

# [MS-OXWScore]: Core Items Web Service Protocol Specification

---

## Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation for protocols, file formats, languages, standards as well as overviews of the interaction among each of these technologies.
- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you may make copies of it in order to develop implementations of the technologies described in the Open Specifications and may distribute portions of it in your implementations using these technologies or your documentation as necessary to properly document the implementation. You may also distribute in your implementation, with or without modification, any schema, IDL's, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that may cover your implementations of the technologies described in the Open Specifications. Neither this notice nor Microsoft's delivery of the documentation grants any licenses under those or any other Microsoft patents. However, a given Open Specification may be covered by Microsoft's Open Specification Promise (available here: <http://www.microsoft.com/interop/osp>) or the Community Promise (available here: <http://www.microsoft.com/interop/cp/default.mspx>). If you would prefer a written license, or if the technologies described in the Open Specifications are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting [iplg@microsoft.com](mailto:iplg@microsoft.com).
- **Trademarks.** The names of companies and products contained in this documentation may be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights.
- **Fictitious Names.** The example companies, organizations, products, domain names, e-mail addresses, logos, people, places, and events depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

**Reservation of Rights.** All other rights are reserved, and this notice does not grant any rights other than specifically described above, whether by implication, estoppel, or otherwise.

**Tools.** The Open Specifications do not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments you are free to take advantage of them. Certain Open Specifications are intended for use in conjunction with publicly available standard specifications and network programming art, and assumes that the reader either is familiar with the aforementioned material or has immediate access to it.

## Revision Summary

Date	Revision History	Revision Class	Comments
07/15/2009	1.0	Major	Initial Availability.
11/04/2009	1.1.0	Minor	1.1.0
02/10/2010	1.1.0	None	Version 1.1.0 release
05/05/2010	1.1.1	Editorial	Revised and edited the technical content.
08/04/2010	1.1.1	No change	No changes to the meaning, language, or formatting of the technical content.
11/03/2010	2.0	Major	Significantly changed the technical content.

# 1 Introduction

This document specifies the Core Items Web Service protocol, which is responsible for creating, updating, and deleting items on the server. Clients use the SOAP protocol [SOAP1.1] to contact the Core Items service.

## 1.1 Glossary

The following terms are defined in [\[MS-OXGLOS\]](#):

**carbon copy (Cc) recipient**  
**Cc recipient**  
**delivery receipt**  
**HTTP**  
**HTTPS**  
**mailbox**  
**meeting**  
**message**  
**MIME**  
**Outbox folder**  
**property**  
**read receipt**  
**recipient**  
**SOAP body**  
**SOAP fault**  
**SOAP header**  
**SOAP message**  
**To recipient**  
**Web Services Description Language (WSDL)**  
**WSDL message**  
**WSDL port type**  
**XML**  
**XML namespace**  
**XML schema**

The following terms are specific to this document:

**MAY, SHOULD, MUST, SHOULD NOT, MUST NOT:** These terms (in all caps) are used as described in [\[RFC2119\]](#). All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

## 1.2 References

### 1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact [dochelp@microsoft.com](mailto:dochelp@microsoft.com). We will assist you in finding the relevant information. Please check the archive site, <http://msdn2.microsoft.com/en-us/library/E4BD6494-06AD-4aed-9823-445E921C9624>, as an additional source.

## 1.2.2 Informative References

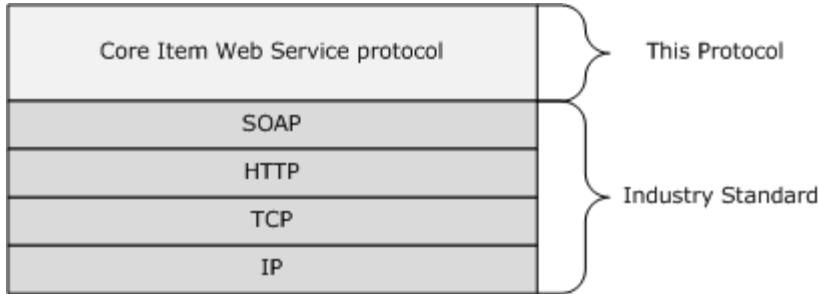

[MS-OXGLOS] Microsoft Corporation, "[Exchange Server Protocols Master Glossary](#)", April 2008.

## 1.3 Overview

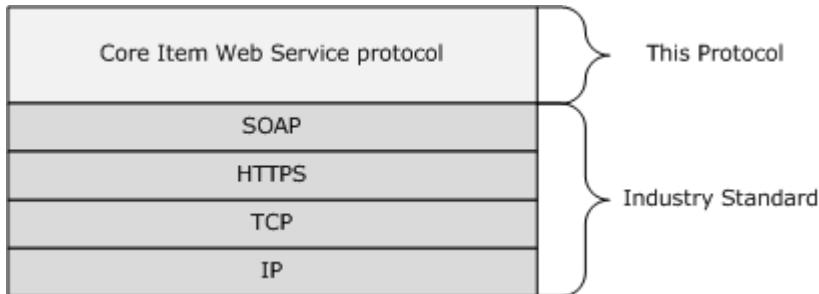

The Core Items Web Service protocol provides clients with the ability to create, update, and delete items on the server. Clients create items such as **messages**, **tasks**, and **meetings** by using the **CreateItem** operation (section [3.1.4.2](#)), or get properties of an existing item by using the **GetItem** operation (section [3.1.4.4](#)). Items can also be updated, deleted, moved, or copied on the server by using the **UpdateItem** operation (section [3.1.4.7](#)), the **DeleteItem** operation (section [3.1.4.3](#)), the **MoveItem** operation (section [3.1.4.5](#)), and the **CopyItem** operation (section [3.1.4.1](#)) respectively.

## 1.4 Relationship to Other Protocols

The Core Items Web Service protocol uses SOAP over **HTTP** and SOAP over **HTTPS**, as shown in the following figures.

**Figure 1: Message Tracking Web Service protocol HTTP stack**

**Figure 2: Message Tracking Web Service protocol HTTPS stack**

The item information that is returned by the Core Items Web Service protocol is used when requests are made by using the following protocols:

- Contacts Web Service protocol [\[MS-OXWSCONT\]](#)
- Distribution List Creation and Usage Web Service protocol [\[MS-OXWSDLIST\]](#)
- E-Mail Message Types Web Service protocol [\[MS-OXWSMSG\]](#)
- Calendaring Web Service protocol [\[MS-OXWSMTGS\]](#)
- Post Items Web Service protocol [\[MS-OXWSPOST\]](#)
- Tasks Web Service protocol [\[MS-OXWSTASK\]](#)

## 1.5 Prerequisites/Preconditions

None.

## 1.6 Applicability Statement

The protocol specified in this document is applicable to environments that copy, create, delete, get, move, or update items by using Exchange Web Services.

## 1.7 Versioning and Capability Negotiation

This document covers versioning issues in the following areas:

- **Supported Transports:** This protocol uses SOAP 1.1, as specified in section [2.1](#).
- **Protocol Versions:** This protocol specifies only one **WSDL** port type version.

- **Security and Authentication Methods:** This protocol relies on the Web server that is hosting it to perform authentication.
- **Localization:** This protocol includes text strings in various messages. Localization considerations for such strings are specified in section [3.1.4](#).
- **Capability Negotiation:** None.

## 1.8 Vendor-Extensible Fields

None.

## 1.9 Standards Assignments

None.

## 2 Messages

### 2.1 Transport

The SOAP version supported is SOAP 1.1. For details, see [\[SOAP1.1\]](#).

### 2.2 Common Message Syntax

This section contains common definitions that are used by this protocol. The syntax of the definitions uses **XML schema**, as defined in [\[XMLSHEMA1\]](#) and [\[XMLSHEMA2\]](#), and Web Services Description Language (WSDL), as defined in [\[WSDL\]](#).

#### 2.2.1 Namespaces

This specification defines and references various **XML namespaces** by using the mechanisms specified in [\[XMLNS\]](#). Although this specification associates a specific XML namespace prefix for each XML namespace that is used, the choice of any particular XML namespace prefix is implementation-specific and not significant for interoperability.

Prefix	Namespace URI	Reference
soap	<a href="http://schemas.xmlsoap.org/wsdl/soap/">http://schemas.xmlsoap.org/wsdl/soap/</a>	<a href="#">[SOAP1.1]</a>
tns	<a href="http://schemas.microsoft.com/exchange/services/2006/messages">http://schemas.microsoft.com/exchange/services/2006/messages</a>	[MS-OXWSCORE]
s	<a href="http://www.w3.org/2001/XMLSchema">http://www.w3.org/2001/XMLSchema</a>	<a href="#">[XMLSHEMA1]</a>
targetNamespace	<a href="http://schemas.microsoft.com/exchange/services/2006/messages">http://schemas.microsoft.com/exchange/services/2006/messages</a>	[MS-OXWSCORE]
wsdl	<a href="http://schemas.xmlsoap.org/wsdl/">http://schemas.xmlsoap.org/wsdl/</a>	<a href="#">[WSDL]</a>
t	<a href="http://schemas.microsoft.com/exchange/services/2006/types">http://schemas.microsoft.com/exchange/services/2006/types</a>	[MS-OXWSCORE]

#### 2.2.2 Simple Types

The following table summarizes the set of common XML schema simple type definitions that are defined by this specification. XML schema simple type definitions that are specific to a particular operation are defined with the operation.

Simple Type	Description
<a href="#">t:DerivedItemIdType</a>	Specifies the identifier of the recurring master of a recurring item.
<a href="#">t:ImportanceChoicesType</a>	Specifies the levels of importance for an item.
<a href="#">t:ItemClassType</a>	Specifies an item class.
<a href="#">t:ReminderMinutesBeforeStartType</a>	Specifies the number of minutes before an event occurs when a reminder is displayed.

### **2.2.2.1 t:DerivedItemIdType Simple Type**

The [DerivedItemIdType](#) simple type specifies the identifier of the recurring master of a recurring item.

```
<xs:simpleType name="DerivedItemIdType">
  <xs:restriction
    base="xs:string"
  />
</xs:simpleType>
```

### **2.2.2.2 t:ImportanceChoicesType Simple Type**

The [ImportanceChoicesType](#) simple type specifies the levels of importance for an item.

```
<xs:simpleType name="ImportanceChoicesType">
  <xs:restriction
    base="xs:string"
  >
    <xs:enumeration
      value="High"
    />
    <xs:enumeration
      value="Low"
    />
    <xs:enumeration
      value="Normal"
    />
  </xs:restriction>
</xs:simpleType>
```

#### Enumeration

The following values are defined by the **ImportanceChoicesType** simple type:

Value	Description
High	Specifies high importance.
Low	Specifies low importance.
Normal	Specifies normal importance.

