[MS-OXWCONFIG]: Web Service Configuration Protocol Specification

documentation for past or current releases as specifically noted in the document, as applicable; it is preliminary documentation for the pre-release (beta) versions. Microsoft will release final documentation in connection with the commercial release of the updated or new version of this technology. As the documentation may change between this preliminary version and the final version of this technology, there are risks in relying on preliminary documentation. To the extent that you incur additional development obligations or any other costs as a result of relying on this preliminary documentation, you do so at your own risk.

Revision Summary

Date	Revision History	Revision Class	Comments
04/10/2009	.1	Major	Initial Availability.
07/15/2009	1.0	Major	Revised and edited for technical content.
11/04/2009	1.1.0	Minor	Updated the technical content.
02/10/2010	2.0.0	Major	Updated and revised the technical content.
05/05/2010	3.0.0	Major	Updated and revised the technical content.
08/04/2010	3.1	Minor	Clarified the meaning of the technical content.
11/03/2010	3.2	Minor	Clarified the meaning of the technical content.
03/18/2011	3.2	No change	No changes to the meaning, language, or formatting of the technical content.
08/05/2011	3.3	Minor	Clarified the meaning of the technical content.
10/07/2011	3.3	No change	No changes to the meaning, language, or formatting of the technical content.
01/20/2012	4.0	Major	Significantly changed the technical content.
04/27/2012	4.0	No change	No changes to the meaning, language, or formatting of the technical content.

Table of Contents

1 Introduction

This document specifies the Web Service Configuration Protocol, which sends the request-response messages for retrieving configuration information that describes policy that clients use to either enforce or advise users.

Sections 1.8, 2, and 3 of this specification are normative and can contain the terms MAY, SHOULD, MUST, MUST NOT, and SHOULD NOT as defined in RFC 2119. Sections 1.5 and 1.9 are also normative but cannot contain those terms. All other sections and examples in this specification are informative.

1.1 Glossary

The following terms are defined in [MS-GLOS]:

domain
Hypertext Transfer Protocol (HTTP)
Hypertext Transfer Protocol over Secure Sockets Layer (HTTPS)
XML

The following terms are defined in [MS-OXGLOS]:

mail tip
mailbox
recipient
Simple Mail Transfer Protocol (SMTP)
SOAP message
Web Services Description Language (WSDL)
WSDL message

The following terms are specific to this document:

organization policy: A policy that is comprised of a condition part and an action part. The condition part is expressed as a sequence of predicates that are evaluated by an e-mail client. The action part specifies what action the e-mail client takes if the condition is met. Organization policies are sets of conditions and associated actions that apply within an organization.

MAY, SHOULD, MUST, SHOULD NOT, MUST NOT: These terms (in all caps) are used as described in [RFC2119]. All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

1.2 References

References to Microsoft Open Specifications documentation do not include a publishing year because links are to the latest version of the documents, which are updated frequently. References to other documents include a publishing year when one is available.

1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact dochelp@microsoft.com. We will assist you in finding the relevant information. Please check the archive site, http://msdn2.microsoft.com/en-us/library/E4BD6494-06AD-4aed-9823-445E921C9624, as an additional source.

1.3 Overview

The Web Service Configuration Protocol sends the request-response messages that retrieve **organization policy** configuration information for a **mailbox**. Clients use the **SOAP** protocol [SOAP1.1] to contact the Web Service Configuration service.

1.4 Relationship to Other Protocols

The Web Service Configuration Protocol uses SOAP over **HTTP** and SOAP over **HTTPS**, as shown in the following figures.

Figure 1: SOAP over HTTP

Release: Sunday, April 22, 2012

Service Configuration protocol — This Protocol

SOAP

HTTPS

TCP

IP

Industry Standard
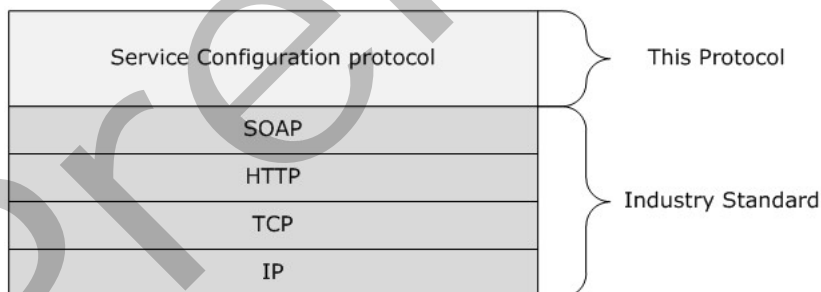

Figure 2: SOAP over HTTPS

1.5 Prerequisites/Preconditions

The URL of the Web Service Configuration Protocol can be retrieved by using the Autodiscover Publishing and Lookup SOAP-Based Web Service Protocol [MS-OXWSADISC].

1.6 Applicability Statement

The Web Service Configuration Protocol can be used when access to organization policy configuration information is available and when communication with the server is enabled for SOAP over HTTP or SOAP over HTTPS.

1.7 Versioning and Capability Negotiation

This document covers versioning issues in the following areas:

- Supported Transports: This protocol uses SOAP 1.1, as specified in section 2.1.

- Protocol Versions: This protocol specifies only one **WSDL** portType version.

- Security and Authentication Methods: This protocol relies on the Web server that is hosting it to perform authentication.

- Capability Negotiation: None.

1.8 Vendor-Extensible Fields

None.

1.9 Standards Assignments

None.

2   Messages

In the following sections, the schema definition might differ from the processing rules imposed by the protocol. The WSDL in this specification provides a base description of the protocol. The schema in this specification provides a base description of the message syntax. The text that specifies the WSDL and schema might specify restrictions that reflect actual protocol behavior. For example, the schema definition might allow for an element to be **empty**, **null**, or **not present** but the behavior of the protocol as specified restricts the same elements to being **non-empty**, **not null**, or **present**.

2.1   Transport

The SOAP version supported is SOAP 1.1. For details, see [SOAP1.1].

2.2   Common Message Syntax

This section contains common definitions that are used by this protocol. The syntax of the definitions uses XML schema, as defined in [XMLSCHEMA1] and [XMLSCHEMA2], and Web Services Description Language (WSDL), as defined in [WSDL].

