Release: Wednesday, April 11, 2012

[MS-OBPRS]: Office Broadcast Presentation Service Specification

Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation for protocols, file formats, languages, standards as well as overviews of the interaction among each of these technologies.
- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you may make copies of it in order to develop implementations of the technologies described in the Open Specifications and may distribute portions of it in your implementations using these technologies or your documentation as necessary to properly document the implementation. You may also distribute in your implementation, with or without modification, any schema, IDL's, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that may cover your implementations of the technologies described in the Open Specifications. Neither this notice nor Microsoft's delivery of the documentation grants any licenses under those or any other Microsoft patents. However, a given Open Specification may be covered by Microsoft [Open Specification Promise](#) or the [Community Promise](#). If you would prefer a written license, or if the technologies described in the Open Specifications are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting iplg@microsoft.com.
- **Trademarks.** The names of companies and products contained in this documentation may be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights.
- **Fictitious Names.** The example companies, organizations, products, domain names, e-mail addresses, logos, people, places, and events depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

Reservation of Rights. All other rights are reserved, and this notice does not grant any rights other than specifically described above, whether by implication, estoppel, or otherwise.

Tools. The Open Specifications do not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments you are free to take advantage of them. Certain Open Specifications are intended for use in conjunction with publicly available standard specifications and network programming art, and assumes that the reader either is familiar with the aforementioned material or has immediate access to it.

Preliminary Documentation. This Open Specification provides documentation for past and current releases and/or for the pre-release (beta) version of this technology. This Open Specification is final documentation for past or current releases as specifically noted in the document, as applicable; it is

preliminary documentation for the pre-release (beta) versions. Microsoft will release final documentation in connection with the commercial release of the updated or new version of this technology. As the documentation may change between this preliminary version and the final version of this technology, there are risks in relying on preliminary documentation. To the extent that you incur additional development obligations or any other costs as a result of relying on this preliminary documentation, you do so at your own risk.

Revision Summary

Date	Revision History	Revision Class	Comments
01/20/2012	0.1	New	Released new document.
04/11/2012	0.1	No change	No changes to the meaning, language, or formatting of the technical content.

1 Introduction

This document specifies the Office Broadcast Presentation Service Protocol, which enables a protocol client to create and update information about the state of a document being shared on a protocol server.

Sections 1.8, 2, and 3 of this specification are normative and can contain the terms MAY, SHOULD, MUST, MUST NOT, and SHOULD NOT as defined in RFC 2119. Sections 1.5 and 1.9 are also normative but cannot contain those terms. All other sections and examples in this specification are informative.

1.1 Glossary

The following terms are defined in [\[MS-GLOS\]](#):

Hypertext Transfer Protocol (HTTP) Hypertext Transfer Protocol over Secure Sockets Layer (HTTPS)

The following terms are defined in [\[MS-OFCGLOS\]](#):

broadcast session
presentation slide
Simple Object Access Protocol (SOAP)
slide show
SOAP action
SOAP body
SOAP fault
Uniform Resource Locator (URL)
Web Services Description Language (WSDL)
WSDL message
WSDL operation
XML namespace
XML namespace prefix
XML schema

The following terms are specific to this document:

MAY, SHOULD, MUST, SHOULD NOT, MUST NOT: These terms (in all caps) are used as described in [\[RFC2119\]](#). All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

1.2 References

References to Microsoft Open Specifications documentation do not include a publishing year because links are to the latest version of the documents, which are updated frequently. References to other documents include a publishing year when one is available.

1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact dochelp@microsoft.com. We will assist you in finding the relevant information. Please check the archive site, <http://msdn2.microsoft.com/en-us/library/E4BD6494-06AD-4aed-9823-445E921C9624>, as an additional source.

1.3 Overview

When meeting remotely, it is useful to share the current 'view' of a document so others may follow along with the document sharer. To share this 'view' in real-time and allow attendees to follow along with the presenter as they move through the document, information regarding the presenter's current view of the document needs to be shared between the presenter and attendees.

This protocol enables a protocol client to send requests to a protocol server allowing the client to begin or end a document **broadcast session**, and to store data about the state of a broadcast session on the protocol server.

1.4 Relationship to Other Protocols

This protocol uses the **Simple Object Access Protocol (SOAP)** message protocol for formatting request and response messages, as described in [\[SOAP1.1\]](#), [\[SOAP1.2/1\]](#) and [\[SOAP1.2/2\]](#). It transmits those messages by using **Hypertext Transfer Protocol (HTTP)**, as described in [\[RFC2616\]](#), or **Hypertext Transfer Protocol over Secure Sockets Layer (HTTPS)**, as described in [\[RFC2818\]](#).

The following diagram shows the underlying messaging and transport stack used by the protocol:

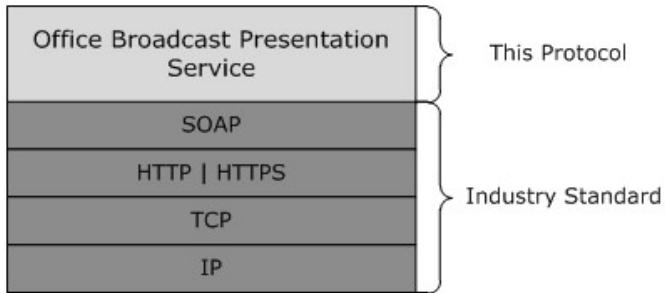

Figure 1: This protocol in relation to other protocols

This protocol works in conjunction with the Office Broadcast Participant Service protocol as specified in [\[MS-OBPAS\]](#) and uses the Web Application Open Platform Interface protocol for file retrieval as specified in [\[MS-WOPI\]](#).

1.5 Prerequisites/Preconditions

This protocol operates between a protocol client and a protocol server that is identified by a **URL** that is known by protocol clients. The protocol server endpoint is formed by appending "/m/Present_2_0.asmx" to the URL of the site, for example:
http://www.example.com/m/Present_2_0.asmx.

This protocol requires that files being used in broadcast sessions be identified and accessed as described in [\[MS-WOPI\]](#).

This protocol assumes that authentication has been performed by the underlying protocols.

1.6 Applicability Statement

This protocol is designed to begin and end broadcast sessions on the protocol server and to store and update broadcast session information on the protocol server.

1.7 Versioning and Capability Negotiation

This document covers versioning issues in the following areas:

- **Supported Transports** – This protocol uses multiple transports with SOAP as specified in section [2.1](#).

1.8 Vendor-Extensible Fields

None.

1.9 Standards Assignments

None.

2 Messages

In the following sections, the schema definition might be less restrictive than the processing rules imposed by the protocol. The **WSDL** in this specification matches the WSDL that shipped with the product and provides a base description of the schema. The text that introduces the WSDL specifies additional restrictions differences that reflect actual Microsoft product behavior. For example, the schema definition might allow for an element to be **empty**, **null**, or **not present** but the behavior of the protocol as specified restricts the same elements to being **non-empty**, **not null**, and **present**.

2.1 Transport

Protocol servers MUST support SOAP over HTTP. Protocol servers SHOULD additionally support SOAP over HTTPS for securing communication with protocol clients.

Protocol messages MUST be formatted as specified either in [\[SOAP1.1\]](#) section 4 or in [\[SOAP1.2/1\]](#) section 5. Protocol server faults MUST be returned either using HTTP status codes, as specified in [\[RFC2616\]](#) section 10 or using **SOAP faults**, as specified in either [\[SOAP1.1\]](#) section 4.4 or in [\[SOAP1.2/1\]](#) section 5.4.

