[MS-OXWSDLGM]:
Delegate Access Management Web Service Protocol

Intellectual Property Rights Notice for Open Specifications Documentation

Revision Summary

Date	Revision History	Revision Class	Comments
07/15/2009	1.0	Major	Initial Availability.
11/04/2009	1.1.0	Minor	Updated the technical content.
02/10/2010	1.2.0	Minor	Updated the technical content.
05/05/2010	1.2.1	Editorial	Revised and edited the technical content.
08/04/2010	2.0	Major	Significantly changed the technical content.
11/03/2010	3.0	Major	Significantly changed the technical content.
03/18/2011	4.0	Major	Significantly changed the technical content.
08/05/2011	4.1	Minor	Clarified the meaning of the technical content.
10/07/2011	4.1	No change	No changes to the meaning, language, or formatting of the technical content.
01/20/2012	5.0	Major	Significantly changed the technical content.
04/27/2012	5.0	No change	No changes to the meaning, language, or formatting of the technical content.
07/16/2012	5.1	Minor	Clarified the meaning of the technical content.
10/08/2012	5.2	Minor	Clarified the meaning of the technical content.
02/11/2013	5.2	No change	No changes to the meaning, language, or formatting of the technical content.
07/26/2013	5.2	No change	No changes to the meaning, language, or formatting of the technical content.
11/18/2013	5.2	No change	No changes to the meaning, language, or formatting of the technical content.
02/10/2014	5.2	No change	No changes to the meaning, language, or formatting of the technical content.
04/30/2014	5.3	Minor	Clarified the meaning of the technical content.
07/31/2014	5.4	Minor	Clarified the meaning of the technical content.
10/30/2014	5.4	No change	No changes to the meaning, language, or formatting of the technical content.

Table of Contents

1   Introduction

The Delegate Access Management Web Service Protocol is used to manage delegate access to mailbox and calendar information that is stored on a server.

Sections 1.8, 2, and 3 of this specification are normative and can contain the terms MAY, SHOULD, MUST, MUST NOT, and SHOULD NOT as defined in [RFC2119]. Sections 1.5 and 1.9 are also normative but do not contain those terms. All other sections and examples in this specification are informative.

1.1   Glossary

The following terms are defined in [MS-OXGLOS]:

Calendar folder
Contacts folder
delegate
delegate access
Deleted Items folder
endpoint
Hypertext Transfer Protocol (HTTP)
Hypertext Transfer Protocol over Secure Sockets Layer (HTTPS)
Inbox folder
Journal folder
mailbox
meeting request
Notes folder
permission
security identifier (SID)
SOAP
SOAP action
SOAP body
SOAP header
SOAP message
Tasks folder
Uniform Resource Locator (URL)
web server
Web Services Description Language (WSDL)
WSDL message
WSDL port type
XML
XML namespace
XML namespace prefix
XML schema

The following terms are specific to this document:

MAY, SHOULD, MUST, SHOULD NOT, MUST NOT: These terms (in all caps) are used as defined in [RFC2119]. All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

1.2 References

References to Microsoft Open Specification documents do not include a publishing year because links are to the latest version of the documents, which are updated frequently. References to other documents include a publishing year when one is available.

1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact dochelp@microsoft.com. We will assist you in finding the relevant information.

[MS-OXWSADISC] Microsoft Corporation, "Autodiscover Publishing and Lookup SOAP-Based Web Service Protocol".

1.3 Overview

Delegates are **mailbox** owners who are authorized to act on behalf of other mailbox owners. Client applications can use the Delegate Access Management Web Service Protocol to add, update, and

remove delegates, and to query the server to determine whether a specific delegate is authorized to act on a specific mailbox.

1.4 Relationship to Other Protocols

A client that implements this protocol can use the Autodiscover Publishing and Lookup SOAP-Based Web Service Protocol, as described in [MS-OXWSADISC], or the Autodiscover Publishing and Lookup Protocol, as described in [MS-OXDSCLI], to identify the target **endpoint** (4) to use for each operation.

