[MS-OXCROPS]: Remote Operations (ROP) List and Encoding Protocol Specification

Intellectual Property Rights Notice for Protocol Documentation

Revision Summary			
Author	Date	Version	Comments
Microsoft Corporation	April 4, 2008	0.1	Initial Availability

Table of Contents

1 Introduction

This document specifies the details of each Remote Operation (ROP) that is used by the client to access and modify mailbox information on the server.

1.1 Glossary

The following terms are defined in [MS-OXGLOS]:

distinguished name (DN)
domain
folder
folder associated information (FAI)
folder ID
global identifier (GID)
identifier
little -endian
mailbox
message
message class
property
property ID
property name
property tag
public folder
Receive folder
remote operation (ROP)
special folder
store

The following terms are specific to this document:

Gateway Address Routing Table (GWART): A list of values specifying the address types supported by transport gateways.

Ghosted Folder: A folder whose contents are located on another server.

Lowest Cost Server: A server whose communication cost to access is the lowest in a list of servers.

ROP buffer: A buffer containing ROP requests or responses and a Server Object Handle Table.

ROP request: An array of bytes specifying an operation request of a client.

ROP response: An array of bytes specifying an operation response of a server.

Server Object: An object on a server that is used as input or created as output for remote operations.

Server Object Handle: A 32-bit value that identifies a Server Object.

Server Object Handle Table: An array of 32-bit handles that are used to identify input and output Server Objects for ROP requests and responses.

Server Object Map: An object that stores the connection between a Server Object Handle and the Server Object that it identifies.

MAY, SHOULD, MUST, SHOULD NOT, MUST NOT: These terms (in all caps) are used as described in [RFC2119].   All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

None.

1.3 Protocol Overview (Synopsis)

ROP buffers are used by the client to send operation requests to the server and by the server to send responses back to the client. These requests specify operations that access and modify mailbox data on a server, such as the following:

- Log on to mailboxes or public folders on a server
- Retrieve the list of folders and messages on a mailbox
- Move and copy messages or folders from one location to another
- Sort and filter views of messages or folders
- Submit new messages for delivery to other mailboxes or servers
- Retrieve a list of changes made to messages and folders
- Register for notifications when contents of a mailbox have changed

In a typical scenario, a client packages one or more **ROP requests** into a ROP buffer and makes a function call on the EMSMDB interface, as specified in [MS-OXCRPC], passing the buffer. The server then parses the ROP requests from the buffer. Each request is executed and a **ROP response** is added to the output ROP buffer. Once the server is done processing the input ROP buffer, the function call returns the responses to the client.

1.3.1 Server Objects

A **Server Object** refers to an object created during execution of specific ROPs. Once created, a Server Object can then be used as a parameter for other ROPs until it is released. A Server Object is typically a view of data on the server, such as a **folder** or a message object, but it could also be an object used to control synchronization or change notifications.

A Server Object is identified in a ROP buffer by a **Server Object Handle**, a 32-bit handle value. This handle is assigned by the server when the Server Object is created. A client uses a Server Object Handle to specify a Server Object to be used as input for a ROP request.

1.3.2   Format of ROP Buffers

A ROP buffer contains a list of ROP requests or responses followed by a **Server Object Handle Table**. Each request contains input values to use for an operation. Each response contains output produced during the execution of previous requests. The Server Object Handle Table contains Server Object Handles that are used as input or output for ROPs.

With few exceptions, a ROP request or response does not directly specify Server Object Handles, but instead contains an index into the Server Object Handle Table. When the index is used for an input parameter, it specifies the location of the Server Object Handle identifying the input Server Object. When the index is used for an output parameter, it specifies the entry in the Server Object Handle Table where the handle for the created Server Object will be stored if the operation is successful. If the operation is unsuccessful, the content of the entry in the Server Object Handle Table is undefined.

The usage of an index allows a client to create a ROP buffer consisting of ROP requests that reference as an input parameter a Server Object created earlier during processing of the buffer. In this way, fewer round-trip calls between the client and server are necessary.

1.4   Relationship to Other Protocols

The Remote Operations (ROP) List and Encoding protocol is dependent upon the Wire Format protocol, as specified in [MS-OXCRPC]. The ROP buffers are sent and received as parameters of the EcDoRpcExt2 functions on the EMSMDB interface. In addition, information provided during the EcDoConnectEx calls on the same interface is used later when executing ROP requests.

There are a number of protocols that are built on the Remote Operations (ROP) List and Encoding protocol. Some examples include the Bulk Data Transfer Protocol Specification [MS-OXCFXICS] and the Property and Stream Object Protocol Specification [MS-OXCPRPT].

There are several protocols which can be considered alternatives to the Remote Operations (ROP) List and Encoding protocol. These alternatives include IMAP4 and Distributed Authoring and Versioning (DAV). For details about IMAP4, see [MS-OXIMAP4]. For details about DAV, see [MS-XWDVSEC].

1.5   Prerequisites/Preconditions

This document assumes that a connection was already made using the EMSMDB interface, as specified in [MS-OXCRPC]. The connection process authenticates and exchanges version information between the server and client.

Successful communication between the client and server requires that the client is already configured with information about the mailbox and server. Several ROPs make use of a distinguished name (DN) as an input field to specify a mailbox or a server.

1.6 Applicability Statement

This protocol is used to view and modify mailbox and public folder data. It provides broad low-level access to the contents that are on the server.

1.7 Versioning and Capability Negotiation

None.

1.8 Vendor-Extensible Fields

None.

1.9 Standards Assignments

None.

2 Messages

Unless otherwise specified, buffers and fields in this section are depicted in little-endian byte order.

2.1 Transport

The ROP request and response buffers specified in the following sections are sent and received by using the **EcDoRpcExt2** RPC functions, as specified in [MS-OXCRPC].

2.2 Message Syntax

Each ROP request and response buffer consists of the following structure.

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopSize																Rops (variable)															
…								ServerObjectHandleTable (variable)																							
…																															

[MS-OXCROPS] - v0.1
Remote Operations (ROP) List and Encoding Protocol Specification
Copyright © 2008 Microsoft Corporation.
Release: Friday, April 4, 2008
RopSize (2 bytes): Unsigned 16-bit integer. This value specifies the size of this field and the **Rops** field.

Rops (variable): List of ROP buffers. The number of bytes in this field MUST be 2 bytes less than the value specified in the **RopSize** field. The formats of the ROP buffers are specified in subsequent sections.

ServerObjectHandleTable (variable): Array of 32-bit identifiers. The length of this field is the length of the remaining data in the buffer after the **Rops** field. These identifiers specify the Server Object Handles that are referenced in the **Rops** field.

2.2.1   The Table of RopIds

Each ROP request and response is identified by a RopId, which is a one-byte value. The list of ROPs used by the client is included in the following table. Any RopId marked "Reserved" MUST NOT be used by the client. The server SHOULD <1> return an error for the RPC call when it encounters a reserved RopId.

RopId	RopName	Section
0x00	Reserved	
0x01	RopRelease	2.2.14.3
0x02	RopOpenFolder	2.2.3.1
0x03	RopOpenMessage	2.2.5.1

2.2.2 Logon ROPs

2.2.2.1 RopLogon

This remote operation logs on to a mailbox or public folder. More detailed information about this operation can be found in [MS-OXCSTOR].

2.2.2.1.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								LogonId								OutputHandleIndex								LogonFlags							
OpenFlags																															
StoreState																															
LegacyDnSize																LegacyDn															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0xFE.

LogonId (1 byte): Unsigned 8-bit integer. This value specifies the ID that the client wants associated with the created logon.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the output Server Object will be stored. More information about Server Objects can be found in section 3.

LogonFlags (1 byte): 8-bit flags structure. The possible values for this structure are specified in [MS-OXCSTOR]. This structure contains flags that control the behavior of the logon.

OpenFlags (4 byte): 32-bit flags structure. The possible values for this structure are specified in [MS-OXCSTOR]. This structure contains more flags that control the behavior of the logon.

StoreState (4 bytes): 32-bit flags structure. The possible values for this structure are specified in [MS-OXCSTOR]. This structure specifies ongoing action on the mailbox or public folder.

LegacyDnSize (2 bytes): Unsigned 16-bit integer. This value specifies the size of the **LegacyDn** field.

LegacyDn (variable): Null terminated ASCII string. This string MUST contain the same number of characters (including the null) as specified in the **LegacyDnSize** field. This string specifies which mailbox to log on to.

2.2.2.1.2 Success Response Buffer for Private Mailboxes

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								OutputHandleIndex								ReturnValue

																								ResponseFlags							
MailboxGuid (16 bytes)																															
ReplId																ReplGuid (16 bytes)															
																								LogonTime							
…																															

…	GwartTime
…	
…	StoreState

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0xFE.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the output Server Object will be stored. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST be set to 0x00000000.

LogonFlags (1 byte): 8-bit flags structure. The possible values for this structure are specified in [MS-OXCSTOR]. This structure contains flags that specify the type of logon.

