[MS-OBPAS]:
Office Broadcast Participant Service Specification

Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation for protocols, file formats, languages, standards as well as overviews of the interaction among each of these technologies.
- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you may make copies of it in order to develop implementations of the technologies described in the Open Specifications and may distribute portions of it in your implementations using these technologies or your documentation as necessary to properly document the implementation. You may also distribute in your implementation, with or without modification, any schema, IDL's, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that may cover your implementations of the technologies described in the Open Specifications. Neither this notice nor Microsoft's delivery of the documentation grants any licenses under those or any other Microsoft patents. However, a given Open Specification may be covered by Microsoft Open Specification Promise or the Community Promise. If you would prefer a written license, or if the technologies described in the Open Specifications are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting iplg@microsoft.com.
- **Trademarks.** The names of companies and products contained in this documentation may be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights.
- **Fictitious Names.** The example companies, organizations, products, domain names, e-mail addresses, logos, people, places, and events depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

Reservation of Rights. All other rights are reserved, and this notice does not grant any rights other than specifically described above, whether by implication, estoppel, or otherwise.

Tools. The Open Specifications do not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments you are free to take advantage of them. Certain Open Specifications are intended for use in conjunction with publicly available standard specifications and network programming art, and assumes that the reader either is familiar with the aforementioned material or has immediate access to it.

Preliminary Documentation. This Open Specification provides documentation for past and current releases and/or for the pre-release (beta) version of this technology. This Open Specification is final

Preliminary

Copyright © 2012 Microsoft Corporation.

documentation for past or current releases as specifically noted in the document, as applicable; it is preliminary documentation for the pre-release (beta) versions. Microsoft will release final documentation in connection with the commercial release of the updated or new version of this technology. As the documentation may change between this preliminary version and the final version of this technology, there are risks in relying on preliminary documentation. To the extent that you incur additional development obligations or any other costs as a result of relying on this preliminary documentation, you do so at your own risk.

1 Introduction

This document specifies the Office Broadcast Participant Service Protocol, which enables a protocol client to retrieve information about the state of a document being shared on a protocol server.

Sections 1.8, 2, and 3 of this specification are normative and contain RFC 2119 language. Sections 1.5 and 1.9 are also normative but cannot contain RFC 2119 language. All other sections and examples in this specification are informative.

1.1 Glossary

The following terms are defined in [MS-GLOS]:

Hypertext Transfer Protocol (HTTP)
Hypertext Transfer Protocol over Secure Sockets Layer (HTTPS)

The following terms are defined in [MS-OFCGLOS]:

broadcast session
presentation slide
Simple Object Access Protocol (SOAP)
slide show
SOAP action
SOAP body
SOAP fault
Uniform Resource Locator (URL)
Web Services Description Language (WSDL)
WSDL message
WSDL operation
XML namespace
XML namespace prefix
XML schema

The following terms are specific to this document:

MAY, SHOULD, MUST, SHOULD NOT, MUST NOT: These terms (in all caps) are used as described in [RFC2119]. All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

1.2 References

References to Microsoft Open Specification documents do not include a publishing year because links are to the latest version of the documents, which are updated frequently. References to other documents include a publishing year when one is available.

1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact dochelp@microsoft.com. We will assist you in finding the relevant information. Please check the archive site, http://msdn2.microsoft.com/en-us/library/E4BD6494-06AD-4aed-9823-445E921C9624, as an additional source.

1.3 Overview

When meeting remotely, it is useful to share the current 'view' of a document so others may follow along with the document sharer. To share this 'view' in real-time and allow attendees to follow along with the presenter as they move through the document, information regarding the presenter's current view of the document needs to be shared between the presenter and attendees.

This protocol enables a protocol client to send requests to a protocol server allowing the client to join an in-progress document **broadcast session**, and to retrieve data about the state of a broadcast session on the protocol server.

Preliminary

Copyright © 2012 Microsoft Corporation.

1.4 Relationship to Other Protocols

This protocol uses the **Simple Object Access Protocol (SOAP)** message protocol for formatting request and response messages, as described in [SOAP1.1], [SOAP1.2/1] and [SOAP1.2/2]. It transmits those messages by using **Hypertext Transfer Protocol (HTTP)**, as described in [RFC2616], or **Hypertext Transfer Protocol over Secure Sockets Layer (HTTPS)**, as described in [RFC2818].

The following diagram shows the underlying messaging and transport stack used by the protocol:

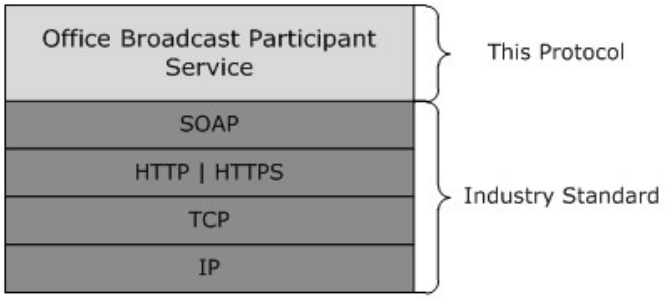

Figure 1: This protocol in relation to other protocols

This protocol works in conjunction with the Office Broadcast Presentation Service protocol as specified in [MS-OBPRS] and uses the Web Application Open Platform Interface protocol for file retrieval as specified in [MS-WOPI].

1.5 Prerequisites/Preconditions

This protocol operates between a protocol client and a protocol server that is identified by a URL that is known by protocol clients. The protocol server endpoint is formed by appending "/m/met/Participant.svc" to the **URL** of the site, for example: http://www.example.com/m/met/Participant.svc

This protocol requires that a broadcast session be started and in progress prior to joining it. Broadcast sessions can be started using the Office Broadcast Presentation Service protocol as defined in [MS-OBPRS].

This protocol requires that files being used in broadcast sessions be identified and accessed as described in [MS-WOPI].

This protocol assumes that authentication has been performed by the underlying protocols.

1.6 Applicability Statement

This protocol is designed to join in-progress broadcast sessions on the protocol server and to retrieve broadcast session information on the protocol server.

1.7 Versioning and Capability Negotiation

This document covers versioning issues in the following areas:

- **Supported Transports** – This protocol uses multiple transports with SOAP as specified in section 2.1.

Preliminary

Copyright © 2012 Microsoft Corporation.

1.8 Vendor-Extensible Fields

None.

1.9 Standards Assignments

None.

Preliminary

2 Messages

In the following sections, the schema definition might differ from the processing rules imposed by the protocol. The **WSDL** in this specification matches the WSDL that shipped with the product and provides a base description of the schema. The text that introduces the WSDL might specify differences that reflect actual Microsoft product behavior. For example, the schema definition might allow for an element to be **empty**, **null**, or **not present** but the behavior of the protocol as specified restricts the same elements to being **non-empty**, **not null**, and **present**.

2.1 Transport

Protocol servers MUST support SOAP over HTTP. Protocol servers SHOULD additionally support SOAP over HTTPS for securing communication with clients.

Protocol messages MUST be formatted as specified either in [SOAP1.1] section 4 or in [SOAP1.2/1] section 5. Protocol server faults MUST be returned either using HTTP Status Codes, as specified in [RFC2616] section 10 or using **SOAP faults**, as specified in either [SOAP1.1] section 4.4 or in [SOAP1.2/1] section 5.4.