This protocol uses the SOAP Protocol, as described in [SOAP1.1], to specify the structure information exchanged between the client and server. This protocol uses the **XML** Protocol, as described in [XMLSCHEMA1] and [XMLSCHEMA2], to describe the message content sent to and from the server.

This protocol uses **SOAP** over **HTTP**, as described in [RFC2616], and SOAP over **HTTPS**, as described in [RFC2818], as shown in the following figure.
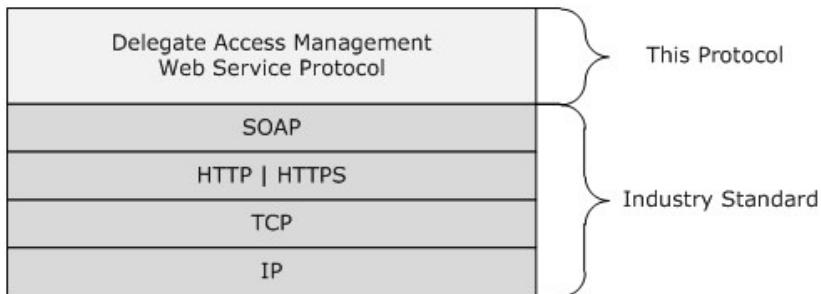

Figure 1: This protocol in relation to other protocols

For conceptual background information and overviews of the relationships and interactions between this and other protocols, see [MS-OXPROTO].

1.5 Prerequisites/Preconditions

The endpoint (4) **URL** that is returned by either the Autodiscover Publishing Lookup SOAP-Based Web Service Protocol, as described in [MS-OXWSADISC], or the Autodiscover Publishing and Lookup Protocol, as described in [MS-OXDSCLI], is required to form the HTTP request to the web server that hosts this protocol. The operations that this protocol defines cannot be accessed unless the correct endpoint (4) is identified in the HTTP Web requests that target this protocol.

1.6 Applicability Statement

This protocol is applicable to client applications that manage mailbox delegates on a server.

1.7 Versioning and Capability Negotiation

This document covers versioning issues in the following areas:

- **Supported Transports:** This protocol uses multiple transports with SOAP 1.1, as specified in section 2.1.

- **Protocol Versions:** This protocol has only one **WSDL port type** version. The **WSDL** version of the request is identified by using the **t:RequestServerVersion** element, as described in [MS-

OXWSCDATA] section 2.2.3.9, and the version of the server responding to the request is identified by using the **t:ServerVersionInfo** element, as described in [MS-OXWSCDATA] section 2.2.3.10.

- **Security and Authentication Methods:** This protocol relies on the **web server** that is hosting it to perform authentication.

- **Localization:** This protocol includes text strings in various messages. Localization considerations for such strings are specified in sections 2.2 and 3.1.4.

- **Capability Negotiation:** This protocol does not support version negotiation.

1.8   Vendor-Extensible Fields

None.

1.9   Standards Assignments

None.

2 Messages

In the following sections, the schema definition might differ from the processing rules imposed by the protocol. The WSDL in this specification provides a base description of the protocol. The schema in this specification provides a base description of the message syntax. The text that specifies the WSDL and schema might specify restrictions that reflect actual protocol behavior. For example, the schema definition might allow for an element to be **empty**, **null**, or **not present** but the behavior of the protocol as specified restricts the same elements to being **non-empty**, **not null**, or **present**.

2.1 Transport

The SOAP version supported is SOAP 1.1. For details, see [SOAP1.1].

This protocol relies on the web server that hosts the application to perform authentication. The protocol MUST support SOAP over HTTP, as specified in [RFC2616]. The protocol SHOULD use secure communications via HTTPS, as defined in [RFC2818].

