

[MS-OXSHRMSG]: Sharing Message Attachment Schema

Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation for protocols, file formats, languages, standards as well as overviews of the interaction among each of these technologies.
- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you may make copies of it in order to develop implementations of the technologies described in the Open Specifications and may distribute portions of it in your implementations using these technologies or your documentation as necessary to properly document the implementation. You may also distribute in your implementation, with or without modification, any schema, IDL's, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that may cover your implementations of the technologies described in the Open Specifications. Neither this notice nor Microsoft's delivery of the documentation grants any licenses under those or any other Microsoft patents. However, a given Open Specification may be covered by Microsoft's Open Specification Promise (available here: <http://www.microsoft.com/interop/osp>) or the Community Promise (available here: <http://www.microsoft.com/interop/cp/default.mspx>). If you would prefer a written license, or if the technologies described in the Open Specifications are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting iplg@microsoft.com.
- **Trademarks.** The names of companies and products contained in this documentation may be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights.

Reservation of Rights. All other rights are reserved, and this notice does not grant any rights other than specifically described above, whether by implication, estoppel, or otherwise.

Tools. The Open Specifications do not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments you are free to take advantage of them. Certain Open Specifications are intended for use in conjunction with publicly available standard specifications and network programming art, and assumes that the reader either is familiar with the aforementioned material or has immediate access to it.

1 Introduction

The Sharing Message Attachment Schema defines the schema for an **XML** document used to establish a sharing relationship between two servers on behalf of client applications. The document contains identification information and encrypted tokens that enable the two servers to authenticate and establish the sharing relationship.

1.1 Glossary

The following terms are defined in [\[MS-OXGLOS\]](#):

XML
XML namespace
XML schema

The following terms are specific to this document:

MAY, SHOULD, MUST, SHOULD NOT, MUST NOT: These terms (in all caps) are used as described in [\[RFC2119\]](#). All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

1.2 References

1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact dochelp@microsoft.com. We will assist you in finding the relevant information. Please check the archive site, <http://msdn2.microsoft.com/en-us/library/E4BD6494-06AD-4ae9-9823-445E921C9624>, as an additional source.

1.2.2 Informative References

None.

1.3 Structure Overview (Synopsis)

The sharing message attachment **XML schema** specifies the authentication and identification information required for two servers to set up a sharing relationship on behalf of client applications. The sharing message is composed of three main elements: Type of invitation, e-mail address and name of the initiator, and the sharing invitation.

1.4 Relationship to Protocols and Other Structures

The sharing message attachment XML schema is used by the Folder Sharing Web Service Protocol ([\[MS-OXWSMSHR\]](#)) to provide authentication and identification information when establishing a shared folder relationship between two servers. Operations defined in the Folder Sharing protocol provide the encrypted token and folder information required by the servers to establish the sharing relationship.

Encrypted data elements of the sharing message structure are defined in [\[MS-OXWSMSHR\]](#). The format of the encrypted data contained in the encrypted data elements is defined in [\[XMLENCL\]](#).

1.5 Applicability Statement

The XML document defined by the Sharing Message Attachment XML schema enables servers to share information on behalf of client applications with less risk of exposing secrets to those client applications. The encrypted data section of the sharing message is passed between the client applications while the information within the sharing message is protected.

1.6 Versioning and Localization

Structure versions: None

Localization: None

1.7 Vendor-Extensible Fields

None

2 Structures

2.1 Sharing Message Namespace

The elements of the sharing message are defined in the following namespace:

<http://schemas.microsoft.com/exchange/sharing/2008/>

Sharing messages use encryption elements defined by [\[XMLENC\]](#):

<http://www.w3.org/2001/04/xmlenc>

Sharing messages use encryption data elements defined by [MS-OXWSMSHR].

<http://schemas.microsoft.com/exchange/services/2006/types>

2.2 Message Sharing Processing Instructions

The following XML processing instruction tag, as specified in [XML], section 2.6, MUST appear in the sharing message file.

```
<?xml version="1.0"?>
```

A formal definition in Augmented Backus-Naur Format (ABNF), as specified in [RFC5234], of the XML processing instructions is as follows.

```
UDC_PI = '<?MicrosoftWindowsSharePointServices ' CONTENT_ID_TYPE '?>' CRLF  
CONTENT_ID_TYPE = 'ContentTypeID="0x010100B4CBD48E029A4AD8B62CB0E41868F2B0"'
```

2.3 Sharing Message Schema

The following sections specify the elements and attributes of the sharing message.

