1.3 Overview

The common web service data types are the global elements, types, groups, and attribute groups that are common across the web service protocols.

1.4 Relationship to Other Protocols

These data types are used by two or more web service protocols.

For conceptual background information and overviews of the relationships and interactions between this and other protocols, see [MS-OXPROTO].

1.5 Prerequisites/Preconditions

None.

1.6 Applicability Statement

These data types are shared by two or more web service protocols.

1.7 Versioning and Capability Negotiation

None.

1.8 Vendor-Extensible Fields

None.

1.9 Standards Assignments

None.

2   Messages

In the following sections, the schema definition might differ from the processing rules imposed by the protocol. The **WSDL** in this specification provides a base description of the protocol. The schema in this specification provides a base description of the message syntax. The text that specifies the WSDL and schema might specify restrictions that reflect actual protocol behavior. For example, the schema definition might allow for an element to be **empty**, **null**, or **not present** but the behavior of the protocol as specified restricts the same elements to being **non-empty**, **not null**, or **present**.

2.1   Transport

None.

2.2   Common Message Syntax

This section contains common definitions that are used by this protocol. The syntax of the definitions uses **XML schema**, as defined in [XMLSCHEMA1] and [XMLSCHEMA2], and Web Services Description Language (WSDL), as defined in [WSDL].

2.2.1   Namespaces

This specification defines and references various **XML namespaces** by using the mechanisms specified in [XMLNS]. Although this specification associates a specific **XML namespace prefix** for each XML namespace that is used, the choice of any particular XML namespace prefix is implementation-specific and not significant for interoperability.

Prefix	Namespace URI	Reference
m	http://schemas.microsoft.com/exchange/services/2006/messages	
t	http://schemas.microsoft.com/exchange/services/2006/types	
xs	http://www.w3.org/2001/XMLSchema	[XMLSCHEMA1]
tns	http://schemas.microsoft.com/exchange/services/2006/messages	

2.2.2   Messages

This specification does not define any common WSDL message definitions.

2.2.3   Elements

2.2.3.1   t:DateTimePrecision Element

The **DateTimePrecision** element specifies precision of **DateTime** values that are returned in responses.<1> This element is optional.

```
<xs:element name="DateTimePrecision" type="t:DateTimePrecisionType" />

6   Appendix A: Full WSDL

The XML files that are listed in the following table are required in order to implement the functionality described in this document.

File name	Description	Section
MS-OXWSCDATA-messages.xsd	Contains the XML schema message definitions.	7.1
MS-OXWSCDATA-types.xsd	Contains the XML schema type definitions.	7.2

These files have to be placed in a common folder in order for any referencing WSDL to validate and operate. Also, any schema files that are included in or imported into the MS-OXWSCDATA-types.xsd or MS-OXWSCDATA-messages.xsd schemas have to be placed in the common folder along with the files listed in the table.

This protocol specification does not define a WSDL file.

7 Appendix B: Full XML Schema

For ease of implementation, the following sections provide the full XML schema for this protocol.

Schema name	Prefix	Section
Messages schema	m:	7.1
Types schema	t:	7.2

These files have to be placed in a common folder in order for any referencing WSDL to validate and operate. Also, any schema files that are included in or imported into the MS-OXWSCDATA-types.xsd or MS-OXWCDATA-messages.xsd schemas have to be placed in the common folder along with the files listed in the table.

7.1 Messages Schema

This section provides the contents of the MS-OXWSCDATA-messages.xsd file and information about additional files that this schema file requires to operate correctly.

MS-OXWSCDATA-messages.xsd includes or imports the files listed in the following table. To operate correctly, these files have to be present in the folder that contains the types and messages schema files.
