# 1 Introduction

This document specifies extensions to the DrawingML ([\[ISO/IEC29500:2012\]](#)) Office Open XML File Formats structure, which is used in WordprocessingML, SpreadsheetML, and PresentationML ([\[ISO/IEC29500:2012\]](#)) documents.

Sections 1.7 and 2 of this specification are normative and can contain the terms MAY, SHOULD, MUST, MUST NOT, and SHOULD NOT as defined in [\[RFC2119\]](#). All other sections and examples in this specification are informative.

## 1.1 Glossary

The following terms are specific to this document:

**ActiveX control:** A reusable software control, such as a check box or button, that uses ActiveX technology and provides options to users or runs macros or scripts that automate a task. See also ActiveX object.

**binary large image or picture (BLIP):** A binary data structure that stores information about a metafile image or bitmap picture.

**cell reference:** A set of coordinates that a cell occupies on a worksheet. For example, "B3" is the reference of a cell that appears at the intersection of column "B" and row "3".

**comment:** An annotation that is associated with a cell, text, or other object to provide context-specific information or reviewer feedback.

**control:** A graphical user interface object that users interact with when working with applications, forms, documents, webpages, and other types of files.

**drawing canvas:** See canvas and drawing space.

**globally unique identifier (GUID):** A term used interchangeably with universally unique identifier (UUID) in Microsoft protocol technical documents (TDs). Interchanging the usage of these terms does not imply or require a specific algorithm or mechanism to generate the value. Specifically, the use of this term does not imply or require that the algorithms specified in [\[RFC4122\]](#) or [\[C706\]](#) must be used for generating the **GUID**. See also universally unique identifier (UUID).

**group shape:** A shape that contains a group of shapes.

**hue-saturation-luminance (HSL):** A color model that defines a color by using three dimensions: hue, the color itself; saturation, the purity of the color; and luminance, the amount of light that is either reflected or absorbed by the color. See also color scheme and color space.

**hyperlink:** A relationship between two anchors, as described in [\[RFC1866\]](#).

**ink:** A process of entering text in handwritten form. Instead of converting handwritten text to typed text, ink is converted to an object and displayed exactly as it was written.

**Object Linking and Embedding (OLE):** A technology for transferring and sharing information between applications by inserting a file or part of a file into a compound document. The inserted file can be either embedded or linked. See also embedded object and linked object.

**red-green-blue (RGB):** A color model that describes color information in terms of the red (R), green (G), and blue (B) intensities in a color.

**shape:** A collection of qualifiers, such as names, and quantifiers, such as coordinates, that is used to represent a geometric object. A shape can be contained in a document, file structure, run-time structure, or other medium.

**style:** A set of formatting options that is applied to text, tables, charts, and other objects in a document.

**text box story:** An element that contains a set of text that is associated with one or more shapes.

**worksheet:** A single logical container for a set of tabular data and other objects in a workbook.

**XML:** The Extensible Markup Language, as described in [\[XML1.0\]](#).

**MAY, SHOULD, MUST, SHOULD NOT, MUST NOT:** These terms (in all caps) are used as defined in [\[RFC2119\]](#). All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

### 1.3 Structure Overview (Synopsis)

The structures specified in this format provide an extended XML vocabulary for the DrawingML file format structure. The extended elements and attributes enable the format to indicate further information about a document, or content and formatting of parts of the document beyond the elements and attributes of the Office Open XML File Formats as described in [\[ISO/IEC29500:2012\]](#). Because these elements and attributes are meant as extensions, their intent and usage varies.

The extensions specified in this format are integrated into Office Open XML file formats by means of the Markup Compatibility and Extensibility features described in [\[ISO/IEC29500-3:2012\]](#). Specifically, the **Ignorable** attribute, the **AlternateContent** element, and application-defined extension elements maintain compatibility with Office Open XML File Formats implementations when integrating the extensions from this format. Using these extensions as specified in this document results in Office Open XML file formats conformance.

The following sections provide an overview of the functionality supported by these extensions.