2.2 Common Message Syntax

This section contains common definitions used by this protocol. The syntax of the definitions uses **XML schema** as defined in [\[XMLSHEMA1\]](#) and [\[XMLSHEMA2\]](#), and Web Services Description Language (WSDL) as defined in [\[WSDL\]](#).

2.2.1 Namespaces

This specification defines and references various **XML namespaces** using the mechanisms specified in [\[XMLNS\]](#). Although this specification associates a specific **XML namespace prefix** for each XML namespace that is used, the choice of any particular XML namespace prefix is implementation-specific and not significant for interoperability.

Prefix	Namespace URI	Reference
http	http://schemas.xmlsoap.org/wsdl/http/	
soap	http://schemas.xmlsoap.org/wsdl/soap/	[SOAP1.1]
soap12	http://schemas.xmlsoap.org/wsdl/soap12/	[SOAP1.2/1] [SOAP1.2/2]
tns	http://schemas.microsoft.com/server/broadcast/2010/main	
wsdl	http://schemas.xmlsoap.org/wsdl/	[WSDL]
xs	http://www.w3.org/2001/XMLSchema	[XMLSHEMA1] [XMLSHEMA2]

2.2.2 Messages

This specification does not define any common **WSDL message** definitions.

2.2.3 Elements

This specification does not define any common XML schema element definitions.

2.2.4 Complex Types

The following table summarizes the set of common XML schema complex type definitions defined by this specification. XML schema complex type definitions that are specific to a particular operation are described with the operation.

Complex Type	Description
AppServerInfo	A complex type that contains settings that dictate the behavior of the protocol server.
ArrayOfPPTBroadcastAnimationStepData	A complex type that specifies a list of PPTBroadcastAnimationStepData (section 2.2.4.8) elements. Each element in the list specifies a step in an animation timeline. Each entry in the list MUST have a unique value in its TimelineId field.
ArrayOfPPTBroadcastMediaStateData	A complex type that specifies a list of PPTBroadcastMediaStateData (section 2.2.4.9) elements. Each element in the list specifies a state for a multimedia object. Each entry in the list MUST have a unique value in its MediaId field.
BroadcastDictionaryType	A complex type that specifies a list of ItemType (section 2.2.4.7) elements.
BroadcastUser	A complex type that specifies a user of a broadcast session.
EnumTypes	Reserved. MUST be ignored.
ItemType	A complex type that holds a key-value pair
PPTBroadcastAnimationStepData	A complex type that specifies a step in an animation timeline.
PPTBroadcastMediaStateData	A complex type that specifies a state for a multimedia object such as an embedded video clip.
PPTStateData	A complex type that specifies data about the state of a broadcast session of a presentation.
ServiceError	A complex type that specifies error information returned by the protocol server to a protocol client.
ServiceResult	A complex type that specifies the result of a protocol method. The protocol server returns this type to the protocol client containing either a successful Result element or an Error element.
WordStateData	A complex type that specifies data about the state of a broadcast session of a Word document.

2.2.4.1 AppServerInfo

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

A complex type that contains settings that dictate the behavior of the protocol server.

```
<xs:complexType name="AppServerInfo" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="1" name="AppCapabilities"
      type="tns:BroadcastDictionaryType"/>
  </xs:sequence>
</xs:complexType>
```

AppCapabilities: A **BroadcastDictionaryType** (section [2.2.4.4](#)) element that contains server-related settings. This element MUST be present.

2.2.4.2 ArrayOfPPTBroadcastAnimationStepData

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

A complex type that specifies a list of **PPTBroadcastAnimationStepData** (section [2.2.4.8](#)) elements. Each element in the list specifies a step in an animation timeline. Each entry in the list MUST have a unique value in its **TimelineId** field.

```
<xs:complexType name="ArrayOfPPTBroadcastAnimationStepData"
  xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="PPTBroadcastAnimationStepData"
      nillable="true" type="tns:PPTBroadcastAnimationStepData"/>
  </xs:sequence>
</xs:complexType>
```

PPTBroadcastAnimationStepData: Specifies a **PPTBroadcastAnimationStepData** (section [2.2.4.8](#)) element. The element MUST be present.

2.2.4.3 ArrayOfPPTBroadcastMediaStateData

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

A complex type that specifies a list of **PPTBroadcastMediaStateData** (section [2.2.4.9](#)) elements. Each element in the list specifies a state for a multimedia object. Each entry in the list MUST have a unique value in its **MediaId** field.

```
<xs:complexType name="ArrayOfPPTBroadcastMediaStateData"
  xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="PPTBroadcastMediaStateData"
      nillable="true" type="tns:PPTBroadcastMediaStateData"/>
  </xs:sequence>
</xs:complexType>
```

PPTBroadcastMediaStateData: Each element specifies a **PPTBroadcastMediaStateData** (section [2.2.4.9](#)) element. The element MUST be present.

2.2.4.4 BroadcastDictionaryType

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

A complex type that specifies a list of **ItemType** (section [2.2.4.7](#)) elements.

```
<xs:complexType name="BroadcastDictionaryType" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element maxOccurs="unbounded" name="item" type="tns:ItemType"/>
  </xs:sequence>
</xs:complexType>
```

item: Each element specifies an **ItemType** (section [2.2.4.7](#)) element. The element MUST be present.

2.2.4.5 BroadcastUser

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

A complex type that specifies a user of a broadcast session.

```
<xs:complexType name="BroadcastUser" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="1" name="SessionId" type="xs:string"/>
    <xs:element minOccurs="0" maxOccurs="1" name="UserToken" type="xs:string"/>
  </xs:sequence>
</xs:complexType>
```

SessionId: An **xs:string** [XMLSCHEMA2] section 3.2.1 element that specifies the identifier of the broadcast session on the protocol server. This element MUST be present.

UserToken: An **xs:string** [XMLSCHEMA2] section 3.2.1 element that specifies the identifier of a user of the broadcast session on the protocol server. This element MUST be present.

2.2.4.6 EnumTypes

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

Reserved. MUST be ignored.

```
<xs:complexType name="EnumTypes" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="1" maxOccurs="1" name="BroadcastDataKey"
      type="tns:BroadcastDataKey"/>
    <xs:element minOccurs="1" maxOccurs="1" name="BroadcastAppCapability"
      type="tns:BroadcastAppCapability"/>
    <xs:element minOccurs="1" maxOccurs="1" name="AppType" type="tns:AppType"/>
    <xs:element minOccurs="1" maxOccurs="1" name="BroadcastState" type="tns:BroadcastState"/>
    <xs:element minOccurs="1" maxOccurs="1" name="PPTSlideShowState"
      type="tns:PPTSlideShowState"/>
    <xs:element minOccurs="1" maxOccurs="1" name="PPTMediaPlaybackState"
      type="tns:PPTMediaPlaybackState"/>
  </xs:sequence>
```

```
</xs:complexType>
```

BroadcastDataKey: This element is reserved and MUST be ignored.

BroadcastAppCapability: This element is reserved and MUST be ignored.

AppType: This element is reserved and MUST be ignored.

BroadcastState: This element is reserved and MUST be ignored.