2.2.1   Namespaces

This specification defines and references various XML namespaces by using the mechanisms specified in [XMLNS]. Although this specification associates a specific **XML** namespace prefix for each XML namespace that is used, the choice of any particular XML namespace prefix is implementation-specific and not significant for interoperability.

Prefix	Namespace URI	Reference
soap	http://schemas.xmlsoap.org/WSDL/soap/	[SOAP1.1]
tns	http://schemas.microsoft.com/exchange/services/2006/messages	[MS-OXWCONFIG]
xs	http://www.w3.org/2001/XMLSchema	[XMLSCHEMA1]
targetNamespace	http://schemas.microsoft.com/exchange/services/2006/messages	[MS-OXWCONFIG]
wsdl	http://schemas.xmlsoap.org/WSDL/	[WSDL]
t	http://schemas.microsoft.com/exchange/services/2006/types	[MS-OXWCONFIG]
m	http://schemas.microsoft.com/exchange/services/2006/messages	[MS-OXWCONFIG]

2.2.2   Simple Types

This specification does not define any common XML schema simple type definitions.

2.2.3   Complex Types

This specification does not define any common XML schema complex type definitions.

Release: Sunday, April 22, 2012

2.2.4 Elements

This specification does not define any common XML schema element definitions.

2.2.5 Attributes

This specification does not define any common XML schema attribute definitions.

2.2.6 Groups

This specification does not define any common XML schema group definitions.

2.2.7 Attribute Groups

This specification does not define any common XML schema attribute group definitions.

2.2.8 Messages

This specification does not define any common **WSDL message** definitions.

3   Protocol Details

The client side of this protocol is simply a pass-through. That is, no additional timers or other state is required on the client side of this protocol. Calls made by the higher-layer protocol or application are passed directly to the transport, and the results returned by the transport are passed directly back to the higher-layer protocol or application.

3.1   ExchangeServicePortType Server Details

The Web Service Configuration Protocol defines a single port type.

```
<wsdl:portType name="ExchangeServicePortType">
   <wsdl:operation name="GetServiceConfiguration">
      <wsdl:input message="tns:GetServiceConfigurationSoapIn" />
      <wsdl:output message="tns:GetServiceConfigurationSoapOut" />
   </wsdl:operation>
</wsdl:portType>
```

Operation	Description
GetServiceConfiguration	Gets organization policy configuration information for a mailbox.

3.1.1   Abstract Data Model

The Web Service Configuration Protocol is a stateless protocol.

3.1.2   Timers

None.

3.1.3   Initialization

None.

3.1.4   Message Processing Events and Sequencing Rules

This protocol includes the operation that is listed in the following table.

Operation	Description
GetServiceConfiguration (section 3.1.4.1)	Gets organization policy configuration information for a mailbox.

3.1.4.1   GetServiceConfiguration

The **GetServiceConfiguration** operation gets the service configuration for a mailbox.

```
<wsdl:operation name="GetServiceConfiguration">
    <wsdl:input message="tns:GetServiceConfigurationSoapIn" />
    <wsdl:output message="tns:GetServiceConfigurationSoapOut" />
</wsdl:operation>
```

Request

Message format	Description
tns:GetServiceConfigurationSoapIn	Specifies the **SOAP message** that gets the configuration information for a mailbox.

Response

Message format	Description
tns:GetServiceConfigurationSoapOut	Specifies the SOAP message that is returned by the server in response.

3.1.4.1.1 Simple Types

The following XML schema simple definitions are specific to the **GetServiceConfiguration** operation.

3.1.4.1.1.1 t:ProtectionRuleActionKindType Simple Type

The **ProtectionRuleActionKindType** simple type specifies the actions that are supported by the protection rules service.

```
<xs:simpleType name="ProtectionRuleActionKindType">
  <xs:restriction
    base="xs:string"
  >
    <xs:enumeration
      value="RightsProtectMessage"
     />
  </xs:restriction>
</xs:simpleType>
```

Enumeration

The following value is defined by the **ProtectionRuleActionKindType** simple type:

Value	Description
RightsProtectMessage	The specific permission template to apply to the message.

Only the **RightsProtectMessage** action is supported. The value MUST be **RightsProtectMessage**. The protection rules are used to apply a specific set of permissions.

3.1.4.1.1.2 t:ProtectionRuleAllInternalType Simple Type

The **ProtectionRuleAllInternalType** simple type specifies the AllInternal predicate. The semantics of *AllInternal* is that the predicate matches if all recipients of the e-mail message are internal to the organization of the sender of that e-mail message.

```
<xs:simpleType name="ProtectionRuleAllInternalType">
  <xs:restriction
    base="xs:string"
  >
```

```
        <xs:length
         value="0"
        />
    </xs:restriction>
  </xs:simpleType>
```

3.1.4.1.1.3   t:ProtectionRuleTrueType Simple Type

The **ProtectionRuleTrueType** simple type specifies the True predicate. The semantics of True is that the condition always matches.

```
<xs:simpleType name="ProtectionRuleTrueType">
  <xs:restriction
    base="xs:string"
  >
    <xs:length
     value="0"
    />
  </xs:restriction>
</xs:simpleType>
```

3.1.4.1.1.4   t:ProtectionRuleValueType Simple Type

The **ProtectionRuleValueType** simple type specifies additional arguments to the RecipientIs and SenderDepartments predicates. The value MUST be a string with a minimum length of one character.

```
<xs:simpleType name="ProtectionRuleValueType">
  <xs:restriction
    base="xs:string"
  >
    <xs:minLength
     value="1"
    />
  </xs:restriction>
</xs:simpleType>
```

3.1.4.1.1.5   t:ServiceConfigurationType Simple Type

Note   Some of the information in this section is subject to change because it applies to a preliminary implementation of the protocol or structure. For information about specific differences between versions, see the behavior notes that are provided in the Product Behavior appendix.

The **ServiceConfigurationType** simple type specifies the service configurations that are returned in the response.

```
<xs:simpleType name="ServiceConfigurationType">
  <xs:list>
    <xs:simpleType>
      <xs:restriction
```

```
          base="xs:string"
      >
          <xs:enumeration
           value="MailTips"
          />
          <xs:enumeration
           value="UnifiedMessagingConfiguration"
          />
          <xs:enumeration
           value="ProtectionRules"
          />
          <xs:enumeration value="PolicyNudges" />
        </xs:restriction>
      </xs:simpleType>
    </xs:list>
  </xs:simpleType>
```

The following table lists the values that are defined by the **ServiceConfigurationType** simple type.