### 1.3.1 Charts

Chart extensions add a number of features to charts ([\[ISO/IEC29500-1:2012\]](#) section 21.2). Following are the new extensions:

- The **invertSolidFillFmt** extension for the **ser** element described in [\[ISO/IEC29500-1:2012\]](#) section 21.2.2.170 and the **ser** element described in [\[ISO/IEC29500-1:2012\]](#) section 21.2.2.174 specify the color of the negative data points of the chart series ([\[ISO/IEC29500-1:2012\]](#) section 21.2).
- The **pivotOptions** extension for the **chartspace** element ([\[ISO/IEC29500-1:2012\]](#) section 21.2.2.29) specifies which pivot controls appear on the chart ([\[ISO/IEC29500-1:2012\]](#) section 21.2).

### 1.3.2 Content Parts and Ink

Ink is stored in documents as an extension by using a part referenced by the relationship **id** attribute of a content part element. Some content part elements are described in [\[ISO/IEC29500-1:2012\]](#) section 17.3.3.2, 19.3.1.14, and 20.5.2.12. Other content part elements are themselves extensions ([2.2.2](#)). The content of the part contains XML that conforms to a subset of the syntax and semantics for the Ink Markup Language as described in [\[InkML\]](#), the W3C EMMA recommendation specification [\[EMMA\]](#), and other extended elements ([2.1.2](#)).

### 1.3.3 Pictures

Embedded raster images (bitmaps) can be edited and replaced by the processed results. Unless the document author disables storing image editing data, the original bitmap and the processing parameters applied are stored in the **imgProps** extension ([2.3.3](#)) to enable non-destructive editing of the bitmap. For backward compatibility and performance, applications do not display changes made to the image-editing data for the embedded bitmaps unless the user edits them with the application UI or through the Object Model.

Bitmap pictures are resampled and compressed when inserted and saved based on document DPI. Individual bitmaps can be set to override the default document compression setting by using the **useLocalDpi** extension ([2.3.4](#)).

A user can insert embedded html, including online videos, into Word by storing the embedded html and related data into the **webVideoPr** extension (section [2.19.1.1](#)).

### 1.3.4 Diagrams

The last successful layout for a diagram is stored in documents as an extension by using a Diagram Layout part. The part is referenced by the relationship **id** attribute of a **DataModelExt** extension to the Data Model. For more information, see [\[ISO/IEC29500-1:2012\]](#) section 21.4.2.10. The content of the part contains XML as defined by Diagram Layout (section [2.2.1](#)).

The **DataModelExt** contains a version URI that represents the minimum version required to run the layout. If an application version is insufficient to perform layout, the Diagram Layout can be used to display the diagram.

The **recolorImg** extension specifies recoloring images in the diagram according to the color style currently applied. This gives images a more integrated look.

The **cNvPr** extension adds non-visual drawing properties to points in the diagram. This enables adding **hyperlinks** and alternative text for use by assistive technologies or applications that do not display the diagram shapes.

### 1.3.5 Math

Math extensions represent mathematical expressions in DrawingML content. Mathematical equations in objects represented in DrawingML are stored in **AlternateContent** elements. These **AlternateContent** elements contain DrawingML and the math-specific element, **m**. The expression of mathematical content in DrawingML objects is similar to the representation of math in WordprocessingML ([\[ISO/IEC29500-1:2012\]](#) section 22.1) with the distinction that the math content in DrawingML is modified by properties specified in the DrawingML namespace, rather than in WordprocessingML.

### 1.3.6 SpreadsheetML Drawing

**ActiveX control** objects, Embedded **OLE** and form **control** embedded objects in SpreadsheetML are each associated with a **shape** in DrawingML. The shape in DrawingML is a placeholder that specifies the position of the embedded object in the worksheet drawing tree that in turn specifies the embedded object z-order and grouping information in relation to other drawing objects.

Visible text and visible text-related properties of form control embedded objects are specified by the **txBody** element of the placeholder shape. For more information, see [\[ISO/IEC29500-1:2012\]](#) section 20.5.2.34.