PPTSlideShowState: This element is reserved and MUST be ignored.

PPTMediaPlaybackState: This element is reserved and MUST be ignored.

2.2.4.7 ItemType

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

A complex type that holds a key-value pair

```
<xs:complexType name="ItemType" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element name="key" type="xs:string"/>
    <xs:element name="value" type="xs:string"/>
  </xs:sequence>
</xs:complexType>
```

key: An **xs:string** [\[XMLSCHEMA2\]](#) section 3.2.1 element that specifies the key in a key-value pair. This element MUST be present.

value: An **xs:string** [\[XMLSCHEMA2\]](#) section 3.2.1 element that specifies the value in a key-value pair. This element MUST be present.

2.2.4.8 PPTBroadcastAnimationStepData

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

A complex type that specifies a step in an animation timeline.

```
<xs:complexType name="PPTBroadcastAnimationStepData"
  xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="1" name="TimelineId" type="xs:string"/>
    <xs:element minOccurs="1" maxOccurs="1" name="Step" type="xs:int"/>
  </xs:sequence>
</xs:complexType>
```

TimelineId: An **xs:string** [\[XMLSCHEMA2\]](#) section 3.2.1 element that specifies an identifier of the animation timeline. This element MUST be present.

Step: An **xs:int** [\[XMLSCHEMA2\]](#) section 3.3.17 element that specifies the step number in the animation timeline given by the **TimelineId** field. This element MUST be present.

2.2.4.9 PPTBroadcastMediaStateData

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

A complex type that specifies a state for a multimedia object such as an embedded video clip.

```
<xs:complexType name="PPTBroadcastMediaStateData"
  xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="1" name="MediaId" type="xs:string"/>
    <xs:element minOccurs="1" maxOccurs="1" name="State" type="tns:PPTMediaPlaybackState"/>
  </xs:sequence>
</xs:complexType>
```

MediaId: An **xs:string** [XMLSCHEMA2] section 3.2.1 element that specifies an identifier of the multimedia object. This element MUST be present.

State: A **PPTMediaPlaybackState** (section [2.2.5.5](#)) element that specifies the playback state of the multimedia object identified by the **MediaId** field. This element MUST be present.

2.2.4.10 PPTStateData

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

A complex type that specifies data about the state of a broadcast session of a presentation.

```
<xs:complexType name="PPTStateData" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="1" maxOccurs="1" name="SlideId" type="xs:unsignedInt"/>
    <xs:element minOccurs="1" maxOccurs="1" name="SlideIndex" type="xs:unsignedInt"/>
    <xs:element minOccurs="0" maxOccurs="1" name="AnimationStepDataList"
      type="tns:ArrayOfPPTBroadcastAnimationStepData"/>
    <xs:element minOccurs="0" maxOccurs="1" name="MediaStateDataList"
      type="tns:ArrayOfPPTBroadcastMediaStateData"/>
    <xs:element minOccurs="1" maxOccurs="1" name="PPTSlideShowState"
      type="tns:PPTSlideShowState"/>
  </xs:sequence>
</xs:complexType>
```

SlideId: An **xs:unsignedInt** [XMLSCHEMA2] section 3.3.22 element that specifies the identifier of the **presentation slide**. This element MUST be present.

SlideIndex: An **xs:unsignedInt** [XMLSCHEMA2] section 3.3.22 element that specifies the zero-based ordered index of the presentation slide. This element MUST be present if **SlideId** is equal to 0. This element MUST be ignored if **SlideId** is not equal to 0.

AnimationStepDataList: An **ArrayOfPPTBroadcastAnimationStepData** (section [2.2.4.2](#)) element that specifies the state of each of the animation timelines. This element MUST be present.

MediaStateDataList: An **ArrayOfPPTBroadcastMediaStateData** (section [2.2.4.3](#)) element that specifies the state of each of the multimedia objects. This element MUST be present.

PPTSlideShowState: A **PPTSlideShowState** (section [2.2.5.6](#)) element that specifies the current state of the **slide show**. This element MUST be present.

2.2.4.11 ServiceError

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

A complex type that specifies error information returned by the protocol server to a protocol client.

```
<xs:complexType name="ServiceError" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="1" name="Message" type="xs:string"/>
    <xs:element minOccurs="0" maxOccurs="1" name="Title" type="xs:string"/>
    <xs:element minOccurs="1" maxOccurs="1" name="Type" type="tns:ServiceErrorType"/>
    <xs:element minOccurs="1" maxOccurs="1" name="RecommendedActions"
      type="tns:ClientActions"/>
  </xs:sequence>
</xs:complexType>
```

Message: An **xs:string** [XMLSCHEMA2] section 3.2.1 element that specifies the error message description. The string length MUST be greater than zero if the **Type** element has a value of "ApplicationError". This element MUST be present.

Title: An **xs:string** [XMLSCHEMA2] section 3.2.1 element that specifies the error title. The string length MUST be greater than zero if the **Type** element has a value of "ApplicationError". This element MUST be present.

Type: A **ServiceErrorType** (section 2.2.5.7) element that specifies the error type. This element MUST be present.

RecommendedActions: Reserved and MUST be ignored.

2.2.4.12 ServiceResult

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

A complex type that specifies the result of a protocol method. The protocol server returns this type to the protocol client containing either a successful **Result** element or an **Error** element.

```
<xs:complexType name="ServiceResult" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="1" name="Result"/>
    <xs:element minOccurs="0" maxOccurs="1" name="Error" type="tns:ServiceError"/>
  </xs:sequence>
</xs:complexType>
```

Result: An optional **xs:anyType** [XMLSCHEMA1] section 3.4.7 element that specifies a successful result of a protocol message response. This element MUST NOT be present if the **Error** element is present.

Error: An optional **ServiceError** (section 2.2.4.11) element that specifies an error result of a protocol message response. This element MUST NOT be present if the **Result** element is present.

2.2.4.13 WordStateData

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

A complex type that specifies data about the state of a broadcast session of a Word document.

```
<xs:complexType name="WordStateData" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="1" maxOccurs="1" name="Page" type="xs:int"/>
    <xs:element minOccurs="1" maxOccurs="1" name="Offset" type="xs:double"/>
  </xs:sequence>
</xs:complexType>
```

Page: An **xs:int** [XMLSCHEMA2] section 3.3.17 element that specifies the one-based ordered index of the current page within the set of all pages of the document. This element MUST be present.

Offset: An **xs:double** [XMLSCHEMA2] section 3.2.5 element that specifies a percentage offset from the top of the page defined by the **Page** field. This element MUST be present.

2.2.5 Simple Types

The following table summarizes the set of common XML schema simple type definitions defined by this specification. XML schema simple type definitions that are specific to a particular operation are described with the operation.

Simple type	Description
AppType	A simple type that specifies an enumeration of all the possible types for a broadcast session.
BroadcastAppCapability	A simple type that specifies an enumeration of a set of capabilities returned by the protocol server to the protocol client.
BroadcastDataKey	A simple type that specifies an enumeration of a set of keys to data stored in the protocol server for a given broadcast session.
BroadcastState	A simple type that specifies an enumeration of all the possible broadcast session states.
ClientActions	A simple type that is reserved and MUST be ignored.
PPTMediaPlaybackState	A simple type that specifies an enumeration of the different states a multimedia object can be in.
PPTSlideShowState	A simple type that specifies an enumeration of all the possible slide show states.
ServiceErrorType	A simple type that specifies an enumeration of a set of protocol errors returned by the protocol server to the protocol client.