Value	Description
MailTips	Represents the **mail tips** service configuration.
UnifiedMessagingConfiguration	Represents the unified messaging service configuration.
ProtectionRules	Represents the protection rules service configuration.
PolicyNudges	Represents the policy nudges service configuration.<1>

3.1.4.1.2   Complex Types

The following XML schema complex type definitions are specific to this operation.

3.1.4.1.2.1   t:ArrayOfProtectionRulesType Complex Type

The **ArrayOfProtectionRulesType** complex type specifies an array of protection rules.

```
  <xs:complexType name="ArrayOfProtectionRulesType">
    <xs:sequence>
      <xs:element name="Rule"
        type="t:ProtectionRuleType"
        minOccurs="0"
        maxOccurs="unbounded"
      />
    </xs:sequence>
  </xs:complexType>
```

Child Elements

Element	Type	Description
Rule	**t:ProtectionRuleType** (section 3.1.4.1.2.16)	Contains a single protection rule. This element can occur zero or more times. This element occurs zero times when no

Element	Type	Description
		protection rules are defined by the organization. It occurs one or more times if at least one rule is defined by the organization.

3.1.4.1.2.2   m:ArrayOfServiceConfigurationResponseMessageType Complex Type

The **ArrayOfServiceConfigurationResponseMessageType** complex type specifies an array of service configuration response messages.

```
<xs:complexType name="ArrayOfServiceConfigurationResponseMessageType">
  <xs:sequence>
    <xs:element name="ServiceConfigurationResponseMessageType"
      type="m:ServiceConfigurationResponseMessageType"
      maxOccurs="unbounded"
      minOccurs="0"
     />
  </xs:sequence>
</xs:complexType>
```

Child Elements

Element	Type	Description
ServiceConfigurationResponseMessage Type	**m:ServiceConfigurationResponseMessage Type** (section 3.1.4.1.2.18)	Contains a service configuratio n response message. This element MUST occur at least once and can occur two or more times.

3.1.4.1.2.3   m:ArrayOfServiceConfigurationType Complex Type

The **ArrayOfServiceConfigurationType** complex type specifies the requested service configurations for a **GetServiceConfigurationSoapIn** message (section 3.1.4.1.7.1).

```
<xs:complexType name="ArrayOfServiceConfigurationType">
  <xs:choice
    maxOccurs="unbounded"
    minOccurs="1"
  >
    <xs:element name="ConfigurationName"
      type="t:ServiceConfigurationType"
     />
  </xs:choice>
```

```
</xs:complexType>
```

Child Elements

Element	Type	Description
ConfigurationName	t:ServiceConfigurationType	Specifies the service configuration that is returned in the response. This simple type MUST occur at least once.

3.1.4.1.2.4   t:ConfigurationRequestDetailsType

Note   *All of the information in this section is subject to change because it applies to a preliminary implementation of the protocol or structure.*

The **ConfigurationRequestDetailsType** complex type contains the policy nudges details.<2>

```
<xs:complexType name="ConfigurationRequestDetailsType">
  <xs:choice minOccurs="1" maxOccurs="1">
    <xs:any processContents="skip" minOccurs="0" maxOccurs="unbounded" namespace="##any"/>
  </xs:choice>
</xs:complexType>
```

3.1.4.1.2.5   m:GetServiceConfigurationResponseMessageType Complex Type

The **GetServiceConfigurationResponseMessageType** type contains the response message for a **GetServiceConfiguration** operation. The **GetServiceConfigurationResponseMessageType** type extends the **ResponseMessageType**.

```
<xs:complexType name="GetServiceConfigurationResponseMessageType">
  <xs:complexContent>
    <xs:extension
      base="m:ResponseMessageType"
    >
      <xs:sequence>
        <xs:element name="ResponseMessages"
          type="m:ArrayOfServiceConfigurationResponseMessageType"
          minOccurs="0"
          maxOccurs="1"
        />
      </xs:sequence>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

Child Elements

Element	Type	Description
ResponseMessages	**m:ArrayOfServiceConfigurationResponseMessageType** (section 3.1.4.1.2.2)	Contains an array of service

Element	Type	Description
		configuration responsemessages. This element MUST occur if there are configuration settings.

3.1.4.1.2.6   m:GetServiceConfigurationType Complex Type

Note   *Some of the information in this section is subject to change because it applies to a preliminary implementation of the protocol or structure. For information about specific differences between versions, see the behavior notes that are provided in the Product Behavior appendix.*

The **GetServiceConfigurationType** complex type specifies the requested service configurations and identifies the sender or recipient actor who is making the request. The recipient actor can be different from the user who authenticated with the server. The **GetServiceConfigurationType** type extends the **m:BaseRequestType** complex type.

```
<xs:complexType name="GetServiceConfigurationType">
  <xs:complexContent>
    <xs:extension
      base="m:BaseRequestType"
    >
      <xs:sequence>
        <xs:element name="ActingAs"
          type="t:EmailAddressType"
          maxOccurs="1"
          minOccurs="0"
         />
        <xs:element name="RequestedConfiguration"
          type="m:ArrayOfServiceConfigurationType"
          maxOccurs="1"
          minOccurs="1"
         />
        <xs:element minOccurs="0" maxOccurs="1" name="ConfigurationRequestDetails"
type="t:ConfigurationRequestDetailsType" />
      </xs:sequence>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

The following table lists the child elements of the **GetServiceConfigurationType** complex type.