2.2 Common Message Syntax

This section contains common definitions that are used by this protocol. The syntax of the definitions uses **XML schema**, as specified in [XMLSCHEMA1] and [XMLSCHEMA2], and WSDL, as specified in [WSDL].

2.2.1 Namespaces

This specification defines and references various **XML namespaces** using the mechanisms specified in [XMLNS]. Although this specification associates a specific **XML namespace prefix** for each XML namespace that is used, the choice of any particular XML namespace prefix is implementation-specific and not significant for interoperability.

Prefix	Namespace URI	Reference
soap	http://schemas.xmlsoap.org/wsdl/soap/	[SOAP1.1]
tns	http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Interface.Data

Prefix	Namespace URI	Reference
xs	http://www.w3.org/2001/XMLSchema	[XMLSCHEMA1] [XMLSCHEMA2]

2.2.2 Messages

This specification does not define any common WSDL message definitions.

2.2.3 Elements

This specification does not define any common XML schema element definitions.

2.2.4 Complex Types

The following table summarizes the set of common XML schema complex type definitions defined by this specification. XML schema complex type definitions that are specific to a particular operation are described with the operation.

Complex Type	Description
ArrayOfKeyValueOfstringstring	A complex type that specifies a list of key/value pairs.
ArrayOfPPTBroadcastAnimationStepData	A complex type that specifies a list of **PPTBroadcastAnimationStepData** (section 2.2.4.5) elements. Each element in the list specifies a step in an animation timeline. Each entry in the list MUST have a unique value in its **TimelineId** (section 2.2.4.5) field.
ArrayOfPPTBroadcastMediaStateData	A complex type that specifies a list of **PPTBroadcastMediaStateData** (section 2.2.4.6) elements. Each element in the list specifies a state for a multimedia object. Each entry in the list MUST have a unique value in its **MediaId** field.
EnumTypes	This complex type is reserved and MUST be ignored.
PPTBroadcastAnimationStepData	A complex type that specifies a step in an animation timeline.
PPTBroadcastMediaStateData	A complex type that specifies a state for a multimedia object such as an embedded video clip.
PPTStateData	A complex type that specifies data about the state of a broadcast session of a presentation.
ServiceError	A complex type that specifies error information returned from the protocol server to a protocol client.
ServiceResult	A complex type that specifies the result of a protocol method. The protocol server returns this type to the protocol client containing either a successful **Result** element or an **Error** element.
WordStateData	A complex type that specifies data about the state of a broadcast session of a document.

Preliminary

Copyright © 2012 Microsoft Corporation.

2.2.4.1 ArrayOfKeyValueOfstringstring

Namespace: http://schemas.microsoft.com/2003/10/Serialization/Arrays

A complex type that specifies a list of key/value pairs.

```
<xs:complexType name="ArrayOfKeyValueOfstringstring"
xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="KeyValueOfstringstring">
      <xs:complexType>
        <xs:sequence>
          <xs:element name="Key" nillable="true" type="xs:string"/>
          <xs:element name="Value" nillable="true" type="xs:string"/>
        </xs:sequence>
      </xs:complexType>
    </xs:element>
  </xs:sequence>
</xs:complexType>
```

KeyValueOfstringstring: A key/value pair. This element MUST be present.

KeyValueOfstringstring.Key: An **xs:string** ([XMLSCHEMA2] section 3.2.1) element that specifies the key in a key/value pair. This element MUST be present.

KeyValueOfstringstring.Value: An **xs:string** ([XMLSCHEMA2] section 3.2.1) element that specifies the value in a key/value pair. This element MUST be present.

2.2.4.2 ArrayOfPPTBroadcastAnimationStepData

Namespace:
http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Interface.Data

A complex type that specifies a list of **PPTBroadcastAnimationStepData** (section 2.2.4.5) elements. Each element in the list specifies a step in an animation timeline. Each entry in the list MUST have a unique value in its **TimelineId** (section 2.2.4.5) field.

```
<xs:complexType name="ArrayOfPPTBroadcastAnimationStepData"
xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="PPTBroadcastAnimationStepData"
nillable="true" type="tns:PPTBroadcastAnimationStepData"/>
  </xs:sequence>
</xs:complexType>
```

PPTBroadcastAnimationStepData: Specifies a **PPTBroadcastAnimationStepData** (section 2.2.4.5) element. The element MUST be present.

2.2.4.3 ArrayOfPPTBroadcastMediaStateData

Namespace:
http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Interface.Data

A complex type that specifies a list of **PPTBroadcastMediaStateData** (section 2.2.4.6) elements. Each element in the list specifies a state for a multimedia object. Each entry in the list MUST have a unique value in its **MediaId** field.

Preliminary

Copyright © 2012 Microsoft Corporation.

```
<xs:complexType name="ArrayOfPPTBroadcastMediaStateData"
xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="PPTBroadcastMediaStateData"
nillable="true" type="tns:PPTBroadcastMediaStateData"/>
  </xs:sequence>
</xs:complexType>
```

PPTBroadcastMediaStateData: Specifies a **PPTBroadcastMediaStateData** element. This element MUST be present.

2.2.4.4 EnumTypes

Namespace:
http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Interface.Data

This complex type is reserved and MUST be ignored.

```
<xs:complexType name="EnumTypes" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" name="AppType" type="tns:AppType"/>
    <xs:element minOccurs="0" name="BroadcastAppCapability"
type="tns:BroadcastAppCapability"/>
    <xs:element minOccurs="0" name="BroadcastDataKey" type="tns:BroadcastDataKey"/>
    <xs:element minOccurs="0" name="BroadcastState" type="tns:BroadcastState"/>
    <xs:element minOccurs="0" name="PPTMediaPlaybackState" type="tns:PPTMediaPlaybackState"/>
    <xs:element minOccurs="0" name="PPTSlideShowState" type="tns:PPTSlideShowState"/>
  </xs:sequence>
</xs:complexType>
```

AppType: This element is reserved and MUST be ignored.

BroadcastAppCapability: This element is reserved and MUST be ignored.

BroadcastDataKey: This element is reserved and MUST be ignored.

BroadcastState: This element is reserved and MUST be ignored.

PPTMediaPlaybackState: This element is reserved and MUST be ignored.

PPTSlideShowState: This element is reserved and MUST be ignored.

2.2.4.5 PPTBroadcastAnimationStepData

Namespace:
http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Interface.Data

A complex type that specifies a step in an animation timeline.

```
<xs:complexType name="PPTBroadcastAnimationStepData"
xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" name="Step" type="xs:int"/>
    <xs:element minOccurs="0" name="TimelineId" nillable="true" type="xs:string"/>
  </xs:sequence>
```

Preliminary

Copyright © 2012 Microsoft Corporation.

```
</xs:complexType>
```

Step: An **xs:int** ([XMLSCHEMA2] section 3.3.17) element that specifies the step number in the animation timeline given by the **TimelineId** field. This element MUST be present.

TimelineId: An **xs:string** ([XMLSCHEMA2] section 3.2.1) element that specifies an identifier of the animation timeline. This element MUST be present.