An implementing application can replace this shape with any other placeholder shape when saving.

### 1.3.7 WordprocessingML Drawing

WordprocessingML drawing extensions integrate graphical objects into WordprocessingML documents. See [2.2.7](#) for a discussion of how these objects are integrated and how interoperability with clients that conform to the Office Open XML file formats, as described in [\[ISO/IEC29500:2012\]](#), is achieved.

The primary graphical objects introduced are the following:

- Shapes are represented by the **wsp** element of type **CT\_WordprocessingShape** (section [2.5.76](#)).
- Groups of graphical objects are represented by the **wgp** element of type **CT\_WordprocessingGroup** (section [2.5.78](#)).
- Canvases are represented by the **wpc** element of type **CT\_WordprocessingCanvas** (section [2.5.79](#)).

- **Ink** objects are represented by the [contentPart](#) element of type **CT\_WordContentPart** (section [2.5.38](#)).

Groups and canvases are similar in structure, but have different behavior. Both groups and canvases can contain any graphical object as a **graphic** element as described in [\[ISO/IEC29500-1:2012\]](#) section 20.1.2.2.16 in addition to other shapes, pictures, groups, and ink.

Additionally, the picture type defined for WordprocessingML as described in [\[ISO/IEC29500-1:2012\]](#) section 20.2.2.5 has been extended to enable styling information to be applied.

Moreover, the picture non-visual picture properties represented by the element **cNvPicPr** of type **CT\_NonVisualPictureProperties** (as specified in [\[ISO/IEC29500-1:2012\]](#) section 19.3.1.11) was extended to represent properties for a control or object using a **CT\_ObjectPr** element defined as [objectPr](#).

### 1.3.8 Legacy Objects

The picture non visual picture properties represented by the element **cNvPicPr** of type **CT\_NonVisualPictureProperties** (as specified in [\[ISO/IEC29500-1:2012\]](#) section 19.3.1.11) was extended to represent properties for a legacy signature line object using a **CT\_SignatureLine** element defined as [signatureLine](#).

Additionally, the non-visual group drawing shape properties represented by the element **cNvGrpSpPr** of type **CT\_NonVisualGroupDrawingShapeProps** (as specified in [\[ISO/IEC29500-1:2012\]](#) section 19.3.1.10) was extended to specify if a group was originally a legacy group object using a **CT\_NonVisualGroupProps** element defined as [nonVisualGroupProps](#).

## 1.4 Relationship to Protocols and Other Structures

The Office Drawing extensions to Office Open XML file formats as described in [\[ISO/IEC29500:2012\]](#) are a specified set of extensions to Office Open XML DrawingML, as described in [\[ISO/IEC29500-1:2012\]](#). This specification is dependent on the structures and concepts defined in the following references:

- [\[ISO/IEC29500-1:2012\]](#) for baseline DrawingML persistence format
- [\[ISO/IEC29500-2:2012\]](#) for open packaging conventions
- [\[ISO/IEC29500-3:2012\]](#) for markup compatibility and extensibility
- [\[ISO/IEC29500-4:2012\]](#) for backward-compatibility considerations
- [\[MS-DOCX\]](#) for WordprocessingML extensions
- [\[MS-XLSX\]](#) for SpreadsheetML extensions
- [\[MS-PPTX\]](#) for PresentationML extensions

## 1.5 Applicability Statement

This document specifies a persistence format for extensions, as described in [\[ISO/IEC29500-1:2012\]](#), to the Office Open XML file formats for DrawingML ([\[ISO/IEC29500:2012\]](#)) content in WordprocessingML, SpreadsheetML, and PresentationML ([\[ISO/IEC29500:2012\]](#)) documents. The extensions specified in this document enable expressing additional content and properties, and are not applicable as a stand-alone file format. Each structure specified in this document is integrated with the Office Open XML file formats as described in [\[ISO/IEC29500-1:2012\]](#) for DrawingML content as specified in the section for that structure. All structures are integrated into DrawingML content to

maintain compatibility with implementations of the Office Open XML file formats as described in [\[ISO/IEC29500-1:2012\]](#).