Element name	Type	Description
ActingAs	**t:EmailAddressType**	Specifies who the caller is sending as. If this element is not present, the authenticated user is assumed to be the sender. The **ActingAs** element

Element name	Type	Description
		MUST be included for requesting sender hints. This element is optional.
RequestedConfiguration	**m:ArrayOfServiceConfigurationType** (section 3.1.4.1.2.3)	Specifies the requested service configurations. This element MUST be present.
ConfigurationRequestDetails	**t:ConfigurationRequestDetailsType**	<3>

3.1.4.1.2.7 t:MailTipsServiceConfiguration Complex Type

The **MailTipsServiceConfiguration** complex type contains service configuration for the mail tips service. The **MailTipsServiceConfiguration** complex type extends the **ServiceConfigurationType** simple type (section 3.1.4.1.1.5).

```
<xs:complexType name="MailTipsServiceConfiguration">
  <xs:complexContent>
    <xs:extension
      base="t:ServiceConfiguration"
    >
      <xs:sequence>
        <xs:element name="MailTipsEnabled"
          type="xs:boolean"
          maxOccurs="1"
          minOccurs="1"
         />
        <xs:element name="MaxRecipientsPerGetMailTipsRequest"
          type="xs:int"
          maxOccurs="1"
          minOccurs="1"
         />
        <xs:element name="MaxMessageSize"
          type="xs:int"
          maxOccurs="1"
          minOccurs="1"
         />
        <xs:element name="LargeAudienceThreshold"
          type="xs:int"
          maxOccurs="1"
          minOccurs="1"
         />
        <xs:element name="ShowExternalRecipientCount"
          type="xs:boolean"
          maxOccurs="1"
          minOccurs="1"
         />
        <xs:element name="InternalDomains"
          type="t:SmtpDomainList"
          maxOccurs="1"
          minOccurs="1"
         />
      </xs:sequence>
    </xs:extension>
  </xs:complexContent>
```

```
                       </xs:complexType>
```

Child Elements

Element	Type	Description
MailTipsEnabled	**xs:boolean**	Specifies whether the mail tips service is available.
MaxRecipientsPerGetMailTipsRequest	**xs:int**	Specifies the maximum number of **recipients** that can be passed to the **GetMailTips** operation (section). This element MUST be included if the **MailTipsServiceConfiguration** complex type is used and MUST be a non-negative integer.
MaxMessageSize	**xs:int**	Specifies the maximum message size that the user identified by the <ActingAs> element can send. This element MUST be included if the **MailTipsServiceConfiguration** complex type is used and MUST be a non-negative integer.
LargeAudienceThreshold	**xs:int**	Specifies the large audience threshold for clients. This element MUST be included if the **MailTipsServiceConfiguration** complex type is used and MUST be a non-negative integer.
ShowExternalRecipientCount	**xs:boolean**	Specifies whether consumers of the **GetMailTips** operation have to show mail tips that indicate the number of external recipients to which a message is addressed. This element MUST be included if the **MailTipsServiceConfiguration** complex type is used.
InternalDomains	**t:SmtpDomainList** (section 3.1.4.1.2.20)	Specifies a list of **SMTP domains** that are considered internal to an organization. This information is provided so that mail client software can provide external recipient mail tips when offline. This element MUST be included if the **MailTipsServiceConfiguration** complex type is used.

3.1.4.1.2.8   t:PolicyNudgeRulesServiceConfiguration

Note   All of the information in this section is subject to change because it applies to a preliminary implementation of the protocol or structure.

The **PolicyNudgeRulesServiceConfiguration** complex type contains the policy nudges configuration data.<4>

```
<xs:complexType name="PolicyNudgeRulesServiceConfiguration">
  <xs:sequence>
    <xs:any processContents="skip" minOccurs="0" maxOccurs="unbounded" namespace="##any"/>
  </xs:sequence>
</xs:complexType>
```

3.1.4.1.2.9   t:ProtectionRuleActionType Complex Type

The **ProtectionRuleActionType** complex type specifies the action that the client can take if the condition part of the associated rule matches.

```
<xs:complexType name="ProtectionRuleActionType">
  <xs:sequence>
    <xs:element name="Argument"
      type="t:ProtectionRuleArgumentType"
      maxOccurs="unbounded"
      minOccurs="0"
    />
  </xs:sequence>
  <xs:attribute name="Name"
    type="t:ProtectionRuleActionKindType"
    use="required"
   />
</xs:complexType>
```

Child Elements

Element	Type	Description
Argument	**t:ProtectionRuleArgumentType** (section 3.1.4.1.2.11)	Specifies arguments to the action. This element MUST NOT occur if the specified action does not require arguments to be specified. This element can occur one or more times if an action requires one or more arguments. The **RightsProtectMessage** action MUST contain a single argument.

Attributes

Name	Type	Description
Name	t:ProtectionRuleActionKindType (section 3.1.4.1.1.1)	Specifies the name of the action. This attribute MUST be present.

3.1.4.1.2.10   t:ProtectionRuleAndType Complex Type

The **ProtectionRuleAndType** complex type specifies that there MUST be more than one protection rule condition. Elements of type **ProtectionRuleAndType** MUST contain at least one child element.

```
<xs:complexType name="ProtectionRuleAndType">
  <xs:sequence>
```

```
<xs:choice
  minOccurs="1"
  maxOccurs="unbounded"
>
  <xs:element name="AllInternal"
    type="t:ProtectionRuleAllInternalType"
   />
  <xs:element name="And"
    type="t:ProtectionRuleAndType"
   />
  <xs:element name="RecipientIs"
    type="t:ProtectionRuleRecipientIsType"
   />
  <xs:element name="SenderDepartments"
    type="t:ProtectionRuleSenderDepartmentsType"
   />
  <xs:element name="True"
    type="t:ProtectionRuleTrueType"
   />
</xs:choice>
  </xs:sequence>
</xs:complexType>
```

Child Elements

Element	Type	Description
AllInternal	**t:ProtectionRuleAllInternalType** (section 3.1.4.1.1.2)	Evaluates to **true** if all recipients of an e-mail message are internal to the sender's organization.
And	**t:ProtectionRuleAndType**	Specifies that all child elements MUST match to evaluate to **true**.
RecipientIs	**t:ProtectionRuleRecipientIsType** (section 3.1.4.1.2.13)	Evaluates to **true** if any recipient of the e-mail Message matches any of the specified recipients in the child **Value** elements.
SenderDepartments	**t:ProtectionRuleSenderDepartmentsType** (section 3.1.4.1.2.14)	Evaluates to **true** if the department of the sender matches any specified department in the child **Value** elements.
True	**t:ProtectionRuleTrueType** (section 3.1.4.1.1.3)	Specifies a condition that always matches.