2.2.4.6 PPTBroadcastMediaStateData

Namespace:
http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Interface.Data

A complex type that specifies a state for a multimedia object such as an embedded video clip.

```
<xs:complexType name="PPTBroadcastMediaStateData"
xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" name="MediaId" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="State" type="tns:PPTMediaPlaybackState"/>
  </xs:sequence>
</xs:complexType>
```

MediaId: An **xs:string** ([XMLSCHEMA2] section 3.2.1) element that specifies an identifier of the multimedia object. This element MUST be present.

State: A **PPTMediaPlaybackState** (section 2.2.5.7) element that specifies the playback state of the multimedia object identified by the **MediaId** field. This element MUST be present.

2.2.4.7 PPTStateData

Namespace:
http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Interface.Data

A complex type that specifies data about the state of a broadcast session of a presentation.

```
<xs:complexType name="PPTStateData" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" name="AnimationStepDataList" nillable="true"
type="tns:ArrayOfPPTBroadcastAnimationStepData"/>
    <xs:element minOccurs="0" name="MediaStateDataList" nillable="true"
type="tns:ArrayOfPPTBroadcastMediaStateData"/>
    <xs:element minOccurs="0" name="PPTSlideShowState" type="tns:PPTSlideShowState"/>
    <xs:element minOccurs="0" name="SlideId" type="xs:unsignedInt"/>
    <xs:element minOccurs="0" name="SlideIndex" type="xs:unsignedInt"/>
  </xs:sequence>
</xs:complexType>
```

AnimationStepDataList: An **ArrayOfPPTBroadcastAnimationStepData** (section 2.2.4.2) element that specifies the state of each of the animation timelines. This element MUST be present.

MediaStateDataList: An **ArrayOfPPTBroadcastMediaStateData** (section 2.2.4.3) element that specifies the state of each of the multimedia objects. This element MUST be present.

Preliminary

Copyright © 2012 Microsoft Corporation.

PPTSlideShowState: A **PPTSlideShowState** (section 2.2.5.8) element that specifies the current state of the **slide show**. This element MUST be present.

SlideId: An **xs:unsignedInt** ([XMLSCHEMA2] section 3.3.22) element that specifies the identifier of the **presentation slide**. This element MUST be present.

SlideIndex: An **xs:unsignedInt** ([XMLSCHEMA2] section 3.3.22) element that specifies the zero-based ordered index of the presentation slide. This element MUST be present if **SlideId** is equal to 0. This element MUST be ignored if **SlideId** is not equal to 0.

2.2.4.8 ServiceError

Namespace:
http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Pipe.Interface

A complex type that specifies error information returned from the protocol server to a protocol client.

```
<xs:complexType name="ServiceError" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" name="Message" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="RecommendedActions" type="tns1:ClientActions"/>
    <xs:element minOccurs="0" name="Title" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="Type" type="tns1:ServiceErrorType"/>
  </xs:sequence>
</xs:complexType>
```

Message: An **xs:string** ([XMLSCHEMA2] section 3.2.1) element that specifies the error message description. The string length MUST be greater than zero if the **Type** element has a value of **ApplicationError**. This element MUST be present.

RecommendedActions: This element is reserved and MUST be ignored.

Title: An **xs:string** ([XMLSCHEMA2] section 3.2.1) element that specifies the error title. The string length MUST be greater than zero if the **Type** element has a value of **ApplicationError**. This element MUST be present.

Type: A **ServiceErrorType** (section 2.2.5.9) element that specifies the error type. This element MUST be present.

2.2.4.9 ServiceResult

Namespace:
http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Pipe.Interface

A complex type that specifies the result of a protocol method. The protocol server returns this type to the protocol client containing either a successful **Result** element or an **Error** element.

```
<xs:complexType name="ServiceResult" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" name="Error" nillable="true" type="tns1:ServiceError"/>
    <xs:element minOccurs="0" name="Result" nillable="true" type="xs:anyType"/>
  </xs:sequence>
</xs:complexType>
```

Preliminary

Copyright © 2012 Microsoft Corporation.

Error: An optional **ServiceError** (section 2.2.4.8) element that specifies an error result of a protocol message response. This element MUST NOT be present if the **Result** element is present.

Result: An optional **xs:anyType** ([XMLSCHEMA1] section 3.4.7) element that specifies a successful result of a protocol message response. This element MUST NOT be present if the **Error** element is present.

2.2.4.10 WordStateData

Namespace:
http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Interface.Data

A complex type that specifies data about the state of a broadcast session of a document.

```
<xs:complexType name="WordStateData" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" name="Offset" type="xs:double"/>
    <xs:element minOccurs="0" name="Page" type="xs:int"/>
  </xs:sequence>
</xs:complexType>
```

Offset: An **xs:double** ([XMLSCHEMA2] section 3.2.5) element that specifies a percentage offset from the top of the page defined by the **Page** field. This element MUST be present.

Page: An **xs:int** ([XMLSCHEMA2] section 3.3.17) element that specifies the one-based ordered index of the current page within the set of all pages of the document. This element MUST be present.

2.2.5 Simple Types

The following table summarizes the set of common XML schema simple type definitions defined by this specification. XML schema simple type definitions that are specific to a particular operation are described with the operation.

Simple type	Description
AppType	A simple type that specifies an enumeration of all the possible broadcast session types.
BroadcastAppCapability	This simple type is reserved and MUST be ignored.
BroadcastDataKey	A simple type that specifies an enumeration of a set of keys to data stored in the protocol server for a given session.
BroadcastState	A simple type that specifies an enumeration of all the possible broadcast session states.
char	A simple type that is reserved. The protocol client and protocol server MUST NOT use this as the type of any element. The protocol client and protocol server MUST ignore it if receiving an element of this type.
ClientActions	A simple type that is reserved and MUST be ignored.
duration	A simple type that is reserved. The protocol client and protocol server MUST NOT use this as the type of any element. The protocol client and protocol server MUST ignore it if receiving an element of this type.

Preliminary

Copyright © 2012 Microsoft Corporation.

Simple type	Description
guid	A simple type that is reserved. The protocol client and protocol server MUST NOT use this as the type of any element. The protocol client and protocol server MUST ignore it if receiving an element of this type.
PPTMediaPlaybackState	A simple type that specifies an enumeration of the different states a multimedia object can be in.
PPTSlideShowState	A simple type that specifies an enumeration of all the possible slide show states.
ServiceErrorType	A simple type that specifies an enumeration of a set of protocol errors returned by the protocol server to the protocol client.

2.2.5.1 BroadcastAppCapability

Namespace:
http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Interface.Data

This simple type is reserved and MUST be ignored.

```
<xs:simpleType name="BroadcastAppCapability" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:enumeration value="SessionTimeout"/>
    <xs:enumeration value="SessionIdleTimeOut"/>
    <xs:enumeration value="SupportVideo"/>
    <xs:enumeration value="SupportAudio"/>
    <xs:enumeration value="SupportNotes"/>
    <xs:enumeration value="MediaExtensions"/>
    <xs:enumeration value="MaxMediaSize"/>
  </xs:restriction>
</xs:simpleType>
```

The following table specifies the allowable values for **BroadcastAppCapability**.