The extensions specified in this document do not require any other extensions to be used and do not prohibit any other extensions from being used in the same document.

A **contentPart** element is specified in [\[ISO/IEC29500-1:2012\]](#) as an element in a WordprocessingML document ([\[ISO/IEC29500-1:2012\]](#) section 17.3.3.2), an element in a PresentationML slide ([\[ISO/IEC29500-1:2012\]](#) section 19.3.1.14), or an element in a SpreadsheetML drawing ([\[ISO/IEC29500-1:2012\]](#) section 20.5.2.12).

The following extensions define additional **contentPart** elements.

The DrawingML **grpSp** element ([\[ISO/IEC29500-1:2012\]](#) section 20.1.2.2.20) and **lockedCanvas** element ([\[ISO/IEC29500-1:2012\]](#) section 20.3.2.1) are extended by the addition of **AlternateContent** child elements ([\[ISO/IEC29500-3:2012\]](#) section 10.2.1), for which the structure is specified in the following table.

## 2.6.3 Complex Types

### 2.6.3.1 CT\_CategoryFilterException

Target namespace: <http://schemas.microsoft.com/office/drawing/2012/chart>

Referenced by: [CT\\_CategoryFilterExceptions](#)

**CT\_CategoryFilterException** is a complex type that contains information about special formatting properties associated with a single data point in a chart series ([\[ISO/IEC29500-1:2012\]](#) section 21.2). [<68>](#) This complex type is used to save special data point properties of points that are filtered out of the chart series ([\[ISO/IEC29500-1:2012\]](#) section 21.2). An entry of this type MUST contain exactly one **sqref** element followed by one or more child elements.

Child Elements:

**sqref:** A **string** element ([\[XMLSCHEMA2\]](#) section 3.2.1) that specifies the cell reference of the data corresponding to this data point in the chart series ([\[ISO/IEC29500-1:2012\]](#) section 21.2). This element is required. This reference MUST follow the ABNF grammar rules defined in the Formulas section ([\[MS-XLSX\]](#) section 2.2.2) with the following restrictions:

- MUST follow the single-sheet-reference rule.
- MUST NOT use the A1-area, A1-relative-column and A1-relative-row rules.
- MUST use ONLY A1-cell, A1-absolute-column, and A1-absolute-row (since a data point in a series can correspond to only one cell, it SHOULD NOT use area references).

An application can adjust this **cell reference** when the **worksheet** layout changes, even when the containing **ext** element ([\[ISO/IEC29500-1:2012\]](#) section 18.2.7) is not recognized by the application.

**spPr:** A CT\_ShapeProperties element ([\[ISO/IEC29500-1:2012\]](#) section A.4.1) that specifies the formatting (like fill or line properties) to be shown on this data point.

**explosion:** A CT\_UnsignedInt element ([\[ISO/IEC29500-1:2012\]](#) section A.5.1) that specifies the amount this data point shall be moved from the center of the pie in a pie chart series.

**invertIfNegative:** A CT\_Boolean element (section [2.5.80](#)) that specifies if the invert color is shown when this data point has a negative value.

**bubble3D:** A CT\_Boolean element that specifies if this data point has a 3D bubble.

**marker:** A CT\_Marker element ([\[ISO/IEC29500-1:2012\]](#) section A.5.1) that specifies the properties of the line marker associated with this data point.

**dLbl:** A CT\_DLbl element ([\[ISO/IEC29500-1:2012\]](#) section A.5.1) that specifies the properties of the **Datalabel** (section [2.2.1.3](#)) associated with this data point.

The following W3C XML Schema ([\[XMLSCHEMA1\]](#) section 2.1) fragment specifies the contents of this complex type.

### 2.8.3.2 CT\_ColorStyle

*Target namespace:* <http://schemas.microsoft.com/office/drawing/2012/chartStyle>

*Referenced by:* [colorStyle](#)

The complex type specifies colors used to resolve **CT\_StyleColor** (section [2.5.95](#)) colors in a **CT\_ChartStyle** (section [2.5.105](#)). [<90>](#) The color style consists of a list of colors, a list of variations and a method for iterating the total set of colors.