### **2.2.2.3 t:ItemClassType Simple Type**

The [ItemClassType](#) simple type specifies an item class.

```
<xs:simpleType name="ItemClassType">
  <xs:restriction
    base="xs:string"
  />
</xs:simpleType>
```

#### 2.2.2.4 t:ReminderMinutesBeforeStartType Simple Type

The [ReminderMinutesBeforeStartType](#) simple type specifies the number of minutes before an event occurs when a reminder is displayed.

```
<xs:simpleType name="ReminderMinutesBeforeStartType">
  <xs:union>
    <xs:simpleType
      id="ReminderMinutesBeforeStartType"
    >
      <xs:restriction
        base="xs:int"
      >
        <xs:minInclusive
          value="0"
        />
        <xs:maxInclusive
          value="2629800"
        />
      </xs:restriction>
    </xs:simpleType>
    <xs:simpleType
      id="ReminderMinutesBeforeStartMarkerType"
    >
      <xs:restriction
        base="xs:int"
      >
        <xs:minInclusive
          value="1525252321"
        />
        <xs:maxInclusive
          value="1525252321"
        />
      </xs:restriction>
    </xs:simpleType>
  </xs:union>
</xs:simpleType>
```

#### 2.2.3 Complex Types

The following table summarizes the set of common XML schema complex type definitions that are defined by this specification. XML schema complex type definitions that are specific to a particular operation are defined with the operation.

Complex Type	Description
<a href="#">m:BaseMoveCopyItemType</a>	Specifies the base type for the <a href="#">m:CopyItemType</a> and <a href="#">m:MoveItemType</a> complex types.
<a href="#">m:SendItemResponseType</a>	Specifies a response to a call to the <b>SendItem</b> method, as specified in <a href="#">[MS-OXWSMSG]</a> section 3.1.4.7.

Complex Type	Description
<a href="#">m:SendItemType</a>	Specifies a request to send a message.
<a href="#">m:UpdateItemResponseMessageType</a>	Specifies the status and result of a single call to the <a href="#">UpdateItem</a> method.
<a href="#">t:ConflictResultsType</a>	Specifies the number of conflicts in an UpdateItem response.
<a href="#">t:ItemType</a>	Specifies a generic item in the Exchange store.
<a href="#">t:MimeContentType</a>	Specifies the native <b>MIME</b> stream of an object that is represented in base64Binary format.
<a href="#">t:NonEmptyArrayOfBaseItemIdsType</a>	Specifies a collection of items.
<a href="#">t:NonEmptyArrayOfInternetHeadersType</a>	Specifies the collection of all Internet message headers that are contained in an item.
<a href="#">t:NonEmptyArrayOfResponseObjectsType</a>	Specifies an array of response objects.
<a href="#">t:OccurrenceItemIdType</a>	Specifies a single occurrence of a recurring item.
<a href="#">t:RecurringMasterItemIdType</a>	Specifies a recurrence master item by identifying the identifiers of one of its related occurrence items.
<a href="#">t:ItemIdType</a>	Specifies an item identifier of an item.
<a href="#">t:ReferenceItemResponseType</a>	Specifies a referenced item for a response object.
<a href="#">t:SmartResponseBaseType</a>	Specifies the base type for ReplyToItem, ReplyAllToItem, ForwardItem, and CancelCalendarItem response objects.
<a href="#">t:SmartResponseType</a>	Specifies the base type for ReplyToItem, ReplyAllToItem, ForwardItem, and CancelCalendarItem response objects.

### 2.2.3.1 m:BaseMoveCopyItemType Complex Type

The **BaseMoveCopyItemType** complex type specifies the base type for the **CopyItemType** complex type (section [3.1.4.1.1.2](#)) and the **MoveItemType** complex type (section [3.1.4.5.1.2](#)).

```

<xs:complexType name="BaseMoveCopyItemType">
  <xs:complexContent>
    <xs:extension
      base="m:BaseRequestType"
    >
      <xs:sequence>
        <xs:element name="ToFolderId"
          type="t:TargetFolderIdType"
        />
        <xs:element name="ItemIds"
          type="t:NonEmptyArrayOfBaseItemIdsType"
        />
        <xs:element name="ReturnNewItemIds"
          type="xs:boolean"
          minOccurs="0"
        />
      </xs:sequence>
    
```

```

</xs:extension>
</xs:complexContent>
</xs:complexType>

```

#### Child Elements

Element	Type	Description
ToFolderId	<a href="#">t:TargetFolderIdType</a>	Specifies an instance of the <b>TargetFolderIdType</b> class that specifies the folder to which to move or copy the items specified by the <b>ItemIds</b> property.
ItemIds	<a href="#">t:NonEmptyArrayOfBaseItemIdsType</a>	Specifies an array of elements of type <b>BaseItemIdType</b> that specifies a set of items to move or copy.
ReturnNewItemIds	xs:boolean	Specifies a Boolean value that indicates whether the ItemID is to be returned for new items. <a href="#">&lt;1&gt;</a>

#### 2.2.3.2 m:SendItemResponseType Complex Type

The [SendItemResponseType](#) complex type specifies a response to a call to the **SendItem** method.

```

<xs:complexType name="SendItemResponseType">
  <xs:complexContent>
    <xs:extension
      base="m:BaseResponseMessageType"
    />
  </xs:complexContent>
</xs:complexType>

```

#### 2.2.3.3 m:SendItemType Complex Type

The [SendItemType](#) complex type specifies a request to send a message.

```

<xs:complexType name="SendItemType">
  <xs:complexContent>
    <xs:extension
      base="m:BaseRequestType"
    >
      <xs:sequence>
        <xs:element name="ItemIds"
          type="t:NonEmptyArrayOfBaseItemIdsType"
        />
        <xs:element name="SavedItemFolderId"
          type="t:TargetFolderIdType"
          minOccurs="0"
        />
      </xs:sequence>
    </xs:extension>
  </xs:complexContent>

```

```
</xs:complexType>
```

#### Child Elements

Element	Type	Description
ItemIds	<a href="#">t:NonEmptyArrayOfBaseItemIdsType</a>	Specifies an array of item identifiers that are used to determine the items to try to send.
SavedItemFolderId	<a href="#">t:TargetFolderIdType</a>	Specifies the identity of the folder that contains a saved version of the sent item.

#### 2.2.3.4 m:UpdateItemResponseType Complex Type

The [UpdateItemResponseType](#) complex type specifies the status and result of a single call to the [UpdateItem](#) operation.

```
<xs:complexType name="UpdateItemResponseType">
  <xs:complexContent>
    <xs:extension
      base="m:ItemInfoResponseMessageType"
    >
      <xs:sequence>
        <xs:element name="ConflictResults"
          type="t:ConflictResultsType"
          minOccurs="0"
        />
      </xs:sequence>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

#### Child Elements

Element	Type	Description
ConflictResults	<a href="#">t:ConflictResultsType</a>	Specifies the number of conflicts in the result.

#### 2.2.3.5 t:ConflictResultsType Complex Type

The [ConflictResultsType](#) complex type specifies the number of conflicts in an [UpdateItem](#) operation response.

```
<xs:complexType name="ConflictResultsType">
  <xs:sequence>
    <xs:element name="Count"
      type="xs:int"
    />
  </xs:sequence>
</xs:complexType>
```

## Child Elements

Element	Type	Description
Count	xs:int	Specifies an integer value that indicates the number of conflicts in an UpdateItem operation response.

### 2.2.3.6 t:ItemType Complex Type

The [ItemType](#) complex type specifies a generic item on the server.

```
<xs:complexType name="ItemType">
  <xs:sequence>
    <xs:element name="MimeType"
      type="t:MimeContentType"
      minOccurs="0"
    />
    <xs:element name="ItemId"
      type="t:ItemIdType"
      minOccurs="0"
    />
    <xs:element name="ParentFolderId"
      type="t:FolderIdType"
      minOccurs="0"
    />
    <xs:element name="ItemClass"
      type="t:ItemClassType"
      minOccurs="0"
    />
    <xs:element name="Subject"
      type="xs:string"
      minOccurs="0"
    />
    <xs:element name="Sensitivity"
      type="t:SensitivityChoicesType"
      minOccurs="0"
    />
    <xs:element name="Body"
      type="t:BodyType"
      minOccurs="0"
    />
    <xs:element name="Attachments"
      type="t:NonEmptyArrayOfType"
      minOccurs="0"
    />
    <xs:element name="DateTimeReceived"
      type="xs:dateTime"
      minOccurs="0"
    />
    <xs:element name="Size"
      type="xs:int"
      minOccurs="0"
    />
    <xs:element name="Categories"
```

```

        type="t:ArrayOfStringsType"
        minOccurs="0"
    />
<xs:element name="Importance"
    type="t:ImportanceChoicesType"
    minOccurs="0"
/>
<xs:element name="InReplyTo"
    type="xs:string"
    minOccurs="0"
/>
<xs:element name="IsSubmitted"
    type="xs:boolean"
    minOccurs="0"
/>
<xs:element name="IsDraft"
    type="xs:boolean"
    minOccurs="0"
/>
<xs:element name="IsFromMe"
    type="xs:boolean"
    minOccurs="0"
/>
<xs:element name="IsResend"
    type="xs:boolean"
    minOccurs="0"
/>
<xs:element name="IsUnmodified"
    type="xs:boolean"
    minOccurs="0"
/>
<xs:element name="InternetMessageHeaders"
    type="t:NonEmptyArrayOfInternetHeadersType"
    minOccurs="0"
/>
<xs:element name="DateTimeSent"
    type="xs:dateTime"
    minOccurs="0"
/>
<xs:element name="DateTimeCreated"
    type="xs:dateTime"
    minOccurs="0"
/>
<xs:element name="ResponseObjects"
    type="t:NonEmptyArrayOfResponseObjectsType"
    minOccurs="0"
/>
<xs:element name="ReminderDueBy"
    type="xs:dateTime"
    minOccurs="0"
/>
<xs:element name="ReminderIsSet"
    type="xs:boolean"
    minOccurs="0"
/>
<xs:element name="ReminderMinutesBeforeStart"
    type="t:ReminderMinutesBeforeStartType"
    minOccurs="0"
/>

```

