Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation ("this documentation") for protocols, file formats, data portability, computer languages, and standards support. Additionally, overview documents cover inter-protocol relationships and interactions.

- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you can make copies of it in order to develop implementations of the technologies that are described in this documentation and can distribute portions of it in your implementations that use these technologies or in your documentation as necessary to properly document the implementation. You can also distribute in your implementation, with or without modification, any schemas, IDLs, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications documentation.

- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.

- **Patents.** Microsoft has patents that might cover your implementations of the technologies described in the Open Specifications documentation. Neither this notice nor Microsoft’s delivery of this documentation grants any licenses under those patents or any other Microsoft patents. However, a given Open Specifications document might be covered by the Microsoft Open Specifications Promise or the Microsoft Community Promise. If you would prefer a written license, or if the technologies described in this documentation are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting iplg@microsoft.com.

- **License Programs.** To see all of the protocols in scope under a specific license program and the associated patents, visit the Patent Map.

- **Trademarks.** The names of companies and products contained in this documentation might be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights. For a list of Microsoft trademarks, visit www.microsoft.com/trademarks.

- **Fictitious Names.** The example companies, organizations, products, domain names, email addresses, logos, people, places, and events that are depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

**Reservation of Rights.** All other rights are reserved, and this notice does not grant any rights other than as specifically described above, whether by implication, estoppel, or otherwise.

**Tools.** The Open Specifications documentation does not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments, you are free to take advantage of them. Certain Open Specifications documents are intended for use in conjunction with publicly available standards specifications and network programming art and, as such, assume that the reader either is familiar with the aforementioned material or has immediate access to it.

**Support.** For questions and support, please contact dochelp@microsoft.com.

1 Introduction

The Short Message Service (SMS) and Multimedia Messaging Service (MMS) Object Protocol enables clients to create, modify, and delete Short Message Service (SMS) and Multimedia Messaging Service (MMS) messages.

This protocol extends the Message and Attachment Object Protocol, as described in [MS-OXCMSG].

Sections 1.5, 1.8, 1.9, 2, and 3 of this specification are normative. All other sections and examples in this specification are informative.

1.1 Glossary

This document uses the following terms:

**Attachment object**: A set of properties that represents a file, Message object, or structured storage that is attached to a Message object and is visible through the attachments table for a Message object.

**calendar**: A date range that shows availability, meetings, and appointments for one or more users or resources. See also Calendar object.

**Coordinated Universal Time (UTC)**: A high-precision atomic time standard that approximately tracks Universal Time (UT). It is the basis for legal, civil time all over the Earth. Time zones around the world are expressed as positive and negative offsets from UTC. In this role, it is also referred to as Zulu time (Z) and Greenwich Mean Time (GMT). In these specifications, all references to UTC refer to the time at UTC-0 (or GMT).

**Drafts folder**: A special folder that is the default location for Message objects that have been saved but not sent.

**flags**: A set of values used to configure or report options or settings.

**globally unique identifier (GUID)**: A term used interchangeably with universally unique identifier (UUID) in Microsoft protocol technical documents (TDs). Interchanging the usage of these terms does not imply or require a specific algorithm or mechanism to generate the value. Specifically, the use of this term does not imply or require that the algorithms described in [RFC4122] or [C706] must be used for generating the GUID. See also universally unique identifier (UUID).

**handle**: Any token that can be used to identify and access an object such as a device, file, or a window.

**Hypertext Markup Language (HTML)**: An application of the Standard Generalized Markup Language (SGML) that uses tags to mark elements in a document, as described in [HTML].

**Inbox folder**: A special folder that is the default location for Message objects received by a user or resource.

**Mail User Agent (MUA)**: A client application that is used to compose and read email messages.

**Message object**: A set of properties that represents an email message, appointment, contact, or other type of personal-information-management object. In addition to its own properties, a Message object contains recipient properties that represent the addressees to which it is addressed, and an attachments table that represents any files and other Message objects that are attached to it.

**message store**: A unit of containment for a single hierarchy of Folder objects, such as a mailbox or public folders.
Multimedia Messaging Service (MMS): A communications protocol that is designed for messages containing text, images, and other multimedia content that is sent between mobile phones.