2.2.5.1 AppType

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

A simple type that specifies an enumeration of all the possible types for a broadcast session.

```
<xs:simpleType name="AppType" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:enumeration value="PPT"/>
    <xs:enumeration value="Word"/>
```

```

</xs:restriction>
</xs:simpleType>

```

The following table specifies the allowable values for **AppType**.

Value	Meaning
PPT	The broadcast session is of a PowerPoint presentation.
Word	The broadcast session is of a Word document.

2.2.5.2 BroadcastAppCapability

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

A simple type that specifies an enumeration of a set of capabilities returned by the protocol server to the protocol client.

```

<xs:simpleType name="BroadcastAppCapability" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:enumeration value="SessionTimeout"/>
    <xs:enumeration value="SessionIdleTimeOut"/>
    <xs:enumeration value="SupportVideo"/>
    <xs:enumeration value="SupportAudio"/>
    <xs:enumeration value="SupportNotes"/>
    <xs:enumeration value="MediaExtensions"/>
    <xs:enumeration value="MaxMediaSize"/>
  </xs:restriction>
</xs:simpleType>

```

The following table specifies the allowable values for **BroadcastAppCapability**.

Value	Meaning
SessionTimeout	This capability specifies the maximum duration in seconds for a broadcast session after which the session is ended.
SessionIdleTimeOut	This capability specifies the maximum duration in seconds after which a broadcast session is ended if there has been no presenter input.
SupportVideo	This capability specifies whether the protocol server supports video content in the broadcast session.
SupportAudio	This capability specifies whether the protocol server supports audio content in the broadcast session.
SupportNotes	This capability specifies whether the protocol server supports note-taking through OneNote in the broadcast session.
MediaExtensions	This capability specifies the supported file name extensions for multimedia content.
MaxMediaSize	This capability specifies the maximum size in bytes of an individual multimedia object that is rendered on the protocol server.

2.2.5.3 BroadcastDataKey

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

A simple type that specifies an enumeration of a set of keys to data stored in the protocol server for a given broadcast session.

```
<xs:simpleType name="BroadcastDataKey" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:enumeration value="AppType"/>
    <xs:enumeration value="SequenceNumber"/>
    <xs:enumeration value="FileVersion"/>
    <xs:enumeration value="OriginalFileName"/>
    <xs:enumeration value="BroadcastState"/>
    <xs:enumeration value="AppSpecificStateData"/>
    <xs:enumeration value="NotesUrl"/>
    <xs:enumeration value="DataVersion"/>
  </xs:restriction>
</xs:simpleType>
```

The following table specifies the allowable values for **BroadcastDataKey**.

Value	Meaning
AppType	This key is used to specify an application type in the key field of an ItemType (section 2.2.4.7).
SequenceNumber	This key is used to specify a monotonically increasing sequence number in the key field of an ItemType (section 2.2.4.7).
FileVersion	This key is used to specify a monotonically increasing file version number in the key field of an ItemType (section 2.2.4.7).
OriginalFileName	This key is used to specify the file name of the document in the key field of an ItemType (section 2.2.4.7).
BroadcastState	This key is used to specify the state of a broadcast session in the key field of an ItemType (section 2.2.4.7).
AppSpecificStateData	This key is used to specify application specific data in the key field of an ItemType (section 2.2.4.7).
NotesUrl	This key is used to specify the URL of the OneNote page linked to the document in the key field of an ItemType (section 2.2.4.7).
DataVersion	This key is used to specify a data version field in the key field of an ItemType (section 2.2.4.7).

2.2.5.4 ClientActions

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

A simple type that is reserved and MUST be ignored.

```
<xs:simpleType name="ClientActions" xmlns:xs="http://www.w3.org/2001/XMLSchema">
```

```

<xs:list>
  <xs:simpleType>
    <xs:restriction base="xs:string">
      <xs:enumeration value="None"/>
      <xs:enumeration value="Dismiss"/>
      <xs:enumeration value="Close"/>
      <xs:enumeration value="OpenInClient"/>
      <xs:enumeration value="Refresh"/>
    </xs:restriction>
  </xs:simpleType>
</xs:list>
</xs:simpleType>

```

The following table specifies the allowable values for **ClientActions**.

Value	Meaning
None	Reserved and MUST be ignored.
Dismiss	Reserved and MUST be ignored.
Close	Reserved and MUST be ignored.
OpenInClient	Reserved and MUST be ignored.
Refresh	Reserved and MUST be ignored.

2.2.5.5 PPTMediaPlaybackState

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

A simple type that specifies an enumeration of the different states a multimedia object can be in.

```

<xs:simpleType name="PPTMediaPlaybackState" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:enumeration value="Paused"/>
    <xs:enumeration value="Playing"/>
    <xs:enumeration value="Stopped"/>
  </xs:restriction>
</xs:simpleType>

```

The following table specifies the allowable values for **PPTMediaPlaybackState**.

Value	Meaning
Paused	The multimedia object is in a paused state.
Playing	The multimedia object is in a playing state.
Stopped	The multimedia object is in a stopped state.

2.2.5.6 PPTSlideShowState

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

A simple type that specifies an enumeration of all the possible slide show states.

```
<xs:simpleType name="PPTSlideShowState" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:enumeration value="BlackScreen"/>
    <xs:enumeration value="WhiteScreen"/>
    <xs:enumeration value="Normal"/>
    <xs:enumeration value="SlideShowEnded"/>
  </xs:restriction>
</xs:simpleType>
```

The following table specifies the allowable values for **PPTSlideShowState**.

Value	Meaning
BlackScreen	The slide show is displaying a black screen.
WhiteScreen	The slide show is displaying a white screen.
Normal	The slide show is displaying presentation slides.
SlideShowEnded	The slide show has ended.

2.2.5.7 ServiceErrorType

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

A simple type that specifies an enumeration of a set of protocol errors returned by the protocol server to the protocol client.

```
<xs:simpleType name="ServiceErrorType" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:enumeration value="UnknownError"/>
    <xs:enumeration value="ApplicationError"/>
    <xs:enumeration value="Timeout"/>
    <xs:enumeration value="ServiceBusy"/>
    <xs:enumeration value="SessionFull"/>
  </xs:restriction>
</xs:simpleType>
```

The following table specifies the allowable values for **ServiceErrorType**.

Value	Meaning
UnknownError	The protocol server encountered an unknown error.
ApplicationError	The protocol server encountered an application error.
Timeout	The protocol server encountered an application timeout.

Value	Meaning
ServiceBusy	The protocol server is busy.
SessionFull	The protocol server cannot allow more attendees to join a broadcast session.

2.2.5.8 BroadcastState

Namespace: <http://schemas.microsoft.com/server/broadcast/2010/main>

A simple type that specifies an enumeration of all the possible broadcast session states.

```
<xs:simpleType name="BroadcastState" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:enumeration value="BroadcastNotStartedYet"/>
    <xs:enumeration value="BroadcastStarted"/>
    <xs:enumeration value="BroadcastEnded"/>
  </xs:restriction>
</xs:simpleType>
```

The following table specifies the allowable values for **BroadcastState**.

Value	Meaning
BroadcastNotStartedYet	The broadcast session has not started yet.
BroadcastStarted	The broadcast session has started but not ended yet.
BroadcastEnded	The broadcast session has ended.

