1.3 Structure Overview (Synopsis)

The structures specified in this format provide an extended XML vocabulary for the DrawingML file format structure. The extended elements and attributes enable the format to indicate further information about a document, or content and formatting of parts of the document beyond the elements and attributes of the Office Open XML File Formats as described in [\[ISO/IEC29500:2011\]](#). Because these elements and attributes are meant as extensions, their intent and usage varies.

The extensions specified in this format are integrated into Office Open XML file formats by means of the Markup Compatibility and Extensibility features described in [\[ISO/IEC29500-3:2011\]](#). Specifically, the **Ignorable** attribute, the **AlternateContent** element, and application-defined extension elements maintain compatibility with Office Open XML File Formats implementations when integrating the extensions from this format. Using these extensions as specified in this document results in Office Open XML file formats conformance.

The following sections provide an overview of the functionality supported by these extensions.

1.3.1 Charts

1.3.2 Content Parts and Ink

Ink is stored in documents as an extension by using a part referenced by the relationship **id** attribute of a content part element. Some content part elements are described in [\[ISO/IEC29500-1:2011\]](#) section 17.3.3.2, 19.3.1.14, and 20.5.2.12. Other content part elements are themselves extensions ([2.2.2](#)). The content of the part contains XML that conforms to a subset of the syntax and semantics for the Ink Markup Language as described in [\[InkML\]](#), the W3C EMMA recommendation specification [\[EMMA\]](#), and other extended elements ([2.1.4](#)).

1.3.3 Pictures

Embedded raster images (bitmaps) can be edited and replaced by the processed results. Unless the document author disables storing image editing data, the original bitmap and the processing parameters applied are stored in the **imgProps** extension ([2.3.1.9](#)) to enable non-destructive editing of the bitmap. For backward compatibility and performance, applications do not display changes made to the image-editing data for the embedded bitmaps unless the user edits them with the application UI or through the Object Model.

Bitmap pictures are resampled and compressed when inserted and saved based on document DPI. Individual bitmaps can be set to override the default document compression setting by using the **useLocalDpi** extension ([2.3.1.13](#)).

A user can insert embedded html, including online videos, into Word by storing the embedded html and related data into the **webVideoPr** extension (section [2.19.1.1](#)).

1.3.4 Diagrams

The last successful layout for a diagram is stored in documents as an extension by using a Diagram Layout part. The part is referenced by the relationship **id** attribute of a **DataModelExt** extension to the Data Model. For more information, see [\[ISO/IEC29500-1:2011\]](#) section 21.4.2.10. The content of the part contains XML as defined by Diagram Layout (section [2.1.3](#)).

The **DataModelExt** contains a version URI that represents the minimum version required to run the layout. If an application version is insufficient to perform layout, the Diagram Layout can be used to display the diagram.

The **recolorImg** extension specifies recoloring images in the diagram according to the color style currently applied. This gives images a more integrated look.

The **cNvPr** extension adds non-visual drawing properties to points in the diagram. This enables adding **hyperlinks** and alternative text for use by assistive technologies or applications that do not display the diagram shapes.

1.3.5 Math

Math extensions represent mathematical expressions in DrawingML content. Mathematical equations in objects represented in DrawingML are stored in **AlternateContent** elements. These **AlternateContent** elements contain DrawingML and the math-specific element, **m**. The expression of mathematical content in DrawingML objects is similar to the representation of math in WordprocessingML ([\[ISO/IEC29500-1:2011\]](#) section 22.1) with the distinction that the math content

in DrawingML is modified by properties specified in the DrawingML namespace, rather than in WordprocessingML.

1.3.6 SpreadsheetML Drawing

ActiveX control objects, Embedded **OLE** and form **control** embedded objects in SpreadsheetML are each associated with a **shape** in DrawingML. The shape in DrawingML is a placeholder that specifies the position of the embedded object in the worksheet drawing tree that in turn specifies the embedded object z-order and grouping information in relation to other drawing objects.

Visible text and visible text-related properties of form control embedded objects are specified by the **txBody** element of the placeholder shape. For more information, see [\[ISO/IEC29500-1:2011\]](#) section 20.5.2.34.

An implementing application can replace this shape with any other placeholder shape when saving.

1.3.7 WordprocessingML Drawing

WordprocessingML drawing extensions integrate graphical objects into WordprocessingML documents. See [2.2.7](#) for a discussion of how these objects are integrated and how interoperability with clients that conform to the Office Open XML file formats, as described in [\[ISO/IEC29500:2011\]](#), is achieved.

The primary graphical objects introduced are the following:

- Shapes are represented by the **wsp** element of type **CT_WordprocessingShape** (section [2.14.3.3](#)).
- Groups of graphical objects are represented by the **wgp** element of type **CT_WordprocessingGroup** (section [2.17.3.2](#)).

Additionally, the picture type defined for WordprocessingML as described in [\[ISO/IEC29500-1:2011\]](#) section 20.2.2.5 has been extended to enable styling information to be applied.