```

<xs:element name="DisplayCc"
  type="xs:string"
  minOccurs="0"
/>
<xs:element name="DisplayTo"
  type="xs:string"
  minOccurs="0"
/>
<xs:element name="HasAttachments"
  type="xs:boolean"
  minOccurs="0"
/>
<xs:element name="ExtendedProperty"
  type="t:ExtendedPropertyType"
  minOccurs="0"
  maxOccurs="unbounded"
/>
<xs:element name="Culture"
  type="xs:language"
  minOccurs="0"
/>
<xs:element name="EffectiveRights"
  type="t:EffectiveRightsType"
  minOccurs="0"
/>
<xs:element name="LastModifiedName"
  type="xs:string"
  minOccurs="0"
/>
<xs:element name="LastModifiedTime"
  type="xs:dateTime"
  minOccurs="0"
/>
<xs:element name="IsAssociated"
  type="xs:boolean"
  minOccurs="0"
/>
<xs:element name="WebClientReadFormQueryString"
  type="xs:string"
  minOccurs="0"
/>
<xs:element name="WebClientEditFormQueryString"
  type="xs:string"
  minOccurs="0"
/>
<xs:element name="ConversationId"
  type="t:ItemIdType"
  minOccurs="0"
/>
<xs:element name="UniqueBody"
  type="t:BodyType"
  minOccurs="0"
/>
</xs:sequence>
</xs:complexType>

```

## Child Elements

Element	Type	Description
MimeContent	<a href="#">t:MimeContentType</a>	Specifies an instance of the <b>MimeContentType</b> class that contains the native MIME stream of an object that is represented in base64Binary format.
ItemId	<a href="#">t:ItemIdType</a>	Specifies an instance of the <b>ItemIdType</b> class that represents the unique identifier and change key of an item in the Exchange store.
ParentFolderId	<a href="#">t:FolderIdType</a>	Specifies an instance of the <b>FolderIdType</b> class that represents the identifier of the parent folder that contains the item or folder.
ItemClass	<a href="#">t:ItemClassType</a>	Specifies a string value that indicates the message class of the item.
Subject	xs:string	Specifies a string value that represents the subject property of items. The subject is limited to 255 characters.
Sensitivity	<a href="#">t:SensitivityChoicesType</a>	Specifies one of the valid <b>SensitivityChoicesType</b> values that indicates the sensitivity level of an item.
Body	<a href="#">t:BodyType</a>	Specifies the body content of an item.
Attachments	<a href="#">t:NonEmptyArrayOfAttachmentsType</a>	Specifies an <b>AttachmentType</b> array that contains the items or files that are attached to an item.
DateTimeReceived	xs:dateTime	Specifies the date and time that an item in a <b>mailbox</b> was received.
Size	xs:int	Specifies an integer value that represents the size in bytes of an item.
Categories	<a href="#">t:ArrayOfStringsType</a>	Specifies a string array that identifies the categories to which an item in the mailbox belongs.
Importance	<a href="#">t:ImportanceChoicesType</a>	Specifies one of the valid <b>ImportanceChoicesType</b> values to indicate the

Element	Type	Description
		importance of the item.
InReplyTo	xs:string	Specifies a string value that contains the identifier of the item to which this item is a reply.
IsSubmitted	xs:boolean	Specifies a Boolean value that indicates whether an item has been submitted to the <b>Outbox folder</b> .
IsDraft	xs:boolean	Specifies a Boolean value that indicates whether the item has been sent.
IsFromMe	xs:boolean	Specifies a Boolean value that indicates whether a user sent an item to him or herself.
IsResend	xs:boolean	Specifies a Boolean value that indicates whether the item has previously been sent.
IsUnmodified	xs:boolean	Specifies a Boolean value that indicates whether the item has been modified.
InternetMessageHeaders	<a href="#">t:NonEmptyArrayOfInternetHeadersType</a>	Specifies an array of the type <b>InternetHeaderType</b> that represents the collection of all Internet message headers that are contained in an item in a mailbox.
DateTimeSent	xs:dateTime	Specifies the date and time when an item in a mailbox was sent.
DateTimeCreated	xs:dateTime	Specifies the date and time that an item in the mailbox was created.
ResponseObjects	<a href="#">t:NonEmptyArrayOfResponseObjectsType</a>	Specifies an array of the type <b>responseObjectType</b> that contains a collection of all the response objects that are associated with an item.
ReminderDueBy	xs:dateTime	Specifies an instance of the <b>DateTime</b> structure that represents the date and time when the event occurs. This is used by the <b>ReminderMinutesBeforeStart</b> property to determine when the reminder is displayed.

Element	Type	Description
ReminderIsSet	xs:boolean	Specifies a Boolean value that indicates whether a reminder has been set for an item.
ReminderMinutesBeforeStart	<a href="#">t:ReminderMinutesBeforeStartType</a>	Specifies a string value that indicates the number of minutes before an event occurs when a reminder is displayed.
DisplayCc	xs:string	Specifies the display string that is used for the contents of the Cc box. This is the concatenated string of all <b>Cc recipient</b> display names.
DisplayTo	xs:string	Specifies the display string that is used for the contents of the To box. This is the concatenated string of all <b>To recipient</b> display names.
HasAttachments	xs:boolean	Specifies a Boolean value that indicates whether the item has at least one attachment.
ExtendedProperty	<a href="#">t:ExtendedPropertyType</a>	Specifies an array of the type <b>ExtendedPropertyType</b> that identifies extended MAPI properties.
Culture	xs:language	Specifies the culture for a given item in a mailbox.
EffectiveRights	<a href="#">t:EffectiveRightsType</a>	Specifies an instance of the <b>EffectiveRightsType</b> class that represents the client's rights based on the permission settings for the item or folder.
LastModifiedName	xs:string	Specifies a string value that contains the name of the user who last modified the item.
LastModifiedTime	xs:dateTime	Specifies an instance of the <b>DateTime</b> structure that represents the date and time that the item was last modified.
IsAssociated	xs:boolean	Specifies a value that indicates whether this is an associated item.
WebClientReadFormQueryString	xs:string	Specifies the query string that should be appended to the Web client URL to open this item by using the appropriate read form in a Web browser.

Element	Type	Description
WebClientEditFormQueryString	xs:string	Specifies the query string that should be appended to the Web client URL to open this item by using the appropriate edit form in a Web browser.
ConversationId	t:ItemIdType	Specifies the ID of the conversation that this item is part of.
UniqueBody	t:BodyType	Specifies the body part that is unique to the conversation that this item is part of.

### 2.2.3.7 t:MimeContentType Complex Type

The [MimeContentType](#) complex type specifies the native MIME stream of an object that is represented in base64Binary format.

```
<xs:complexType name="MimeContentType">
  <xs:simpleContent>
    <xs:extension
      base="xs:string"
    >
      <xs:attribute name="CharacterSet"
        type="xs:string"
        use="optional"
      />
    </xs:extension>
  </xs:simpleContent>
</xs:complexType>
```

#### Attributes

Name	Type	Description
CharacterSet	xs:string	Specifies the International Standards Organization (ISO) name of the character set that is used in the MIME message.

### 2.2.3.8 t:NonEmptyArrayOfBaseItemIdsType Complex Type

The [NonEmptyArrayOfBaseItemIdsType](#) complex type specifies a collection of items.

```
<xs:complexType name="NonEmptyArrayOfBaseItemIdsType">
  <xs:choice
    minOccurs="1"
    maxOccurs="unbounded"
  >
    <xs:element name="ItemId"
      type="t:ItemIdType"
    />
    <xs:element name="OccurrenceItemId"
```

```

        type="t:OccurrenceItemIdType"
    />
<xs:element name="RecurringMasterItemId"
    type="t:RecurringMasterItemIdType"
    />
</xs:choice>
</xs:complexType>
```

#### Child Elements

Element	Type	Description
ItemId	<a href="#">t:ItemIdType</a>	Specifies the item identifier.
OccurrenceItemId	<a href="#">t:OccurrenceItemIdType</a>	Specifies a single occurrence of a recurring item.
RecurringMasterItemId	<a href="#">t:RecurringMasterItemIdType</a>	Specifies a recurrence master item by identifying the identifiers of one of its related occurrence items.

#### 2.2.3.9 t:NonEmptyArrayOfInternetHeadersType Complex Type

The [t:NonEmptyArrayOfInternetHeadersType](#) complex type specifies the collection of all Internet message headers that are contained in an item.

```

<xs:complexType name="NonEmptyArrayOfInternetHeadersType">
    <xs:sequence>
        <xs:element name="InternetMessageHeader"
            type="t:InternetHeaderType"
            maxOccurs="unbounded"
        />
    </xs:sequence>
</xs:complexType>
```

#### Child Elements

Element	Type	Description
InternetMessageHeader	<a href="#">t:InternetHeaderType</a>	Specifies a single Internet message header.

#### 2.2.3.10 t:NonEmptyArrayOfResponseObjectsType Complex Type

The [NonEmptyArrayOfResponseObjectsType](#) complex type specifies an array of response objects.

```

<xs:complexType name="NonEmptyArrayOfResponseObjectsType">
    <xs:choice
        maxOccurs="unbounded"
        minOccurs="0"
    >
        <xs:element name="AcceptItem"
            type="t:AcceptItemType"
        />
    </xs:choice>
</xs:complexType>
```

```

    />
<xs:element name="TentativelyAcceptItem"
    type="t:TentativelyAcceptItemType"
/>
<xs:element name="DeclineItem"
    type="t:DeclineItemType"
/>
<xs:element name="ReplyToItem"
    type="t:ReplyToItemType"
/>
<xs:element name="ForwardItem"
    type="t:ForwardItemType"
/>
<xs:element name="ReplyAllToItem"
    type="t:ReplyAllToItemType"
/>
<xs:element name="CancelCalendarItem"
    type="t:CancelCalendarItemType"
/>
<xs:element name="RemoveItem"
    type="t:RemoveItemType"
/>
<xs:element name="SuppressReadReceipt"
    type="t:SuppressReadReceiptType"
/>
<xs:element name="PostReplyItem"
    type="t:PostReplyItemType"
/>
<xs:element name="AcceptSharingInvitation"
    type="t:AcceptSharingInvitationType"
/>
</xs:choice>
</xs:complexType>

```

## Child Elements

Element	Type	Description
AcceptItem	<a href="#">t:AcceptItemType</a>	Specifies an Accept reply to a meeting request.
TentativelyAcceptItem	<a href="#">t:TentativelyAcceptItemType</a>	Specifies a Tentative reply to a meeting request.
DeclineItem	<a href="#">t:DeclineItemType</a>	Specifies a Decline reply to a meeting request.
ReplyToItem	<a href="#">t:ReplyToItemType</a>	Specifies a reply to the sender of an item.
ForwardItem	<a href="#">t:ForwardItemType</a>	Specifies an server store item to forward to <b>recipients</b> .
ReplyAllToItem	<a href="#">t:ReplyAllToItemType</a>	Specifies a reply to the sender and all identified recipients of an item in the server store.
CancelCalendarItem	<a href="#">t:CancelCalendarItemType</a>	Specifies the response object that is used to

Element	Type	Description
		cancel a meeting.
RemoveItem	<a href="#">t:RemoveItemType</a>	Specifies a response object that is used to remove a meeting item when a MeetingCancellation message is received.
SuppressReadReceipt	<a href="#">t:SuppressReadReceiptType</a>	Specifies to suppress read receipts.
PostReplyItem	<a href="#">t:PostReplyItemType</a>	Specifies a reply to a post item.
AcceptSharingInvitation	<a href="#">t:AcceptSharingInvitationType</a>	Specifies to accept a sharing invitation.

### 2.2.3.11 t:OccurrenceItemIdType Complex Type

The [OccurrenceItemIdType](#) complex type specifies a single occurrence of a recurring item.