2.2.6 Attributes

This specification does not define any common XML schema attribute definitions.

2.2.7 Groups

This specification does not define any common XML schema group definitions.

2.2.8 Attribute Groups

This specification does not define any common XML schema attribute group definitions.

3 Protocol Details

In the following sections, the schema definition might differ from the processing rules imposed by the protocol. The WSDL in this specification matches the WSDL that shipped with the product and provides a base description of the schema. The text that introduces the WSDL might specify differences that reflect actual Microsoft product behavior. For example, the schema definition might allow for an element to be **empty**, **null**, or **not present** but the behavior of the protocol as specified restricts the same elements to being **non-empty**, **not null**, and **present**.

The client side of this protocol is simply a pass-through. That is, no additional timers or other state is required on the client side of this protocol. Calls that are made by the higher-layer protocol or application are passed directly to the transport, and the results that are returned by the transport are passed directly to the higher-layer protocol or application.

Except where specified, protocol clients SHOULD interpret Hypertext Transfer Protocol (HTTP) status codes that are returned by the protocol server as specified in [\[RFC2616\]](#), section 10.

This protocol allows protocol servers to notify protocol clients of application-level faults by using SOAP faults. Except where otherwise specified, these SOAP faults are not significant for interoperability and protocol clients can interpret them in an implementation-specific manner.

This protocol allows protocol servers to perform implementation-specific authorization checks and to notify protocol clients of authorization faults by using either HTTP status codes or SOAP faults, as specified previously in this section.

3.1 Server Details

The following high-level sequence diagram illustrates the operation of the presenter client protocol.

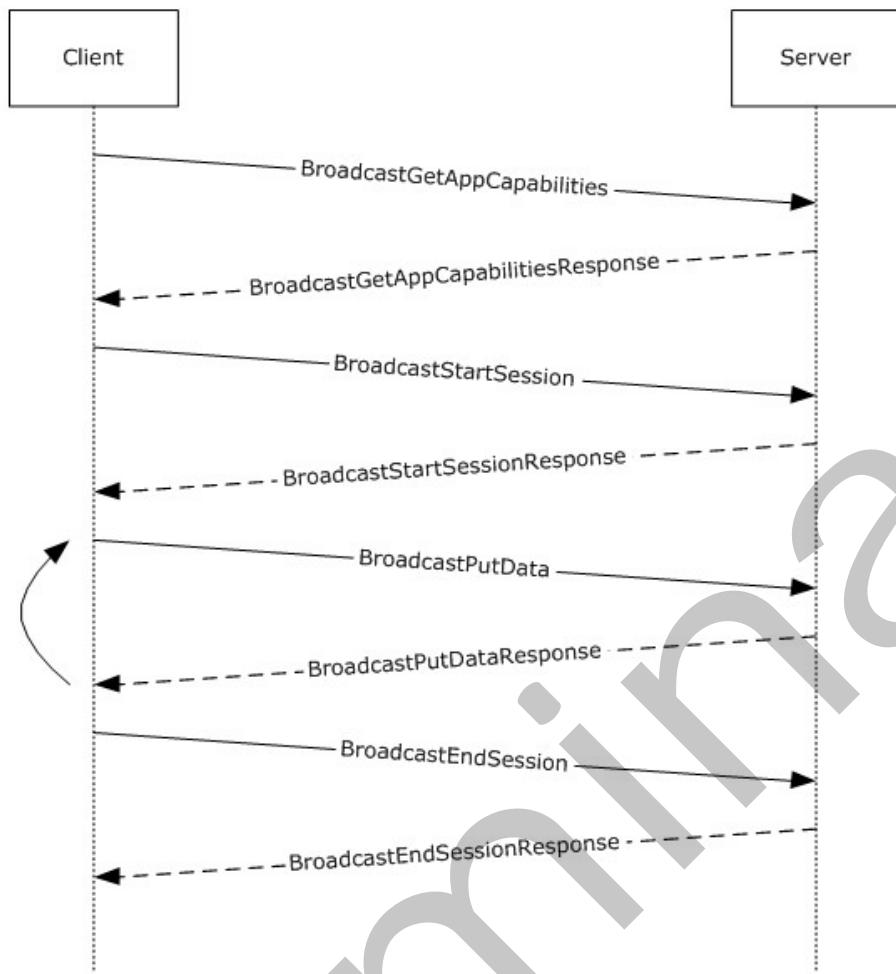

Figure 2: Office Broadcast Presentation Service high-level sequence diagram for presenter clients

First, a protocol client acting as broadcast presenter sends a **BroadcastGetAppCapabilities** (section 3.1.4.2) message. The server responds with a **BroadcastGetAppCapabilitiesResponse** message that contains the capabilities supported by the server. Next, the protocol client sends a **BroadcastStartSession** (section 3.1.4.4) message and the protocol server responds with a **BroadcastStartSessionResponse** message indicating the result of the operation. Next, the protocol client sends one or more **BroadcastPutData** (section 3.1.4.3) messages containing the current state of the broadcast, and the server sends a **BroadcastPutDataResponse** message to acknowledge the request. When the broadcast is finished, the protocol client then sends a **BroadcastEndSession** (section 3.1.4.1) message and the protocol server responds with a **BroadcastEndSessionResponse** message to acknowledge the request.

3.1.1 Abstract Data Model

This section describes a conceptual model of possible data organization that an implementation maintains to participate in this protocol. The described organization is provided to facilitate the explanation of how the protocol behaves. This document does not mandate that implementations

adhere to this model as long as their external behavior is consistent with that described in this document.

Note that the abstract interface notation '(Public)' indicates that the abstract data model element can be directly accessed from outside this protocol.

SessionId (Public): An entity that represents a unique identifier for a broadcast session.

BroadcastState (Public): An entity that represents the state of the broadcast session.

AppSpecificStateData (Public): An entity that represents state specific to the application for which this protocol is being used.

3.1.2 Timers

None.

3.1.3 Initialization

None.

3.1.4 Message Processing Events and Sequencing Rules

Section 3.1 specifies the sequencing of the protocol messages and how they relate to each other. The following sections specify the details of each individual message.

The following table summarizes the list of operations as defined by this specification:

Operation	Description
BroadcastEndSession	The BroadcastEndSession operation is used by the protocol client to end a broadcast session on the protocol server.
BroadcastGetAppCapabilities	The BroadcastGetAppCapabilities operation is used by the protocol client to retrieve session-independent settings from the protocol server.
BroadcastPutData	The BroadcastPutData operation is used by the protocol client to modify the current state of the broadcast session on the protocol server.
BroadcastStartSession	The BroadcastStartSession operation is used by the protocol client to begin a broadcast session on the protocol server.

3.1.4.1 BroadcastEndSession

The **BroadcastEndSession** operation is used by the protocol client to end a broadcast session on the protocol server.

```
<wsdl:operation name="BroadcastEndSession" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input message="tns:BroadcastEndSessionSoapIn"/>
  <wsdl:output message="tns:BroadcastEndSessionSoapOut"/>
</wsdl:operation>
```

The protocol client sends a **BroadcastEndSessionSoapIn** request message, as specified in section [3.1.4.1.1.1](#), and the protocol server MUST respond with a **BroadcastEndSessionSoapOut** response message, as specified in section [3.1.4.1.1.2](#).