2.3.1 Data Type Type Simple Type

The [Data Type Type](#) simple type defines the valid sharing message types.

```
<xs:simpleType name="t:Data Type Type">  
  <xs:restriction  
    base="xs:string"  
  >  
  <xs:enumeration  
    value="calendar"  
  />  
</xs:restriction>  
</xs:simpleType>
```

Enumeration

The following value is defined by the **t:Data Type Type** simple type:

Value	Description
calendar	The sharing message is for a calendar.

2.3.2 InitiatorType Complex Type

The [InitiatorType](#) complex type specifies the name and e-mail address of the entity initiating the sharing message.

```
<xs:complexType name="InitiatorType">
  <xs:sequence>
    <xs:element name="Name"
      type="xs:string"
    />
    <xs:element name="SmtpAddress"
      type="xs:string"
    />
  </xs:sequence>
</xs:complexType>
```

Child Elements

Element	Type	Description
Name	xs:string	The display name of the entity initiating the sharing message.
SmtpAddress	xs:string	The e-mail address of the entity initiating the sharing message.

2.3.3 InvitationType Complex Type

The [InvitationType](#) complex type contains a list of folders to share and the encrypted information required to set up the shared folders.

```
<xs:complexType name="InvitationType">
  <xs:sequence>
    <xs:element name="Providers"
      type="t:ProvidersType"
    />
  </xs:sequence>
</xs:complexType>
```

Child Elements

Element	Type	Description
Providers	t:ProvidersType	One or more folders to share and the encrypted information required to set up the shared folders.

2.3.4 t:ProviderType Complex Type

The [ProviderType](#) complex type specifies a shared folder name and the encrypted information required to set up the shared folder.

```
<xs:complexType name="ProviderType">
  <xs:sequence>
    <xs:element name="FolderId"
      type="xs:string"
    />
    <xs:element name="EncryptedSharedFolderDataCollection"
      type="t:ArrayOfEncryptedSharedFolderDataType"
    />
  </xs:sequence>
  <xs:attribute name="Type"
    type="xs:string"
  />
  <xs:attribute name="TargetRecipients"
    type="xs:string"
  />
</xs:complexType>
```

Child Elements

Element	Type	Description
FolderId	xs:string	The identifier for the shared folder.
EncryptedSharedFolderDataCollection	t:ArrayOfEncryptedSharedFolderDataType	Encrypted authentication token as specified in [XMLENC] .

Attributes

Name	Type	Description
Type	xs:string	Specifies the sharing provider type. MUST be "ms-exchange-external".
TargetRecipients	xs:string	Specifies a semi-colon delimited list of e-mail addresses that this provider applies to.

2.3.5 t:Providers Complex Type

The [ProvidersType](#) complex type specifies one or more shared folders and the encrypted data required to share the folders.

```
<xs:complexType>
  <xs:sequence>
    <xs:element name="Provider"
      type="t:ProviderType"
      maxOccurs="unbounded"
    />
```

```
</xs:sequence>
</xs:complexType>
```

Child Elements

Element	Type	Description
Provider	t:ProviderType	One or more shared folder providers.

2.3.6 SharingMesasge Element

The [SharingMessage](#) element provides a container for the sharing message elements.

```
<xs:element name="SharingMesasge">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="DataType"
        type="t:DataTypeType"
        />
      <xs:element name="Initiator"
        type="t:InitiatorType"
        />
      <xs:element name="Invitation"
        type="t:InvitationType"
        />
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

Child Elements

Element	Type	Description
DataType	t:DataTypeType	The type of the sharing message.
Initiator	t:InitiatorType	The name and e-mail address of the sender of the sharing message.
Invitation	t:InvitationType	The details of the sharing invitation.

3 Structure Examples

The following is complete XML schema for the [MS-OXSHRMSG] XML document.

[XML Schema]