Multimedia Messaging Service (MMS) object: A Message object that represents a Multimedia Messaging Service (MMS) message in a message store.

named property: A property that is identified by both a GUID and either a string name or a 32-bit identifier.

plain text: Text that does not have markup. See also plain text message body.

property ID: A 16-bit numeric identifier of a specific attribute. A property ID does not include any property type information.

reminder: A generally user-visible notification that a specified time has been reached. A reminder is most commonly related to the beginning of a meeting or the due time of a task but it can be applied to any object type.

remote operation (ROP): An operation that is invoked against a server. Each ROP represents an action, such as delete, send, or query. A ROP is contained in a ROP buffer for transmission over the wire.

ROP request: See ROP request buffer.

ROP response: See ROP response buffer.

rule: A condition or action, or a set of conditions or actions, that performs tasks automatically based on events and values.

Sent Items folder: A special folder that is the default location for storing copies of Message objects after they are submitted or sent.

Short Message Service (SMS): A communications protocol that is designed for sending text messages between mobile phones.

SMS object: A Message object that represents a Short Message Service (SMS) message in a message store.

special folder: One of a default set of Folder objects that can be used by an implementation to store and retrieve user data objects.

stream: A flow of data from one host to another host, or the data that flows between two hosts.

Unicode: A character encoding standard developed by the Unicode Consortium that represents almost all of the written languages of the world. The Unicode standard [UNICODE5.0.0/2007] provides three forms (UTF-8, UTF-16, and UTF-32) and seven schemes (UTF-8, UTF-16, UTF-16 BE, UTF-16 LE, UTF-32, UTF-32 LE, and UTF-32 BE).

MAY, SHOULD, MUST, SHOULD NOT, MUST NOT: These terms (in all caps) are used as defined in [RFC2119]. All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

1.2 References

Links to a document in the Microsoft Open Specifications library point to the correct section in the most recently published version of the referenced document. However, because individual documents in the library are not updated at the same time, the section numbers in the documents may not match. You can confirm the correct section numbering by checking the Errata.
1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact dochelp@microsoft.com. We will assist you in finding the relevant information.

[MS-OXOSFLD] Microsoft Corporation, "Special Folders Protocol".

1.2.2 Informative References

1.3 Overview

This protocol enables a client to create, modify, and delete SMS text messages and MMS multimedia messages in a message store. SMS text messages are characterized by a short unformatted text body. MMS messages are characterized by text and multimedia components.

This protocol extends the Message and Attachment Object Protocol, as described in [MS-OXCMSG], in that it defines new properties unique to SMS objects and MMS objects and adds restrictions to the existing of the Message object.

A typical scenario for using this protocol is to create, modify, or delete SMS text messages or MMS multimedia messages.

1.4 Relationship to Other Protocols

This protocol has the same dependencies as the Message and Attachment Object Protocol, which it extends. For more details about the Message and Attachment Object Protocol, see [MS-OXCMSG].

For conceptual background information and overviews of the relationships and interactions between this and other protocols, see [MS-OXPROTO].
1.5 Prerequisites/Preconditions
This protocol has the same prerequisites and preconditions as the Message and Attachment Object Protocol, as specified in [MS-OXCMSG].

1.6 Applicability Statement
None.

1.7 Versioning and Capability Negotiation
None.

1.8 Vendor-Extensible Fields
This protocol provides no vendor-extensibility beyond what is already specified in [MS-OXCMSG].

1.9 Standards Assignments
None.
2 Messages

2.1 Transport

This protocol uses the protocols specified in [MS-OXCPRPT] and [MS-OXCMSG] as its primary transport mechanism.

2.2 Message Syntax

Clients operate on SMS objects and MMS objects using the Message and Attachment Object Protocol, as specified in [MS-OXCMSG].

Unless otherwise specified, SMS objects and MMS objects adhere to all property constraints specified in [MS-OXPROPS] and [MS-OXCMSG]. SMS objects and MMS objects can also contain other properties, but these properties have no impact on this protocol.

2.2.1 Common SMS and MMS Object Properties

2.2.1.1 PidNameOMSAccountGuid Property

Type: PtypString ([MS-OXCDATA] section 2.11.1)

The PidNameOMSAccountGuid property ([MS-OXPROPS] section 2.463) specifies the GUID of the SMS account used to deliver the message. The GUID is encoded as a string in the following format (including the braces), where X is any hexadecimal digit: "{XXXXXXXX-XXXX-XXXX-XXXX-XXXXXXXXXXXX}"; for example, "{C200E360-38C5-11CE-AE62-08002B2B79EF}".