2.2 Common Message Syntax

This section contains common definitions that are used by this protocol. The syntax of the definitions uses **XML schema**, as defined in [XMLSCHEMA1] and [XMLSCHEMA2], and WSDL, as defined in [WSDL].

2.2.1 Namespaces

This specification defines and references various **XML namespaces** using the mechanisms specified in [XMLNS]. Although this specification associates a specific **XML namespace prefix** for each XML namespace that is used, the choice of any particular XML namespace prefix is implementation-specific and not significant for interoperability.

Prefix	Namespace URI	Reference
soap	http://schemas.xmlsoap.org/wsdl/soap/	[SOAP1.1]
tns	http://schemas.microsoft.com/exchange/services/2006/messages	
wsdl	http://schemas.xmlsoap.org/wsdl/	[WSDL]
t	http://schemas.microsoft.com/exchange/services/2006/types	
xs	http://www.w3.org/2001/XMLSchema	[XMLSCHEMA1]

2.2.2 Messages

This specification does not define any common WSDL message definitions.

2.2.3 Elements

This specification does not define any common XML schema element definitions.

2.2.4 Complex Types

The following table summarizes the set of common XML schema complex type definitions that are defined by this specification. XML schema complex type definitions that are specific to a particular operation are defined with the operation.

Complex type name	Description
ArrayOfDelegateUserResponseMessageType	Specifies one or more delegates for a mailbox.
BaseDelegateResponseMessageType	Specifies the base type for all Delegate Access Management Web Service Protocol response types.
BaseDelegateType	Specifies the base type for derived types that specify all delegate management requests.
DelegateUserResponseMessageType	Specifies a response message for a single delegate.
ArrayOfDelegateUserType	Specifies one or more responses from a Delegate Access Management Web Service Protocol operation.
ArrayOfUserIdType	Specifies one or more user identifiers.
DelegatePermissionsType	Specifies the delegate **permissions** for a mailbox delegate.
DelegateUserType	Specifies a single delegate to add or update in a mailbox, or a delegate that is returned in a delegate management response.

2.2.4.1   tns:ArrayOfDelegateUserResponseMessageType Complex Type

The A**rrayOfDelegateUserResponseMessageType** complex type specifies one or more responses from a Delegate Access Management Web Service Protocol operation.

```
<xs:complexType name="ArrayOfDelegateUserResponseMessageType">
  <xs:sequence>
    <xs:element name="DelegateUserResponseMessageType"
      type="tns:DelegateUserResponseMessageType"
      maxOccurs="unbounded"
    />
  </xs:sequence>
</xs:complexType>
```

The following table lists the child elements of the **ArrayOfDelegateUserResponseMessageType** complex type.

Element name	Type	Description
DelegateUserResponseMessageType	**tns:DelegateUserResponseMessageType** (section 2.2.4.4).	Specifies a response from a Delegate Access Management Web Service Protocol operation.

The **ArrayOfDelegateUserResponseMessageType** complex type is used in the **BaseDelegateResponseMessageType** complex type, as specified in section 2.2.4.2.

2.2.4.2   tns:BaseDelegateResponseMessageType Complex Type

The B**aseDelegateResponseMessageType** complex type is the base type for all Delegate Access Management Web Service Protocol response types. The **BaseDelegateResponseMessageType** complex type extends the **ResponseMessageType** complex type, as specified in [MS-OXWSCDATA] section 2.2.4.57.

```
<xs:complexType name="BaseDelegateResponseMessageType"
  abstract="true"
>
  <xs:complexContent>
    <xs:extension
      base="tns:ResponseMessageType"
    >
      <xs:sequence>
        <xs:element name="ResponseMessages"
          type="tns:ArrayOfDelegateUserResponseMessageType" minOccurs="0"/>
      </xs:sequence>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

The following table lists the child elements of the **BaseDelegateResponseMessageType** complex type.

Element name	Type	Description
ResponseMessages	**tns:ArrayOfDelegateUserResponseMessageType** (section 2.2.4.1)	Specifies one or more response messages from a Delegate Access Management Web Service Protocol operation. Can be present.

2.2.4.3   tns:BaseDelegateType Complex Type

The Ba**seDelegateType** complex type specifies the base type for derived types that specify all delegate management requests. The **BaseDelegateType** complex type extends the **BaseRequestType** complex type, as specified in [MS-OXWSCDATA] section 2.2.4.15.