```
<?xml version="1.0" encoding="utf-8"?>
<xs:schema xmlns:t="http://schemas.microsoft.com/exchange/sharing/2008"
  xmlns:tns="http://schemas.microsoft.com/exchange/sharing/2008"
  xmlns:xs="http://www.w3.org/2001/XMLSchema"
  xmlns:xml="http://www.w3.org/XML/1998/namespace"
  xmlns:enc="http://www.w3.org/2001/04/xmlenc#"
  xmlns:ews="http://schemas.microsoft.com/exchange/services/2006/types"
  targetNamespace="http://schemas.microsoft.com/exchange/sharing/2008"
  elementFormDefault="qualified" version="Exchange2010" id="types">

  <xs:import namespace="http://www.w3.org/2001/04/xmlenc#" />
  <xs:import namespace="http://schemas.microsoft.com/services/exchange/2006/types" />

  <xs:simpleType name="DataTypeType">
    <xs:restriction base="xs:string">
      <xs:enumeration value="calendar"/>
    </xs:restriction>
  </xs:simpleType>

  <xs:complexType name="InitiatorType">
    <xs:sequence>
      <xs:element name="Name" type="xs:string"/>
      <xs:element name="SmtpAddress" type="xs:string"/>
    </xs:sequence>
  </xs:complexType>

  <xs:complexType name="ProviderType">
    <xs:sequence>
      <xs:element name="FolderId" type="xs:string"/>
      <xs:element name="EncryptedSharedFolderDataCollection"
        type="ews:ArrayOfEncryptedSharedFolderDataType"/>
    </xs:sequence>
    <xs:attribute name="Type" type="xs:string"/>
    <xs:attribute name="TargetRecipients" type="xs:string" />
  </xs:complexType>

  <xs:complexType name="ProvidersType">
    <xs:sequence>
      <xs:element name="Provider" type="t:ProviderType" maxOccurs="unbounded" />
    </xs:sequence>
  </xs:complexType>

  <xs:complexType name="InvitationType">
    <xs:sequence>
      <xs:element name="Title" type="xs:string" minOccurs="0" />
      <xs:element name="Providers" type="t:ProvidersType"/>
    </xs:sequence>
  </xs:complexType>

  <xs:complexType name="RequestType">
```

```

<xs:sequence>
  <xs:element name="Providers" type="t:ProvidersType" />
</xs:sequence>
</xs:complexType>

<xs:complexType name="AcceptOfRequestType">
  <xs:sequence>
    <xs:element name="Title" type="xs:string" minOccurs="0" />
    <xs:element name="Providers" type="t:ProvidersType" />
  </xs:sequence>
</xs:complexType>

<xs:complexType name="DenyOfRequestType">
  <xs:sequence>
    <xs:element name="Providers" type="t:ProvidersType" />
  </xs:sequence>
</xs:complexType>

<xs:element name="SharingMessage">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="DataType" type="t:DataTypeType"/>
      <xs:element name="Initiator" type="t:InitiatorType"/>
      <xs:choice>
        <xs:element name="AcceptOfRequest" type="t:AcceptOfRequestType" />
        <xs:element name="DenyOfRequest" type="t:DenyOfRequestType" />
        <xs:sequence>
          <xs:element name="RequestType" type="t:RequestType" minOccurs="0" />
          <xs:element name="Invitation" type="t:InvitationType" minOccurs="0" />
        </xs:sequence>
      </xs:choice>
    </xs:sequence>
  </xs:complexType>
</xs:element>
</xs:schema>

```

4 Security Considerations

5 Appendix A: Product Behavior

The information in this specification is applicable to the following product versions. References to product versions include released service packs.

- Windows 2000
- Windows XP
- Windows Server 2003
- Windows Vista
- Windows Server 2008 operating system

Exceptions, if any, are noted below. If a service pack number appears with the product version, behavior changed in that service pack. The new behavior also applies to subsequent service packs of the product unless otherwise specified.

Unless otherwise specified, any statement of optional behavior in this specification prescribed using the terms SHOULD or SHOULD NOT implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies that product does not follow the prescription.

6 Change Tracking

No table of changes is available. The document is either new or has had no changes since its last release.