2.2.1.2 PidNameOMSScheduleTime Property

Type: PtypTime ([MS-OXCDATA] section 2.11.1)

The PidNameOMSScheduleTime property ([MS-OXPROPS] section 2.465) specifies the time, in Coordinated Universal Time (UTC), that the client sends the requests instructing the service provider to send the SMS or MMS message.

2.2.1.3 PidNameOMSServiceType Property

Type: PtypInteger32 ([MS-OXCDATA] section 2.11.1)

The PidNameOMSServiceType property ([MS-OXPROPS] section 2.466) indicates the type of service used to send the SMS or MMS message. The value of this property MUST be one of the values in the following table.

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>0x00000001</td>
<td>SMS</td>
</tr>
<tr>
<td>0x00000004</td>
<td>MMS</td>
</tr>
</tbody>
</table>

2.2.1.4 PidNameOMSSourceType Property

Type: PtypInteger32 ([MS-OXCDATA] section 2.11.1)
The **PidNameOMSSourceType** property ([MS-OXPROP] section 2.467) indicates the source of the **SMS** or **MMS** message. The value of this property MUST be one of the values in the following table.

<table>
<thead>
<tr>
<th>Value</th>
<th>Source type</th>
</tr>
</thead>
<tbody>
<tr>
<td>0x00000000</td>
<td>XMS inspector (as described in [MSDN-MobileServicePart1])</td>
</tr>
<tr>
<td>0x00000001</td>
<td>Reminder</td>
</tr>
<tr>
<td>0x00000002</td>
<td>Calendar summary</td>
</tr>
<tr>
<td>0x00000003</td>
<td>Rule</td>
</tr>
<tr>
<td>0x00000004</td>
<td>Unknown</td>
</tr>
</tbody>
</table>

### 2.2.1.5 PidNameContentClass Property

Type: **PtypString** ([MS-OXCDATA] section 2.11.1)

The **PidNameContentClass** property ([MS-OXCMSG] section 2.2.1.48) MUST be set to one of the values in the following table.

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>MS-OMS-SMS</td>
<td>SMS</td>
</tr>
<tr>
<td>MS-OMS-MMS</td>
<td>MMS</td>
</tr>
</tbody>
</table>

### 2.2.1.6 PidNameOMSMobileModel Property

Type: **PtypString** ([MS-OXCDATA] section 2.11.1)

The **PidNameOMSMobileModel** property ([MS-OXPROP] section 2.464) indicates the model of the mobile device used to send the **SMS** or **MMS** message.

### 2.2.2 Additional Property Constraints

This protocol makes additional constraints on the properties specified in section 2.2.2.1 through section 2.2.2.4 beyond what is specified in [MS-OXCMSG] and [MS-OXOMSG].

### 2.2.2.1 PidTagIconIndex Property

Type: **PtypInteger32** ([MS-OXCDATA] section 2.11.1)

The **PidTagIconIndex** property ([MS-OXOMSG] section 2.2.1.10) specifies which icon is to be used by a user interface when displaying a group of **SMS objects** and/or **MMS objects**. This property SHOULD <1> be set; if set, the value MUST be 0xFFFFFFFF.

### 2.2.2.2 PidTagMessageClass Property

Type: **PtypString** ([MS-OXCDATA] section 2.11.1)
The **PidTagMessageClass** property ([MS-OXCMSG] section 2.2.1.3) specifies the type of the Message object. In addition to meeting the criteria specified in [MS-OXCMSG], for **SMS objects** this value MUST either be set to "IPM.Note.Mobile.SMS" or begin with "IPM.Note.Mobile.SMS". For **MMS objects**, this property MUST either be set to "IPM.Note.Mobile.MMS" or begin with "IPM.Note.Mobile.MMS.".