FolderIds (104 bytes): 13 64-bit identifiers. These IDs specify a set of special folders for a mailbox.

ResponseFlags (1 byte): 8-bit flags structure. The possible values for this structure are specified in [MS-OXCSTOR]. This structure contains flags that provide details about the state of the mailbox.

MailboxGuid (16 bytes): GUID. This GUID specifies the mailbox on which the logon was performed.

ReplId (2 bytes): REPLID structure. The format of REPLID is specified in [MS-OXCDATA]. This ID specifies a REPLID for the logon.

ReplGuid (16 bytes): REPLGUID structure. The format of REPLGUID is specified in [MS-OXCDATA]. This GUID specifies the REPLGUID associated with **ReplId**.

LogonTime (8 bytes): LogonTime structure. The format of this structure is specified in section 2.2.2.1.2.1. This structure specifies the time at which the logon occurred.

GwartTime (8 bytes): Unsigned 64-bit integer. This value represents the number of 100-nanosecond intervals since January 1, 1601. This time specifies when the Gateway Address Routing Table last changed.

StoreState (4 bytes): 32-bit flags structure. The possible values for this structure are specified in [MS-OXCSTOR]. This structure specifies ongoing action on the mailbox or public folder.

2.2.2.1.2.1 LogonTime Structure

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
Seconds								Minutes								Hour								DayOfWeek							
Day								Month								Year															

Seconds (1 byte): Unsigned 8-bit integer. This value specifies the current second.

Minutes (1 byte): Unsigned 8-bit integer. This value specifies the current minute.

Hour (1 byte): Unsigned 8-bit integer. This value specifies the current hour.

DayOfWeek (1 byte): 8-bit enumeration. This value specifies the current day of the week (Sunday = 0, Monday = 1, and so on).

Day (1 byte): Unsigned 8-bit integer. This value specifies the current day of the month.

Month (1 byte): Unsigned 8-bit integer. This value specifies the current month (January = 1, February = 2, and so on)

Year (2 bytes): Unsigned 16-bit integer. This value specifies the current year.

2.2.2.1.3 Success Response Buffer for Public Folders

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								OutputHandleIndex								ReturnValue															
...																LogonFlags								FolderIds (104 bytes)							
																								ReplId							

…	ReplGuid (16 bytes)

	PerUserGuid (16 bytes)

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0xFE.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the output Server Object will be stored. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST be set to 0x00000000.

LogonFlags (1 byte): 8-bit flags structure. The possible values for this structure are specified in [MS-OXCSTOR]. This structure contains flags that specify the type of logon.

FolderIds (104 bytes): 13 64-bit identifiers. These IDs specify a set of special folders for a mailbox.

ReplId (2 bytes): REPLID structure. The format of REPLID is specified in [MS-OXCDATA]. This ID specifies a REPLID for the logon.

Guid (16 bytes): REPLGUID structure. The format of REPLGUID is specified in [MS-OXCDATA]. This GUID specifies the REPLGUID associated with **ReplId**.

PerUserGuid (16 bytes): GUID. This value specifies the GUID that is associated with this user for looking up Per-User information.

2.2.2.1.4 Redirect Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								OutputHandleIndex								ReturnValue															
…																LogonFlags								ServerNameSize							
ServerName (variable)																															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0xFE.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the output Server Object will be stored. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST be set to 0x00000478.

LogonFlags (1 byte): 8-bit flags structure. The possible values for this structure are specified in [MS-OXCSTOR]. This structure contains flags that specify the type of logon.

ServerNameSize (1 byte): Unsigned 8-bit integer. This value specifies the length of the **ServerName** field.

ServerName (variable): Null terminated ASCII string. This string MUST contain the same number of characters (including the null) as specified in the **ServerNameSize** field. This string specifies a different server for the client to connect to.

2.2.2.1.5 Failure Response

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								OutputHandleIndex								ReturnValue															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0xFE.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the output Server Object will be stored. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST NOT be set to 0x00000000 or 0x00000478.

2.2.2.2 RopGetReceiveFolder

This remote operation gets the receive folder for incoming messages of a particular message class. More detailed information about this operation can be found in [MS-OXCSTOR].

2.2.2.2.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

…																								MessageClass (variable)							
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x26.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

FolderId (8 bytes): 64-bit identifier. This ID specifies the receiving folder.

MessageClass (variable): Null-terminated ASCII string. This string specifies which message class to set the receive folder for.

2.2.2.3.2 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								InputHandleIndex								ReturnValue																
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x26.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation.

2.2.2.4 RopGetReceiveFolderTable

This remote operation gets the table of all folders that were established as receive folders. More detailed information about this operation can be found in [MS-OXCSTOR].

2.2.2.4.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
		RopId								LogonId									InputHandleIndex												

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x68.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

2.2.2.4.2 Success Response Buffer

		RopId								InputHandleIndex						ReturnValue														
		…														RowCount														
			…													Rows (variable)														
		…																													

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x68.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST be set to 0x00000000.

RowCount (4 bytes): 32-bit integer. This specifies the number of RowData structures in the **RowDataArray**.

Rows (variable): List of **PropertyRow** structures. This array MUST contain the same number of structures as defined in **RowCount**. The format of the PropertyRow structure is specified in [MS-OXCDATA] and the columns used for these rows are PidTagFolderId, PidTagMessageClass, and PidTagLastModificationTime.

2.2.2.4.3 Failure Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								InputHandleIndex								ReturnValue															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x68.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST NOT be set to 0x00000000.

2.2.2.5 RopGetStoreState

This remote operation gets the current store state for the logged on user. More detailed information about this operation can be found in [MS-OXCSTOR].

2.2.2.5.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST be set to 0x00000000.

LongTermIdCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of identifiers in the **LongTermIds** field.

LongTermIds (variable): Array of LongTermId structures. The format of LongTermId is specified in [MS-OXCDATA]. This field MUST contain the same number of structures as specified in **LongTermIdCount**. These structures specify which folders the user has per-user information about.

2.2.2.10.3 Failure Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								InputHandleIndex								ReturnValue															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x60.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST NOT be set to 0x00000000.

2.2.2.11 RopGetPerUserGuid

This remote operation gets the GUID of a public folder's per-user information. More detailed information about this operation can be found in [MS-OXCSTOR].

2.2.2.11.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								LogonId								InputHandleIndex								LongTermId (24 bytes)							

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x61.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

LongTermId (24 bytes): LongTermId structure. The format of LongTermId is specified in [MS-OXCDATA]. This structure specifies the public folder.

2.2.2.11.2 Success Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								InputHandleIndex								ReturnValue															
…																DatabaseGuid (16 bytes)															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x61.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST be set to 0x00000000.

DatabaseGuid (16 bytes): GUID. This value specifies the database for which per-user information was obtained.

2.2.2.11.3 Failure Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								InputHandleIndex								ReturnValue															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x61.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST NOT be set to 0x00000000.

2.2.2.12 RopReadPerUserInformation

This remote operation gets per-user information for a public folder. More detailed information about this operation can be found in [MS-OXCSTOR].

2.2.2.12.1 Request Buffer

										1 0									2 0									3 0	
0	1	2	3	4	5	6	7	8	9	0	1	2	3	4	5	6	7	8	9	0	1	2	3	4	5	6	7	8	9	0	1

DataOffset																															
MaxDataSize																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x63.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

FolderId (24 bytes): 192-bit identifier. This ID specifies the folder to get per-user information for.

WantIfChanged (1 byte): 8-bit Boolean. This value specifies whether to return data if it hasn't changed.

DataOffset (4 bytes): Unsigned 32-bit integer. This value specifies the location in the per-user information stream to start reading.

MaxDataSize (2 bytes): Unsigned 16-bit integer. This value specifies the maximum number of bytes of per-user information to read.

2.2.2.12.2 Success Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x64.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

FolderId (24 bytes): 192-bit identifier. This ID specifies the folder to set per-user information for.

HasFinished (1 byte): 8-bit Boolean. This value specifies whether this operation specifies the end of the per-user information stream.

DataOffset (4 bytes): Unsigned 32-bit integer. This value specifies the location in the per-user information stream to start writing.

DataSize (2 bytes): Unsigned 16-bit integer. This value specifies the size of the **Data** field in bytes.

Data (variable): Array of bytes. This field MUST contain the same number of bytes as specified in **DataSize**. This array is the per-user data to write.

ReplicaGuid (16 bytes, optional): GUID. This field MUST be present when the **DataOffset** field is 0x00000000 and the logon associated with **LogonId** was created with the Private flag set (see [MS-OXCSTOR] for more information) and MUST NOT be present otherwise.

2.2.2.13.2 Response Buffer

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the output Server Object will be stored. More information about Server Objects can be found in section 3.

FolderType (1 byte): 8-bit enumeration. The possible values for this enumeration are specified in [MS-OXCFOLD]. This value specifies what type of folder to create.

UseUnicodeStrings (1 byte): 8-bit Boolean. This value specifies whether the **DisplayName** and **Comment** are specified in Unicode or not.