3.1.4.1.2.11   t:ProtectionRuleArgumentType Complex Type

The **ProtectionRuleArgumentType** complex type specifies an attribute that is used to specify an argument to an action. The protection is identified by the **Value** attribute.

```
<xs:complexType name="ProtectionRuleArgumentType">
  <xs:attribute name="Value"
    use="required"
  >
    <xs:simpleType>
      <xs:restriction
        base="xs:string"
      >
        <xs:minLength
          value="1"
        />
      </xs:restriction>
    </xs:simpleType>
  </xs:attribute>
</xs:complexType>
```

Attributes

Name	Type	Description
Value	**xs:string**	Specifies the value of an argument to the action part of a protection rule. This attribute value MUST be a string of at least one character in length.

3.1.4.1.2.12   t:ProtectionRuleConditionType Complex Type

The **ProtectionRuleConditionType** complex type specifies the condition part of a protection rule.

```
<xs:complexType name="ProtectionRuleConditionType">
  <xs:choice
    maxOccurs="1"
    minOccurs="1"
  >
    <xs:element name="AllInternal"
      type="t:ProtectionRuleAllInternalType"
    />
    <xs:element name="And"
      type="t:ProtectionRuleAndType"
    />
    <xs:element name="RecipientIs"
      type="t:ProtectionRuleRecipientIsType"
    />
    <xs:element name="SenderDepartments"
      type="t:ProtectionRuleSenderDepartmentsType"
    />
    <xs:element name="True"
      type="t:ProtectionRuleAllInternalType"
    />
  </xs:choice>
</xs:complexType>
```

Child Elements

Element	Type	Description
AllInternal	**t:ProtectionRuleAllInternalType** (section 3.1.4.1.1.2)	The **AllInternal** element evaluates to **true** if all recipients of an e-mail message are internal to the sender's organization. If this element exists, the **And**, **RecipientsIs**, **SenderDeprtments**, and **True** elements MUST NOT exist as a direct child node of elements of type **ProtectionRuleConditionType**.
And	**t:ProtectionRuleAndType** (section 3.1.4.1.2.10)	Specifies that all child elements MUST match to evaluate to **true**. Specifies that there MUST be more than one protection rule child condition. If this element exists, the **AllInternal**, **RecipientsIs**, **SenderDeprtments**, and **True** elements MUST NOT exist as a direct child node of elements of type **ProtectionRuleConditionType**.
RecipientIs	**t:ProtectionRuleRecipientIsType** (section 3.1.4.1.2.13)	Specifies that any recipient of the e-mail message matches any of the specified recipients in the child **Value** elements. If this element exists, the **And**, **AllInternal**, **SenderDeprtments**, and **True** elements MUST NOT exist as a direct child node of elements of type **ProtectionRuleConditionType**.
SenderDepartments	**t:ProtectionRuleSenderDepartmentsType** (section 3.1.4.1.2.14)	Specifies that the department of the sender matches any of the specified departments in the child **Value** elements. If this element exists, the **And**, **RecipientsIs**, **AllInternal**, and **True** elements MUST NOT exist as a direct child node of elements of type **ProtectionRuleConditionType**.
True	**t:ProtectionRuleAllInternalType**	Specifies a condition that always matches. If this element exists, the **And**, **RecipientsIs**, **SenderDeprtments**, and **AllInternal** elements MUST NOT exist as a direct child node of elements of type

Element	Type	Description
		ProtectionRuleConditionType.

3.1.4.1.2.13   t:ProtectionRuleRecipientIsType Complex Type

The **ProtectionRuleRecipientIsType** complex type specifies a condition that matches if any recipients of the e-mail message match any specified recipients in the child <Value> elements.

```
<xs:complexType name="ProtectionRuleRecipientIsType">
  <xs:sequence>
    <xs:element name="Value"
      type="t:ProtectionRuleValueType"
      minOccurs="1"
      maxOccurs="unbounded"
    />
  </xs:sequence>
</xs:complexType>
```

Child Elements

Element	Type	Description
Value	**t:ProtectionRuleValueType** (section 3.1.4.1.1.4)	Specifies an argument to the **RecipientIs** condition. This element MUST occur at least once.

3.1.4.1.2.14   t:ProtectionRuleSenderDepartmentsType Complex Type

The **ProtectionRuleSenderDepartmentsType** type specifies a condition that matches if the department of the sender of the e-mail message matches any of the specified departments in the child <Value> elements.

```
<xs:complexType name="ProtectionRuleSenderDepartmentsType">
  <xs:sequence>
    <xs:element name="Value"
      type="t:ProtectionRuleValueType"
      minOccurs="1"
      maxOccurs="unbounded"
    />
  </xs:sequence>
</xs:complexType>
```

Child Elements

Element	Type	Description
Value	**t:ProtectionRuleValueType** (section 3.1.4.1.1.4)	Specifies an argument to the **SenderDepartments** condition. This element MUST occur at least once.

3.1.4.1.2.15 t:ProtectionRulesServiceConfiguration Complex Type

The **ProtectionRulesServiceConfiguration** complex type specifies the configuration of the protection rules service. The configuration is comprised of a list of rules, internal domains, and a refresh interval. The **ProtectionRulesServiceConfiguration** complex type extends the **t:ServiceConfiguration** type, as specified in section 3.1.4.1.2.17.

```xml
<xs:complexType name="ProtectionRulesServiceConfiguration">
  <xs:complexContent>
    <xs:extension
      base="t:ServiceConfiguration"
    >
      <xs:sequence>
        <xs:element name="Rules"
          type="t:ArrayOfProtectionRulesType"
          maxOccurs="1"
          minOccurs="1"
         />
        <xs:element name="InternalDomains"
          type="t:SmtpDomainList"
          maxOccurs="1"
          minOccurs="1"
         />
      </xs:sequence>
      <xs:attribute name="RefreshInterval"
        use="required"
      >
        <xs:simpleType>
          <xs:restriction
            base="xs:int"
          >
            <xs:minInclusive
              value="1"
             />
          </xs:restriction>
        </xs:simpleType>
      </xs:attribute>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

Child Elements

Element	Type	Description
Rules	**t:ArrayOfProtectionRulesType** (section 3.1.4.1.2.1)	Specifies the collection of rules to be evaluated. This element MUST be included if the **ProtectionRulesServiceConfiguration** complex type is used.
InternalDomains	**t:SmtpDomainList** (section 3.1.4.1.2.20)	Specifies the list of internal SMTP domains of the organization. This element MUST be included if the **ProtectionRulesServiceConfiguration** complex type is used.

Attributes

Name	Type	Description
RefreshInterval	**xs:int**	Specifies how often, in whole hours, the client SHOULD request protection rules from the server.
		This element MUST be included if the **ProtectionRulesServiceConfiguration** complex type is used.

3.1.4.1.2.16   t:ProtectionRuleType

The **ProtectionRuleType** type specifies a single protection rule.