### 2.2.2.3 Body Properties

The contents of **SMS objects** are stored and retrieved following the details specified for plain text messages in [MS-OXCMAIL] section 2.1.3.3.1.<2>

The contents of **MMS objects** are stored and retrieved following the details specified for HTML messages, as specified in [MS-OXCMAIL] section 2.1.3.3.1.<3>

### 2.2.2.4 PidTagNormalizedSubject Property

Type: **PtypString** ([MS-OXCDATA] section 2.11.1)

The **PidTagNormalizedSubject** property ([MS-OXCMSG] section 2.2.1.10) contains an abbreviated version of the contents of the message suitable for displaying groups of **SMS objects** to a user. For **MMS objects**, only the constraints specified in [MS-OXCMSG] section 2.2.1.10 apply.
3 Protocol Details

3.1 Client Details
The client role creates and sets properties on SMS objects and MMS objects.

3.1.1 Abstract Data Model
None.

3.1.2 Timers
None.

3.1.3 Initialization
None.

3.1.4 Higher-Layer Triggered Events

3.1.4.1 Creation of an SMS or MMS Object
To create an SMS object or MMS object, the client sets properties in accordance with the requirements in section 2 and [MS-OXCPRPT] and then saves the resulting Message object as specified in [MS-OXCMSG].

3.1.4.2 Modification of an SMS or MMS Object
When modifying an SMS object or MMS object, the client modifies any of the properties in accordance with the requirements in section 2 and [MS-OXCPRPT] and then saves the Message object as specified in [MS-OXCMSG].

3.1.4.3 Deletion of an SMS or MMS Object
An SMS object or MMS object has no special deletion semantics beyond what is specified in [MS-OXCMSG].

3.1.5 Message Processing Events and Sequencing Rules
None.

3.1.6 Timer Events
None.

3.1.7 Other Local Events
None.
3.2 Server Details

The server processes a client's requests regarding an SMS object and MMS object and in all other ways operates within the server role as specified in [MS-OXCMSG].

3.2.1 Abstract Data Model

This section describes a conceptual model of possible data organization that an implementation maintains to participate in this protocol. The described organization is provided to facilitate the explanation of how the protocol behaves. This document does not mandate that implementations adhere to this model as long as their external behavior is consistent with that described in this document.

This protocol uses the abstract data model that is specified in [MS-OXCMSG] section 3.1.1 with the following adaptations:

- The SMS object and MMS object are extensions of the Message object.
- An SMS object and MMS object are created in the Drafts folder, the Inbox folder, or the Sent Items folder, which are special folders, unless the MUA explicitly specifies another folder. For details about special folders, see [MS-OXOSFLD].

3.2.2 Timers

None.

3.2.3 Initialization

None.

3.2.4 Higher-Layer Triggered Events

None.

3.2.5 Message Processing Events and Sequencing Rules

The server responds to client requests as specified in [MS-OXCMSG] section 3.2.5.

3.2.6 Timer Events

None.

3.2.7 Other Local Events

None.
4 Protocol Examples

4.1 Sample SMS Object

A user creates an SMS text message, types in some text, and sends it. The following is a description of what a client might do to accomplish the user's intentions and the responses a server might return. For more details about remote operations (ROPs), see [MS-OXCPRPT] and [MS-OXCMSG].

Before manipulating SMS objects, the client asks the server to map the named properties to property IDs by sending a RopGetPropertyIDsFromNames ROP request ([MS-OXCROPS] section 2.2.8.1).

<table>
<thead>
<tr>
<th>Property</th>
<th>Property set GUID</th>
<th>NameID</th>
</tr>
</thead>
<tbody>
<tr>
<td>PidNameOMSMobileModel</td>
<td>{00020329-0000-0000-C000-000000000046}</td>
<td>OMSMobileModel</td>
</tr>
<tr>
<td>PidNameOMSAccountGuid</td>
<td>{00020329-0000-0000-C000-000000000046}</td>
<td>OMSAccountGuid</td>
</tr>
<tr>
<td>PidNameOMSServiceType</td>
<td>{00020329-0000-0000-C000-000000000046}</td>
<td>OMSServiceType</td>
</tr>
<tr>
<td>PidNameOMSSourceType</td>
<td>{00020329-0000-0000-C000-000000000046}</td>
<td>OMSSourceType</td>
</tr>
</tbody>
</table>

The server might send a RopGetPropertyIDsFromNames ROP response with the following property IDs, which are used in the example that follows. (The actual property IDs are at the discretion of the server.)

<table>
<thead>
<tr>
<th>Property</th>
<th>Property ID</th>
</tr>
</thead>

To create an SMS object, the client uses the RopCreateMessage ROP ([MS-OXCROPS] section 2.2.6.2). The server returns a success code and a handle to a Message object.