Value	Meaning
SessionTimeout	Reserved and MUST be ignored.
SessionIdleTimeOut	Reserved and MUST be ignored.
SupportVideo	Reserved and MUST be ignored.
SupportAudio	Reserved and MUST be ignored.
SupportNotes	Reserved and MUST be ignored.
MediaExtensions	Reserved and MUST be ignored.
MaxMediaSize	Reserved and MUST be ignored.

2.2.5.2 BroadcastDataKey

Namespace:
http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Interface.Data

Preliminary

Copyright © 2012 Microsoft Corporation.

A simple type that specifies an enumeration of a set of keys to data stored in the protocol server for a given session.

```
<xs:simpleType name="BroadcastDataKey" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:enumeration value="AppType"/>
    <xs:enumeration value="SequenceNumber"/>
    <xs:enumeration value="FileVersion"/>
    <xs:enumeration value="OriginalFileName"/>
    <xs:enumeration value="BroadcastState"/>
    <xs:enumeration value="AppSpecificStateData"/>
    <xs:enumeration value="NotesUrl"/>
    <xs:enumeration value="DataVersion"/>
  </xs:restriction>
</xs:simpleType>
```

The following table specifies the allowable values for **BroadcastDataKey**.

Value	Meaning
AppType	This key is used to specify an application type in the **Key** field of a **KeyValueOfstringstring** element in an **ArrayOfKeyValueOfstringstring** element (section 2.2.4.1).
SequenceNumber	This key is used to specify a monotonically increasing sequence number in the **Key** field of a **KeyValueOfstringstring** element in an **ArrayOfKeyValueOfstringstring** element.
FileVersion	This key is used to specify a monotonically increasing file version number in the **Key** field of a **KeyValueOfstringstring** element in an **ArrayOfKeyValueOfstringstring** element.
OriginalFileName	This key is used to specify the file name of the document being shared in the broadcast session in the **Key** field of a **KeyValueOfstringstring** element in an **ArrayOfKeyValueOfstringstring** element.
BroadcastState	This key is used to specify a **BroadcastState** (section 2.2.5.11) for the broadcast session in the **Key** field of a **KeyValueOfstringstring** element in an **ArrayOfKeyValueOfstringstring** element.
AppSpecificStateData	This key is used to specify application specific data for the broadcast session in the **Key** field of a **KeyValueOfstringstring** element in an **ArrayOfKeyValueOfstringstring** element.
NotesUrl	This key is used to specify the URL of the notes page linked to the document being broadcast in the **Key** field of a **KeyValueOfstringstring** element in an **ArrayOfKeyValueOfstringstring** element.
DataVersion	This key is used to specify a data version field in the **Key** field of a **KeyValueOfstringstring** element in an **ArrayOfKeyValueOfstringstring** element.

2.2.5.3 char

Namespace: http://schemas.microsoft.com/2003/10/Serialization/

Preliminary

Copyright © 2012 Microsoft Corporation.

A simple type that is reserved. The protocol client and protocol server MUST NOT use this as the type of any element. The protocol client and protocol server MUST ignore it if receiving an element of this type.

```
<xs:simpleType name="char" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:int"/>
</xs:simpleType>
```

2.2.5.4 ClientActions

Namespace:
http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Pipe.Interface

A simple type that is reserved and MUST be ignored.

```
<xs:simpleType name="ClientActions" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:list>
    <xs:simpleType>
      <xs:restriction base="xs:string">
        <xs:enumeration value="None"/>
        <xs:enumeration value="Dismiss"/>
        <xs:enumeration value="Close"/>
        <xs:enumeration value="OpenInClient"/>
        <xs:enumeration value="Refresh"/>
      </xs:restriction>
    </xs:simpleType>
  </xs:list>
</xs:simpleType>
```

The following table specifies the allowable values for **ClientActions**.

Value	Meaning
None	Reserved and MUST be ignored.
Dismiss	Reserved and MUST be ignored.
Close	Reserved and MUST be ignored.
OpenInClient	Reserved and MUST be ignored.
Refresh	Reserved and MUST be ignored.

2.2.5.5 duration

Namespace: http://schemas.microsoft.com/2003/10/Serialization/

A simple type that is reserved. The protocol client and protocol server MUST NOT use this as the type of any element. The protocol client and protocol server MUST ignore it if receiving an element of this type.

```
<xs:simpleType name="duration" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:duration">
    <xs:pattern value="\-?P(\d*D)?(T(\d*H)?(\d*M)?(\d*(\.\d*)?S)?)?"/>
    <xs:minInclusive value="-P10675199DT2H48M5.4775808S"/>
```

Copyright © 2012 Microsoft Corporation.

Preliminary

```
    <xs:maxInclusive value="P10675199DT2H48M5.4775807S"/>
  </xs:restriction>
</xs:simpleType>
```

2.2.5.6 guid

Namespace: http://schemas.microsoft.com/2003/10/Serialization/

A simple type that is reserved. The protocol client and protocol server MUST NOT use this as the type of any element. The protocol client and protocol server MUST ignore it if receiving an element of this type.

```
<xs:simpleType name="guid" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:pattern value="[\da-fA-F]{8}-[\da-fA-F]{4}-[\da-fA-F]{4}-[\da-fA-F]{4}-[\da-fA-
F]{12}"/>
  </xs:restriction>
</xs:simpleType>
```

2.2.5.7 PPTMediaPlaybackState

Namespace:
http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Interface.Data

A simple type that specifies an enumeration of the different states a multimedia object can be in.

```
<xs:simpleType name="PPTMediaPlaybackState" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:enumeration value="Paused"/>
    <xs:enumeration value="Playing"/>
    <xs:enumeration value="Stopped"/>
  </xs:restriction>
</xs:simpleType>
```

The following table specifies the allowable values for **PPTMediaPlaybackState**.

Value	Meaning
Paused	The multimedia object is in a paused state.
Playing	The multimedia object is in a playing state.
Stopped	The multimedia object is in a stopped state.

2.2.5.8 PPTSlideShowState

Namespace:
http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Interface.Data

A simple type that specifies an enumeration of all the possible slide show states.

```
<xs:simpleType name="PPTSlideShowState" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
```

Preliminary

Copyright © 2012 Microsoft Corporation.

```
      <xs:enumeration value="BlackScreen"/>
      <xs:enumeration value="WhiteScreen"/>
      <xs:enumeration value="Normal"/>
      <xs:enumeration value="SlideShowEnded"/>
    </xs:restriction>
  </xs:simpleType>
```

The following table specifies the allowable values for **PPTSlideShowState**.

Value	Meaning
BlackScreen	The slide show is displaying a black screen.
WhiteScreen	The slide show is displaying a white screen.
Normal	The slide show is displaying presentation slides.
SlideShowEnded	The slide show has ended.

2.2.5.9 ServiceErrorType

Namespace:
http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Pipe.Interface

A simple type that specifies an enumeration of a set of protocol errors returned by the protocol server to the protocol client.

```
<xs:simpleType name="ServiceErrorType" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:enumeration value="UnknownError"/>
    <xs:enumeration value="ApplicationError"/>
    <xs:enumeration value="Timeout"/>
    <xs:enumeration value="ServiceBusy"/>
    <xs:enumeration value="SessionFull"/>
  </xs:restriction>
</xs:simpleType>
```

The following table specifies the allowable values for **ServiceErrorType**.