```
<xs:complexType name="ProtectionRuleType">
  <xs:sequence>
    <xs:element name="Condition" type="t:ProtectionRuleConditionType" minOccurs="1"
maxOccurs="1"/>
    <xs:element name="Action" type="t:ProtectionRuleActionType" minOccurs="1" maxOccurs="1"/>
  </xs:sequence>
  <xs:attribute name="Name" use="required">
    <xs:simpleType>
      <xs:restriction base="xs:string">
        <xs:minLength value="1"/>
      </xs:restriction>
    </xs:simpleType>
  </xs:attribute>
  <xs:attribute name="UserOverridable" type="xs:boolean" use="required" />
  <xs:attribute name="Priority" use="required" >
    <xs:simpleType>
      <xs:restriction base="xs:int">
        <xs:minInclusive value="1"/>
      </xs:restriction>
    </xs:simpleType>
  </xs:attribute>
</xs:complexType>
```

Element	Type	Definition
Condition	**t:ProtectionRuleConditionType**	Specifies the condition that MUST be satisfied for the action part of the rule to be executed.
		This element MUST be included if the **ProtectionRuleType** type is used.
Action	**t:ProtectionRuleActionType**	Specifies what action MUST be executed if the condition part of the rule matches.
		This element MUST be included if the **ProtectionRuleType** type is used.

Attribute	Type	Definition
Name	**xs:string**	Specifies the name of the rule.
		This attribute MUST be included if the **ProtectionRuleType** type is used. This attribute value MUST contain a string of at least one character.

Attribute	Type	Definition
UserOverridable	**xs:boolean**	Specifies whether the rule is mandatory. If the rule is mandatory, this attribute value MUST be **FALSE**.
		This attribute MUST be included if the **ProtectionRuleType** type is used.
Priority	**xs:int**	Specifies the rule priority. The lower bound MUST be 1.
		This attribute MUST be included if the **ProtectionRuleType** type is used. This attribute value MUST contain an integer value of at least one.

3.1.4.1.2.17   t:ServiceConfiguration

The **ServiceConfiguration** type specifies the base type for the service configuration types.

```
<xs:complexType name="ServiceConfiguration">
</xs:complexType>
```

3.1.4.1.2.18   ServiceConfigurationResponseMessageType Complex Type

Note   Some of the information in this section is subject to change because it applies to a preliminary implementation of the protocol or structure. For information about specific differences between versions, see the behavior notes that are provided in the Product Behavior appendix.

The **ServiceConfigurationResponseMessageType** complex type specifies service configuration settings. The **ServiceConfigurationResponseMessageType** complex type extends the **ResponseMessageType** complex type ([MS-OXWSCDATA] section 2.2.3.52).

```
<xs:complexType>
  <xs:complexContent>
    <xs:extension
      base="m:ResponseMessageType"
    >
      <xs:sequence>
        <xs:element name="MailTipsConfiguration"
          type="t:MailTipsServiceConfiguration"
          minOccurs="0"
          maxOccurs="1"
         />
        <xs:element name="UnifiedMessagingConfiguration"
          type="t:UnifiedMessageServiceConfiguration"
          maxOccurs="1"
          minOccurs="0"
         />
        <xs:element name="ProtectionRulesConfiguration"
          type="t:ProtectionRulesServiceConfiguration"
          maxOccurs="1"
          minOccurs="0"
         />
        <xs:element name="PolicyNudgeRulesConfiguration"
  type="t:PolicyNudgeRulesServiceConfiguration" minOccurs="0" maxOccurs="1"/>
      </xs:sequence>
    </xs:extension>
  </xs:complexContent>
```

```
</xs:complexType>
```

The following table lists the child elements of the **ServiceConfigurationResponseMessageType** complex type.

Element name	Type	Description
MailTipsConfiguration	**t:MailTipsServiceConfiguration** (section 3.1.4.1.2.7)	Contains service configuration information for the mail tips service. This element **MUST** occur for mail tips service configuration.
UnifiedMessagingConfiguration	**t:UnifiedMessageServiceConfiguration** (section 3.1.4.1.2.21)	Contains service configuration information for the unified messaging service. This element **MUST** occur for unified messaging service configuration.
ProtectionRulesConfiguration	**t:ProtectionRulesServiceConfiguration** (section 3.1.4.1.2.15)	Contains service configuration information for the protection rules service. This element **MUST** occur for protection rules service configuration.
PolicyNudgeRulesConfiguration	**t:PolicyNudgeRulesServiceConfiguration**	<5>

3.1.4.1.2.19   t:SmtpDomain

The **SmtpDomain** type specifies a single domain.

```
<xs:complexType name="SmtpDomain">
  <xs:attribute name="Name" type="xs:string" use="required"/>
  <xs:attribute name="IncludeSubdomains" type="xs:boolean" use="optional"/>
</xs:complexType>
```

Attribute	Type	Definition
Name	**xs:string**	Specifies the name of a domain. This attribute MUST be set.
IncludeSubdomains	**xs:boolean**	Specifies whether sub-domains of the domain identified by the **Name** attribute are considered internal.

3.1.4.1.2.20   t:SmtpDomainList

The **SmtpDomainList** type specifies a list of internal domains in a user's organization.

```
<xs:complexType name="SmtpDomainList">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="Domain" type="t:SmtpDomain"/>
  </xs:sequence>
</xs:complexType>
```

Element	Type	Definition
Domain	**t:SmtpDomain**	Specifies a single SMTP domain. This element can occur 0 or more times.

3.1.4.1.2.21   UnifiedMessageServiceConfiguration Complex Type

The **UnifiedMessageServiceConfiguration** complex type specifies the configuration for Unified Messaging service. The **UnifiedMessageServiceConfiguration** complex type extends the **ServiceConfiguration** complex type (section 3.1.4.1.2.17).