After the user inputs the content for the SMS object, the client transmits the data to the server by using the RopSetProperties ROP ([MS-OXCROPS] section 2.2.8.6).

</tr>
</tbody>
</table>

When the user sends the message, the client commits the properties on the server by using the **RopSaveChangesMessage** ROP ([MS-OXCROPS] section 2.2.6.3) and then releases the SMS object by using the **RopRelease** ROP ([MS-OXCROPS] section 2.2.15.3). The client then submits the message to an SMS provider by using the **RopSubmitMessage** ROP ([MS-OXCROPS] section 2.2.7.1).

The values of some properties change during the processing of the **RopSaveChangesMessage** ROP, but the properties defined in this specification do not change.

### 4.2 Sample MMS Object

A user creates an **MMS** message, gives it a subject, types some text, attaches a picture, and sends it. The following is a description of what a client might do to accomplish the user's intentions and the responses a server might return. For more details about **ROPs**, see [MS-OXCSRPT] and [MS-OXCMSSG].

Before manipulating an **MMS object**, the client asks the server to map the named properties to **property IDs** by sending a **RopGetPropertyIDsFromNames** ROP request ([MS-OXCROPS] section 2.2.8.1).

<table>
<thead>
<tr>
<th>Property</th>
<th>Property set GUID</th>
<th>NameID</th>
</tr>
</thead>
<tbody>
<tr>
<td>PidNameOMSMobileModel (section 2.2.1.6)</td>
<td>{00020329-0000-0000-C00000000046}</td>
<td>OMSMobileModel</td>
</tr>
<tr>
<td>PidNameOMSAccountGuid (section 2.2.1.1)</td>
<td>{00020329-0000-0000-C00000000046}</td>
<td>OMSAccountGuid</td>
</tr>
<tr>
<td>PidNameOMSServiceType (section 2.2.1.3)</td>
<td>{00020329-0000-0000-C00000000046}</td>
<td>OMSServiceType</td>
</tr>
<tr>
<td>PidNameOMSSourceType (section 2.2.1.4)</td>
<td>{00020329-0000-0000-C00000000046}</td>
<td>OMSSourceType</td>
</tr>
</tbody>
</table>

The server might send a **RopGetPropertyIDsFromNames** ROP response with the following property IDs, which are used in the example that follows. (The actual property IDs are at the discretion of the server.)

<table>
<thead>
<tr>
<th>Property</th>
<th>Property ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>PidNameOMSMobileModel</td>
<td>0x84CE</td>
</tr>
<tr>
<td>PidNameOMSAccountGuid</td>
<td>0x84CF</td>
</tr>
<tr>
<td>PidNameOMSServiceType</td>
<td>0x84D0</td>
</tr>
<tr>
<td>PidNameOMSSourceType</td>
<td>0x84D1</td>
</tr>
</tbody>
</table>
To create an MMS object, the client uses the **RopCreateMessage** ROP ([MS-OXCROPS] section 2.2.6.2). The server returns a success code and a `handle` to an object.

After the user inputs the content for the MMS object, the client transmits the data to the server by using the **RopSetProperties** ROP ([MS-OXCROPS] section 2.2.8.6).

<table>
<thead>
<tr>
<th>Property</th>
<th>Property ID</th>
<th>Data type</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>PidNameOMSAccountGuid</td>
<td>0x84CF</td>
<td>PtypString ([MS-OXCDATA] section 2.11.1)</td>
<td>{01234567-0123-0123-0123-0123456789AB}</td>
</tr>
<tr>
<td>PidNameOMSMobileModel</td>
<td>0x84CE</td>
<td>PtypString</td>
<td>(empty)</td>
</tr>
<tr>
<td>PidNameOMSServiceType</td>
<td>0x84D0</td>
<td>PtypInteger32 ([MS-OXCDATA] section 2.11.1)</td>
<td>0x000000004</td>
</tr>
<tr>
<td>PidNameOMSSourceType</td>
<td>0x84D1</td>
<td>PtypInteger32</td>
<td>0x000000000</td>
</tr>
<tr>
<td>PidTagInternetCodepage</td>
<td>0x3FDE</td>
<td>PtypInteger32</td>
<td>0xffffffffFDE9</td>
</tr>
<tr>
<td>PidTagHtml</td>
<td>0x1013</td>
<td>PtypBinary ([MS-OXCDATA] section 2.11.1)</td>
<td>(The content of this property is given following the table.)</td>
</tr>
<tr>
<td>PidTagIconIndex</td>
<td>0x1080</td>
<td>PtypInteger32</td>
<td>0xffffffffFFFF</td>
</tr>
<tr>
<td>PidTagMessageClass</td>
<td>0x001A</td>
<td>PtypString</td>
<td>IPM.Note.Mobile.MMS</td>
</tr>
<tr>
<td>PidTagMessageFlags</td>
<td>0x0E07</td>
<td>PtypInteger32</td>
<td>Flags: 0x000000018 MSGFLAG_UNSENT MSGFLAG_HASATTACH</td>
</tr>
<tr>
<td>PidTagNormalizedSubject</td>
<td>0x0E1d</td>
<td>PtypString</td>
<td>Here's the photo.</td>
</tr>
<tr>
<td>PidTagSubjectPrefix</td>
<td>0x003d</td>
<td>PtypString</td>
<td>(empty)</td>
</tr>
</tbody>
</table>