```

<xs:complexType name="OccurrenceItemIdType">
  <xs:complexContent>
    <xs:extension
      base="t:BaseItemIdType"
    >
      <xs:attribute name="RecurringMasterId"
        type="t:DerivedItemIdType"
        use="required"
      />
      <xs:attribute name="ChangeKey"
        type="xs:string"
        use="optional"
      />
      <xs:attribute name="InstanceIndex"
        type="xs:int"
        use="required"
      />
    </xs:extension>
  </xs:complexContent>
</xs:complexType>

```

#### Attributes

Name	Type	Description
RecurringMasterId	<a href="#">t:DerivedItemIdType</a>	Specifies the identifier of the recurring master of a recurring item.
ChangeKey	xs:string	Specifies a specific version of a single occurrence of a recurring master item.
InstanceIndex	xs:int	Specifies the index of the item occurrence.

### 2.2.3.12 t:RecurringMasterItemIdType Complex Type

The t: [t:RecurringMasterItemIdType](#) complex type specifies a recurrence master item by identifying the identifiers of one of its related occurrence items.

```

<xs:complexType name="RecurringMasterItemIdType">
  <xs:complexContent>
    <xs:extension
      base="t:BaseItemIdType"
    >
      <xs:attribute name="OccurrenceId"
        type="t:DerivedItemIdType"
        use="required"
      />
      <xs:attribute name="ChangeKey"
        type="xs:string"
        use="optional"
      />
    </xs:extension>
  </xs:complexContent>
</xs:complexType>

```

#### Attributes

Name	Type	Description
OccurrenceId	<a href="#">t:DerivedItemIdType</a>	Specifies a single occurrence of a recurring master item.
ChangeKey	xs:string	Specifies a specific version of a single occurrence of a recurring master item.

#### 2.2.3.13 t:ItemIdType Complex Type

The [ItemIdType](#) complex type specifies an item identifier of an item.

```

<xs:complexType name="ItemIdType">
  <xs:complexContent>
    <xs:extension
      base="t:BaseItemIdType"
    >
      <xs:attribute name="Id"
        type="xs:string"
        use="required"
      />
      <xs:attribute name="ChangeKey"
        type="xs:string"
        use="optional"
      />
    </xs:extension>
  </xs:complexContent>
</xs:complexType>

```

#### Attributes

Name	Type	Description
Id	xs:string	Specifies an item identifier.

Name	Type	Description
ChangeKey	xs:string	Specifies a change key.

### 2.2.3.14 t:ReferenceItemResponseType Complex Type

The [t:ReferenceItemResponseType](#) complex type specifies a referenced item for a response object.

```
<xs:complexType name="ReferenceItemResponseType">
  <xs:complexContent>
    <xs:restriction
      base="t:ResponseObjectType"
    >
      <xs:sequence>
        <xs:element name="ReferenceItemId"
          type="t:ItemIdType"
          minOccurs="0"
        />
      </xs:sequence>
      <xs:attribute name="ObjectName"
        type="xs:string"
        use="prohibited"
      />
    </xs:restriction>
  </xs:complexContent>
</xs:complexType>
```

#### Child Elements

Element	Type	Description
ReferenceItemId	<a href="#">t:ItemIdType</a>	Specifies the referenced item identifier.

#### Attributes

Name	Type	Description
ObjectName	xs:string	Specifies the name of the reply object class as a string

### 2.2.3.15 t:SmartResponseBaseType Complex Type

The **SmartResponseBaseType** complex type specifies the base type for **ReplyToItemType** ([\[MS-OXWSCDATA\]](#) section 2.2.3.51), **ReplyAllToItemType** ([\[MS-OXWSCDATA\]](#) section 2.2.3.49), **ForwardItemType** ([\[MS-OXWSCDATA\]](#) section 2.2.3.31), and **CancelCalendarItemType** ([\[MS-OXWSCDATA\]](#) section 2.2.3.8) complex type response objects.

```
<xs:complexType name="SmartResponseBaseType">
  <xs:complexContent>
    <xs:restriction
      base="t:ResponseObjectType"
    >
      <xs:sequence>
        <xs:element name="Subject"
```

```

        type="xs:string"
        minOccurs="0"
    />
<xs:element name="Body"
    type="t:BodyType"
    minOccurs="0"
/>
<xs:element name="ToRecipients"
    type="t:ArrayOfRecipientsType"
    minOccurs="0"
/>
<xs:element name="CcRecipients"
    type="t:ArrayOfRecipientsType"
    minOccurs="0"
/>
<xs:element name="BccRecipients"
    type="t:ArrayOfRecipientsType"
    minOccurs="0"
/>
<xs:element name="IsReadReceiptRequested"
    type="xs:boolean"
    minOccurs="0"
/>
<xs:element name="IsDeliveryReceiptRequested"
    type="xs:boolean"
    minOccurs="0"
/>
<xs:element name="From"
    type="t:SingleRecipientType"
    minOccurs="0"
/>
<xs:element name="ReferenceItemId"
    type="t:ItemIdType"
    minOccurs="0"
/>
/>
</xs:sequence>
<xs:attribute name="ObjectName"
    type="xs:string"
    use="prohibited"
/>
</xs:restriction>
</xs:complexContent>
</xs:complexType>

```

## Child Elements

Element	Type	Description
Subject	xs:string	Specifies the subject.
Body	t:BodyType	Specifies the body content of an item.
ToRecipients	<a href="#">t:ArrayOfRecipientsType</a>	Specifies a collection of recipients of an e-mail message. This property is required for sending a message.

Element	Type	Description
CcRecipients	t:ArrayOfRecipientsType	Specifies a collection of <b>carbon copy (Cc) recipients</b> of an e-mail message.
BccRecipients	t:ArrayOfRecipientsType	Specifies a collection of <b>blind carbon copy (Bcc) recipients</b> of an e-mail message.
IsReadReceiptRequested	xs:boolean	Specifies whether a <b>read receipt</b> is requested.
IsDeliveryReceiptRequested	xs:boolean	Specifies whether a <b>delivery receipt</b> is requested.
From	<a href="#">t:SingleRecipientType</a>	Specifies the addressee from whom a message was sent.
ReferenceItemId	<a href="#">t:ItemIdType</a>	Specifies the item identifier that is related to a response object.

#### Attributes

Name	Type	Description
ObjectName	xs:string	Specifies the name of the reply object class as an English string.

#### 2.2.3.16 t:SmartResponseType Complex Type

The **SmartResponseType** complex type specifies the base type for **ReplyToItemType** ([\[MS-OXWSCDATA\]](#) section 2.2.3.51), **ReplyAllToItemType** ([\[MS-OXWSCDATA\]](#) section 2.2.3.49), **ForwardItemType** ([\[MS-OXWSCDATA\]](#) section 2.2.3.31), and **CancelCalendarItemType** ([\[MS-OXWSCDATA\]](#) section 2.2.3.8) complex type response objects.

```

<xs:complexType name="SmartResponseType">
  <xs:complexContent>
    <xs:extension
      base="t:SmartResponseBaseType"
    >
      <xs:sequence>
        <xs:element name="NewBodyContent"
          type="t:BodyType"
          minOccurs="0"
        />
      </xs:sequence>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>

```

#### Child Elements

Element	Type	Description
NewBodyContent	<a href="#">t:BodyType</a>	Specifies the new body content of a message response object.

## 2.2.4 Elements

The following table summarizes the set of common XML schema element definitions that are defined by this specification. XML schema element definitions that are specific to a particular operation are defined with the operation.

Element	Description
<a href="#">t:BaseItemId</a>	Specifies the base class for IDs that represent items in a mailbox.

### 2.2.4.1 t:BaseItemId Element

The [BaseItemId](#) element specifies the base class for IDs that represent items in a mailbox.

```
<xs:element name="t:BaseItemId"
    type="t:BaseItemIdType"
    abstract="true"
/>
```

## 2.2.5 Attributes

This specification does not define any common XML schema attribute definitions.

## 2.2.6 Groups

This specification does not define any common XML schema group definitions.

## 2.2.7 Attribute Groups

This specification does not define any common XML schema attribute group definitions.

## 2.2.8 Messages

This specification does not define any common XML schema message definitions.

### 3 Protocol Details

The client side of this protocol is simply a pass-through. That is, no additional timers or other state is required on the client side of this protocol. Calls made by the higher-layer protocol or application are passed directly to the transport, and the results that are returned by the transport are passed directly back to the higher-layer protocol or application.

#### 3.1 ExchangeServicePortType Server Details

The Core Items Web Service protocol defines a single port type with six operations.

Operation	Description
<a href="#">GetItem</a>	Gets items on the server.
<a href="#">CreateItem</a>	Creates items on the server.
<a href="#">DeleteItem</a>	Deletes items on the server.
<a href="#">UpdateItem</a>	Updates items on the server.
<a href="#">MoveItem</a>	Moves items on the server.
<a href="#">CopyItem</a>	Copies items on the server.

##### 3.1.1 Abstract Data Model

The Core Items Web Service protocol is a stateless protocol.

##### 3.1.2 Timers

None.

##### 3.1.3 Initialization

None.

##### 3.1.4 Message Processing Events and Sequencing

This protocol includes the operations that are listed in the following table.

Operation	Description
<a href="#">GetItem</a>	Gets items on the server.
<a href="#">CreateItem</a>	Creates items on the server.
<a href="#">DeleteItem</a>	Deletes items on the server.
<a href="#">UpdateItem</a>	Updates items on the server.
<a href="#">MoveItem</a>	Moves items on the server.
<a href="#">CopyItem</a>	Copies items on the server.

### 3.1.4.1 CopyItem

The [CopyItem](#) operation copies items on the server.