The total set of colors is all contained colors repeated each time with each variation applied. A color style can contain 6 colors and 7 variations. This yields a total of 42 colors with the first 6 having the first variation applied, the second 6 having the second variation applied and so on. If no variations are present, then the total color set is just the contained colors with no extra variations.

To retrieve a color given an index, a method is applied to map that index into the total set of colors.

### 3.3 Pictures

In the binary large image or picture (BLIP) element ( [ISO/IEC29500-1:2012](#) section 20.1.8.13) is an extension list that enables applications to store the original image and processing parameters for corrections and artistic effects applied to a picture. The following code example shows the XML specifying that an artistic effect, sharpen and soften effect, color temperature effect, saturation effect, and brightness and contrast effect are applied to a picture.

The part specified by the relationship **rId2** of the **blip** element is embedded. (This does not apply to linked BLIPs.) This bitmap is the result of performing operations on the original image specified by the related part **rId3** in JPEG XR format. (This does not apply to metafile BLIPs.)

### 3.4 Diagrams

#### 3.4.1 Diagram Layout

The **spTree** element is comprised of multiple pieces. The **nvGrpSpPr** element defines non-visual shape properties that are applied to the entire group. The **grpSpPr** element defines visual shape

properties that are applied to the group. The individual shapes and their properties are defined in the **sp** element.

```
<dsp:drawing xmlns:dsp="http://schemas.microsoft.com/office/drawing/2008/diagram"

### 3.4.2 Image Recoloring

The following code example demonstrates the structure of the data model for a **SmartArt** diagram. The **recolorImg** element is set to TRUE and causes the images associated with the **SmartArt** diagram to be recolored according to the assigned color scheme and theme.

```
<dgm:dataModel xmlns:dgm="http://schemas.openxmlformats.org/drawingml/2006/diagram"

## 3.5 Math

The following code example demonstrates the use of an **AlternateContent** element ([\[ISO/IEC29500-3:2012\]](#) section 10.2.1) to wrap an equation and the fallback image of that equation. The following XML shows the contents of a shape containing an equation that is the letter pi:

## 3.6 SpreadsheetML Drawing

### 3.6.1 Camera Tool

The following code example shows usage of an extended element to specify that a picture is a camera tool and is linked to a cell range. See [2.2.5.1](#) for more information. The following XML shows the contents of a camera tool object specified by a **pic** element ([\[ISO/IEC29500-1:2012\]](#) section 20.5.2.25).

```

</xdr:nvPicPr>
<xdr:blipFill>

</xdr:blipFill>
<xdr:spPr bwMode="auto">

The camera tool properties are specified by the **cameraTool** element as an extension of the **nvPicPr** element ([\[ISO/IEC29500-1:2012\]](#) section 20.5.2.22). The value of the **cellRange** attribute in the **cameraTool** element is in the A1 cell range reference style, not the R1C1 cell range reference style.

### 3.6.2 Legacy Object Wrapper

The following code example shows usage of an extended element to specify a legacy VML drawing object. See [2.2.5.2](#) for more information. The following XML shows the contents of a legacy object wrapper specified by an **sp** element ([\[ISO/IEC29500-1:2012\]](#) section 20.5.2.29).

```

<xdr:sp macro="" textlink="">

  </xdr:txBody>
</xdr:sp>

```

The linked legacy object is specified by the **compatExt** element as an extension of the **cNvPr** element ([\[ISO/IEC29500-1:2012\]](#) section 20.5.2.8).

Some important terms used in the change type descriptions are defined as follows:

- **Protocol syntax** refers to data elements (such as packets, structures, enumerations, and methods) as well as interfaces.
- **Protocol revision** refers to changes made to a protocol that affect the bits that are sent over the wire.

The changes made to this document are listed in the following table. For more information, please contact [dochelp@microsoft.com](mailto:dochelp@microsoft.com).