The `PidTagHtml` property is a binary property containing the following text.

```html
<HTML>
<BODY>
<IMG SRC="cid:Att1.jpg@AB1B43B2B0594564.B94EF7AB12B49BA" border="0">
<br>
This is the photo you asked for.
<br>
<a href="cid:Att0.txt@AB1B43B2B0594564.B94EF7AB12B49BA"/>
</BODY>
</HTML>
```

The client allocates space for a data file in the message by using the **RopCreateAttachment** ROP ([MS-OXCROPS] section 2.2.6.13). In response, the server returns a success code and a handle to an **Attachment object**. The client uses this handle with the **RopSetProperties** ROP ([MS-OXCROPS] section 2.2.8.6) to transmit data about the attachment to the server.
The client sets the contents of the attachment by using the attachment handle with the **RopOpenStream** ROP ([MS-OXCROPS] section 2.2.9.1), passing in the **PidTagAttachDataBinary** property ([MS-OXCROPS] section 2.589) as the property to open. With the handle returned from the **RopOpenStream** ROP, the client calls the **RopWriteStream** ROP ([MS-OXCROPS] section 2.2.9.3), writing out the contents of the Synchronized Multimedia Integration Language (SMIL) file, the format of which is described in [SMIL2.1], describing the layout of the MMS message. The client follows this with the **RopRelease** ROP ([MS-OXCROPS] section 2.2.15.3) on the stream handle, then commits the changes by using the **RopSaveChangesAttachment** ROP ([MS-OXCROPS] section 2.2.6.15), releases the handle to the attachment by using the **RopRelease** ROP.

The client repeats the process from the **RopCreateAttachment** ROP ([MS-OXCROPS] section 2.2.6.13) for the **RopRelease** ROP with the attachment handle twice more, once for a plain-text version of the body, and once for the image. The attachment containing the body uses the following properties and values with the **RopSetProperties** ROP.

<table>
<thead>
<tr>
<th>Property</th>
<th>Property ID</th>
<th>Data type</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>PidTagAttachmentHidden</strong></td>
<td>0x7FFE</td>
<td><strong>PtypBoolean</strong> [MS-OXCDATA] section 2.11.1)</td>
<td>0x01</td>
</tr>
<tr>
<td><strong>PidTagAttachMethod</strong></td>
<td>0x3705</td>
<td><strong>PtypInteger3</strong></td>
<td>0x00000001 (ATTACH_BY_VALUE)</td>
</tr>
<tr>
<td><strong>PidTagAttachContentId</strong></td>
<td>0x3712</td>
<td><strong>PtypString</strong></td>
<td><a href="mailto:MMS.smil@AB1B43B2B0594564.B94EF7ABB12B49BA">MMS.smil@AB1B43B2B0594564.B94EF7ABB12B49BA</a></td>
</tr>
<tr>
<td><strong>PidTagAttachMimeTag</strong></td>
<td>0x370E</td>
<td><strong>PtypString</strong></td>
<td>application/smil</td>
</tr>
<tr>
<td><strong>PidTagAttachLongFilename</strong></td>
<td>0x3707</td>
<td><strong>PtypString</strong></td>
<td>MMS.smil</td>
</tr>
</tbody>
</table>

The **RopOpenStream** ROP for the plain-text body is also on the **PidTagAttachDataBinary** property, but the contents written are **Unicode** text. The last attachment the client creates contains the image, and the **RopSetProperties** ROP sends the following data.