```
<wsdl:operation name="CopyItem" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
    <wsdl:input message="tns:CopyItemSoapIn" />
    <wsdl:output message="tns:CopyItemSoapOut" />
</wsdl:operation>
```

Request

Message Format	Description
<a href="#">tns:CopyItemSoapIn</a>	Specifies the <b>SOAP message</b> that requests the copied item.

Response

Message Format	Description
<a href="#">tns:CopyItemSoapOut</a>	Specifies the SOAP message that is returned by the server in response.

#### 3.1.4.1.1 Complex Types

The following XML schema complex type definitions are specific to this operation.

##### 3.1.4.1.1.1 m:CopyItemResponseType Complex Type

The [CopyItemResponseType](#) complex type specifies the response that is returned by the [CopyItem](#) operation.

```
<xs:complexType name="CopyItemResponseType">
    <xs:complexContent>
        <xs:extension
            base="m:BaseResponseMessageType"
        />
    </xs:complexContent>
</xs:complexType>
```

##### 3.1.4.1.1.2 m:CopyItemType Complex Type

The [CopyItemType](#) complex type specifies an operation to copy items in a mailbox.

```
<xs:complexType name="CopyItemType">
    <xs:complexContent>
        <xs:extension
            base="m:BaseMoveCopyItemType"
        />
    </xs:complexContent>
</xs:complexType>
```

### 3.1.4.1.2 Elements

The following XML schema element definitions are specific to this operation.

#### 3.1.4.1.2.1 CopyItem Element

The [CopyItem](#) element specifies a request to copy an item in a mailbox.

```
<xs:element name="CopyItem"
    type="m:CopyItemType"
/>
```

#### 3.1.4.1.2.2 CopyItemResponse Element

The [CopyItemResponse](#) element specifies a response to a [CopyItem](#) operation request.

```
<xs:element name="CopyItemResponse"
    type="m:CopyItemResponseType"
/>
```

### 3.1.4.1.3 Messages

The following **WSDL message** definitions are specific to this operation.

#### 3.1.4.1.3.1 tns:CopyItemSoapIn Message

The CopyItemSoapIn message contains four parts, as described in the following table.

Part Name	Element/Type	Description
request	<a href="#">tns:CopyItem</a>	Specifies the request.
Impersonation	<a href="#">t:ExchangeImpersonation</a>	Specifies the user whom the client application is impersonating.
MailboxCulture	<a href="#">t:MailboxCulture</a>	Specifies the culture to use for accessing the mailbox. The cultures are defined by <a href="#">[RFC3066]</a> .
RequestVersion	<a href="#">t:RequestServerVersion</a>	Specifies the schema version for the <b>CopyItem</b> operation (section <a href="#">3.1.4.1</a> ) request.

#### 3.1.4.1.3.2 tns:CopyItemSoapOut Message

The CopyItemSoapOut message contains two parts, as described in the following table.

Part Name	Element/Type	Description
CopyItemResult	<a href="#">tns:CopyItemResponse</a>	Specifies the response message.
ServerVersion	<a href="#">t:ServerVersionInfo</a>	Specifies the schema version for the CopyItemSoapOut message.

### 3.1.4.2 CreateItem

The **CreateItem** operation creates items on the server.

```
<wsdl:operation name="CreateItem" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
    <wsdl:input message="tns:CreateItemSoapIn" />
    <wsdl:output message="tns:CreateItemSoapOut" />
</wsdl:operation>
```

Request

Message Format	Description
<a href="#">tns:CreateItemSoapIn</a>	Specifies the SOAP message that requests the created item.

Response

Message Format	Description
<a href="#">tns:CreateItemSoapOut</a>	Specifies the SOAP message that is returned by the server in response.

#### 3.1.4.2.1 Complex Types

The following XML schema complex type definitions are specific to this operation.

##### 3.1.4.2.1.1 m:CreateItemResponseType Complex Type

The [CreateItemResponseType](#) complex type specifies a response to a [CreateItem](#) operation request.

```
<xs:complexType name="CreateItemResponseType">
    <xs:complexContent>
        <xs:extension
            base="m:BaseResponseMessageType"
        />
    </xs:complexContent>
</xs:complexType>
```

##### 3.1.4.2.1.2 m:CreateItemType Complex Type

The [CreateItemType](#) complex type specifies a request to create an item or response object.

```
<xs:complexType name="CreateItemType">
    <xs:complexContent>
        <xs:extension
            base="m:BaseRequestType"
        >
            <xs:sequence>
                <xs:element name="SavedItemFolderId"
                    type="t:TargetFolderIdType"
                    minOccurs="0"
                />
                <xs:element name="Items"
```

```

        type="t:NonEmptyArrayOfTypeAllItemsType"
    />
</xs:sequence>
<xs:attribute name="MessageDisposition"
    type="t:MessageDispositionType"
    use="optional"
/>
<xs:attribute name="SendMeetingInvitations"
    type="t:CalendarItemCreateOrDeleteOperationType"
    use="optional"
/>
</xs:extension>
</xs:complexContent>
</xs:complexType>

```

#### Child Elements

Element	Type	Description
SavedItemFolderId	<a href="#">t:TargetFolderIdType</a>	Specifies the folder in which new items are saved.
Items	<a href="#">t:NonEmptyArrayOfTypeAllItemsType</a>	Specifies the collection of items to create.

#### Attributes

Name	Type	Description
MessageDisposition	<a href="#">t:MessageDispositionType</a>	Specifies an enumeration that describes how an item is handled after it is created.
SendMeetingInvitations	<a href="#">t:CalendarItemCreateOrDeleteOperationType</a>	Specifies an enumeration that describes how meeting requests are handled after they are created.

### 3.1.4.2.2 Elements

The following XML schema element definitions are specific to this operation.

#### 3.1.4.2.2.1 CreateItem Element

The [CreateItem](#) element specifies a request to create an item.

```

<xs:element name="CreateItem"
    type="m:CreateItemType"
/>

```

#### 3.1.4.2.2.2 CreateItemResponse Element

The [CreateItemResponse](#) element specifies a response to a [CreateItem](#) operation request.

```

<xs:element name="CreateItemResponse"
    type="m:CreateItemResponseType"
/>

```

### 3.1.4.2.3 Messages

The following **WSDL message** definitions are specific to this operation.

#### 3.1.4.2.3.1 tns:CreateItemSoapIn Message

The tns:CreateItemSoapIn message contains five parts, as described in the following table.

Part Name	Element/Type	Description
request	<a href="#">tns:CreateItem</a>	Specifies the request.
Impersonation	<a href="#">t:ExchangeImpersonation</a>	Specifies the user whom the client application is impersonating.
MailboxCulture	<a href="#">t:MailboxCulture</a>	Specifies the culture to use for accessing the mailbox. The cultures are defined by <a href="#">[RFC3066]</a> .
RequestVersion	<a href="#">t:RequestServerVersion</a>	Specifies the schema version for the <b>CreateItem</b> operation (section <a href="#">3.1.4.2</a> ) request.
TimeZoneContext	<a href="#">t:TimeZoneContext</a>	Specifies the time zone to use for all responses from the server. All times that are returned from the server will be converted to the specified time zone.

#### 3.1.4.2.3.2 tns:CreateItemSoapOut Message

The CreateItemSoapOut message contains two parts, as described in the following table.

Part Name	Element/Type	Description
CreateItemResult	<a href="#">tns:CreateItemResponse</a>	Specifies the response message.
ServerVersion	<a href="#">t:ServerVersionInfo</a>	Specifies the schema version for the CreateItemSoapOut message.

### 3.1.4.3 DeleteItem

The [DeleteItem](#) operation deletes items on the server.

Request

Message Format	Description
<a href="#">tns:DeleteItemSoapIn</a>	Specifies the SOAP message that requests the deleted item.

Response

Message Format	Description
<a href="#">tns:DeleteItemSoapOut</a>	Specifies the SOAP message that is returned by the server in response.

### 3.1.4.3.1 Complex Types

The following XML schema complex type definitions are specific to this operation.

#### 3.1.4.3.1.1 m:DeleteItemResponseType Complex Type

The [DeleteItemResponseType](#) complex type specifies a response to a single [DeleteItem](#) operation request.

```
<xs:complexType name="DeleteItemResponseType">
  <xs:complexContent>
    <xs:extension
      base="m:BaseResponseMessageType"
    />
  </xs:complexContent>
</xs:complexType>
```

#### 3.1.4.3.1.2 m:DeleteItemType Complex Type

The [DeleteItemType](#) complex type specifies a request to delete items.

```
<xs:complexType name="DeleteItemType">
  <xs:complexContent>
    <xs:extension
      base="m:BaseRequestType"
    >
      <xs:sequence>
        <xs:element name="ItemIds"
          type="t:NonEmptyArrayOfBaseItemIdsType"
        />
      </xs:sequence>
      <xs:attribute name="DeleteType"
        type="t:DisposalType"
        use="required"
      />
      <xs:attribute name="SendMeetingCancellations"
        type="t:CalendarItemCreateOrDeleteOperationType"
        use="optional"
      />
      <xs:attribute name="AffectedTaskOccurrences"
        type="t:AffectedTaskOccurrencesType"
        use="optional"
      />
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

#### Child Elements

Element	Type	Description
ItemIds	<a href="#">t:NonEmptyArrayOfBaseItemIdsType</a>	Specifies the collection of items to delete.

#### Attributes

Name	Type	Description
DeleteType	<a href="#">t:DisposalType</a>	Specifies an enumeration value that describes how an item is deleted.
SendMeetingCancellations	<a href="#">t:CalendarItemCreateOrDeleteOperationType</a>	Specifies an enumeration that describes how cancellations are handled for deleted meetings.
AffectedTaskOccurrences	<a href="#">t:AffectedTaskOccurrencesType</a>	Specifies an enumeration value that indicates whether a task instance or task master is deleted.

### 3.1.4.3.2 Elements

The following XML schema element definitions are specific to this operation.

#### 3.1.4.3.2.1 DeleteItem Element

The [DeleteItem](#) element specifies a request to delete an item from a mailbox.

```
<xs:element name="DeleteItem"
  type="m:DeleteItemType"
/>
```

#### 3.1.4.3.2.2 DeleteItemResponse Element

The [DeleteItemResponse](#) element specifies a response to a single [DeleteItem](#) operation request.

```
<xs:element name="DeleteItemResponse"
  type="m:DeleteItemResponseType"
/>
```

### 3.1.4.3.3 Messages

The following **WSDL message** definitions are specific to this operation.

#### 3.1.4.3.3.1 tns:DeleteItemSoapIn Message

The DeleteItemSoapIn message contains four parts, as described in the following table.