OpenExisting (1 byte): 8-bit Boolean. This value specifies whether this operation opens or fails when a folder already exists.

Reserved (1 byte): Reserved. The client MUST specify 0x00 for this field.

DisplayName (variable): Null-terminated string. If **UseUnicodeStrings** is non-zero, this field MUST be specified using Unicode characters. If **UseUnicodeStrings** is zero, this field MUST be specified using ASCII characters. This string specifies the name of the created folder.

Comment (variable): Null-terminated string. If **UseUnicodeStrings** is non-zero, this field MUST be specified using Unicode characters. If **UseUnicodeStrings** is zero, this field MUST be specified using ASCII characters. This string specifies the folder comment associated with the created folder.

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x30.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

RestrictionDataSize (2 bytes): Unsigned 16-bit integer. This value specifies the length of the **RestrictionData** field.

RestrictionData (variable): Restriction. This field MUST be **RestrictionDataSize** bytes long. The format of this field is specified in [MS-OXCDATA]. This value specifies the filter for this search folder.

FolderIdCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of IDs in the **FolderIds** field.

FolderIds (variable): Array of 64-bit identifiers. This field MUST contain **FolderIdCount** identifiers. These identifiers specify which folders are searched.

SearchFlags (4 bytes): 32-bit flags structure. This structure contains flags controlling the search for a search folder.

2.2.3.6.2 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								InputHandleIndex								ReturnValue															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x30.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation.

2.2.3.7 RopGetSearchCriteria

This remote operation gets the search criteria for a search folder. More detailed information about this operation can be found in [MS-OXCFOLD].

2.2.3.7.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								LogonId								InputHandleIndex								UseUnicode							
IncludeRestriction								IncludeFolders																							

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x31.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

UseUnicode (1 byte): 8-bit Boolean. This value specifies whether the client wants the restriction to include Unicode strings.

IncludeRestriction (1 byte): 8-bit Boolean. This value specifies whether the server includes the restriction information in the response.

IncludeFolders (1 byte): 8-bit Boolean. This value specifies whether the server includes the folders list in the response.

2.2.3.7.2 Success Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

									|1 0|1|2|3|4|5|6|7|8|9|2 0|1|2|3|4|5|6|7|8|9|3 0|1

| RopId | InputHandleIndex | ReturnValue | |
| ... | | TableStatus | |

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x12.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

SetColumnsFlags (1 byte): 8-bit flags structure. The possible values for this structure are specified in [MS-OXCTABL]. This structure contains flags controlling this operation.

PropertyTagCount (2 bytes): Unsigned 16-bit integer. This value specifies how many tags are present in **PropertyTags**.

PropertyTags (variable): Array of PropertyTag structures. This field MUST contain **PropertyTagCount** tags. The format of PropertyTag is specified in [MS-OXCDATA]. This field specifies the property values that are visible in table rows.

2.2.4.1.2 Success Response Buffer

0|1|2|3|4|5|6|7	8|9|1 0|1|2|3|4|5	6|7|8|9|2 0|1|2|3|4|5|6|7|8|9|3 0|1

| RopId | InputHandleIndex | ReturnValue |
| ... | TableStatus | |

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x12.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST be set to 0x00000000.

TableStatus (1 byte): 8-bit enumeration. The possible values for this enumeration are specified in [MS-OXCTABL]. This value specifies the status of the table.

2.2.4.1.3 Failure Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								InputHandleIndex								ReturnValue															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x12.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST NOT be set to 0x00000000.

2.2.4.2 RopSortTable

This remote operation defines the order of rows of a table based on sort criteria. More detailed information about this operation can be found in [MS-OXCTABL].

2.2.4.2.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x13.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

SortTableFlags (1 byte): 8-bit flags structure. The possible values for this structure are specified in [MS-OXCTABL]. This structure contains flags controlling this operation.

SortOrderCount (2 bytes): Unsigned 16-bit integer. This value specifies how many SortOrder structures are present in **SortOrders**.

CategoryCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of category SortOrder structures in **SortOrders**.

ExpandedCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of expanded categories in **SortOrders**.

SortOrders (variable): Array of SortOrder structures. This field MUST contain **SortOrderCount** tags. The format of SortOrder is specified in [MS-OXCDATA]. This field specifies the sort order for the rows in the table.

2.2.4.2.2 Success Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

RestrictionDataSize																RestrictionData															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x14.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

RestrictFlags (1 byte): 8-bit flags structure. The possible values for this structure are specified in [MS-OXCTABL]. This structure contains flags controlling this operation.

RestrictionDataSize (2 bytes): Unsigned 16-bit integer. This value specifies the length of the **RestrictionData** field.

RestrictionData (variable): Restriction. This field MUST be **RestrictionDataSize** bytes long. The format of this field is specified in [MS-OXCDATA]. This value specifies the filter for this table.

2.2.4.3.2 Success Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the output Server Object will be stored. More information about Server Objects can be found in section 3.

CodePageId (2 bytes): 16-bit identifier. This value specifies which code page will be used for string values associated with the message.

FolderId (8 bytes): 64-bit identifier. This ID specifies the parent folder of the message to be opened.

OpenModeFlags (1 byte): 8-bit flags structure. The possible values for this structure are specified in [MS-OXCMSG]. These flags control the access to the message.

MessageId (8 bytes): 64-bit identifier. This ID specifies the message to be opened.

2.2.5.1.2 Success Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								OutputHandleIndex								ReturnValue															
…																HasNamedProperties									SubjectPrefix (variable)					
…								NormalizedSubject (variable)																							
…								RecipientCount																ColumnCount							
…								RecipientColumns (variable)																							
…								RowCount								RecipientRows (variable)															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x03.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **OutputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST be set to 0x00000000.

HasNamedProperties (1 byte): 8-bit Boolean. This value specifies whether the message has named properties.

SubjectPrefix (variable): TypedString structure. The format of the TypedString structure is specified in [MS-OXCDATA]. This value specifies the subject prefix of the message.

NormalizedSubject (variable): TypedString structure. The format of the TypedString structure is specified in [MS-OXCDATA]. This value specifies the normalized subject of the message.

RecipientCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of recipients on the message.

ColumnCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of structures in the **RecipientColumns** field.

RecipientColumns (variable): Array of PropertyTag structures. This field MUST contain **ColumnCount** tags. The format of PropertyTag is specified in [MS-OXCDATA]. This field specifies the property values that can be included in each RecipientRow.

RowCount (1 bytes): Unsigned 8-bit integer. This value specifies the number of rows in the **RecipientRows** field.

RecipientRows (variable): List of OpenRecipientRow structures. This array MUST contain the same number of structures as specified in the **RowCount** field. The format of OpenRecipientRow is defined in section 2.2.5.1.2.1:

2.2.5.1.2.1   OpenRecipientRow structure

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RecipientType								CodePageId																Reserved							
…								RecipientRowSize																RecipientRow (variable)							
…																															

RecipientType (1 byte): 8-bit enumeration. The possible values for this enumeration are specified in [MS-OXCMSG]. This enumeration specifies the type of recipient.

CodePageId (2 bytes): 16-bit enumeration. This value specifies the code page for the recipient.

Reserved (2 bytes): Reserved. The server MUST specify 0x0000 for this value.

RecipientRowSize (2 bytes): Unsigned 16-bit integer. This value specifies the size of the **RecipientRow** field.

RecipientRow (variable): RecipientRow structure. The format of this structure is specified in [MS-OXCDATA]. The size of this field MUST be the same number of bytes as specified in the **RecipientRowSize** field.

2.2.5.1.3 Failure Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								OutputHandleIndex								ReturnValue																
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x03.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **OutputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST NOT be set to 0x00000000.

2.2.5.2 RopCreateMessage
This remote operation creates a message object in a mailbox. More detailed information about this operation can be found in [MS-OXCMSG].

2.2.5.2.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								LogonId								InputHandleIndex								OutputHandleIndex							
CodePageId																FolderId															
…																															
…																AssociatedFlag															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x06.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the output Server Object will be stored. More information about Server Objects can be found in section 3.

CodePageId (2 bytes): Unsigned 16-bit integer. This ID specifies the code page for the message.

FolderId (8 bytes): 64-bit identifier. This ID specifies the parent folder.

AssociatedFlag (1 byte): 8-bit Boolean. This value specifies whether the message is a Folder Associated Information message.

2.2.5.2.2 Success Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x06.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **OutputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST NOT be set to 0x00000000.

2.2.5.3 RopSaveChangesMessage

This remote operation commits the changes made to a message. More detailed information about this operation can be found in [MS-OXCMSG].

2.2.5.3.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								LogonId								ResponseHandleIndex								InputHandleIndex							
SaveFlags																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x0C.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

ResponseHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table that is referenced in the response. More information about Server Objects can be found in section 3.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

SaveFlags (1 byte): 8-bit flags structure. The possible values for this flags structure are specified in [MS-OXCMSG]. These flags specify how the save operation behaves.