```
<xs:complexType name="BaseDelegateType"
  abstract="true"
>
  <xs:complexContent>
    <xs:extension
      base="tns:BaseRequestType"
    >
      <xs:sequence>
        <xs:element name="Mailbox"
          type="t:EmailAddressType"
          />
      </xs:sequence>
    </xs:extension>
  </xs:complexContent>
```

```
    </xs:complexType>
```

The following table lists the child elements of the **BaseDelegateType** complex type.

Element name	Type	Description
Mailbox	**t:EmailAddressType (**[MS-OXWSCDATA] section 2.2.4.27)	Specifies an e-mail address that defines the target of the delegate management operation.

2.2.4.4   tns:DelegateUserResponseMessageType Complex Type

The De**legateUserResponseMessageType** complex type specifies a response message for a single delegate. The **DelegateUserResponseMessageType** complex type extends the **ResponseMessageType** complex type, as specified in [MS-OXWSCDATA] section 2.2.4.57.

```
<xs:complexType name="DelegateUserResponseMessageType">
  <xs:complexContent>
    <xs:extension
      base="tns:ResponseMessageType">
      <xs:sequence>
        <xs:element name="DelegateUser"
          type="t:DelegateUserType" minOccurs="0"/>
      </xs:sequence>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

The following table lists the child elements of the **DelegateUserResponseMessageType** complex type.

Element name	Type	Description
DelegateUser	**t:DelegateUserType** (section 2.2.4.8)	Specifies a single delegate that is associated with a mailbox that is returned by a delegate management operation.

2.2.4.5   t:ArrayOfDelegateUserType Complex Type

The **ArrayOfDelegateUser** complex type specifies one or more delegates for a mailbox.

```
<xs:complexType name="ArrayOfDelegateUserType">
  <xs:sequence>
    <xs:element name="DelegateUser"
      type="t:DelegateUserType"
      maxOccurs="unbounded"
    />
  </xs:sequence>
</xs:complexType>
```

The following table lists the child elements of the **ArrayOfDelegateUser** complex type.

Element name	Type	Description
DelegateUser	**t:DelegateUserType** (section 2.2.4.8)	Specifies one or more mailbox delegates.

2.2.4.6   t:ArrayOfUserIdType Complex Type

The **ArrayOfUserIdType** complex type specifies one or more user identifiers.

```
<xs:complexType name="ArrayOfUserIdType">
  <xs:sequence>
    <xs:element name="UserId"
      type="t:UserIdType"
      maxOccurs="unbounded"
    />
  </xs:sequence>
</xs:complexType>
```

The following table lists the child elements of the **ArrayOfUserIdType** complex type.

Element name	Type	Description
UserId	**t:UserIdType** ([MS-OXWSCDATA] section 2.2.4.62)	Specifies one user identifier.

2.2.4.7   t:DelegatePermissionsType Complex Type

The **DelegatePermissionsType** complex type specifies the delegate permissions for a mailbox delegate.

```
<xs:complexType name="DelegatePermissionsType">
  <xs:sequence>
    <xs:element name="CalendarFolderPermissionLevel"
      type="t:DelegateFolderPermissionLevelType"
      minOccurs="0"
    />
    <xs:element name="TasksFolderPermissionLevel"
      type="t:DelegateFolderPermissionLevelType"
      minOccurs="0"
    />
    <xs:element name="InboxFolderPermissionLevel"
      type="t:DelegateFolderPermissionLevelType"
      minOccurs="0"
    />
    <xs:element name="ContactsFolderPermissionLevel"
      type="t:DelegateFolderPermissionLevelType"
      minOccurs="0"
    />
    <xs:element name="NotesFolderPermissionLevel"
      type="t:DelegateFolderPermissionLevelType"
      minOccurs="0"
    />
    <xs:element name="JournalFolderPermissionLevel"
      type="t:DelegateFolderPermissionLevelType"
```

```
      minOccurs="0"
    />
  </xs:sequence>
</xs:complexType>
```

The following table lists the child elements of the **DelegatePermissionsType** complex type.