<b>Part Name</b>	<b>Element/Type</b>	<b>Description</b>
request	<a href="#">tns:DeleteItem</a>	Specifies the request.
Impersonation	<a href="#">t:ExchangeImpersonation</a>	Specifies the user whom the client application is impersonating.
MailboxCulture	<a href="#">t:MailboxCulture</a>	Specifies the culture to use for accessing the mailbox. The cultures are defined by <a href="#">[RFC3066]</a> .
RequestVersion	<a href="#">t:RequestServerVersion</a>	Specifies the schema version for the <b>DeleteItem</b> operation (section <a href="#">3.1.4.3</a> ) request.

### 3.1.4.3.3.2 tns:DeleteItemSoapOut Message

The DeleteItemSoapOut message contains two parts, as described in the following table.

<b>Part Name</b>	<b>Element/Type</b>	<b>Description</b>
DeleteItemResult	<a href="#">tns:DeleteItemResponse</a>	Specifies the response message.
ServerVersion	<a href="#">t:ServerVersionInfo</a>	Specifies the schema version for the DeleteItemSoapOut message.

### 3.1.4.4 GetItem

The [GetItem](#) operation gets items on the server.

Request

<b>Message Format</b>	<b>Description</b>
<a href="#">tns:.GetItemSoapIn</a>	Specifies the SOAP message that requests the item.

Response

<b>Message Format</b>	<b>Description</b>
<a href="#">tns:.GetItemSoapOut</a>	Specifies the SOAP message that is returned by the server in response.

### 3.1.4.4.1 Complex Types

The following XML schema complex type definitions are specific to this operation.

#### 3.1.4.4.1.1 m:GetItemResponseType Complex Type

The [GetItemResponseType](#) complex type specifies a response to a [GetItem](#) operation request.

```
<xs:complexType name="GetItemResponseType">
  <xs:complexContent>
    <xs:extension
      base="m:BaseResponseMessageType"
    />
  </xs:complexContent>
```

```
</xs:complexType>
```

### 3.1.4.4.1.2 m:GetItemType Complex Type

The [GetItemType](#) complex type specifies a request to get items from a mailbox.

```
<xs:complexType name="GetItemType">
  <xs:complexContent>
    <xs:extension
      base="m:BaseRequestType"
    >
      <xs:sequence>
        <xs:element name="ItemShape"
          type="t:ItemResponseShapeType"
        />
        <xs:element name="ItemIds"
          type="t:NonEmptyArrayOfBaseItemIdsType"
        />
      </xs:sequence>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

#### Child Elements

Element	Type	Description
ItemShape	<a href="#">t:ItemResponseShapeType</a>	Specifies the response shape of the <a href="#">GetItem</a> operation response.
ItemIds	<a href="#">t:NonEmptyArrayOfBaseItemIdsType</a>	Specifies the collection of items to get.

### 3.1.4.4.2 Elements

The following XML schema element definitions are specific to this operation.

#### 3.1.4.4.2.1 GetItem Element

The [GetItem](#) element specifies a request to get an item from a mailbox.

```
<xs:element name="GetItem"
  type="m:GetItemType"
/>
```

#### 3.1.4.4.2.2 GetItemResponse Element

The [GetItemResponse](#) element specifies a response to a [GetItem](#) operation request.

```
<xs:element name="GetItemResponse"
  type="m:GetItemResponseType"
```

/>

### 3.1.4.4.3 Messages

The following **WSDL message** definitions are specific to this operation.

#### 3.1.4.4.3.1 tns:.GetItemSoapIn Message

The [GetItemSoapIn](#) message contains five parts, as described in the following table.

Part Name	Element/Type	Description
request	<a href="#">tns:.GetItem</a>	Specifies the request.
Impersonation	<a href="#">t:ExchangeImpersonation</a>	Specifies the user whom the client application is impersonating.
MailboxCulture	<a href="#">t:MailboxCulture</a>	Specifies the culture to use for accessing the mailbox. The cultures are defined by <a href="#">[RFC3066]</a> .
RequestVersion	<a href="#">t:RequestServerVersion</a>	Specifies the schema version for the <b>GetItem</b> operation (section <a href="#">3.1.4.4</a> ) request.
TimeZoneContext	<a href="#">t:TimeZoneContext</a>	Specifies the time zone to use for all responses from the server. All times that are returned from the server will be converted to the specified time zone.

#### 3.1.4.4.3.2 tns:.GetItemSoapOut Message

The GetItemSoapOut message contains two parts, as described in the following table.

Part Name	Element/Type	Description
GetItemResult	<a href="#">tns:.GetItemResponse</a>	Specifies the response message.
ServerVersion	<a href="#">t:ServerVersionInfo</a>	Specifies the schema version for the GetItemSoapOut message.

### 3.1.4.5 MoveItem

The [MoveItem](#) operation moves items on the server.

Request

Message Format	Description
<a href="#">tns:MoveItemSoapIn</a>	Specifies the SOAP message that requests the moved item.

Response

Message Format	Description
<a href="#">tns:MoveItemSoapOut</a>	Specifies the SOAP message that is returned by the server in response.

### 3.1.4.5.1 Complex Types

The following XML schema complex type definitions are specific to this operation.

#### 3.1.4.5.1.1 m:MoveItemResponseType Complex Type

The **MoveItemResponseType** complex type specifies a response to a call to the **MoveItem** operation (section [3.1.4.5](#)).

```
<xs:complexType name="MoveItemResponseType">
  <xs:complexContent>
    <xs:extension
      base="m:BaseResponseMessageType"
    />
  </xs:complexContent>
</xs:complexType>
```

#### 3.1.4.5.1.2 m:MoveItemType Complex Type

The [MoveItemType](#) complex type specifies an operation to move items in a mailbox.

```
<xs:complexType name="MoveItemType">
  <xs:complexContent>
    <xs:extension
      base="m:BaseMoveCopyItemType"
    />
  </xs:complexContent>
</xs:complexType>
```

### 3.1.4.5.2 Elements

The following XML schema element definitions are specific to this operation.

#### 3.1.4.5.2.1 MoveItem Element

The [MoveItem](#) element specifies a request to move an item.

```
<xs:element name="MoveItem"
  type="m:MoveItemType"
/>
```

#### 3.1.4.5.2.2 MoveItemResponse Element

The <MoveItemResponse> element specifies a response to a **MoveItem** operation (section [3.1.4.5](#)) request.

```
<xs:element name="MoveItemResponse"
  type="m:MoveItemResponseType"
/>
```

### 3.1.4.5.3 Messages

The following **WSDL message** definitions are specific to this operation.

#### 3.1.4.5.3.1 tns:MoveItemSoapIn Message

The MoveItemSoapIn message contains four parts, as described in the following table.

Part Name	Element/Type	Description
request	<a href="#">tns:MoveItem</a>	Specifies the request.
Impersonation	<a href="#">t:ExchangeImpersonation</a>	Specifies the user whom the client application is impersonating.
MailboxCulture	<a href="#">t:MailboxCulture</a>	Specifies the culture to use for accessing the mailbox. The cultures are defined by <a href="#">[RFC3066]</a> .
RequestVersion	<a href="#">t:RequestServerVersion</a>	Specifies the schema version for the <b>MoveItem</b> (section <a href="#">3.1.4.5.2.1</a> ) operation request.

#### 3.1.4.5.3.2 tns:MoveItemSoapOut Message

The MoveItemSoapOut message contains two parts, as described in the following table.

Part Name	Element/Type	Description
MoveItemResult	<a href="#">tns:MoveItemResponse</a> (section <a href="#">3.1.4.5.2.2</a> )	Specifies the response message.
ServerVersion	<a href="#">t:ServerVersionInfo</a>	Specifies the schema version for the MoveItemSoapOut message.

### 3.1.4.6 SendItem

The [SendItem](#) operation sends messages and post items on the server.

Request

Message Format	Description
<a href="#">tns:SendItemSoapIn</a>	Specifies the SOAP message that requests the item to send.

Response

Message Format	Description
<a href="#">tns:SendItemSoapOut</a>	Specifies the SOAP message that is returned by the server in response.

### 3.1.4.6.1 Complex Types

The following XML schema complex type definitions are specific to this operation.

#### 3.1.4.6.1.1 m:SendItemResponseType Complex Type

The [m:SendItemResponseType](#) complex type specifies a response to a [SendItem](#) operation (section [3.1.4.6](#)) request.

```
<xs:complexType name="SendItemResponseType">
  <xs:complexContent>
    <xs:extension
      base="m:BaseResponseMessageType"
    />
  </xs:complexContent>
</xs:complexType>
```

#### 3.1.4.6.1.2 m:SendItemType Complex Type

The [SendItemType](#) complex type specifies a request to send messages and post items on the server.

```
<xs:complexType name="SendItemType">
  <xs:complexContent>
    <xs:extension
      base="m:BaseRequestType"
    >
      <xs:sequence>
        <xs:element name="ItemIds"
          type="t:NonEmptyArrayOfBaseItemIdsType"
        />
        <xs:element name="SavedItemFolderId"
          type="t:TargetFolderIdType"
          minOccurs="0"
        />
      </xs:sequence>
      <xs:attribute name="SaveItemToFolder"
        type="xs:boolean"
        use="required"
      />
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

#### Child Elements

Element	Type	Description
ItemIds	<a href="#">t:NonEmptyArrayOfBaseItemIdsType</a>	Specifies an array of item identifiers that are used to determine the items to try to send.
SavedItemFolderId	<a href="#">t:TargetFolderIdType</a>	Specifies the identity of the folder that

Element	Type	Description
		contains a saved version of the sent item.

Attributes

Name	Type	Description
SaveItemToFolder	xs:boolean	Specifies a Boolean value that specifies whether a copy of the sent item is saved.

### 3.1.4.6.2 Elements

The following XML schema element definitions are specific to this operation.

#### 3.1.4.6.2.1 SendItem Element

The [SendItem](#) element specifies the root element in a request to send an item.

```
<xs:element name="SendItem"
    type="m:SendItemType"
/>
```

#### 3.1.4.6.2.2 SendItemResponse Element

The [SendItemResponse](#) element specifies a response to a [SendItem](#) operation (section [3.1.4.6](#)) request.

```
<xs:element name="SendItemResponse"
    type="m:SendItemResponseType"
/>
```

### 3.1.4.6.3 Messages

The following **WSDL message** definitions are specific to this operation.

#### 3.1.4.6.3.1 tns:SendItemSoapIn Message

The SendItemSoapIn message contains four parts, as described in the following table.