2.2.5.3.2 Success Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x0D.

108 of 233

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

Reserved (4 bytes): Reserved. The client MUST specify this value as 0x00000000.

2.2.5.4.2 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								InputHandleIndex								ReturnValue															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x0D.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation.

2.2.5.5 RopModifyRecipients

This remote operation adds or modifies recipients on a message. More detailed information about this operation can be found in [MS-OXCMSG].

2.2.5.5.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								LogonId								InputHandleIndex								ColumnCount							
…								RecipientColumns (variable)																							
…								RowCount																RecipientRows (variable, optional)							

…	

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x0E.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

ColumnCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of structures in the **RecipientColumns** field.

RecipientColumns (variable): Array of PropertyTag structures. This field MUST contain **ColumnCount** tags. The format of PropertyTag is specified in [MS-OXCDATA]. This field specifies the property values that can be included for each RecipientRow.

RowCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of rows in the **RecipientRows** field.

RecipientRows (variable): List of **ModifyRecipientRow** structures. This array MUST contain the same number of structures as specified in the **RowCount** field. The format of **ModifyRecipientRow** is defined in section 2.2.5.5.1.1:

2.2.5.5.1.1   ModifyRecipientRow

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RowId																															
RecipientType								RecipientRowSize																RecipientRow (variable, optional)							
…																															

RowId (4 bytes): Unsigned 32-bit integer. This value specifies the ID of the recipient row.

RecipientType (1 byte): 8-bit enumeration. The possible values for this enumeration are specified in [MS-OXCMSG]. This enumeration specifies the type of recipient.

RecipientRowSize (2 bytes): Unsigned 16-bit integer. This value specifies the size of the **RecipientRow** field.

RecipientRow (variable, optional): RecipientRow structure. This field MUST be present when the RecipientRowSize field is non-zero and MUST NOT be present otherwise. The format of this structure is specified in [MS-OXCDATA]. The size of this field MUST be the same number of bytes as specified in the **RecipientRowSize** field.

2.2.5.5.2 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								InputHandleIndex								ReturnValue															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x0E.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation.

2.2.5.6 RopReadRecipients

This remote operation gets recipient details from a message. More detailed information about this operation can be found in [MS-OXCMSG].

2.2.5.6.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

MessageId (8 bytes): Unsigned 64-bit integer. This ID specifies the message for which the status will be returned.

2.2.5.9.2 Success Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								InputHandleIndex								ReturnValue															

…	MessageStatusFlags

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x20. **Note:** The **RopId** of the response for this ROP response buffer does not match the **RopId** of the ROP request buffer.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index refers to the handle in the Server Object Handle Table used as input for this operation. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation.

MessageStatusFlags (4 bytes): 32-bit flags structure. This structure contains status flags set on the message. The possible values for this structure are specified in [MS-OXCMSG].

2.2.5.9.3 Failure Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								InputHandleIndex								ReturnValue															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x20. **Note:** The **RopId** of the response for this ROP response buffer does not match the **RopId** of the ROP request buffer.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST NOT be set to 0x00000000.

2.2.5.10 RopSetReadFlags

This remote operation sets the read flag for messages in a folder. More detailed information about this operation can be found in [MS-OXCMSG].

2.2.5.10.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								LogonId								InputHandleIndex								WantAsynchronous							
ReadFlags								MessageIdCount																MessageIds (variable)							
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x66.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

WantAsynchronous (1 byte): 8-bit Boolean. This value specifies whether the operation is to be executed asynchronously with status reported via RopProgress.

ReadFlags (1 byte): 8-bit flags structure. The possible values for this flags structure are specified in [MS-OXCMSG]. These flags specify the flags to set.

MessageIdCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of identifiers in the **MessageIds** field.

MessageIds (variable): Array of 64-bit identifiers. This field MUST contain the same number of identifiers as specified in the **MessageIdCount** field. These IDs specify the messages that are to have their read flags changed.

2.2.5.10.2 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								InputHandleIndex								ReturnValue															
…																PartialCompletion															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x66.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation.

PartialCompletion (1 byte): 8-bit Boolean. This value indicates whether the operation was only partially completed.

2.2.5.11 RopSetMessageReadFlag

This remote operation sets or clears the message read flag. More detailed information about this operation can be found in [MS-OXCMSG].

2.2.5.11.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								LogonId								ResponseHandleIndex								InputHandleIndex							
ReadFlags (optional)								ClientData (24 bytes, optional)																							

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x11.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

ResponseHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table that is referenced in the response. More information about Server Objects can be found in section 3.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

ReadFlags (1 byte, optional): 8-bit flags structure. This field MUST be present when the logon associated with **LogonId** was created with the Private flag unset (see [MS-OXCSTOR]

for more information) and MUST NOT be present otherwise. The possible values for this flags structure are specified in [MS-OXCMSG].

ClientData (24 bytes, optional): Array of 24 bytes. This field MUST be present when the logon associated with **LogonId** was created with the Private flag unset (see [MS-OXCSTOR] for more information) and MUST NOT be present otherwise. This value specifies the information that is returned to the client in a successful response.

2.2.5.11.2 Success Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								ResponseHandleIndex								ReturnValue															
…																ReadStatusChanged								LogonId (optional)						
ClientData (24 bytes, optional)																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x11.

ResponseHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **ResponseHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST be set to 0x00000000.

ReadStatusChanged (1 byte): 8-bit Boolean. This value specifies whether the read status of a public folder's message has changed.

LogonId (1 byte, optional): Unsigned 8-bit integeter. This field MUST be present when the value in the **ReadStatusChanged** field is non-zero and MUST NOT be present otherwise. This value MUST be set to the **LogonId** specified in the request.

ClientData (24 bytes, optional): Array of 24 bytes. This field MUST be present when the value in the **ReadStatusChanged** field is non-zero and MUST NOT be present otherwise. This value MUST be set to the **ClientData** field in the request.

2.2.5.11.3 Failure Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

OpenAttachmentFlags								AttachmentId																							
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x22.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the output Server Object will be stored. More information about Server Objects can be found in section 3.

OpenAttachmentFlags (1 byte): 8-bit flags structure. This structure contains flags for opening attachments. The possible values for this structure are specified in [MS-OXCMSG].

AttachmentID (4 bytes): Unsigned 32-bit integer. This ID specifies which attachment is to be opened.

2.2.5.12.2 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								OutputHandleIndex								ReturnValue															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x22.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **OutputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation.

2.2.5.13 RopCreateAttachment

This remote operation creates a new attachment on a message. More detailed information about this operation can be found in [MS-OXCMSG].

2.2.5.13.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								LogonId								InputHandleIndex								OutputHandleIndex							

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x23.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the output Server Object will be stored. More information about Server Objects can be found in section 3.

2.2.5.13.2 Success Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
		RopId								OutputHandleIndex										ReturnValue											
				…																AttachmentId											
				…																											

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x23.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **OutputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST be set to 0x00000000.

AttachmentID (4 bytes): Unsigned 32-bit integer. This ID refers to the attachment created.

2.2.5.13.3 Failure Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
		RopId								OutputHandleIndex										ReturnValue											
				…																											

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x23.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **OutputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST NOT be set to 0x00000000.

2.2.5.14 RopDeleteAttachment

This remote operation deletes an attachment on a message. More detailed information about this operation can be found in [MS-OXCMSG].

2.2.5.14.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								LogonId								InputHandleIndex								AttachmentId							
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x24.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

AttachmentId (4 bytes): Unsigned 32-bit integer. This ID specifies the attachment to be deleted.

2.2.5.14.2 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								InputHandleIndex								ReturnValue															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x24.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation.

2.2.5.15 RopSaveChangesAttachment

This remote operation commits the changes made to an attachment. More detailed information about this operation can be found in [MS-OXCMSG].

2.2.5.15.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								LogonId								ResponseHandleIndex								InputHandleIndex							
SaveFlags																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x25.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

ResponseHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table that is referenced in the response. More information about Server Objects can be found in section 3.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

SaveFlags (1 byte): 8-bit flags structure. The possible values for this flags structure are specified in [MS-OXCMSG]. These flags specify how the save operation behaves.

2.2.5.15.2 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

…																																

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x25.

ResponseHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **ResponseHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation.

2.2.5.16 RopOpenEmbeddedMessage

This remote operation opens an attachment as a message. More detailed information about this operation can be found in [MS-OXCMSG].

2.2.5.16.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								LogonId								InputHandleIndex								OutputHandleIndex							
CodePageId																OpenModeFlags															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x46.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the output Server Object will be stored. More information about Server Objects can be found in section 3.

CodePageId (2 bytes): 16-bit identifier. This value specifies which code page is used for string values associated with the message.

OpenModeFlags (1 byte): 8-bit flags structure. The possible values for this structure are specified in [MS-OXCMSG]. These flags control the access to the message.

2.2.5.16.2 Success Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x46.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **OutputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST be set to 0x00000000.