Element name	Type	Description
CalendarFolderPermissionLevel	**t:DelegateFolderPermissionLevelType** (section 2.2.5.1)	Specifies the delegate permissions for the default **Calendar folder**. Can be present.
TasksFolderPermissionLevel	**t:DelegateFolderPermissionLevelType**	Specifies the delegate permissions for the default **Tasks folder**. Can be present.
InboxFolderPermissionLevel	**t:DelegateFolderPermissionLevelType**	Specifies the delegate permissions for the default **Inbox folder**. Can be present.
ContactsFolderPermissionLevel	**t:DelegateFolderPermissionLevelType**	Specifies the delegate permissions for the default **Contacts folder**. Can be present.
NotesFolderPermissionLevel	**t:DelegateFolderPermissionLevelType**	Specifies the delegate permissions for the default **Notes folder**. Can be present.
JournalFolderPermissionLevel	**t:DelegateFolderPermissionLevelType**	Specifies the delegate permissions for the default **Journal folder**. Can be present.

2.2.4.8   t:DelegateUserType Complex Type

The **DelegateUserType** complex type specifies a single delegate to add or update in a mailbox, or a delegate that is returned in a delegate management response.

```
<xs:complexType name="DelegateUserType">
  <xs:sequence>
    <xs:element name="UserId"
      type="t:UserIdType"
     />
    <xs:element name="DelegatePermissions"
      type="t:DelegatePermissionsType"
      minOccurs="0"
     />
```

```
            <xs:element name="ReceiveCopiesOfMeetingMessages"
              type="xs:boolean"
              minOccurs="0"
            />
            <xs:element name="ViewPrivateItems"
              type="xs:boolean"
              minOccurs="0"
            />
        </xs:sequence>
    </xs:complexType>
```

The following table lists the child elements of the **DelegateUserType** complex type.

Element name	Type	Description
UserId	**t:UserIdType** ([MS-OXWSCDATA] section 2.2.4.62)	Specifies the user identifier for the delegate user.
DelegatePermissions	**t:DelegatePermissionsType** (section 2.2.4.7)	Specifies the delegate permissions for the delegate user. Can be present.
ReceiveCopiesOfMeetingMessages	**xs:boolean** [XMLSCHEMA2]	Specifies a Boolean value that indicates whether the delegate receives copies of meeting-related messages that are addressed to the primary account.
ViewPrivateItems	**xs:boolean**	Specifies a Boolean value that indicates whether the delegate can view private calendar items on the primary account's calendar.

2.2.5   Simple Types

The following table summarizes the set of common XML schema simple type definitions that are defined by this specification. XML schema simple type definitions that are specific to a particular operation are described with the operation.

Simple type name	Description
DelegateFolderPermissionLevelType	Specifies the permissions that are granted on a folder to a delegate.
DeliverMeetingRequestType	Specifies whether a delegate receives **meeting requests** on behalf of a primary account.

2.2.5.1   t:DelegateFolderPermissionLevelType Simple Type

The **DelegateFolderPermissionLevelType** simple type specifies the permissions that are granted on a folder to a delegate.

```
    <xs:simpleType name="DelegateFolderPermissionLevelType">
```

```
     <xs:restriction
       base="xs:string"
     >
       <xs:enumeration
         value="None"
        />
       <xs:enumeration
         value="Editor"
        />
       <xs:enumeration
         value="Reviewer"
        />
       <xs:enumeration
         value="Author"
        />
       <xs:enumeration
         value="Custom"
        />
     </xs:restriction>
   </xs:simpleType>
```

The following table lists the values that are defined by the **DelegateFolderPermissionLevelType**
simple type.