```
<xs:complexType name="UnifiedMessageServiceConfiguration">
  <xs:complexContent>
    <xs:extension
      base="t:ServiceConfiguration"
    >
      <xs:sequence>
        <xs:element name="UmEnabled"
          type="xs:boolean"
          maxOccurs="1"
          minOccurs="1"
         />
        <xs:element name="PlayOnPhoneDialString"
          type="xs:string"
          maxOccurs="1"
          minOccurs="1"
         />
        <xs:element name="PlayOnPhoneEnabled"
          type="xs:boolean"
          maxOccurs="1"
          minOccurs="1"
         />
      </xs:sequence>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

Child Elements

Element	Type	Description
UmEnabled	**xs:boolean**	Specifies whether Unified Messaging is enabled. This element MUST be included if the **UnifiedMessageServiceConfiguration** complex type is

Element	Type	Description
		used.
PlayOnPhoneDialString	**xs:string**	Specifies the telephone number for play-on-phone. This element MUST be included if the **UnifiedMessageServiceConfiguration** complex type is used.
PlayOnPhoneEnabled	**xs:boolean**	Specifies whether play-on-phone is enabled. This element MUST be included if the **UnifiedMessageServiceConfiguration** complex type is used.

3.1.4.1.3 Elements

The following XML schema element definitions are specific to this operation.

3.1.4.1.3.1 m:GetServiceConfiguration

The **GetServiceConfiguration** element specifies the base element for a **GetServiceConfiguration** request.

```
<xs:element name="GetServiceConfiguration" type="m:GetServiceConfigurationType"/>
```

3.1.4.1.3.2 m:GetServiceConfigurationResponse

The **GetServiceConfigurationResponse** element specifies the response message for a **GetServiceConfiguration** operation.

```
<xs:element name="GetServiceConfigurationResponse"
type="m:GetServiceConfigurationResponseMessageType"/>
```

3.1.4.1.4 Attributes

This specification does not define any specific XML schema attribute definitions for this operation.

3.1.4.1.5 Groups

This specification does not define any specific XML schema group definitions for this operation.

3.1.4.1.6 Attribute Groups

This specification does not define any specific XML schema attribute group definitions for this operation.

3.1.4.1.7 Messages

The following WSDL message definitions are specific to this operation.

3.1.4.1.7.1 GetServiceConfigurationSoapIn Message

The parts of the **GetServiceConfigurationSoapIn** message are described in the following table.

Part Name	Element/Type	Description
request	**m:GetServiceConfiguration**	Specifies the request.
Impersonation	**ExchangeImpersonation**	Specifies the account to impersonate. The **t:ExchangeImpersonation** element is defined in [MS-OXWSCDATA] section 2.2.4.3.
RequestVersion	**RequestServerVersion**	Specifies the schema version for the **GetServiceConfiguration** operation request. The **RequestServerVersion** element is defined in [MS-OXWSCDATA] section 2.2.4.9.
MailboxCulture	**MailboxCulture**	Specifies the culture to use for accessing the mailbox. The **MailboxCulture** element is defined in [MS-OXWSCDATA] section 2.2.4.6. The cultures are defined by [RFC3066].

3.1.4.1.7.2 GetServiceConfigurationSoapOut Message

The parts of the **GetServiceConfigurationSoapOut** message are described in the following table.

Part name	Element/nype	Description
GetServiceConfigurationResult	**m:GetServiceConfigurationResponse**	Specifies the response.
ServerVersion	**t:ServerVersionInfo**	Specifies the server version for the response ([MS-OXWSCDATA] section 2.2.4.10).

3.1.5 Timer Events

None.

3.1.6 Other Local Events

None.

3.2 Client Details

The client side of this protocol is simply a pass-through. That is, no additional timers or other state is required on the client side of this protocol. Calls made by the higher-layer protocol or application are passed directly to the transport, and the results returned by the transport are passed directly back to the higher-layer protocol or application.

3.2.1 Abstract Data Model

None.

3.2.2 Timers

None.

3.2.3   Initialization

None.

3.2.4   Message Processing Events and Sequencing Rules

None.

3.2.5   Timer Events

None.

3.2.6   Other Local Events

None.

4 Protocol Examples

4.1 GetServiceConfiguration Request

The following example shows how to get sender hints for a user.

```
<?xml version="1.0" encoding="utf-8" ?>
<soap:Envelope xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
               xmlns:xsd="http://www.w3.org/2001/XMLSchema"
               xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"
               xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types">
  <soap:Header>
    <t:RequestServerVersion Version="Exchange2010" />
  </soap:Header>

  <soap:Body>
    <GetServiceConfiguration
xmlns="http://schemas.microsoft.com/exchange/services/2006/messages">
      <ActingAs>
        <t:EmailAddress>user1@contoso.com</t:EmailAddress>
        <t:RoutingType>SMTP</t:RoutingType>
      </ActingAs>
      <RequestedConfiguration>
        <ConfigurationName>MailTips</ConfigurationName>
      </RequestedConfiguration>
    </GetServiceConfiguration>
  </soap:Body>

</soap:Envelope>
```

4.2 GetServiceConfiguration Response

The following is an example of a successful response from the **GetServiceConfiguration** service.

```
<?xml version="1.0" encoding="utf-8"?>
<s:Envelope xmlns:s="http://schemas.xmlsoap.org/soap/envelope/">
  <s:Header>
    <h:ServerVersionInfo MajorVersion="14"
                         MinorVersion="0"
                         MajorBuildNumber="482"
                         MinorBuildNumber="17"
                         Version="Exchange2010"
                         xmlns:h="http://schemas.microsoft.com/exchange/services/2006/types"
                         xmlns="http://schemas.microsoft.com/exchange/services/2006/types"
                         xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
                         xmlns:xsd="http://www.w3.org/2001/XMLSchema"/>
  </s:Header>
  <s:Body xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xmlns:xsd="http://www.w3.org/2001/XMLSchema">
    <GetServiceConfigurationResponse ResponseClass="Success"
xmlns="http://schemas.microsoft.com/exchange/services/2006/messages">
      <ResponseCode>NoError</ResponseCode>
      <ResponseMessages>
        <ServiceConfigurationResponseMessageType ResponseClass="Success">
          <ResponseCode>NoError</ResponseCode>
          <m:MailTipsConfiguration
xmlns:m="http://schemas.microsoft.com/exchange/services/2006/messages">
```

```
            <t:MaxRecipientsPerGetMailTipsRequest
xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types">50</t:MaxRecipientsPerGet
MailTipsRequest>
            <t:MaxMessageSize
xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types">10485760</t:MaxMessageSiz
e>
            <t:LargeAudienceThreshold
xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types">25</t:LargeAudienceThresh
old>
            <t:ShowExternalRecipientCount
xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types">false</t:ShowExternalReci
pientCount>
            <t:InternalDomains
xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types">
              <t:Domain Name="contoso.com" IncludeSubdomains="false"/>
              <t:Domain Name="fabrikam.com" IncludeSubdomains="false"/>
              <t:Domain Name="example.com" IncludeSubdomains="false"/>
            </t:InternalDomains>
          </m:MailTipsConfiguration>
        </ServiceConfigurationResponseMessageType>
      </ResponseMessages>
    </GetServiceConfigurationResponse>
  </s:Body>
</s:Envelope>
```