Reserved (1 byte): Reserved. This value MUST be set to 0x00

MessageId (8 bytes): 64-bit identifier. This value specifies the ID of the embedded message.

HasNamedProperties (1 byte): 8-bit Boolean. This value specifies whether the message has named properties.

SubjectPrefix (variable): TypedString structure. The format of the TypedString structure is specified in [MS-OXCDATA]. This value specifies the subject prefix of the message.

NormalizedSubject (variable): TypedString structure. The format of the TypedString structure is specified in [MS-OXCDATA]. This value specifies the normalized subject of the message.

RecipientCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of recipients on the message.

ColumnCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of structures in the **RecipientColumns** field.

RecipientColumns (variable): Array of PropertyTag structures. This field MUST contain **ColumnCount** tags. The format of PropertyTag is specified in [MS-OXCDATA]. This field specifies the property values that can be included for each RecipientRow.

RowCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of rows in the **RecipientRows** field.

RecipientRows (variable): List of OpenRecipientRow structures. This array MUST contain the same number of structures as specified in the **RowCount** field. The format of OpenRecipientRow is defined in section 2.2.5.1.2.1.

2.2.5.16.3 Failure Response Buffer

…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x49.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST NOT be set to 0x00000000.

2.2.7   Property ROPs

2.2.7.1   RopGetPropertyIdsFromNames

This remote operation gets property IDs for specified property names. More detailed information about this operation can be found in [MS-OXCPRPT].

2.2.7.1.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								LogonId								InputHandleIndex								Flags							
PropertyNameCount																PropertyNames (variable)															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x56.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

Flags (1 byte): 8-bit flags structure. This structure contains flags for controlling the behavior of this operation. The possible values for this structure are specified in [MS-OXCSTOR].

PropertyNameCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of structures in the **PropertyNames** field.

PropertyNames (variable): List of PropertyName structures. This field MUST contain the same number of structures as specified in the **PropertyNameCount** field. The format of a PropertyName structure is specified in [MS-OXCDATA]. This field specifies the Property Names requested.

2.2.7.1.2 Success Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x07.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

PropertySizeLimit (2 bytes): Unsigned 16-bit integer. This value specifies the maximum size allowed for a property value returned.

WantUnicode (2 bytes): 16-bit Boolean. This value specifies whether to return string properties in Unicode.

PropertyTagCount (2 bytes): Unsigned 16-bit integer. This value specifies how many tags are present in **PropertyTags**.

PropertyTags (variable): Array of PropertyTag structures. This field MUST contain **PropertyTagCount** tags. The format of PropertyTag is specified in [MS-OXCDATA]. This field specifies the properties requested.

2.2.7.3.2 Success Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x0B.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST NOT be set to 0x00000000.

2.2.7.9 RopDeletePropertiesNoReplicate

This remote operation deletes property values from an object without invoking replication. More detailed information about this operation can be found in [MS-OXCPRPT].

2.2.7.9.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								LogonId								InputHandleIndex								PropertyTagCount							
…								PropertyTags (variable)																							
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x7A.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

PropertyTagCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of PropertyTag structures in the **PropertyTags** field.

PropertyTags (variable): Array of PropertyTag structures. This field MUST contain the same number of values as specified in the **PropertyTagCount** field. The format for the PropertyTag structure is specified in [MS-OXCDATA]. This field specifies the property values to be deleted from the object.

2.2.7.9.2 Success Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

HasGuid								PropertyGuid (16 bytes, optional)																							

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x5F.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

QueryFlags (1 byte): 8-bit flags structure. The possible values for this structure are specified in [MS-OXCPRPT]. This structure contains flags controlling how this remote operation behaves.

HasGuid (1 byte): 8-bit Boolean. This value specifies whether the **PropertyGuid** field is present.

PropertyGuid (16 bytes, optional): 128-bit GUID. This field MUST be present if **HasGuid** is non-zero and MUST NOT be present if **HasGuid** is zero. This GUID specifies which subset of named properties to return.

2.2.7.10.2 Success Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x5D.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

2.2.8.4.2 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								InputHandleIndex								ReturnValue															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x5D.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation.

2.2.8.5 RopGetStreamSize

This remote operation gets the size of a stream. More detailed information about this operation can be found in [MS-OXCPRPT].

2.2.8.5.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								LogonId								InputHandleIndex															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x5E.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

2.2.8.5.2 Success Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								InputHandleIndex								ReturnValue															
…																StreamSize															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x5E.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation and MUST be set to 0x00000000.

StreamSize (4 bytes): Unsigned 32-bit integer. This value is the current size of the stream.

2.2.8.5.3 Failure Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x54.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

TransferDataSize (2 bytes): Unsigned 16-bit integer. This value specifies the size of the **TransferData** field.

TransferData (variable): Array of bytes. This field MUST contain the same number of bytes as specified in the **TransferDataSize** field. This array contains the data to be uploaded to the destination fast transfer object.

2.2.11.2.2 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								InputHandleIndex								ReturnValue															
…																TransferStatus															
InProgressCount																TotalStepCount															
Reserved								BufferUsedSize																							

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x54.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation.

TransferStatus (2 bytes):   16-bit enumeration. The possible values for this enumeration are specified in [MS-OXCFXICS]. This value specifies the current status of the transfer.

InProgressCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of steps that have been completed in the current operation.

TotalStepCount (2 bytes): Unsigned 16-bit integer. This value specifies the approximate total number of steps to be completed in the current operation.

Reserved (1 byte): Reserved. The server MUST specify 0x00 for this value.

BufferUsedSize (2 bytes): Unsigned 16-bit integer. This value is the buffer size that was used.

2.2.11.3 RopFastTransferSourceGetBuffer

This remote operation retrieves a stream of data from a fast transfer source object. More detailed information about this operation can be found in [MS-OXCFXICS].

2.2.11.3.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								LogonId								InputHandleIndex								BufferSize							
…								MaximumBufferSize (optional)																							

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x4E.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

BufferSize (2 bytes): Unsigned 16-bit integer. This value specifies the buffer size requested.

MaximumBufferSize (2 bytes, optional): Unsigned 16-bit integer. This field MUST be present when **BufferSize** is specified as 0xBABE. This value specifies the maximum size limit when the server determines the buffer size.

2.2.11.3.2 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								InputHandleIndex								ReturnValue															
…																TransferStatus															
InProgressCount																TotalStepCount															
Reserved								TransferBufferSize																TransferBuffer (variable, optional)							
…								BackoffTime (optional)																							
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x4E.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation.

TransferStatus (2 bytes): 16-bit enumeration. The possible values for this enumeration are specified in [MS-OXCFXICS]. This value specifies the current status of the transfer.

InProgressCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of steps that have been completed in the current operation.

TotalStepCount (2 bytes): Unsigned 16-bit integer. This value specifies the approximate number of steps to be completed in the current operation.

Reserved (1 byte): Reserved. The server MUST specify 0x00 for this value.

TransferBufferSize (2 bytes): Unsigned 16-bit integer. This value specifies the size of the **TransferBuffer** field.

TransferBuffer (variable, optional): Array of bytes. This field MUST be present if the **ReturnValue** is not 0x00000480 and must not be present otherwise. If present, this field MUST contain the same number of bytes as specified in the **TransferBufferSize** field.

BackoffTime (4 bytes, optional): Unsigned 32-bit integer. This field MUST be present if the **ReturnValue** is 0x00000480 and must not be present otherwise. This value specifies the number of milliseconds for the client to wait before trying this operation again.

2.2.11.4 RopFastTransferSourceCopyFolder

This remote operation moves or copies a source folder to a fast transfer object. More detailed information about this operation can be found in [MS-OXCFXICS].

2.2.11.4.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								LogonId								InputHandleIndex								OutputHandleIndex							
CopyFlags								SendOptions																							

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x4C.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the output Server Object will be stored. More information about Server Objects can be found in section 3.

CopyFlags (1 byte): 8-bit flags structure. The possible values for this structure are specified in [MS-OXCFXICS]. This value controls the type of operation.

SendOptions (1 byte): 8-bit flags structure. The possible values for this structure are specified in [MS-OXCFXICS]. These values control the behavior of the operation.

2.2.11.4.2 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								OutputHandleIndex								ReturnValue															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x4C.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **OutputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation.

2.2.11.5 RopFastTransferSourceCopyMessages

This remote operation copies messages from a source folder to a fast transfer object. More detailed information about this operation can be found in [MS-OXCFXICS].

2.2.11.5.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

MessageIdCount																MessageIds (variable)															
…								WantMove								SendOptions															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x4B.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the output Server Object will be stored. More information about Server Objects can be found in section 3.

MessageIdCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of identifiers in the **MessageIds** field.

MessageIds (variable): Array of 64-bit identifiers. This array MUST contain the same number of identifiers as specified in the **MessageIdCount** field. This list specifies the messages to copy.

CopyFlags (1 byte): 8-bit flags structure. The possible values for this structure are specified in [MS-OXCFXICS]. These values control the type of operation.