Moreover, the picture non-visual picture properties represented by the element **cNvPicPr** of type **CT_NonVisualPictureProperties** (as specified in [\[ISO/IEC29500-1:2011\]](#) section 19.3.1.11) was extended to represent properties for a control or object using a [CT_ObjectPr](#) element defined as [objectPr](#).

1.3.8 Legacy Objects

The picture non-visual picture properties represented by the element **cNvPicPr** of type **CT_NonVisualPictureProperties** (as specified in [\[ISO/IEC29500-1:2011\]](#) section 19.3.1.11) was extended to represent properties for a legacy signature line object using a [CT_SignatureLine](#) element defined as [signatureLine](#).

1.4 Relationship to Protocols and Other Structures

The Office Drawing extensions to Office Open XML file formats as described in [\[ISO/IEC29500:2011\]](#) are a specified set of extensions to Office Open XML DrawingML, as described in [\[ISO/IEC29500-1:2011\]](#). This specification is dependent on the structures and concepts defined in the following references:

- [\[ISO/IEC29500-1:2011\]](#) for baseline DrawingML persistence format
- [\[ISO/IEC29500-2:2011\]](#) for open packaging conventions
- [\[ISO/IEC29500-3:2011\]](#) for markup compatibility and extensibility
- [\[ISO/IEC29500-4:2011\]](#) for backward-compatibility considerations
- [\[MS-DOCX\]](#) for WordprocessingML extensions
- [\[MS-XLSX\]](#) for SpreadsheetML extensions
- [\[MS-PPTX\]](#) for PresentationML extensions

1.5 Applicability Statement

This document specifies a persistence format for extensions, as described in [\[ISO/IEC29500-1:2011\]](#), to the Office Open XML file formats for DrawingML ([\[ISO/IEC29500:2011\]](#)) content in WordprocessingML, SpreadsheetML, and PresentationML ([\[ISO/IEC29500:2011\]](#)) documents. The extensions specified in this document enable expressing additional content and properties, and are not applicable as a stand-alone file format. Each structure specified in this document is integrated with the Office Open XML file formats as described in [\[ISO/IEC29500-1:2011\]](#) for DrawingML content as specified in the section for that structure. All structures are integrated into DrawingML content to maintain compatibility with implementations of the Office Open XML file formats as described in [\[ISO/IEC29500-1:2011\]](#).

The extensions specified in this document do not require any other extensions to be used and do not prohibit any other extensions from being used in the same document.

2.6.3.1 CT_CategoryFilterException

Target namespace: <http://schemas.microsoft.com/office/drawing/2012/chart>

Referenced by: [CT_CategoryFilterExceptions](#)

CT_CategoryFilterException is a complex type that contains information about special formatting properties associated with a single data point in a chart series ([\[ISO/IEC29500-1:2011\]](#) section 21.2). [<121>](#) This complex type is used to save special data point properties of points that are filtered out of the chart series ([\[ISO/IEC29500-1:2011\]](#) section 21.2). An entry of this type MUST contain exactly one **sqref** element followed by one or more child elements.

Child Elements:

sqref: A **string** element ([\[XMLSCHEMA2\]](#) section 3.2.1) that specifies the cell reference of the data corresponding to this data point in the chart series ([\[ISO/IEC29500-1:2011\]](#) section 21.2). This element is required. This reference MUST follow the ABNF grammar rules defined in the Formulas section ([\[MS-XLSX\]](#) section 2.2.2) with the following restrictions:

- MUST follow the single-sheet-reference rule.
- MUST NOT use the A1-area, A1-relative-column and A1-relative-row rules. MUST use ONLY A1-cell, A1-absolute-column and A1-absolute-row (since a data point in a series can correspond to only one cell, it should not use area references).

An application can adjust this **cell reference** when the **worksheet** layout changes, even when the containing **ext** element ([\[ISO/IEC29500-1:2011\]](#) section 18.2.7) is not recognized by the application.

spPr: A CT_ShapeProperties element ([\[ISO/IEC29500-1:2011\]](#) section A.4.1) that specifies the formatting (like fill or line properties) to be shown on this data point.

invertIfNegative: A CT_Boolean element (section [2.9.3.1](#)) that specifies if the invert color should be shown when this data point has a negative value.

bubble3D: A CT_Boolean element that specifies if this data point has a 3D bubble.

marker: A CT_Marker element ([\[ISO/IEC29500-1:2011\]](#) section A.5.1) that specifies the properties of the line marker associated with this data point.

dLbl: A CT_DLbl element ([\[ISO/IEC29500-1:2011\]](#) section A.5.1) that specifies the properties of the **Datalabel** (section [2.2.1.3](#)) associated with this data point.