3.1.4.1.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
BroadcastEndSessionSoapIn	The request WSDL message for the BroadcastEndSession WSDL operation.
BroadcastEndSessionSoapOut	The response WSDL message for the BroadcastEndSession WSDL operation.

3.1.4.1.1.1 BroadcastEndSessionSoapIn

The request WSDL message for the **BroadcastEndSession** WSDL operation.

The **SOAP action** value is:

`http://schemas.microsoft.com/server/broadcast/2010/main/BroadcastEndSession`

The **SOAP body** contains the **BroadcastEndSession** element.

3.1.4.1.1.2 BroadcastEndSessionSoapOut

The response WSDL message for the **BroadcastEndSession** WSDL operation.

The SOAP body contains the **BroadcastEndSessionResponse** element.

3.1.4.1.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
BroadcastEndSession	The input data for the BroadcastEndSession WSDL operation.
BroadcastEndSessionResponse	The result data for the BroadcastEndSession WSDL operation.

3.1.4.1.2.1 BroadcastEndSession

The input data for the **BroadcastEndSession** WSDL operation.

```
<xs:element name="BroadcastEndSession" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" maxOccurs="1" name="user" type="tns:BroadcastUser"/>
```

```
</xs:sequence>
</xs:complexType>
</xs:element>
```

user: A BroadcastUser (section [2.2.4.5](#)) element that is obtained through a BroadcastStartSession (section [3.1.4.4](#)) operation. This element MUST be present.

3.1.4.1.2.2 BroadcastEndSessionResponse

The result data for the **BroadcastEndSession** WSDL operation.

```
<xs:element name="BroadcastEndSessionResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" maxOccurs="1" name="BroadcastEndSessionResult"
        type="tns:ServiceResult"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

BroadcastEndSessionResult: A **ServiceResult** (section [2.2.4.12](#)) that specifies the result of the operation. This element MUST be present. If the **Result** child element is present it MUST be ignored by the protocol client.

3.1.4.1.3 Complex Types

None.

3.1.4.1.4 Simple Types

None.

3.1.4.1.5 Attributes

None.

3.1.4.1.6 Groups

None.

3.1.4.1.7 Attribute Groups

None.

3.1.4.2 BroadcastGetAppCapabilities

The **BroadcastGetAppCapabilities** operation is used by the protocol client to retrieve session-independent settings from the protocol server.

```
<wsdl:operation name="BroadcastGetAppCapabilities"
  xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input message="tns:BroadcastGetAppCapabilitiesSoapIn"/>
```

```
<wsdl:output message="tns:BroadcastGetAppCapabilitiesSoapOut"/>
</wsdl:operation>
```

The protocol client sends a **BroadcastGetAppCapabilitiesSoapIn** request message, as specified in section [3.1.4.2.1.1](#), and the protocol server MUST respond with a **BroadcastGetAppCapabilitiesSoapOut** response message, as specified in section [3.1.4.2.1.2](#).

3.1.4.2.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
BroadcastGetAppCapabilitiesSoapIn	The request WSDL message for the BroadcastGetAppCapabilities WSDL operation.
BroadcastGetAppCapabilitiesSoapOut	The response WSDL message for the BroadcastGetAppCapabilities WSDL operation.

3.1.4.2.1.1 BroadcastGetAppCapabilitiesSoapIn

The request WSDL message for the **BroadcastGetAppCapabilities** WSDL operation.

The SOAP action value is:

`http://schemas.microsoft.com/server/broadcast/2010/main/BroadcastGetAppCapabilities`

The SOAP body contains the **BroadcastGetAppCapabilities** element.

3.1.4.2.1.2 BroadcastGetAppCapabilitiesSoapOut

The response WSDL message for the **BroadcastGetAppCapabilities** WSDL operation.

The SOAP body contains the **BroadcastGetAppCapabilitiesResponse** element.

3.1.4.2.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
BroadcastGetAppCapabilities	The input data for the BroadcastGetAppCapabilities WSDL operation.
BroadcastGetAppCapabilitiesResponse	The result data for the BroadcastGetAppCapabilities WSDL operation.

3.1.4.2.2.1 BroadcastGetAppCapabilities

The input data for the **BroadcastGetAppCapabilities** WSDL operation.

```

<xss:element name="BroadcastGetAppCapabilities" xmlns:xss="http://www.w3.org/2001/XMLSchema">
  <xss:complexType/>
</xss:element>

```

3.1.4.2.2.2 BroadcastGetAppCapabilitiesResponse

The result data for the **BroadcastGetAppCapabilities** WSDL operation.

```

<xss:element name="BroadcastGetAppCapabilitiesResponse"
  xmlns:xss="http://www.w3.org/2001/XMLSchema">
  <xss:complexType>
    <xss:sequence>
      <xss:element minOccurs="0" maxOccurs="1" name="BroadcastGetAppCapabilitiesResult"
        type="tns:ServiceResult"/>
    </xss:sequence>
  </xss:complexType>
</xss:element>

```

BroadcastGetAppCapabilitiesResult: A **ServiceResult** (section [2.2.4.12](#)) that specifies the result of the operation. This element MUST be present. If successful, the **Result** field of the **ServiceResult** MUST be an **AppServerInfo** (section [2.2.4.1](#)) element. Otherwise the **Error** field of the **ServiceResult** MUST be present.

The **AppServerInfo** contains a **BroadcastDictionaryType** (section [2.2.4.4](#)), which contains a list of **ItemType** (section [2.2.4.7](#)) elements.

The **key** field in an **ItemType** element MUST be a **BroadcastAppCapability** (section [2.2.5.2](#)) element.

The **value** field of an **ItemType** element MUST be an **xss:string** [\[XMLSCHEMA2\]](#) section 3.2.1 element, as specified in the following table.

Key	Value
SessionTimeout	MUST be a non-negative integer
SessionIdleTimeOut	MUST be a non-negative integer
SupportVideo	MUST be "true" or "false"
SupportAudio	MUST be "true" or "false"
SupportNotes	MUST be "true" or "false"
MediaExtensions	MUST be a string containing a comma-separated list of file name extensions
MaxMediaSize	MUST be a non-negative integer

3.1.4.2.3 Complex Types

None.

3.1.4.2.4 Simple Types

None.

3.1.4.2.5 Attributes

None.

3.1.4.2.6 Groups

None.

3.1.4.2.7 Attribute Groups

None.

3.1.4.3 BroadcastPutData

The **BroadcastPutData** operation is used by the protocol client to modify the current state of the broadcast session on the protocol server.

```
<wsdl:operation name="BroadcastPutData" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input message="tns:BroadcastPutDataSoapIn"/>
  <wsdl:output message="tns:BroadcastPutDataSoapOut"/>
</wsdl:operation>
```

The protocol client sends a **BroadcastPutDataSoapIn** request message, and the protocol server MUST respond with a **BroadcastPutDataSoapOut** response message as follows:

3.1.4.3.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
BroadcastPutDataSoapIn	The request WSDL message for the BroadcastPutData WSDL operation.
BroadcastPutDataSoapOut	The response WSDL message for the BroadcastPutData WSDL operation.

3.1.4.3.1.1 BroadcastPutDataSoapIn

The request WSDL message for the **BroadcastPutData** WSDL operation.

The SOAP action value is:

<http://schemas.microsoft.com/server/broadcast/2010/main/BroadcastPutData>

The SOAP body contains the **BroadcastPutData** element.

3.1.4.3.1.2 BroadcastPutDataSoapOut

The response WSDL message for the **BroadcastPutData** WSDL operation.

The SOAP body contains the **BroadcastPutDataResponse** element.

3.1.4.3.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
BroadcastPutData	The input data for the BroadcastPutData WSDL operation.
BroadcastPutDataResponse	The result data for the BroadcastPutData WSDL operation.

3.1.4.3.2.1 BroadcastPutData

The input data for the **BroadcastPutData** WSDL operation.