SendOptions (1 byte): 8-bit flags structure. The possible values for this structure are specified in [MS-OXCFXICS]. These values control the behavior of the operation.

2.2.11.5.2 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								OutputHandleIndex								ReturnValue															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x4B.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **OutputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation.

2.2.11.6 RopFastTransferSourceCopyTo

This remote operation copies properties from a source folder to a fast transfer object. More detailed information about this operation can be found in [MS-OXCFXICS].

2.2.11.6.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

…								SendOptions								PropertyTagCount								PropertyTags (variable)							
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x4D.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the output Server Object will be stored. More information about Server Objects can be found in section 3.

Level (1 byte): Unsigned 8-bit integer. This value specifies the level at which the copy is occurring.

CopyFlags (4 bytes): 32-bit flags structure. The possible values for this structure are specified in [MS-OXCFXICS]. This structure is used to control the behavior of the transfer operation.

SendOptions (1 byte): 8-bit flags structure. The possible values for this structure are specified in [MS-OXCFXICS]. These values control the behavior of the operation.

PropertyTagCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of structures in the **PropertyTags** field.

PropertyTags (variable): Array of PropertyTag structures. The format of PropertyTag is specified in [MS-OXCDATA]. This field MUST contain the same number of structures as specified in the **PropertyTagCount** field. This array specifies the properties to exclude during the copy.

2.2.11.6.2 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								OutputHandleIndex								ReturnValue															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x4D.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **OutputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation.

2.2.11.7 RopFastTransferSourceCopyProperties

This remote operation copies properties from smessage, folder, or attachment objects to a fast transfer object. More detailed information about this operation can be found in [MS-OXCFXICS].

2.2.11.7.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

Level								CopyFlags								SendOptions								PropertyTagCount							
…								PropertyTags (variable)																							
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x69.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the output Server Object will be stored. More information about Server Objects can be found in section 3.

Level (1 byte): Unsigned 8-bit integer. This value specifies the level at which the copy is occurring.

CopyFlags (1 byte): 8-bit flags structure. The possible values for this structure are specified in [MS-OXCFXICS]. This structure is used to control the behavior of the transfer operation.

SendOptions (1 byte): 8-bit flags structure. The possible values for this structure are specified in [MS-OXCFXICS]. These values control the behavior of the operation.

PropertyTagCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of structures in the **PropertyTags** field.

PropertyTags (variable): Array of PropertyTag structures. The format of PropertyTag is specified in [MS-OXCDATA]. This field MUST contain the same number of structures as specified in the **PropertyTagCount** field. This array specifies the properties to copy.

2.2.11.7.2 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x86.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation.

2.2.12 Incremental Change Synchronization ROPs

2.2.12.1 RopSynchronizationConfigure

This remote operation configures a synchronization object. More detailed information about this operation can be found in [MS-OXCFXICS].

2.2.12.1.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

RestrictionDataSize																RestrictionData (variable)															
…								SynchronizationExtraFlags																							
…								PropertyTagCount																PropertyTags (variable)							
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x70.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the output Server Object will be stored. More information about Server Objects can be found in section 3.

SynchronizationType (1 byte): 8-bit enumeration. The possible values for this enumeration are specified in [MS-OXCFXICS]. This value controls the type of synchronization.

SendOptions (1 byte): 8-bit flags structure. The possible values for this structure are specified in [MS-OXCFXICS]. These values control the behavior of the operation.

SynchronizationExtraFlags (4 bytes): 32-bit flags structure. The possible values for this structure are specified in [MS-OXCFXICS]. This structure controls the behavior of the synchronization.

RestrictionDataSize (2 bytes): Unsigned 16-bit integer. This value specifies the length of the **RestrictionData** field.

RestrictionData (variable): Restriction. This field MUST be **RestrictionDataSize** bytes long. The format of this field is specified in [MS-OXCDATA]. This value specifies the filter for this synchronization object.

AdditionalFlags (4 bytes): 32-bit flags structure. The possible values for this structure are specified in [MS-OXCFXICS]. This structure controls the additional behavior of the synchronization.

PropertyTagCount (2 bytes): Unsigned 16-bit integer. This value specifies how many tags are present in **PropertyTags**.

PropertyTags (variable): Array of PropertyTag structures. This field MUST contain **PropertyTagCount** tags. The format of PropertyTag is specified in [MS-OXCDATA]. This field specifies the property tags to be used for the synchronization process.

2.2.12.1.2 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x72.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the output Server Object will be stored. More information about Server Objects can be found in section 3.

ImportFlag (1 byte): 8-bit flags structure. The possible values for this structure are specified in [MS-OXCFXICS]. This structure controls the behavior of the synchronization.

PropertyValueCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of structures in the **PropertyValues** field.

PropertyValues (variable): Array of PropertyValue structures. This field MUST contain the same number of structures as specified in the **PropertyValueCount** field. The PropertyValue structure is specified in [MS-OXCDATA] and possible properties to be set are specified in [MS-OXCFXICS]. These values are used to specify some extra properties on the the message.

2.2.12.2.2 Success Response Buffer

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x80.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

MessageReadStateSize (2 bytes): Unsigned 16-bit integer. This value specifies the size in bytes of the **MessageReadStates** field.

MessageReadStates (variable): List of MessageReadState structures. The format of the MessageReadState structure is defined in section 2.2.12.3.1.1. The number of bytes in this field MUST match the number specified in the **MessageReadStatesSize** field. These values specify the messages and associated read states to be changed.

2.2.12.3.1.1 MessageReadState structure

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

HierarchyValueCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of structures in the **HierarchyValues** field.

HierarchyValues (variable): Array of PropertyValue structures. This field MUST contain the same number of structures as specified in the **PropertyValueCount** field. The PropertyValue structure is specified in [MS-OXCDATA] and possible properties to be set are specified in [MS-OXCFXICS]. These values are used to specify some hierarchy related properties of the folder.

PropertyValueCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of structures in the **PropertyValues** field.

PropertyValues (variable): Array of PropertyValue structures. This field MUST contain the same number of structures as specified in the **PropertyValueCount** field. The PropertyValue structure is specified in [MS-OXCDATA]. These values are used to specify folder properties.

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x74.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

IsHierarchy (1 byte): 8-bit Boolean. This value specifies whether this operation consists of hierarchy or content deletions.

PropertyValueCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of structures in the **PropertyValues** field.

PropertyValues (variable): Array of PropertyValue structures. This field MUST contain the same number of structures as specified in the **PropertyValueCount** field. The PropertyValue structure is specified in [MS-OXCDATA] and possible properties to be set are specified in [MS-OXCFXICS]. These values are used to specify the folders or messages to delete.

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x78.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

SourceFolderIdSize (4 bytes): Unsigned 32-bit integer. This value specifies the size of the **SourceFolderId** field.

SourceFolderId (variable): Array of bytes. This field MUST contain the same number of bytes as specified in **SourceFolderIdSize**. This ID specifies the parent folder of the source message.

SourceMessageIdSize (4 bytes): Unsigned 32-bit integer. This value specifies the size of the **SourceMessageId** field.

SourceMessageId (variable): Array of bytes. This field MUST contain the same number of bytes as specified in **SourceMessageIdSize**. This ID specifies the source message.

PredecessorChangeListSize (4 bytes): Unsigned 32-bit integer. This value specifies the size of the **PredecessorChangeList** field.

PredecessorChangeList (variable): Array of bytes. This field MUST contain the same number of bytes as specified in the **PredecessorChangeListSize** field.

DestinationMessageIdSize (4 bytes): Unsigned 32-bit integer. This value specifies the size of the **DestinationMessageId** field.

DestinationMessageId (variable): Array of bytes. This field MUST contain the same number of bytes as specified in **DestinationMessageIdSize**. This ID specifies the destination message.

ChangeNumberSize (4 bytes): Unsigned 32-bit integer. This value specifies the size of the **ChangeNumber** field.

ChangeNumber (variable): Array of bytes. This field MUST contain the same number of bytes as specified in the **ChangeNumberSize** field. This field specifies the change number of the message.

2.2.12.6.2 Success Response Buffer

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x83.

OutputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **OutputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation.

2.2.13.3 RopRegisterSynchronizationNotifications

This remote operation registers incremental change synchronization notifications for given folders. More detailed information about this operation can be found in [MS-OXCNOTIF].

2.2.13.3.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

FolderIds (variable)																															
…								FolderChangeNumbers (variable)																								

…	

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x84.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

FolderCount (2 bytes): Unsigned 16-bit integer. This value specifies the number of folders to register for notifications for.

FolderIds (variable): Array of 64-bit identifiers. This field MUST contain the same number of identifiers as specified in the **FolderCount** field. These IDs specify the folders to register for notification for.

FolderChangeNumbers (variable): Array of unsigned 32-bit integers. This field MUST contain he same number of identifiers as specified in the **FolderCount** field. These values are unique change numbers for each folder.

2.2.13.3.2 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x84.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation.