The style definitions for this simple type are identical to the corresponding **ST_Style** style definitions ([\[ISO/IEC29500-1:2011\]](#) section 21.2.3.46), with the following exceptions:

- The number for each style in this simple type is 100 plus the corresponding style number in **ST_Style** ([\[ISO/IEC29500-1:2011\]](#) section 21.2.3.46).
- The **ST_Style** simple type ([\[ISO/IEC29500-1:2011\]](#) section 21.2.3.46) states, "If the chart does not have a font size set, then the default font size is 10." This is changed in this simple type to the following: If the chart does not have a font size set, the default font size for the chart is 10 points, and the default font size for the chart title is 18 points.
- The **ST_Style** simple type ([\[ISO/IEC29500-1:2011\]](#) section 21.2.3.46), table 2, column Axis & Major Gridlines has a value of "tx1" for styles 1 to 32. This is changed in this simple type to specify that styles 101 to 132 have a value of "75% tint of tx1".
- The **ST_Style** simple type ([\[ISO/IEC29500-1:2011\]](#) section 21.2.3.46), table 2, column Axis & Major Gridlines has a value of "dk1" for styles 33 to 48. This is changed in this simple type to specify that styles 133 to 148 have a value of "75% tint of dk1".

2.8.3.2 CT_ColorStyle

Target namespace: <http://schemas.microsoft.com/office/drawing/2012/chartStyle>

Referenced by: [colorStyle](#)

The complex type specifies colors used to resolve **CT_StyleColor** (section [2.8.3.6](#)) colors in a **CT_ChartStyle** (section [2.8.3.1](#)). <143> The color style consists of a list of colors, a list of variations and a method for iterating the total set of colors.

The total set of colors is all contained colors repeated each time with each variation applied. A color style can contain 6 colors and 7 variations. This yields a total of 42 colors with the first 6 having the first variation applied, the second 6 having the second variation applied and so on. If no variations are present, then the total color set is just the contained colors with no extra variations.

To retrieve a color given an index, a method is applied to map that index into the total set of colors.

2.11.3.2 CT_CtxNode

Target namespace: <http://schemas.microsoft.com/ink/2010/main>

Referenced by: [context](#)

The **CT_CtxNode** defines an Ink context node and its properties. A context node is a logical collection of Ink traces. When Ink is drawn by the user, the Ink traces are analyzed and organized into a hierarchy of context nodes. Each context node has a type (specified by the **type** attribute) and can have zero or more child content nodes. For example, a **writingRegion** content node can have one or more **paragraph** content nodes. In addition, context nodes can have relational links to each other. For example, if a word is underlined, the context node representing the ink word and the context node representing the underline are linked.

For example, the following figure shows ink that is analyzed as shown in the following code example.

The image shows the handwritten text "The quick" in a cursive style. The word "quick" is underlined with a single horizontal line.

Figure 30: Example ink text

3.3 Pictures

In the binary large image or picture (BLIP) element ([\[ISO/IEC29500-1:2011\]](#) section 20.1.8.13) is an extension list that enables applications to store the original image and processing parameters for corrections and artistic effects applied to a picture. The following code example shows the XML specifying that an artistic effect, sharpen and soften effect, color temperature effect, saturation effect, and brightness and contrast effect are applied to a picture.

The part specified by the relationship **rId2** of the **blip** element is embedded. (This does not apply to linked BLIPs.) This bitmap is the result of performing operations on the original image specified by the related part **rId3** in JPEG XR format. (This does not apply to metafile BLIPs.)

3.4 Diagrams

3.4.1 Diagram Layout

The **spTree** element is comprised of multiple pieces. The **nvGrpSpPr** element defines non-visual shape properties that are applied to the entire group. The **grpSpPr** element defines visual shape properties that are applied to the group. The individual shapes and their properties are defined in the **sp** element.

3.4.2 Image Recoloring

3.6 SpreadsheetML Drawing

3.6.1 Camera Tool

The following code example shows usage of an extended element to specify that a picture is a camera tool and is linked to a cell range. See [2.2.6.1](#) for more information. The following XML shows the contents of a camera tool object specified by a **pic** element ([ISO/IEC29500-1:2011](#) section 20.5.2.25).

The camera tool properties are specified by the **cameraTool** element as an extension of the **nvPicPr** element ([ISO/IEC29500-1:2011](#) section 20.5.2.22). The value of the **cellRange** attribute in the **cameraTool** element is in the A1 cell range reference style, not the R1C1 cell range reference style.

3.6.2 Legacy Object Wrapper

The following code example shows usage of an extended element to specify a legacy VML drawing object. See [2.2.6.2](#) for more information. The following XML shows the contents of a legacy object wrapper specified by an **sp** element ([ISO/IEC29500-1:2011](#) section 20.5.2.29).

6 Appendix B: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include released service packs:

- The 2007 Microsoft Office system
- Microsoft Office 2010 suites
- Microsoft Office 2013

Exceptions, if any, are noted below. If a service pack or Quick Fix Engineering (QFE) number appears with the product version, behavior changed in that service pack or QFE. The new behavior also applies to subsequent service packs of the product unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms SHOULD or SHOULD NOT implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies that the product does not follow the prescription.