```
<xs:element name="BroadcastPutData" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" maxOccurs="1" name="user" type="tns:BroadcastUser"/>
      <xs:element minOccurs="0" maxOccurs="1" name="data"
type="tns:BroadcastDictionaryType"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

user: A **BroadcastUser** (section [2.2.4.5](#)) element that is obtained by making a **BroadcastStartSession** (section [3.1.4.4](#)) web method call. This element MUST be present.

data: A **BroadcastDictionaryType** (section [2.2.4.4](#)) element that specifies the current broadcast session on the protocol client. This element MUST be present.

The **BroadcastDictionaryType** contains a list of **ItemType** (section [2.2.4.7](#)) elements. The **key** in each **ItemType** element MUST be a **BroadcastDataKey** (section [2.2.5.3](#)) value of type **xs:string** [XMLSCHEMA2] section 3.2.1.

The **value** field in an **ItemType** element MUST conform to the following table.

Key	Value
AppType	MUST be an AppType (section 2.2.5.1) element.
SequenceNumber	MUST be an xs:int [XMLSCHEMA2] section 3.3.17 element.
FileVersion	MUST be an xs:int [XMLSCHEMA2] section 3.3.17 element.
OriginalFileName	MUST be an xs:string [XMLSCHEMA2] section 3.2.1 element.
BroadcastState	MUST be a BroadcastState (section 2.2.5.8) element.

Key	Value
AppSpecificStateData	MUST be a JSON [RFC4627] serialization of a PPTStateData (section 2.2.4.10) element if the AppType is PPT or a JSON [RFC4627] serialization of a WordStateData (section 2.2.4.13) element if the AppType is Word .
NotesUrl	MUST be an xs:string [XMLSCHEMA2] section 3.2.1 element.
DataVersion	Unused - MUST be ignored.

3.1.4.3.2.2 BroadcastPutDataResponse

The result data for the **BroadcastPutData** WSDL operation.

```
<xs:element name="BroadcastPutDataResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" maxOccurs="1" name="BroadcastPutDataResult"
        type="tns:ServiceResult"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

BroadcastPutDataResult: A **ServiceResult** (section [2.2.4.12](#)) that specifies the result of the operation. This element MUST be present. If the **Result** child element is present it MUST be ignored by the protocol client.

3.1.4.3.3 Complex Types

None.

3.1.4.3.4 Simple Types

None.

3.1.4.3.5 Attributes

None.

3.1.4.3.6 Groups

None.

3.1.4.3.7 Attribute Groups

None.

3.1.4.4 BroadcastStartSession

The **BroadcastStartSession** operation is used by the protocol client to begin a broadcast session on the protocol server.

```

<wsdl:operation name="BroadcastStartSession" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input message="tns:BroadcastStartSessionSoapIn"/>
  <wsdl:output message="tns:BroadcastStartSessionSoapOut"/>
</wsdl:operation>

```

The protocol client sends a **BroadcastStartSessionSoapIn** request message, and the protocol server MUST respond with a **BroadcastStartSessionSoapOut** response message as follows:

3.1.4.4.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
BroadcastStartSessionSoapIn	The request WSDL message for the BroadcastStartSession WSDL operation.
BroadcastStartSessionSoapOut	The response WSDL message for the BroadcastStartSession WSDL operation.

3.1.4.4.1.1 BroadcastStartSessionSoapIn

The request WSDL message for the **BroadcastStartSession** WSDL operation.

The SOAP action value is:

<http://schemas.microsoft.com/server/broadcast/2010/main/BroadcastStartSession>

The SOAP body contains the **BroadcastStartSession** element.

3.1.4.4.1.2 BroadcastStartSessionSoapOut

The response WSDL message for the **BroadcastStartSession** WSDL operation.

The SOAP body contains the **BroadcastStartSessionResponse** element.

3.1.4.4.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
BroadcastStartSession	The input data for the BroadcastStartSession WSDL operation.
BroadcastStartSessionResponse	The result data for the BroadcastStartSession WSDL operation.

3.1.4.4.2.1 BroadcastStartSession

The input data for the **BroadcastStartSession** WSDL operation.

```

<xs:element name="BroadcastStartSession" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" maxOccurs="1" name="query" type="xs:string"/>
      <xs:element minOccurs="1" maxOccurs="1" name="appType" type="tns:AppType"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>

```

query: An **xs:string** [XMLSCHEMA2] section 3.2.1 element that specifies an identifier for the broadcast session. This identifier MUST conform to the pattern

WOPISrc=<**source**>&**access_token=**<**token**>, where <**source**> is the **WOPISrc** parameter as defined in [\[MS-WOPI\]](#) section 3.1.1.1.2.3.3, and <**token**> is the <**token**> parameter as defined in [\[MS-WOPI\]](#) section 2.2.2.

appType: An **AppType** (section [2.2.5.1](#)) element that specifies the type of the broadcast session.

3.1.4.4.2.2 BroadcastStartSessionResponse

The result data for the **BroadcastStartSession** WSDL operation.

```

<xs:element name="BroadcastStartSessionResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" maxOccurs="1" name="BroadcastStartSessionResult" type="tns:ServiceResult"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>

```

BroadcastStartSessionResult: A **ServiceResult** (section [2.2.4.12](#)) that specifies the result of the operation. This element MUST be present. The **Result** child element MUST be a **BroadcastUser** (section [2.2.4.5](#)) if the **Error** child element is not present.

3.1.4.4.3 Complex Types

None.

3.1.4.4.4 Simple Types

None.

3.1.4.4.5 Attributes

None.

3.1.4.4.6 Groups

None.

3.1.4.4.7 Attribute Groups

None.

3.1.5 Timer Events

None.

3.1.6 Other Local Events

None.

3.2 Client Details

None.

3.2.1 Abstract Data Model

None.

3.2.2 Timers

None.

3.2.3 Initialization

None.

3.2.4 Message Processing Events and Sequencing Rules

None.

3.2.5 Timer Events

None.

3.2.6 Other Local Events

None.

4 Protocol Examples

The following examples contain sample interactions between protocol clients and protocol servers.

4.1 Presenter Client Example

The presenter protocol client begins by sending a request to the protocol server to fetch the settings stored on the protocol server. The following **BroadcastGetAppCapabilitiesSoapIn** message is sent to the protocol server:

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"  
    xmlns:xsd="http://www.w3.org/2001/XMLSchema">  
    <soap:Body>  
        <BroadcastGetAppCapabilities xmlns="http://schemas.microsoft.com/server/broadcast/2010/main"  
        />  
    </soap:Body>  
</soap:Envelope>
```

The protocol server responds with a message to acknowledge the request and to provide the protocol client with the protocol server settings and their values. The following **BroadcastGetAppCapabilitiesSoapOut** message is sent to the presenter protocol client:

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"  
    xmlns:xsd="http://www.w3.org/2001/XMLSchema">  
    <soap:Body>  
        <BroadcastGetAppCapabilitiesResponse  
        xmlns="http://schemas.microsoft.com/server/broadcast/2010/main"><BroadcastGetAppCapabilitiesR  
esult>  
            <Result xsi:type="AppServerInfo">  
                <AppCapabilities>  
                    <item>  
                        <key>SessionTimeout</key>  
                        <value>43200</value>  
                    </item>  
                    <item>  
                        <key>SupportNotes</key>  
                        <value>true</value>  
                    </item>  
                    <item>  
                        <key>MediaExtensions</key>  
                        <value>3g2,3gp,3gpp,3gp2,aac,adts,asf,asx,flv,m4a,m4b,m4v,mov,mp3,mp4,mpa,swf,wax,wm,wma,wmv,  
wmx,wpl,wvx</value>  
                    </item>  
                    <item>  
                        <key>MaxMediaSize</key>  
                        <value>10485760</value>  
                    </item>  
                </AppCapabilities>  
            </Result>  
        </BroadcastGetAppCapabilitiesResult>  
        </BroadcastGetAppCapabilitiesResponse>  
    </soap:Body>
```

```
</soap:Envelope>
```

The presenter protocol client then sends a request to the protocol server to begin the broadcast. The following **BroadcastStartSessionSoapIn** message is sent to the protocol server:

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"  
    xmlns:xsd="http://www.w3.org/2001/XMLSchema">  
    <soap:Body>  
        <BroadcastStartSession xmlns="http://schemas.microsoft.com/server/broadcast/2010/main">  
            <query>WOPISrc=http://machinename/th/handler/wopi/files/anonymous~PPTTest.pptx&access_token=VAR</query>  
            <appType>PPT</appType>  
        </BroadcastStartSession>  
    </soap:Body>  
</soap:Envelope>
```

The protocol server responds with a message to acknowledge the request and to provide a user identifier and a session identifier to be used by the presenter protocol client for future requests. The following **BroadcastStartSessionSoapOut** message is sent to the presenter protocol client:

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"  
    xmlns:xsd="http://www.w3.org/2001/XMLSchema">  
    <soap:Body>  
        <BroadcastStartSessionResponse  
            xmlns="http://schemas.microsoft.com/server/broadcast/2010/main"><BroadcastStartSessionResult>  
            <Result xsi:type="BroadcastUser">  
                <SessionId>WOPISrc=http://machinename/th/handler/wopi/files/anonymous~PPTTest.pptx&access_token=VAR</SessionId>  
                <UserToken>e59840b8-d523-4477-b978-5369a237775a</UserToken>  
            </Result>  
        </BroadcastStartSessionResult>  
    </BroadcastStartSessionResponse>  
    </soap:Body>  
</soap:Envelope>
```

Next, the presenter protocol client sends information about the current state of the broadcast. The following **BroadcastPutDataSoapIn** message is sent to the protocol server:

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"  
    xmlns:xsd="http://www.w3.org/2001/XMLSchema">  
    <soap:Body>  
        <BroadcastPutData xmlns="http://schemas.microsoft.com/server/broadcast/2010/main">  
            <user>  
                <SessionId>WOPISrc=http://machinename/th/handler/wopi/files/anonymous~PPTTest.pptx&access_token=VAR</SessionId>  
                <UserToken>e59840b8-d523-4477-b978-5369a237775a</UserToken>  
            </user>  
            <data>  
                <item>  
                    <key>AppType</key>  
                    <value>PPT</value>
```

```

</item>
<item>
<key>BroadcastState</key>
<value>BroadcastStarted</value>
</item>
<item>
<key>SequenceNumber</key>
<value>5</value>
</item>
<item>
<key>FileVersion</key>
<value>1</value>
</item>
<item>
<key>OriginalFileName</key>
<value>file.pptx</value>
</item>
<item>
<key>NotesUrl</key>
<value>http://url</value>
</item>
<item>
<key>DataVersion</key>
<value/>
</item>
<item>
<key>AppSpecificStateData</key>
<value>{"SlideId":258,"SlideIndex":0,"AnimationStepDataList":[{"TimelineId":"timeline_1","Step":1},{"TimelineId":"timeline_2","Step":2}],"MediaStateDataList":[{"MediaId":"media_1","State":1},{"MediaId":"media_2","State":0}],"PPTSlideShowState":2}</value>
</item>
</data>
</BroadcastPutData>
</soap:Body>
</soap:Envelope>

```

The protocol server responds with a message to acknowledge the request. The following **BroadcastPutDataSoapOut** message is sent to the presenter protocol client:

```

<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:xsd="http://www.w3.org/2001/XMLSchema">
  <soap:Body>
    <BroadcastPutDataResponse
      xmlns="http://schemas.microsoft.com/server/broadcast/2010/main"><BroadcastPutDataResult>
    /</BroadcastPutDataResponse>
  </soap:Body>
</soap:Envelope>

```

The presenter protocol client continues to send these **BroadcastPutDataSoapIn** messages until the broadcast is finished. At this point, the presenter protocol client sends a request to the protocol server to end the broadcast. The following **BroadcastEndSessionSoapIn** message is sent to the protocol server:

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"  
    xmlns:xsd="http://www.w3.org/2001/XMLSchema">  
    <soap:Body>  
        <BroadcastEndSession xmlns="http://schemas.microsoft.com/server/broadcast/2010/main">  
            <user>  
                <SessionId>WOPISrc=http://machinename/th/handler/wopi/files/anonymous~PPTTest.pptx&access_token=VAR</SessionId>  
                <UserToken>e59840b8-d523-4477-b978-5369a237775a</UserToken>  
            </user>  
        </BroadcastEndSession>  
    </soap:Body>  
</soap:Envelope>
```

The protocol server responds with a message to acknowledge the request. The following **BroadcastEndSessionSoapOut** message is sent to the presenter protocol client:

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"  
    xmlns:xsd="http://www.w3.org/2001/XMLSchema">  
    <soap:Body>  
        <BroadcastEndSessionResponse xmlns="http://schemas.microsoft.com/server/broadcast/2010/main">  
            <BroadcastEndSessionResult />  
        </BroadcastEndSessionResponse>  
    </soap:Body>  
</soap:Envelope>
```

5 Security

5.1 Security Considerations for Implementers

None.

5.2 Index of Security Parameters

None.

6 Appendix A: Full WSDL

For ease of implementation, the full WSDL is provided in this appendix.

```
<?xml version="1.0"?>
<wsdl:definitions xmlns:tns="http://schemas.microsoft.com/server/broadcast/2010/main"
    xmlns:soap12="http://schemas.xmlsoap.org/wsdl/soap12/"

7 Appendix B: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include released service packs:

- Microsoft® PowerPoint® 15 Technical Preview
- Microsoft® PowerPoint® Web App
- Microsoft® Word 15 Technical Preview
- Microsoft® Word Web App

Exceptions, if any, are noted below. If a service pack or Quick Fix Engineering (QFE) number appears with the product version, behavior changed in that service pack or QFE. The new behavior also applies to subsequent service packs of the product unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms SHOULD or SHOULD NOT implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies that the product does not follow the prescription.

8 Change Tracking

No table of changes is available. The document is either new or has had no changes since its last release.