Part Name	Element/Type	Description
request	<a href="#">tns:SendItem</a>	Specifies the request.
Impersonation	<a href="#">t:ExchangeImpersonation</a>	Specifies the user whom the client application is impersonating.
MailboxCulture	<a href="#">t:MailboxCulture</a>	Specifies the culture to use for accessing the mailbox. The cultures are defined by <a href="#">[RFC3066]</a> .
RequestVersion	<a href="#">t:RequestServerVersion</a>	Specifies the schema version for the <b>MoveItem</b> operation

Part Name	Element/Type	Description
		(section <a href="#">3.1.4.5.2.1</a> ) request.

### 3.1.4.6.3.2 tns:SendItemSoapOut Message

The SendItemSoapOut message contains two parts, as described in the following table.

Part Name	Element/Type	Description
SendItemResult	<a href="#">tns:SendItemResponse</a>	Specifies the response message.
ServerVersion	<a href="#">t:ServerVersionInfo</a>	Specifies the schema version for the SendItemSoapOut message.

### 3.1.4.7 UpdateItem

The [UpdateItem](#) operation updates items on the server.

Request

Message Format	Description
<a href="#">tns:UpdateItemSoapIn</a>	Specifies the SOAP message that requests the updated item.

Response

Message Format	Description
<a href="#">tns:UpdateItemSoapOut</a>	Specifies the SOAP message that is returned by the server in response.

### 3.1.4.7.1 Simple Types

The following XML schema simple type definitions are specific to this operation.

#### 3.1.4.7.1.1 t:ConflictResolutionType Simple Type

The [ConflictResolutionType](#) simple type specifies how a conflict is handled during an [UpdateItem](#) operation (section [3.1.4.7](#)).

```
<xs:simpleType name="ConflictResolutionType">
  <xs:restriction
    base="xs:string"
  >
    <xs:enumeration
      value="AlwaysOverwrite"
    />
    <xs:enumeration
      value="AutoResolve"
    />
    <xs:enumeration
      value="NeverOverwrite"
    />
  </xs:restriction>
```

```
</xs:simpleType>
```

## Enumeration

The following values are defined by the **ConflictResolutionType** simple type:

Value	Description
AlwaysOverwrite	If there is a conflict, the UpdateItem operation (section <a href="#">3.1.4.7</a> ) will overwrite information.
AutoResolve	The UpdateItem operation (section <a href="#">3.1.4.7</a> ) automatically resolves any conflict. The AutoResolve option will in most cases overwrite the existing value for a <b>property</b> . In some cases, the new value is ignored and the original value is retained. For example, user A changes the Sensitivity property from Normal to Confidential. Then user B sets the value to Public. In this example, the Confidential setting is retained and user B's update is ignored.
NeverOverwrite	If conflict exists, the UpdateItem operation (section <a href="#">3.1.4.7</a> ) fails and an error is returned.

## 3.1.4.7.2 Complex Types

The following XML schema complex type definitions are specific to this operation.

### 3.1.4.7.2.1 m:UpdateItemResponseType Complex Type

The [UpdateItemResponseType](#) complex type specifies the response to a call to the [UpdateItem](#) operation (section [3.1.4.7](#)).

```
<xs:complexType name="UpdateItemResponseType">
  <xs:complexContent>
    <xs:extension
      base="m:BaseResponseMessageType"
    />
  </xs:complexContent>
</xs:complexType>
```

### 3.1.4.7.2.2 m:UpdateItemType Complex Type

The [UpdateItemType](#) complex type specifies a request to update a set of items.

```
<xs:complexType name="UpdateItemType">
  <xs:complexContent>
    <xs:extension
      base="m:BaseRequestType"
    >
      <xs:sequence>
        <xs:element name="SavedItemId"
          type="t:TargetFolderIdType"
          minOccurs="0"
        />
      </xs:sequence>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

```

<xs:element name="ItemChanges"
    type="t:NonEmptyArrayOfItemChangesType"
/>
</xs:sequence>
<xs:attribute name="ConflictResolution"
    type="t:ConflictResolutionType"
    use="required"
/>
<xs:attribute name="MessageDisposition"
    type="t:MessageDispositionType"
    use="optional"
/>
<xs:attribute name="SendMeetingInvitationsOrCancellations"
    type="t:CalendarItemUpdateOperationType"
    use="optional"
/>
</xs:extension>
</xs:complexContent>
</xs:complexType>

```

#### Child Elements

Element	Type	Description
SavedItemId	<a href="#">t:TargetFolderIdType</a>	Specifies the target folder for saved items.
ItemChanges	<a href="#">t:NonEmptyArrayOfItemChangesType</a>	Specifies an array of item changes.

#### Attributes

Name	Type	Description
ConflictResolution	<a href="#">t:ConflictResolutionType</a>	Specifies an enumeration value that represents the type of conflict resolution that is performed during an update.
MessageDisposition	<a href="#">t:MessageDispositionType</a>	Specifies an enumeration value that describes how a message item is handled after it is updated.
SendMeetingInvitationsOrCancellations	<a href="#">t:CalendarItemUpdateOperationType</a>	Specifies an enumeration value that describes how a calendar item is handled after it is updated.

### 3.1.4.7.2.3 t:AppendToItemFieldType Complex Type

The [AppendToItemFieldType](#) complex type specifies data to append to a single property of an item during and [UpdateItem](#) operation (section [3.1.4.7](#)).

```

<xs:complexType name="AppendToItemType">
  <xs:complexContent>
    <xs:extension
      base="t:ItemChangeDescriptionType"
    >
      <xs:choice>
        <xs:element name="Item"
          type="t:ItemType"
        />
        <xs:element name="Message"
          type="t:MessageType"
        />
        <xs:element name="CalendarItem"
          type="t:CalendarItemType"
        />
        <xs:element name="Contact"
          type="t>ContactItemType"
        />
        <xs:element name="DistributionList"
          type="t:DistributionListType"
        />
        <xs:element name="MeetingMessage"
          type="t:MeetingMessageType"
        />
        <xs:element name="MeetingRequest"
          type="t:MeetingRequestMessageType"
        />
        <xs:element name="MeetingResponse"
          type="t:MeetingResponseMessageType"
        />
        <xs:element name="MeetingCancellation"
          type="t:MeetingCancellationMessageType"
        />
        <xs:element name="Task"
          type="t:TaskType"
        />
        <xs:element name="PostItem"
          type="t:PostItemType"
        />
      </xs:choice>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>

```

## Child Elements

Element	Type	Description
Item	<a href="#">t:ItemType</a>	Specifies a generic item.
Message	<a href="#">t:MessageType</a>	Specifies an e-mail message or non-IPM.Note item.
CalendarItem	<a href="#">t:CalendarItemType</a>	Specifies a calendar item.
Contact	<a href="#">t&gt;ContactItemType</a>	Specifies a contact item.

Element	Type	Description
DistributionList	<a href="#">t:DistributionListType</a>	Specifies a distribution list.
MeetingMessage	<a href="#">t:MeetingMessageType</a>	Specifies a meeting.
MeetingRequest	<a href="#">t:MeetingRequestMessageType</a>	Specifies a meeting request.
MeetingResponse	<a href="#">t:MeetingResponseMessageType</a>	Specifies a meeting response.
MeetingCancellation	<a href="#">t:MeetingCancellationMessageType</a>	Specifies a meeting cancellation.
Task	<a href="#">t:TaskType</a>	Specifies a task.
PostItem	<a href="#">t:PostItemType</a>	Specifies a post item.

### 3.1.4.7.2.4 t:ChangeDescriptionType Complex Type

The **ChangeDescriptionType** complex type specifies the base type that is used to describe changes in **UpdateFolder** operations ([MS-OXWSFOLD] section 3.1.4.8) and **UpdateItem** operations (section [3.1.4.7](#)).

```
<xs:complexType name="ChangeDescriptionType"
    abstract="true"
>
<xs:sequence>
    <xs:element
        ref="t:Path"
    />
</xs:sequence>
</xs:complexType>
```

#### Child Elements

Element	Type	Description
t:Path	t:Path	Specifies a substitution group that specifies the property to update.

### 3.1.4.7.2.5 t:DeleteItemFieldType Complex Type

The [DeleteItemFieldType](#) complex type specifies a property to delete from an item.

```
<xs:complexType name="DeleteItemFieldType">
    <xs:complexContent>
        <xs:extension
            base="t:ItemChangeDescriptionType"
        >
            <xs:sequence />
        </xs:extension>
    </xs:complexContent>
</xs:complexType>
```

### 3.1.4.7.2.6 t:ItemChangeDescriptionType Complex Type

The [ItemChangeDescriptionType](#) complex type specifies data that describes changes that are applied by using the [UpdateItem](#) operation (section [3.1.4.7](#)).

```
<xs:complexType name="ItemChangeDescriptionType">
  <xs:complexContent>
    <xs:extension
      base="t:ChangeDescriptionType"
    />
  </xs:complexContent>
</xs:complexType>
```

### 3.1.4.7.2.7 t:ItemChangeType Complex Type

The [ItemChangeType](#) complex type specifies an item identifier and the updates to apply to the item.

```
<xs:complexType name="ItemChangeType">
  <xs:sequence>
    <xs:choice>
      <xs:element name="ItemId"
        type="t:ItemIdType"
      />
      <xs:element name="OccurrenceItemId"
        type="t:OccurrenceItemIdType"
      />
      <xs:element name="RecurringMasterItemId"
        type="t:RecurringMasterItemIdType"
      />
    </xs:choice>
    <xs:element name="Updates"
      type="t:NonEmptyArrayOfItemChangeDescriptionsType"
    />
  </xs:sequence>
</xs:complexType>
```

#### Child Elements

Element	Type	Description
ItemId	<a href="#">t:ItemIdType</a>	Specifies an item identifier of an item in a mailbox.
OccurrenceItemId	<a href="#">t:OccurrenceItemIdType</a>	Specifies a single occurrence of a recurring item.
RecurringMasterItemId	<a href="#">t:RecurringMasterItemIdType</a>	Specifies a recurrence master item by identifying the identifiers of one of its related occurrence items.
Updates	<a href="#">t:NonEmptyArrayOfItemChangeDescriptionsType</a>	Specifies an array that defines append, set, and delete changes to item

Element	Type	Description
		properties.

### 3.1.4.7.2.8 t:NonEmptyArrayOfItemChangeDescriptionsType Complex Type

The [NonEmptyArrayOfItemChangeDescriptionsType](#) complex type specifies an array of items and their change types.