2.2.13.4 RopSetSynchronizationNotificationGuid

This remote operation sets the incremental synchronization notification GUID. More detailed information about this operation can be found in [MS-OXCNOTIF].

2.2.13.4.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								LogonId								InputHandleIndex								NotificationGuid (16 bytes)							

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x88.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

NotificationGuid (16 bytes): GUID. This guid specifies the notification guid to set.

2.2.13.4.2 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								InputHandleIndex								ReturnValue															
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x88.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index MUST be set to the **InputHandleIndex** specified in the request. More information about Server Objects can be found in section 3.

ReturnValue (4 bytes): Unsigned 32-bit integer. This value represents the status of the remote operation.

2.2.13.5 RopNotify

This remote operation response provides notification event data to the client. There is no request buffer for this Rop. More detailed information about this operation can be found in [MS-OXCNOTIF].

2.2.13.5.1 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								NotificationHandle																							
…								LogonId								NotificationData (variable)																
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x2A.

NotificationHandle (4 bytes): 32-bit ServerObject Handle. This handle specifies the notification server object associated with this notification event.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this notification event.

NotificationData (variable): Various structures. The notification structures that can be found here are specified in [MS-OXCDATA]

2.2.13.6 RopPending

This remote operation response notifies the client that there are pending notifications on a session. There is no request buffer for this Rop. More detailed information about this operation can be found in [MS-OXCNOTIF].

2.2.13.6.1 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
		RopId										SessionIndex																			

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x6E.

SessionIndex (2 bytes): Unsigned 16-bit integer. This index specifies which session has pending notifications.

2.2.14 Other ROPs

2.2.14.1 RopBufferTooSmall

This remote operation response notifies the client that there is insufficient space to return all ROP responses.

2.2.14.1.1 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
		RopId										SizeNeeded												RequestBuffers (variable)							
		…																													

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0xFF.

SizeNeeded (2 bytes): Unsigned 16-bit integer. This value specifies the size requested for the output buffer for a subsequent request.

RequestBuffers (variable): Array of bytes. The size of this array is the remaining space in the output ROP response buffer. This array specifies the section of the input buffer that was not executed because of this condition.

2.2.14.2 RopBackoff

This remote operation response notifies the client that the server is busy and is requesting that the client retry later.

2.2.14.2.1 Response Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1

…																BackoffRopCount								BackoffRopData						
…								AdditionalDataSize																AdditionalData (variable)						
…																															

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0xF9.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon to apply a logon backoff to.

Duration (4 bytes): Unsigned 32-bit integer. This value specifies the number of milliseconds to apply a logon backoff.

BackoffRopCount (1 byte): Unsigned 8-bit integer. This value specifies the number of structures in the **BackoffRopData** field.

BackoffRopData (variable): Array of BackoffRop structures. The format for the BackoffRop structure is defined at the end of this section. This array specifies the operations to be backed off and also the backoff duration for each.

AdditionalDataSize (2 bytes): Unsigned 16-bit integer. This value specifies the size of the **AdditionalData** field.

AdditionalData (variable): Array of bytes. This field MUST contain the same number of bytes as specified in **AdditionalDataSize**. This array specifies additional information about the backoff response.

2.2.14.2.1.1   BackoffRop structure

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopIdBackoff								Duration																							
…																															

RopIdBackoff (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation to apply a ROP backoff for.

Duration (4 bytes): Unsigned 32-bit integer. This value specifies the number of milliseconds to apply a ROP backoff.

2.2.14.3 RopRelease

This remote operation releases all resources associated with a server object.

2.2.14.3.1 Request Buffer

0	1	2	3	4	5	6	7	8	9	1 0	1	2	3	4	5	6	7	8	9	2 0	1	2	3	4	5	6	7	8	9	3 0	1
RopId								LogonId								InputHandleIndex																

RopId (1 byte): Unsigned 8-bit integer. This ID specifies the type of remote operation and MUST be set to 0x01.

LogonId (1 byte): Unsigned 8-bit integer. This ID specifies the logon associated with this operation.

InputHandleIndex (1 byte): Unsigned 8-bit integer. This index specifies the location in the Server Object Handle Table where the handle for the input Server Object is stored. More information about Server Objects can be found in section 3.

3   Protocol Details

3.1   Client Details

3.1.1   Abstract Data Model

This section describes a conceptual model of possible data organization that an implementation maintains to participate in this protocol. The described organization is provided to facilitate the explanation of how the protocol behaves. This document does not mandate that implementations adhere to this model as long as their external behavior is consistent with that described in this document.

Logon Collection: A collection of LogonIds in use.

Server Object Handle Collection: A collection of valid Server Object Handles received from the server but not yet released.

3.1.2   Timers

None.

3.1.3 Initialization

None.

3.1.4 Higher-Layer Triggered Events

The client creates ROP buffers consisting of ROP requests for operations to be performed on the server. This input buffer is sent to the server and an output ROP buffer is received back from the server.

3.1.4.1 Creating an Input ROP Buffer

An input ROP buffer is constructed by the client and sent to the server. The client packages its ROP requests together in the intended execution order and creates an associated Server Object Handle Table.

When assembling an input ROP buffer, the client MUST use a Server Object Handle Table large enough to include an entry for the largest index used by ROP requests in the buffer. Each entry in the table that is only referenced as input indexes for ROPs MUST be filled in with the handle of the Server Object that is intended to be the input of the operation. Each entry that is only referenced as an output index SHOULD be filled in with the 0xFFFFFFFF value. Each entry that is referenced first as an output index and then as input indexes SHOULD also be initialized to the 0xFFFFFFFF value.

Multiple ROPs in a buffer can use the same Server Object Handle Table index. For example, a RopOpenFolder can specify index 1 as the location to place the handle for the folder Server Object. Later in the same buffer, a RopGetContentsTable can specify index 1 as the location for the input Server Object handle.

3.1.4.2 Logon

The client specifies the LogonId associated with the logon Server Object created by a RopLogon call. The client manages the identifiers in use by use of a Logon Collection.

3.1.5 Message Processing Events and Sequencing Rules

The client finds the responses for the operations in this output buffer in the same order as sent in the input buffer. The output buffer can also include ROP responses that do not have corresponding ROP requests in the input buffer. These extra ROP responses include RopBackoff, RopBufferTooSmall, RopNotify, and RopPending.

3.1.5.1 Extra ROP Responses

3.1.5.1.1 RopBackoff

Any client reporting its version as 12.0.4228.0 or later (as specified in [MS-OXCRPC]) MUST support processing the **RopBackoff** response buffer. The layout of this ROP is specified in section 2.2.14.2.

RopBackoff can appear at any location in the ROP output buffer. This ROP response indicates that the server requests the client delay the resending of ROP requests for the specified logon or type of ROPs for an amount of time. When this response contains a non-zero **RopIdBackoff**, it specifies the ROP request that needs to be delayed. The ROP response that was delayed and all subsequent ROP responses will not be in the buffer. When the **RopIdBackoff** is set to 0x00, this indicates that all ROP requests for that logon should be delayed.

3.1.5.1.2 RopBufferTooSmall

The layout of this ROP is specified in section 2.2.14.1.

RopBufferTooSmall can appear at any location in the **Rops** field in the ROP buffer. This ROP response indicates that the size of the output buffer is insufficient to return responses for all the ROP requests sent. The RopBufferTooSmall includes all the ROP Requests that were not executed by the server. The client SHOULD resend the unexecuted ROP requests in a new call to the server. The client MUST also specify an output buffer size that is at least as large as the size specified in the RopBufferTooSmall response.

3.1.5.1.3 RopNotify and RopPending

These ROP responses appear at the end of the ROP output buffer. More detailed information about these ROPs can be found in [MS-OXCNOTIF].

3.1.6   Timer Events

None.

3.1.7   Other Local Events

None.

3.1.7.1 Shutdown

When the client shuts down, it SHOULD send **RopRelease** requests to the server to clean up all Server Objects it had created but had not yet released before it disconnects.

3.2   Server Details

3.2.1   Abstract Data Model

This section describes a conceptual model of possible data organization that an implementation maintains to participate in this protocol. The described organization is provided to facilitate the explanation of how the protocol behaves. This document does not mandate that implementations adhere to this model as long as their external behavior is consistent with that specified in this document.

Logon Map: A mapping of LogonIds and logon Server Objects.

Server Object Map: A mapping of Server Object Handles and Server Objects. There is one map for each logon Server Object.

3.2.2 Timers

None.

3.2.3 Initialization

When a connection is first set up between a client and server via the EMSMDB interface specified in [MS-OXCRPC], the Server Object Map and Logon Map are empty.

3.2.4 Higher-Layer Triggered Events

3.2.4.1 Notifications

More detailed information about notifications can be found in [MS-OXCNOTIF].

3.2.4.2 Backoff

When the server determines that a ROP request needs to be delayed, the server MUST respond with either a RopBackoff response or fail the RPC call.