<table>
<thead>
<tr>
<th>Property</th>
<th>Property ID</th>
<th>Data type</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>PidTagAttachmentHidden</strong></td>
<td>0x7FFE</td>
<td><strong>PtypBoolean</strong></td>
<td>0x01</td>
</tr>
<tr>
<td><strong>PidTagAttachMethod</strong></td>
<td>0x3705</td>
<td><strong>PtypInteger3</strong></td>
<td>0x00000001 (ATTACH_BY_VALUE)</td>
</tr>
<tr>
<td><strong>PidTagAttachContentId</strong></td>
<td>0x3712</td>
<td><strong>PtypString</strong></td>
<td><a href="mailto:Att0.txt@AB1B43B2B0594564.B94EF7ABB12B49BA">Att0.txt@AB1B43B2B0594564.B94EF7ABB12B49BA</a></td>
</tr>
<tr>
<td><strong>PidTagAttachMimeTag</strong></td>
<td>0x370E</td>
<td><strong>PtypString</strong></td>
<td>text/plain</td>
</tr>
<tr>
<td><strong>PidTagAttachLongFilename</strong></td>
<td>0x3707</td>
<td><strong>PtypString</strong></td>
<td>1.txt</td>
</tr>
</tbody>
</table>
The contents of the `PidTagAttachDataBinary` property on the image attachment are the binary contents of the image file.

When the user sends the message, the client commits the properties on the server by using the `RopSaveChangesMessage` ROP ([MS-OXCROPS] section 2.2.6.3) and then releases the MMS object by using the `RopRelease` ROP. The client then submits the message to an MMS provider by using the `RopSubmitMessage` ROP ([MS-OXCROPS] section 2.2.7.1).

The values of some properties change during the processing of the `RopSaveChangesMessage` ROP, but the properties specified in this protocol do not change.
5 Security

5.1 Security Considerations for Implementers

There are no special security considerations specific to the SMS and MMS Object Protocol. General security considerations pertaining to the underlying transport apply, as specified in [MS-OXCMSG] and [MS-OXCPRPT].

5.2 Index of Security Parameters

None.
Appendix A: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include updates to those products.

- Microsoft Exchange Server 2003
- Microsoft Exchange Server 2007
- Microsoft Exchange Server 2010
- Microsoft Office Outlook 2003
- Microsoft Office Outlook 2007
- Microsoft Outlook 2010
- Microsoft Outlook 2024 Preview

Exceptions, if any, are noted in this section. If an update version, service pack or Knowledge Base (KB) number appears with a product name, the behavior changed in that update. The new behavior also applies to subsequent updates unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms "SHOULD" or "SHOULD NOT" implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term "MAY" implies that the product does not follow the prescription.

<1> Section 2.2.2.1: Office Outlook 2007 does not set the PidTagIconIndex property on SMS objects or MMS objects.

<2> Section 2.2.2.3: Microsoft Office Outlook 2007 Service Pack 1 sets both the PidTagBody property ([MS-OXCMSG] section 2.2.1.58.1) and the PidTagHtml property ([MS-OXCMSG] section 2.2.1.58.9) on SMS objects.

<3> Section 2.2.2.3: Office Outlook 2007 SP1 sets both the PidTagBody property ([MS-OXCMSG] section 2.2.1.58.1) and the PidTagHtml property ([MS-OXCMSG] section 2.2.1.58.9) on MMS objects.
7 Change Tracking

This section identifies changes that were made to this document since the last release. Changes are classified as Major, Minor, or None.

The revision class **Major** means that the technical content in the document was significantly revised. Major changes affect protocol interoperability or implementation. Examples of major changes are:

- A document revision that incorporates changes to interoperability requirements.
- A document revision that captures changes to protocol functionality.

The revision class **Minor** means that the meaning of the technical content was clarified. Minor changes do not affect protocol interoperability or implementation. Examples of minor changes are updates to clarify ambiguity at the sentence, paragraph, or table level.

The revision class **None** means that no new technical changes were introduced. Minor editorial and formatting changes may have been made, but the relevant technical content is identical to the last released version.

The changes made to this document are listed in the following table. For more information, please contact dochelp@microsoft.com.