Value	Meaning
UnknownError	The protocol server encountered an unknown error.
ApplicationError	The protocol server encountered an application error.
Timeout	The protocol server timed out.
ServiceBusy	The protocol server is busy.
SessionFull	The protocol cannot allow more attendees to join a broadcast session.

2.2.5.10 AppType

Namespace:
http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Interface.Data

Preliminary

Copyright © 2012 Microsoft Corporation.

A simple type that specifies an enumeration of all the possible broadcast session types.

```
<xs:simpleType name="AppType" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:enumeration value="PPT"/>
    <xs:enumeration value="Word"/>
  </xs:restriction>
</xs:simpleType>
```

The following table specifies the allowable values for **AppType**.

Value	Meaning
PPT	The broadcast session is of a presentation.
Word	The broadcast session is of a document.

2.2.5.11 BroadcastState

Namespace:
http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Interface.Data

A simple type that specifies an enumeration of all the possible broadcast session states.

```
<xs:simpleType name="BroadcastState" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:enumeration value="BroadcastNotStartedYet"/>
    <xs:enumeration value="BroadcastStarted"/>
    <xs:enumeration value="BroadcastEnded"/>
  </xs:restriction>
</xs:simpleType>
```

The following table specifies the allowable values for **BroadcastState**.

Value	Meaning
BroadcastNotStartedYet	The broadcast session has not started yet.
BroadcastStarted	The broadcast session has started but not ended yet.
BroadcastEnded	The broadcast session has ended.

2.2.6 Attributes

This specification does not define any common XML schema attribute definitions.

2.2.7 Groups

This specification does not define any common XML schema group definitions.

2.2.8 Attribute Groups

This specification does not define any common XML schema attribute group definitions.

Preliminary

Copyright © 2012 Microsoft Corporation.

3 Protocol Details

In the following sections, the schema definition might differ from the processing rules imposed by the protocol. The WSDL in this specification matches the WSDL that shipped with the product and provides a base description of the schema. The text that introduces the WSDL might specify differences that reflect actual Microsoft product behavior. For example, the schema definition might allow for an element to be **empty**, **null**, or **not present** but the behavior of the protocol as specified restricts the same elements to being **non-empty**, **not null**, and **present**.

The client side of this protocol is simply a pass-through. That is, no additional timers or other state is required on the client side of this protocol. Calls that are made by the higher-layer protocol or application are passed directly to the transport, and the results that are returned by the transport are passed directly to the higher-layer protocol or application.

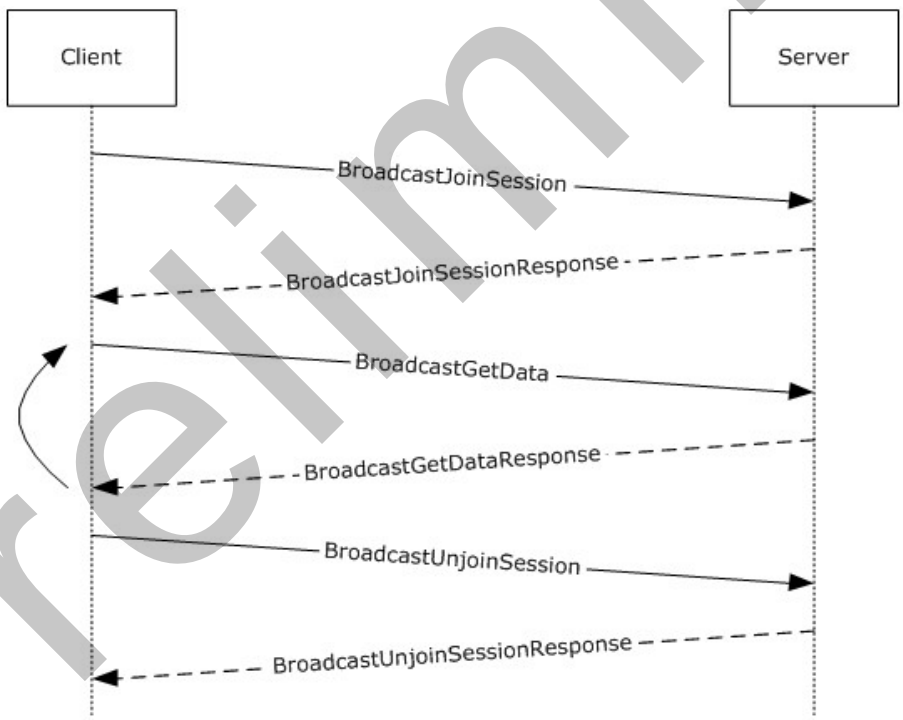
Except where specified, protocol clients SHOULD interpret Hypertext Transfer Protocol (HTTP) status codes that are returned by the protocol server as specified in [RFC2616], section 10.

This protocol allows protocol servers to notify protocol clients of application-level faults by using SOAP faults. Except where otherwise specified, these SOAP faults are not significant for interoperability and protocol clients can interpret them in an implementation-specific manner.

This protocol allows protocol servers to perform implementation-specific authorization checks and to notify protocol clients of authorization faults by using either HTTP status codes or SOAP faults, as specified previously in this section.

3.1 Server Details

The following high-level sequence diagram illustrates the operation of the participant client protocol.



Preliminary

Copyright © 2012 Microsoft Corporation.

Figure 2: Office Broadcast Participant Service high-level sequence diagram for participant clients

The operation begins when a protocol client acting as broadcast session participant sends a **BroadcastJoinSession** (section 3.1.4.2) message. The server responds with a BroadcastJoinSessionResponse message indicating the results of the operation. If the join is successful, the protocol client sends one or more **BroadcastGetData** (section 3.1.4.1) messages, and the protocol server responds to each with a BroadcastGetDataResponse message containing the current state of the broadcast session. When the participant client wishes to leave the broadcast, the protocol client sends a **BroadcastUnjoinSession** (section 3.1.4.3) message and the protocol server responds with a BroadcastUnjoinSessionResponse message to acknowledge the request.

3.1.1 Abstract Data Model

This section describes a conceptual model of possible data organization that an implementation maintains to participate in this protocol. The described organization is provided to facilitate the explanation of how the protocol behaves. This document does not mandate that implementations adhere to this model as long as their external behavior is consistent with that described in this document.

Note that the abstract interface notation '(Public)' indicates that the abstract data model element can be directly accessed from outside this protocol.

SessionId (Public): An entity that represents a unique identifier for a broadcast session.

BroadcastState (Public): An entity that represents the state of the broadcast session.

AppSpecificStateData (Public): An entity that represents state specific to the application for which this protocol is being used.

3.1.2 Timers

None.

3.1.3 Initialization

None.

3.1.4 Message Processing Events and Sequencing Rules

The following table summarizes the list of operations as defined by this specification:

Operation	Description
BroadcastGetData	The **BroadcastGetData** operation is used by the protocol client to retrieve information about the current state of the broadcast session on the protocol server.
BroadcastJoinSession	The **BroadcastJoinSession** operation is used to join a protocol client to a broadcast session.
BroadcastUnjoinSession	The **BroadcastUnjoinSession** operation is used to disjoin a protocol client from a broadcast session.

Preliminary

Copyright © 2012 Microsoft Corporation.