4.3   Unsuccessful Response

4.3.1   SOAP Exception

The following is an example of a SOAP fault caused by the request failing schema validation.

```
<?xml version="1.0" encoding="utf-8"?><s:Envelope
xmlns:s="http://schemas.xmlsoap.org/soap/envelope/">
  <s:Body>
    <s:Fault>
      <faultcode
xmlns:a="http://schemas.microsoft.com/exchange/services/2006/types">a:ErrorSchemaValidation</
faultcode>
      <faultstring xml:lang="en-US">The request failed schema validation: The element
'RequestedConfiguration' in namespace
'http://schemas.microsoft.com/exchange/services/2006/messages' has incomplete content. List
of possible elements expected: 'ConfigurationName' in namespace
'http://schemas.microsoft.com/exchange/services/2006/messages'.</faultstring>
      <detail>
        <e:ResponseCode
xmlns:e="http://schemas.microsoft.com/exchange/services/2006/errors">ErrorSchemaValidation</e
:ResponseCode>
        <e:Message xmlns:e="http://schemas.microsoft.com/exchange/services/2006/errors">The
request failed schema validation.</e:Message>
        <e:MessageXml xmlns:e="http://schemas.microsoft.com/exchange/services/2006/errors">
          <t:LineNumber
xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types">16</t:LineNumber>
          <t:LinePosition

```

5 Security

5.1 Security Considerations for Implementers

The Service Configuration service does not use additional security mechanisms.

5.2 Index of Security Parameters

None.

6 Appendix A: Full WSDL

The XML files that are listed in the following table are required in order to implement the functionality in this document.

File name	Description	Section
MS-OXWCONFIG.wsdl	Contains the WSDL for the implementation of this protocol.	6
MS-OXWCONFIG-messages.xsd	Contains the XML schema message definitions that are used in this protocol.	7.1
MS-OXWCONFIG-types.xsd	Contains the XML schema type definitions that are used in this protocol.	7.2

These files have to be placed in a common folder in order for the WSDL to validate and operate. Also, any schema files that are included in or imported into the MS-OXWCONFIG-types.xsd or MS-OXWCONFIG-messages.xsd schemas have to be placed in the common folder with these files.

This section contains the contents of the MS-OXWCONFIG.wsdl file.

```
<?xml version="1.0" encoding="utf-8"?>
<wsdl:definitions xmlns:soap="http://schemas.xmlsoap.org/wsdl/soap/"
xmlns:tns="http://schemas.microsoft.com/exchange/services/2006/messages"
targetNamespace="http://schemas.microsoft.com/exchange/services/2006/messages"
xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/"

         </wsdl:output>
      </wsdl:operation>
   </wsdl:binding>
</wsdl:definitions>
```

7 Appendix B: Full XML Schema

For ease of implementation, the following sections provide the full XML schema for this protocol.

Schema name	Prefix	Section
Messages schema	m:	7.1
Types schema	t:	7.2

These files have to be placed in a common folder in order for the WSDL to validate and operate. Also, any schema files that are included in or imported into the MS-OXWCONFIG-types.xsd or MS-OXWCONFIG-messages.xsd schemas have to be placed in the common folder along with the files listed in the table.

7.1 Messages Schema

This section contains the contents of the MS-OXWCONFIG-messages.xsd file and information about additional files that this schema file requires to operate correctly.

MS-OXWCONFIG-messages.xsd includes and imports the file listed in the following table. To operate correctly, this file has to be present in the folder that contains the WSDL, types schema, and messages schema files for this protocol.

File name	Defining specification
MS-OXWSCDATA-messages.xsd	[MS-OXWSCDATA] section 7.1
MS-OXWCONFIG-types.xsd	7.2

```xml
<?xml version="1.0" encoding="utf-8"?>
<xs:schema xmlns:m="http://schemas.microsoft.com/exchange/services/2006/messages"
xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types"
xmlns:xs="http://www.w3.org/2001/XMLSchema"
targetNamespace="http://schemas.microsoft.com/exchange/services/2006/messages"
elementFormDefault="qualified" version="Exchange2010" id="messages">

8   Appendix C: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include released service packs:

- Microsoft® Exchange Server 2010

- Microsoft® Exchange Server 15 Technical Preview

- Microsoft® Outlook® 2010

- Microsoft® Outlook® 15 Technical Preview

Exceptions, if any, are noted below. If a service pack or Quick Fix Engineering (QFE) number appears with the product version, behavior changed in that service pack or QFE. The new behavior also applies to subsequent service packs of the product unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms SHOULD or SHOULD NOT implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies that the product does not follow the prescription.

<1> Section 3.1.4.1.1.5: Exchange 2010 does not use the **PolicyNudges** value.

<2> Section 3.1.4.1.2.4: Exchange 2010 does not use the **ConfigurationRequestDetailsType** complex type.

<3> Section 3.1.4.1.2.6: Exchange 2010 does not use the **ConfigurationRequestDetails** element.

<4> Section 3.1.4.1.2.8: Exchange 2010 does not use the **PolicyNudgeRulesServiceConfiguration** complex type.

<5> Section 3.1.4.1.2.18: Exchange 2010 does not use the **PolicyNudgeRulesConfiguration** element.

9 Change Tracking

No table of changes is available. The document is either new or has had no changes since its last release.
