.
2.2.2 button (Button)	Updated the table of Parent elements.	N	Content updated.
2.2.3 button (Unsize Button)	Added the table of Parent elements.	N	New content added.
2.2.4 button (Button Inside of a Split Button)	Added the table of Parent elements.	N	New content added.
2.2.5 buttonGroup (Button Grouping Container)	Added the table of Parent elements.	N	New content added.
2.2.6 checkBox (Check Box)	Added the table of Parent elements.	N	New content added.
4 Appendix B: Product Behavior	Updated the list of applicable product versions.	N	Content updated.
4 Appendix B: Product Behavior	Updated the list of applicable product versions.	N	Content updated.
4 Appendix B: Product Behavior	Updated the list of product versions.	N	Content updated.