3.1.4.1 BroadcastGetData

The **BroadcastGetData** operation is used by the protocol client to retrieve information about the current state of the broadcast session on the protocol server.

```
<wsdl:operation name="BroadcastGetData" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
wsaw:Action="http://schemas.microsoft.com/office/Broadcast/Server/WebServices/BroadcastPartic
ipantService/IParticipantService/BroadcastGetData"
message="tns4:IParticipantService_BroadcastGetData_InputMessage"
xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
wsaw:Action="http://schemas.microsoft.com/office/Broadcast/Server/WebServices/BroadcastPartic
ipantService/IParticipantService/BroadcastGetDataResponse"
message="tns4:IParticipantService_BroadcastGetData_OutputMessage"
xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The protocol client sends a **BroadcastGetDataSoapIn** request message, and the protocol server MUST respond with a **BroadcastGetDataSoapOut** response message.

3.1.4.1.1 Messages

The following table summarizes the set of **WSDL message** definitions that are specific to this operation.

Message	Description
IParticipantService_BroadcastGetData_InputMessage	The request WSDL message for the **BroadcastGetData** **WSDL operation**.
IParticipantService_BroadcastGetData_OutputMessage	The response WSDL message for the **BroadcastGetData** WSDL operation.

3.1.4.1.1.1 IParticipantService_BroadcastGetData_InputMessage

The request WSDL message for the **BroadcastGetData** WSDL operation.

The **SOAP action** value is:

```
http://schemas.microsoft.com/office/Broadcast/Server/WebServices/BroadcastParticipantService/
IParticipantService/BroadcastGetData
```

The **SOAP body** contains the **BroadcastGetData** element.

3.1.4.1.1.2 IParticipantService_BroadcastGetData_OutputMessage

The response WSDL message for the **BroadcastGetData** WSDL operation.

The SOAP body contains the **BroadcastGetDataResponse** element.

3.1.4.1.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Preliminary

Copyright © 2012 Microsoft Corporation.

Element	Description
BroadcastGetData	The input data for the **BroadcastGetData** WSDL operation.
BroadcastGetDataResponse	The result data for the **BroadcastGetData** WSDL operation.

3.1.4.1.2.1 BroadcastGetData

The input data for the **BroadcastGetData** WSDL operation.

```
<xs:element name="BroadcastGetData" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element
xmlns:tns="http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Interfac
e.Data" minOccurs="0" name="user" nillable="true" type="tns:BroadcastUser"/>
      <xs:element minOccurs="0" name="sequenceNumber" type="xs:int"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

user: A **BroadcastUser** (section 3.1.4.1.3.1) element that is obtained by making a **BroadcastJoinSession** (section 3.1.4.2.2.1) web method call. This element MUST be present.

sequenceNumber: An **xs:int** [XMLSCHEMA2] section 3.3.17 element that specifies the sequence number of the data returned by the previous **BroadcastGetData** (section 3.1.4.1.2.1) operation, if any. A value of 0 MUST be passed if this is the first **BroadcastGetData** operation performed by the protocol client. A value of 0 MAY be passed at any time. This element MUST be present.

3.1.4.1.2.2 BroadcastGetDataResponse

The result data for the **BroadcastGetData** WSDL operation.

```
<xs:element name="BroadcastGetDataResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element
xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Pipe.In
terface" minOccurs="0" name="BroadcastGetDataResult" nillable="true"
type="tns1:ServiceResult"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

BroadcastGetDataResult: A **ServiceResult** (section 2.2.4.9) element that specifies the result of the operation. This element MUST be present.

If the **Error** child element of the **ServiceResult** element is present, the **Result** child element MUST NOT be present.

If the **Error** child element of the **ServiceResult** element is not present, the **Result** child element MUST follow the following specified behavior:

1. If the **sequenceNumber** parameter to the **BroadcastGetData** (section 3.1.4.1.2.1) operation is nonzero and is greater than or equal to the sequence number most recently received by the

Preliminary

Copyright © 2012 Microsoft Corporation.

protocol server from an Office Broadcast Presentation Service [MS-OBPRS] protocol client, the **Result** child element MUST NOT be present. This indicates to the protocol client that the state data of the broadcast session has not changed.

2. In all other cases, the **Result** child element MUST be present and MUST be an **ArrayOfKeyValueOfStringString** (section 2.2.4.1) element. The **ArrayOfKeyValueOfStringString** contains **KeyValueOfStringString** child elements where the **Key** child element MUST be a **BroadcastDataKey** (section 2.2.5.2) enumeration value of type xs:string [XMLSCHEMA2] section 3.2.1. The **Value** child of a **KeyValueOfStringString** element MUST conform to the following table.

Key	Values
AppType	MUST be an **AppType** (section 2.2.5.1) element
SequenceNumber	MUST be an **xs:int** [XMLSCHEMA2] section 3.3.17 element.
FileVersion	MUST be an **xs:int** [XMLSCHEMA2] section 3.3.17 element.
OriginalFileName	MUST be an **xs:string** [XMLSCHEMA2] section 3.2.1 element
BroadcastState	MUST be a **BroadcastState** (section 2.2.5.8) element.
AppSpecificStateData	MUST be a JSON [RFC4627] serialization of a **PPTStateData** (section 2.2.4.7) element if the **AppType** is **PPT** or a JSON [RFC4627] serialization of a **WordStateData** (section 2.2.4.10) element if the **AppType** is **Word**.
NotesUrl	MUST be an **xs:string** [XMLSCHEMA2] section 3.2.1 element.
DataVersion	Unused - MUST be ignored

3.1.4.1.3 Complex Types

The following table summarizes the XML schema complex type definitions that are specific to this operation.

Complex type	Description
BroadcastUser	A complex type that specifies a user of a broadcast session.

3.1.4.1.3.1 BroadcastUser

Namespace:
http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Interface.Data

A complex type that specifies a user of a broadcast session.

```
<xs:complexType name="BroadcastUser" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" name="SessionId" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="UserToken" nillable="true" type="xs:string"/>
  </xs:sequence>
</xs:complexType>
```

SessionId: An **xs:string** [XMLSCHEMA2] section 3.2.1 element that specifies the identifier of the broadcast session on the protocol server. This element MUST be present.

Preliminary

Copyright © 2012 Microsoft Corporation.

UserToken: An **xs:string** [XMLSCHEMA2] section 3.2.1 element that specifies the identifier of a user of the broadcast session on the protocol server. This element MUST be present.

3.1.4.1.4 Simple Types

None.

3.1.4.1.5 Attributes

None.

3.1.4.1.6 Groups

None.

3.1.4.1.7 Attribute Groups

None.

3.1.4.2 BroadcastJoinSession

The **BroadcastJoinSession** operation is used to join a protocol client to a broadcast session.

```
<wsdl:operation name="BroadcastJoinSession" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
wsaw:Action="http://schemas.microsoft.com/office/Broadcast/Server/WebServices/BroadcastPartic
ipantService/IParticipantService/BroadcastJoinSession"
message="tns4:IParticipantService_BroadcastJoinSession_InputMessage"
xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
wsaw:Action="http://schemas.microsoft.com/office/Broadcast/Server/WebServices/BroadcastPartic
ipantService/IParticipantService/BroadcastJoinSessionResponse"
message="tns4:IParticipantService_BroadcastJoinSession_OutputMessage"
xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The protocol client sends a **BroadcastJoinSessionSoapIn** request message, and the protocol server MUST respond with a **BroadcastJoinSessionSoapOut** response message.