If the server version is greater than 08.00.0525.0, and the client version is greater than 12.0.4228.0, the server SHOULD add a RopBackoff response buffer is returned in place of the response for the ROP request. If either the client or the server are earlier versions, the server MUST instead fail the RPC call by raising the RPC_S_SERVER_TOO_BUSY exception as specified in [MS-OXCRPC].

If ROPs are specified in a RopBackoff response, then all subsequent ROP requests SHOULD NOT be processed.

3.2.4.3 Insufficient Output Buffer Space

When the server determines that there is not enough space remaining in the output ROP buffer for responses for remaining ROPs, it MUST NOT execute the remaining ROPs. If the client is able to resubmit the remaining ROPs in another call, then the server MUST use a RopBufferTooSmall response. If another call would fail, such as if one ROP response is larger than the maximum output RopBufferSize, the server MUST fail the RPC call returning 0x0000047D.

3.2.5 Message Processing Events and Sequencing Rules

3.2.5.1 Processing an Input ROP Buffer

When processing an input ROP buffer received from a client, the server MUST execute the ROP requests in the order they are specified in the ROP buffer and MUST NOT process more than one input ROP buffer concurrently for a connection. The ROP responses in the output ROP buffer MUST also be in the same order in which they were executed.

If the server is unable to parse the ROP requests in the input ROP buffer, the RPC call MUST fail by returning 0x000004B6.

During execution of a ROP request, the server needs to resolve the Server Object Handle Table index to a Server Object. Any index used for input is converted into the corresponding Server Object by looking up the handle in the Server Object Handle Table and then looking up the Server Object Handle in the Server Object Map associated with the logon for the ROP request. If any lookup in the Logon Map or the Server Object Map fails, the server MUST fill in a failure ROP response with a non-zero return value.

After successful execution of a ROP request that created a Server Object, the server MUST assign an unused Server Object Handle to the object and record the mapping in the Server Object Map for the logon associated with the Rop. The handle assigned is then set in the Server Object Handle Table at the location specified by the output index in the ROP request and can be potentially used by subsequent ROP requests in the buffer.

Because the Server Object Handle value 0xFFFFFFFF is used to initialize unused entries of a Server Object Handle Table, a server MUST NOT assign that value to a created Server Object.

3.2.5.2 Creating an Output ROP Buffer

After processing the input ROP buffer, a list of ROP responses and a modified Server Object Handle Table are specified in the output ROP buffer created by the server. This table MUST be large enough to contain an entry for the highest Server Object Handle Table index specified in the ROP responses. The table can be a smaller size compared to the table in the input ROP buffer if entries at the end of the table were not referenced. The server MUST preserve the order of entries in the Server Object Handle Table between the input and output tables.

3.2.5.3 RopRelease

The format for the **RopRelease** request buffer is specified in section 2.2.14.3.

This request is used when the client is done with a Server Object. The server MUST remove the mapping for the Server Object Handle from the Server Object Map and release the resources associated with it. The same Server Object Handle can now be reused for another Server Object. If the Server Object specified is a logon Server Object, then the server MUST also remove it from the Logon Map.

Unlike all other ROP requests, **RopRelease** does not have any associated ROP response. The server MUST not return any response for a **RopRelease** request. Any errors resulting from the execution of this ROP MUST be ignored and not sent back to the client.

3.2.6 Timer Events

None.

3.2.7   Other Local Events

3.2.7.1   Disconnection

When the client disconnects, the server MUST release all Server Objects, Logon Maps, and Server Object Maps associated with the connection.

4   Protocol Examples

4.1   Empty ROP Buffer

4.1.1   Full Buffer

02 00

4.1.2   Explanation of Parts

RopSize
02 00

Rops
<empty>

ServerObjectHandleTable
<empty>

4.1.3   Description

This empty buffer contains no ROPs and no Server Object Handles. This type of buffer can be used by a client when it expects to receive extra information in the output buffer, such as pending notifications.

4.2   Single ROP Request

4.2.1   Full Buffer

09 00 15 01 01 02 01 FF 0F 6D 00 00 00 56 00 00 00

4.2.2   Explanation of Parts

RopSize
09 00

Rops
15	RopId (RopQueryRows)
01	LogonId
01	Input Handle Index
02	QueryRows Flags
01	Forward Read
FF 0F	RowCount

ServerObjectHandleTable
6D 00 00 00 (Handle 0, unused)
56 00 00 00 (Handle 1, input of RopQueryRows)

4.2.3   Description

This buffer contains a single ROP that has an input index. The RopSize indicates the location of the Server Object Handle Table. The table in this buffer also contains an unused entry.

4.3   Multiple ROP Request

4.3.1   Full Buffer

14 00 02 00 00 01 01 00 59 65 73 73 69 72 00 04 00 01 02 04 6E 00 00 00 FF FF FF FF FF FF FF FF

4.3.2   Explanation of Parts

RopSize
14 00

Rops
02   RopId (RopOpenFolder)
00   LogonId
00   Input Handle Index
01   Output Handle Index
01 00 59 65 73 73 69 72   ID of the folder to open
00   Open Mode Flags

04   RopId (RopGetHierarchyTable)
00   LogonId
01   Input Handle Index
02   Output Handle Index
04   Table Flags

ServerObjectHandleTable
6E 00 00 00 (Handle 0, input of RopOpenFolder)
FF FF FF FF (Handle 1, output of RopOpenFolder, input of RopGetHierarchyTable)
FF FF FF FF (Handle 2, output of RopGetHierarchyTable)

4.3.3   Description

This buffer consists of two ROP requests. The first request is a RopOpenFolder, and the second is a RopGetHierarchyTable. The input for the second ROP is the output for the first ROP. All output handles are initialized to 0xFFFFFFFF.

4.4 RopRelease Request

4.4.1 Full Buffer

08 00 01 00 00 01 00 01 6F 00 00 00 6E 00 00 00

4.4.2 Explanation of Parts

RopSize
08 00

Rops
01   RopId (RopRelease)
00   LogonId
00   Input Handle Index

01   RopId (RopRelease)
00   LogonId
01   Input Handle Index

ServerObjectHandleTable
6F 00 00 00 (Handle 0, input of first RopRelease)
6E 00 00 00 (Handle 1, input of second RopRelease)

4.4.3 Description

This buffer contains a pair of RopRelease requests. These two ROPs are releasing two different Server Objects, based on the different Server Object Handles they reference.

4.5 RopBufferTooSmall Response

4.5.1 Full Buffer

1C 00 FF 2C 00 03 00 00 01 FF 0F 01 00 15 89 00 78 27 1E 03 01 00 15 89 00 78 2F BB 12 00 00 00 FF FF FF FF

4.5.2 Explanation of Parts

RopSize
1C 00

Rops
FF   RopId (RopBufferTooSmall)
2C 00 Size Needed (0x002C bytes)
03   RopId (RopOpenMessage)
00   LogonId
00   Input Handle Index
01   Output Handle Index
FF 0F Code Page ID

01 00 15 89 00 78 27 1E	Folder Id
03	Open Mode Flags
01 00 15 89 00 78 2F BB	Message Id

ServerObjectHandleTable
12 00 00 00   (Handle 0, input of RopOpenMessage)
FF FF FF FF   (Handle 1, output of RopOpenMessage)

4.5.3 Description

This buffer shows a RopOpenMessage call that would produce a response that wouldn't fit in the buffer (the output buffer was much smaller than usual for this example). The RopBufferTooSmall indicates that it would need at least 0x002C bytes to return a response buffer. The RopOpenMessage request and the Server Object Handle Table are the same as what would have been specified in the input ROP buffer. In this buffer, the RopBufferTooSmall is the first ROP, which indicates that no Rops were executed before running out of room.

4.6 Logon RopBackoff Response

4.6.1 Full Buffer

12 00 12 00 00 00 00 00 00 F9 00 34 12 00 00 00 00 00 28 00 00 00

00 00   AdditionalDataSize

ServerObjectHandleTable
 0A 00 00 00   (Handle 0, unused)
24 00 00 00   (Handle 1, output of RopOpenFolder)

4.7.3   Description

This buffer shows a RopBackoff response in the same buffer as a RopOpenFolder response.
The RopBackoff contains information about only one ROP, RopCreateFolder.

5   Security

5.1   Security Considerations for Implementers

There are no special security considerations specific to this protocol. General security
considerations pertain to the underlying Wire Format Protocol Specification [MS-OXCRPC].

5.2   Index of Security Parameters

None.

6   Appendix A: Office/Exchange Behavior

The information in this specification is applicable to the following versions of Office/Exchange:

- Office 2003 with Service Pack 3 applied
- Exchange 2003 with Service Pack 2 applied
- Office 2007 with Service Pack 1 applied
- Exchange 2007 with Service Pack 1 applied

Exceptions, if any, are noted below. Unless otherwise specified, any statement of optional behavior in this specification prescribed using the terms SHOULD or SHOULD NOT implies Office/Exchange behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies Office/Exchange does not follow the prescription.

<1> Section 2.2.1. Exchange Server behavior is undefined when it encounters a reserved RopId.

Index