```
<xs:complexType name="NonEmptyArrayOfItemChangeDescriptionsType">
  <xs:choice
    maxOccurs="unbounded"
  >
    <xs:element name="AppendToItemField"
      type="t:AppendToItemFieldType"
    />
    <xs:element name="SetItemField"
      type="t:SetItemFieldType"
    />
    <xs:element name="DeleteItemField"
      type="t:DeleteItemFieldType"
    />
  </xs:choice>
</xs:complexType>
```

#### Child Elements

Element	Type	Description
AppendToItemField	<a href="#">t:AppendToItemFieldType</a>	Specifies data to append to a single property of an item during an <a href="#">UpdateItem</a> operation (section <a href="#">3.1.4.7</a> ).
SetItemField	<a href="#">t:SetItemFieldType</a>	Specifies an update to a single property of an item in an UpdateItem operation (section <a href="#">3.1.4.7</a> ).
DeleteItemField	<a href="#">t:DeleteItemFieldType</a>	Specifies an operation to delete a given property from an item during an UpdateItem (section <a href="#">3.1.4.7</a> ) call.

### 3.1.4.7.2.9 t:NonEmptyArrayOfItemChangesType Complex Type

The [NonEmptyArrayOfItemChangesType](#) complex type specifies an array of items and their changes.

```
<xs:complexType name="NonEmptyArrayOfItemChangesType">
  <xs:sequence>
    <xs:element name="ItemChange"
      type="t:ItemChangeType"
    />
  </xs:sequence>
</xs:complexType>
```

#### Child Elements

Element	Type	Description
ItemChange	<a href="#">t:ItemChangeType</a>	Specifies an item identifier and the updates to apply to the item.

### 3.1.4.7.2.10 t:SetItemFieldType Complex Type

The [SetItemFieldType](#) complex type specifies an update to a single property of an item.

```

<xs:complexType name="SetItemFieldType">
  <xs:complexContent>
    <xs:extension
      base="t:ItemChangeDescriptionType"
    >
      <xs:choice>
        <xs:element name="Item"
          type="t:ItemType"
        />
        <xs:element name="Message"
          type="t:MessageType"
        />
        <xs:element name="CalendarItem"
          type="t:CalendarItemType"
        />
        <xs:element name="Contact"
          type="t>ContactItemType"
        />
        <xs:element name="DistributionList"
          type="t:DistributionListType"
        />
        <xs:element name="MeetingMessage"
          type="t:MeetingMessageType"
        />
        <xs:element name="MeetingRequest"
          type="t:MeetingRequestMessageType"
        />
        <xs:element name="MeetingResponse"
          type="t:MeetingResponseMessageType"
        />
        <xs:element name="MeetingCancellation"
          type="t:MeetingCancellationMessageType"
        />
        <xs:element name="Task"
          type="t:TaskType"
        />
        <xs:element name="PostItem"
          type="t:PostItemType"
        />
      </xs:choice>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

#### Child Elements

<b>Element</b>	<b>Type</b>	<b>Description</b>
Item	<a href="#">t:ItemType</a>	Specifies a generic item.
Message	<a href="#">t:MessageType</a>	Specifies an e-mail message or non-IPM.Note item.
CalendarItem	<a href="#">t:CalendarItemType</a>	Specifies a calendar item.
Contact	<a href="#">t:ContactItemType</a>	Specifies a contact item.
DistributionList	<a href="#">t:DistributionListType</a>	Specifies a distribution list.
MeetingMessage	<a href="#">t:MeetingMessageType</a>	Specifies a meeting.
MeetingRequest	<a href="#">t:MeetingRequestMessageType</a>	Specifies a meeting request.
MeetingResponse	<a href="#">t:MeetingResponseMessageType</a>	Specifies meeting response.
MeetingCancellation	<a href="#">t:MeetingCancellationMessageType</a>	Specifies meeting cancellation.
Task	<a href="#">t:TaskType</a>	Specifies a task.
PostItem	<a href="#">t:PostItemType</a>	Specifies a post item.

### 3.1.4.7.3 Elements

The following XML schema element definitions are specific to this operation.

#### 3.1.4.7.3.1 UpdateItem Element

The [UpdateItem](#) element specifies a request to update an item in a mailbox.

```
<xs:element name="UpdateItem"
    type="m:UpdateItemType"
/>
```

#### 3.1.4.7.3.2 UpdateItemResponse Element

The [UpdateItemResponse](#) element specifies a response to an [UpdateItem](#) operation (section [3.1.4.7](#)) request.

```
<xs:element name="UpdateItemResponse"
    type="m:UpdateItemResponseType"
/>
```

### 3.1.4.7.4 Messages

The following **WSDL message** definitions are specific to this operation.

#### 3.1.4.7.4.1 tns:UpdateItemSoapIn Message

The UpdateItemSoapIn message contains five parts, as described in the following table.

<b>Part Name</b>	<b>Element/Type</b>	<b>Description</b>
request	<a href="#">tns:UpdateItem</a>	Specifies the request.
Impersonation	<a href="#">t:ExchangeImpersonation</a>	Specifies the user whom the client application is impersonating.
MailboxCulture	<a href="#">t:MailboxCulture</a>	Specifies the culture to use for accessing the mailbox. The cultures are defined by <a href="#">[RFC3066]</a> .
RequestVersion	<a href="#">t:RequestServerVersion</a>	Specifies the schema version for the <a href="#">UpdateItem</a> operation (section <a href="#">3.1.4.7</a> ) request.
TimeZoneContext	<a href="#">t:TimeZoneContext</a>	Specifies the time zone to use for all responses from the server. All times that are returned from the server will be converted to the specified time zone.

### **3.1.4.7.4.2 tns:UpdateItemSoapOut Message**

The UpdateItemSoapOut message contains two parts, as described in the following table.

<b>Part Name</b>	<b>Element/Type</b>	<b>Description</b>
UpdateItemResult	<a href="#">tns:UpdateItemResponse</a>	Specifies the response message.
ServerVersion	<a href="#">t:ServerVersionInfo</a>	Specifies the schema version for the UpdateItemSoapOut message.

## **3.1.5 Timer Events**

None.

## **3.1.6 Other Local Events**

None.

## **3.2 Client Details**

The client side of this protocol is simply a pass-through. That is, no additional timers or other state is required on the client side of this protocol. Calls made by the higher-layer protocol or application are passed directly to the transport, and the results that are returned by the transport are passed directly back to the higher-layer protocol or application.

### **3.2.1 Abstract Data Model**

None.

### **3.2.2 Timers**

None.

### **3.2.3 Initialization**

None.

### **3.2.4 Message Processing Events and Sequencing**

None.

### **3.2.5 Timer Events**

None.

### **3.2.6 Other Local Events**

None.

## 4 Protocol Examples

None.

## **5 Security**

### **5.1 Security Considerations for Implementers**

The Core Items Web Service protocol does not use any additional security mechanisms.

### **5.2 Index of Security Parameters**

None.

## 6 Appendix A: Full WSDL

The following table lists the **XML** files that are required to implement the functionality that is specified in this document. The contents of each file are included in this section.

File name	Description	Section
MS-OXWScore.wsdl	Contains the WSDL for the implementation of this protocol.	<a href="#">6.1</a>
MS-OXWScore-types.xsd	Contains the XML schema type definitions used in this protocol.	<a href="#">6.2</a>
MS-OXWScore-messages.xsd	Contains the XML schema message definitions used in this protocol.	<a href="#">6.3</a>

These files have to be placed in a common folder for the WSDL to validate and operate. Also, any schema files that are included in or imported into the MS-OXWScore-types.xsd or MS-OXWScore-messages.xsd schemas have to be placed in the common folder with the files named in the table.

### 6.1 WSDL

This section contains the contents of the MS-OXWScore.wsdl file.

## 7 Appendix B: Product Behavior

The information in this specification is applicable to the following Microsoft products:

- Microsoft® Exchange Server 2007
- Microsoft® Exchange Server 2010
- Microsoft® Exchange Server 2010 Service Pack 1 (SP1)

Exceptions, if any, are noted below. If a service pack number appears with the product version, behavior changed in that service pack. The new behavior also applies to subsequent service packs of the product unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification prescribed using the terms SHOULD or SHOULD NOT implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies that product does not follow the prescription.

[<1> Section 2.2.3.1:](#) Exchange 2010 does not support the <ReturnNewItemIds> element.

## 8 Change Tracking

This section identifies changes that were made to the [MS-OXWSOCE] protocol document between the August 2010 and November 2010 releases. Changes are classified as New, Major, Minor, Editorial, or No change.

The revision class **New** means that a new document is being released.

The revision class **Major** means that the technical content in the document was significantly revised. Major changes affect protocol interoperability or implementation. Examples of major changes are:

- A document revision that incorporates changes to interoperability requirements or functionality.
- An extensive rewrite, addition, or deletion of major portions of content.
- Changes made for template compliance.
- Removal of a document from the documentation set.

The revision class **Minor** means that the meaning of the technical content was clarified. Minor changes do not affect protocol interoperability or implementation. Examples of minor changes are updates to clarify ambiguity at the sentence, paragraph, or table level.

The revision class **Editorial** means that the language and formatting in the technical content was changed. Editorial changes apply to grammatical, formatting, and style issues.

The revision class **No change** means that no new technical or language changes were introduced. The technical content of the document is identical to the last released version, but minor editorial and formatting changes, as well as updates to the header and footer information, and to the revision summary, may have been made.

Major and minor changes can be described further using the following change types:

- New content added.
- Content updated.
- Content removed.
- New product behavior note added.
- Product behavior note updated.
- Product behavior note removed.
- New protocol syntax added.
- Protocol syntax updated.
- Protocol syntax removed.
- New content added due to protocol revision.
- Content updated due to protocol revision.
- Content removed due to protocol revision.
- New protocol syntax added due to protocol revision.

- Protocol syntax updated due to protocol revision.
- Protocol syntax removed due to protocol revision.
- New content added for template compliance.
- Content updated for template compliance.
- Content removed for template compliance.
- Obsolete document removed.

Editorial changes are always classified with the change type "Editorially updated."

Some important terms used in revision type descriptions are defined as follows:

- **Protocol syntax** refers to data elements (such as packets, structures, enumerations, and methods) as well as interfaces.
- **Protocol revision** refers to changes made to a protocol that affect the bits that are sent over the wire.

The changes made to this document are listed in the following table. For more information, please contact [protocol@microsoft.com](mailto:protocol@microsoft.com).

<b>Section</b>	<b>Tracking number (if applicable) and description</b>	<b>Major change (Y or N)</b>	<b>Change Type</b>
<a href="#">7</a> <a href="#">Appendix B: Product Behavior</a>	57842 Added Exchange 2007 to the list of applicable products.	Y	Content updated.