3.1.4.2.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
IParticipantService_BroadcastJoinSession_InputMessage	The request WSDL message for the **BroadcastJoinSession** WSDL operation.
IParticipantService_BroadcastJoinSession_OutputMessage	The response WSDL message for the **BroadcastJoinSession** WSDL operation.

3.1.4.2.1.1 IParticipantService_BroadcastJoinSession_InputMessage

The request WSDL message for the **BroadcastJoinSession** WSDL operation.

Preliminary

Copyright © 2012 Microsoft Corporation.

The SOAP action value is:

```
http://schemas.microsoft.com/office/Broadcast/Server/WebServices/BroadcastParticipantService/
IParticipantService/BroadcastJoinSession
```

The SOAP body contains the **BroadcastJoinSession** element.

3.1.4.2.1.2 IParticipantService_BroadcastJoinSession_OutputMessage

The response WSDL message for the **BroadcastJoinSession** WSDL operation.

The SOAP body contains the **BroadcastJoinSessionResponse** element.

3.1.4.2.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
BroadcastJoinSession	The input data for the **BroadcastJoinSession** WSDL operation.
BroadcastJoinSessionResponse	The result data for the **BroadcastJoinSession** WSDL operation.

3.1.4.2.2.1 BroadcastJoinSession

The input data for the **BroadcastJoinSession** WSDL operation.

```
<xs:element name="BroadcastJoinSession" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" name="sessionId" nillable="true" type="xs:string"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

sessionId: An **xs:string** [XMLSCHEMA2] section 3.2.1 element that specifies an identifier for the broadcast session. This identifier MUST conform to the pattern **WOPISrc=<source>&access_token=<token>**, where **<source>** is the **WOPISrc** parameter as defined in [MS-WOPI] section 3.1.1.1.1.2.3.3, and **<token>** is the <token> parameter as defined in [MS-WOPI] section 2.2.2.

3.1.4.2.2.2 BroadcastJoinSessionResponse

The result data for the **BroadcastJoinSession** WSDL operation.

```
<xs:element name="BroadcastJoinSessionResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element
xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Pipe.In
terface" minOccurs="0" name="BroadcastJoinSessionResult" nillable="true"
type="tns1:ServiceResult"/>
    </xs:sequence>
```

Preliminary

Copyright © 2012 Microsoft Corporation.

```
    </xs:complexType>
  </xs:element>
```

BroadcastJoinSessionResult: A **ServiceResult** (section 2.2.4.9) element that specifies the result of the operation. This element MUST be present. The **Result** child element MUST be a **BroadcastUser** (section 3.1.4.1.3.1) if the **Error** child element is not present.

3.1.4.2.3 Complex Types

None.

3.1.4.2.4 Simple Types

None.

3.1.4.2.5 Attributes

None.

3.1.4.2.6 Groups

None.

3.1.4.2.7 Attribute Groups

None.

3.1.4.3 BroadcastUnjoinSession

The **BroadcastUnjoinSession** operation is used to disjoin a protocol client from a broadcast session.

```
<wsdl:operation name="BroadcastUnjoinSession" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
wsaw:Action="http://schemas.microsoft.com/office/Broadcast/Server/WebServices/BroadcastPartic
ipantService/IParticipantService/BroadcastUnjoinSession"
message="tns4:IParticipantService_BroadcastUnjoinSession_InputMessage"
xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
wsaw:Action="http://schemas.microsoft.com/office/Broadcast/Server/WebServices/BroadcastPartic
ipantService/IParticipantService/BroadcastUnjoinSessionResponse"
message="tns4:IParticipantService_BroadcastUnjoinSession_OutputMessage"
xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The protocol client sends a **BroadcastUnjoinSessionSoapIn** request message, and the protocol server MUST respond with a **BroadcastUnjoinSessionSoapOut** response message.

3.1.4.3.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Preliminary

Copyright © 2012 Microsoft Corporation.

Message	Description
IParticipantService_BroadcastUnjoinSession_InputMessage	The request WSDL message for the **BroadcastUnjoinSession** WSDL operation.
IParticipantService_BroadcastUnjoinSession_OutputMessage	The response WSDL message for the **BroadcastUnjoinSession** WSDL operation.

3.1.4.3.1.1 IParticipantService_BroadcastUnjoinSession_InputMessage

The request WSDL message for the **BroadcastUnjoinSession** WSDL operation.

The SOAP action value is:

```
http://schemas.microsoft.com/office/Broadcast/Server/WebServices/BroadcastParticipantService/
IParticipantService/BroadcastUnjoinSession
```

The SOAP body contains the **BroadcastUnjoinSession** element.

3.1.4.3.1.2 IParticipantService_BroadcastUnjoinSession_OutputMessage

The response WSDL message for the **BroadcastUnjoinSession** WSDL operation.

The SOAP body contains the **BroadcastUnjoinSessionResponse** element.

3.1.4.3.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
BroadcastUnjoinSession	The input data for the **BroadcastUnjoinSession** WSDL operation.
BroadcastUnjoinSessionResponse	The result data for the **BroadcastUnjoinSession** WSDL operation.

3.1.4.3.2.1 BroadcastUnjoinSession

The input data for the **BroadcastUnjoinSession** WSDL operation.

```
<xs:element name="BroadcastUnjoinSession" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" name="sessionId" nillable="true" type="xs:string"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

sessionId: An **xs:string** [XMLSCHEMA2] section 3.2.1 element that specifies the broadcast session to disjoin from. This element MUST be present.

Preliminary

Copyright © 2012 Microsoft Corporation.

3.1.4.3.2.2 BroadcastUnjoinSessionResponse

The result data for the **BroadcastUnjoinSession** WSDL operation.

```
<xs:element name="BroadcastUnjoinSessionResponse"
xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element
xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Pipe.In
terface" minOccurs="0" name="BroadcastUnjoinSessionResult" nillable="true"
type="tns1:ServiceResult"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

BroadcastUnjoinSessionResult: A **ServiceResult** (section 2.2.4.9) element that specifies the result of the operation. This element MUST be present. If the **Result** child element is present, it MUST be ignored by the protocol client.

3.1.4.3.3 Complex Types

None.

3.1.4.3.4 Simple Types

None.

3.1.4.3.5 Attributes

None.

3.1.4.3.6 Groups

None.

3.1.4.3.7 Attribute Groups

None.

3.1.5 Timer Events

None.

3.1.6 Other Local Events

None.

4 Protocol Examples

The following examples contain sample interactions between protocol clients and protocol servers.

4.1 Attendee Client Example

The attendee protocol client begins by sending a request to the protocol server to join the broadcast session. The following **BroadcastJoinSessionSoapIn (**section 3.1.4.2**)** message is sent to the protocol server:

```
<s:Envelope xmlns:s="http://schemas.xmlsoap.org/soap/envelope/">
<s:Body>
<BroadcastJoinSession
xmlns="http://schemas.microsoft.com/office/Broadcast/Server/WebServices/BroadcastParticipantS
ervice/">
<sessionId>WOPISrc=http://machinename/th/handler/wopi/files/anonymous~PPTTest.pptx&amp;access
_token=VAR</sessionId>
</BroadcastJoinSession>
</s:Body>
</s:Envelope>
```

The protocol server responds with a message to acknowledge the request and to provide host information and an identifier for the broadcast session to be used by the attendee protocol client for future requests. The following **BroadcastJoinSessionSoapOut (**section 3.1.4.2**)** message is sent to the attendee protocol client:

```
<s:Envelope xmlns:s="http://schemas.xmlsoap.org/soap/envelope/">
<s:Body>
<BroadcastJoinSessionResponse
xmlns="http://schemas.microsoft.com/office/Broadcast/Server/WebServices/BroadcastParticipantS
ervice/">
<BroadcastJoinSessionResult
xmlns:a="http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Pipe.Inter
face" xmlns:i="http://www.w3.org/2001/XMLSchema-instance">
<a:Error i:nil="true"/>
<a:Result i:type="b:BroadcastUser"
xmlns:b="http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Interface.
Data">
<b:SessionId>WOPISrc=http://machinename/th/handler/wopi/files/anonymous~PPTTest.pptx&amp;acce
ss_token=VAR</b:SessionId>
<b:UserToken>b5ea6891-bb86-4544-a74c-847ce4c2edee</b:UserToken>
</a:Result>
</BroadcastJoinSessionResult>
</BroadcastJoinSessionResponse>
</s:Body>
</s:Envelope>
```

Next, the attendee protocol client requests information about the current state of the broadcast session from the protocol server. The following **BroadcastGetDataSoapIn (**section 3.1.4.1**)** message is sent to the protocol server:

```
<s:Envelope xmlns:s="http://schemas.xmlsoap.org/soap/envelope/">
<s:Body>
<BroadcastGetData
xmlns="http://schemas.microsoft.com/office/Broadcast/Server/WebServices/BroadcastParticipantS
ervice/">
```

Preliminary

Copyright © 2012 Microsoft Corporation.

```
<user
xmlns:a="http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Interface.
Data" xmlns:i="http://www.w3.org/2001/XMLSchema-instance">
<a:SessionId>WOPISrc=http://machinename/th/handler/wopi/files/anonymous~PPTTest.pptx&amp;acce
ss_token=VAR</a:SessionId>
<a:UserToken>b5ea6891-bb86-4544-a74c-847ce4c2edee</a:UserToken>
</user>
<sequenceNumber>0</sequenceNumber>
</BroadcastGetData>
</s:Body>
</s:Envelope>
```

The protocol server responds with information about the current state of the broadcast session. The following **BroadcastGetDataSoapOut** (section 3.1.4.1) message is sent to the attendee protocol client:

```
<s:Envelope
xmlns:s="http://schemas.xmlsoap.org/soap/envelope/"><s:Body><BroadcastGetDataResponse
xmlns="http://schemas.microsoft.com/office/Broadcast/Server/WebServices/BroadcastParticipantS
ervice/">
<BroadcastGetDataResult
xmlns:a="http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Pipe.Inter
face" xmlns:i="http://www.w3.org/2001/XMLSchema-instance">
<a:Error i:nil="true"/>
<a:Result i:type="b:ArrayOfKeyValueOfstringstring"
xmlns:b="http://schemas.microsoft.com/2003/10/Serialization/Arrays">
<b:KeyValueOfstringstring>
<b:Key>AppType</b:Key>
<b:Value>PPT</b:Value>
</b:KeyValueOfstringstring>
<b:KeyValueOfstringstring>
<b:Key>BroadcastState</b:Key>
<b:Value>BroadcastStarted</b:Value>
</b:KeyValueOfstringstring>
<b:KeyValueOfstringstring>
<b:Key>SequenceNumber</b:Key>
<b:Value>5</b:Value>
</b:KeyValueOfstringstring>
<b:KeyValueOfstringstring>
<b:Key>FileVersion</b:Key>
<b:Value>1</b:Value>
</b:KeyValueOfstringstring>
<b:KeyValueOfstringstring>
<b:Key>OriginalFileName</b:Key>
<b:Value>file.pptx</b:Value>
</b:KeyValueOfstringstring>
<b:KeyValueOfstringstring>
<b:Key>NotesUrl</b:Key>
<b:Value>http://url</b:Value>
</b:KeyValueOfstringstring>
<b:KeyValueOfstringstring>
<b:Key>DataVersion</b:Key>
<b:Value/>
</b:KeyValueOfstringstring>
<b:KeyValueOfstringstring>
<b:Key>AppSpecificStateData</b:Key>
```

Preliminary

Copyright © 2012 Microsoft Corporation.

```
<b:Value>{"SlideId":258,"SlideIndex":0,"AnimationStepDataList":[{"TimelineId":"timeline_1","S
tep":1},{"TimelineId":"timeline_2","Step":2}],"MediaStateDataList":[{"MediaId":"media_1","Sta
te":1},{"MediaId":"media_2","State":0}],"PPTSlideShowState":2}</b:Value>
</b:KeyValueOfstringstring>
</a:Result>
</BroadcastGetDataResult>
</BroadcastGetDataResponse>
</s:Body>
</s:Envelope>
```

The attendee protocol client continues to send **BroadcastGetDataSoapIn** (section 3.1.4.1) messages to request the latest state of the broadcast session.

Finally, the attendee protocol client disjoins from the broadcast session by sending the **BroadcastUnjoinSessionSoapIn** (section 3.1.4.3) message to the protocol server:

```
<s:Envelope xmlns:s="http://schemas.xmlsoap.org/soap/envelope/">
<s:Body>
<BroadcastUnjoinSession
xmlns="http://schemas.microsoft.com/office/Broadcast/Server/WebServices/BroadcastParticipantS
ervice/">
<sessionId>WOPISrc=http://machinename/th/handler/wopi/files/anonymous~PPTTest.pptx&amp;access
_token=VAR</sessionId>
</BroadcastUnjoinSession>
</s:Body>
</s:Envelope>
```

The protocol server responds by sending the **BroadcastUnjoinSessionSoapOut** (section 3.1.4.3**)** message to the attendee protocol client:

```
<s:Envelope xmlns:s="http://schemas.xmlsoap.org/soap/envelope/">
<s:Body>
<BroadcastUnjoinSessionResponse
xmlns="http://schemas.microsoft.com/office/Broadcast/Server/WebServices/BroadcastParticipantS
ervice/">
<BroadcastUnjoinSessionResult
xmlns:a="http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.Broadcast.Pipe.Inter
face" xmlns:i="http://www.w3.org/2001/XMLSchema-instance">
<a:Error i:nil="true"/>
<a:Result i:nil="true"/>
</BroadcastUnjoinSessionResult>
</BroadcastUnjoinSessionResponse>
</s:Body>
</s:Envelope>
```

8 Appendix C: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include released service packs:

- Microsoft® PowerPoint® 15 Technical Preview
- Microsoft® PowerPoint® Web App
- Microsoft® Word 15 Technical Preview
- Microsoft® Word Web App

Exceptions, if any, are noted below. If a service pack or Quick Fix Engineering (QFE) number appears with the product version, behavior changed in that service pack or QFE. The new behavior also applies to subsequent service packs of the product unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms SHOULD or SHOULD NOT implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies that the product does not follow the prescription.