Value	Description
None	Delegate has no permissions on the folder.
Editor	Delegate can read, create, and modify items in the folder.
Reviewer	Delegate can read items in the folder.
Author	Delegate can read and create items in the folder.
Custom	This setting is not applicable to this protocol.

2.2.5.2   t:DeliverMeetingRequestsType Simple Type

The **DeliverMeetingRequestsType** simple type specifies how meeting requests are handled
between the delegate and the primary account.

```
   <xs:simpleType name="DeliverMeetingRequestsType">
     <xs:restriction
       base="xs:string"
     >
       <xs:enumeration
         value="DelegatesOnly"
        />
       <xs:enumeration
         value="DelegatesAndMe"
        />
       <xs:enumeration
         value="DelegatesAndSendInformationToMe"
        />
       <xs:enumeration
         value="NoForward"
```

```
          />
      </xs:restriction>
  </xs:simpleType>
```

The following table lists the values that are defined by the **DeliverMeetingRequestsType** simple type.

Value	Description
DelegatesOnly	Specifies that meeting requests are forwarded to the delegate and moved to the **Deleted Items folder** in the primary account's mailbox.
DelegatesAndMe	Specifies that meeting requests are forwarded to the delegate and remain in the Inbox folder in the primary account's mailbox.
DelegatesAndSendInformationToMe	Specifies that meeting requests are forwarded to the delegate and remain in the Inbox folder in the primary account's mailbox.
NoForward	Specifies that meeting requests are not to be forwarded to delegates. <1>

2.2.6 Attributes

This specification does not define any common XML schema attribute definitions.

2.2.7 Groups

This specification does not define any common XML schema group definitions.

2.2.8 Attribute Groups

This specification does not define any common XML schema attribute group definitions.

3   Protocol Details

The client side of this protocol is simply a pass-through. That is, no additional timers or other state is required on the client side of this protocol. Calls made by the higher-layer protocol or application are passed directly to the transport, and the results that are returned by the transport are passed directly back to the higher-layer protocol or application.

3.1   ExchangeServicePortType Server Details

The Delegate Access Management Web Service Protocol defines a single port type with four operations. The operations enable client implementations to create, review, update, and delete delegates for a primary account.

3.1.1   Abstract Data Model

This section describes a conceptual model of possible data organization that an implementation maintains to participate in this protocol. The described organization is provided to facilitate the explanation of how the protocol behaves. This document does not mandate that implementations adhere to this model as long as their external behavior is consistent with that specified in this document.

The Delegate Access Management Web Service Protocol is used to set, retrieve, update, and delete delegate access permissions on a primary account's mailbox on the server. The server maintains the delegate access permissions and modifies them as requested.

The client is not required to maintain the state of delegate access permissions on the server and can retrieve the current set of permissions at any time. If more than one client is changing delegate access permissions, there is no requirement that the server lock the existing set of permissions for changes.

3.1.2   Timers

None.

3.1.3   Initialization

None.

3.1.4   Message Processing Events and Sequencing Rules

This protocol includes the operations that are listed in the following table.

Operation	Description
AddDelegate	Adds one or more delegates to a primary account's mailbox.
GetDelegate	Gets the delegates that are associated with a primary account's mailbox, if any.
RemoveDelegate	Removes one or more delegates from the primary account's mailbox.
UpdateDelegate	Modifies one or more delegates.

3.1.4.1   AddDelegate Operation

The **AddDelegate** operation adds one or more delegates to a mailbox.

The following is the WSDL port type specification of the operation.

```
<wsdl:operation name="AddDelegate">
    <wsdl:input message="tns:AddDelegateSoapIn" />
    <wsdl:output message="tns:AddDelegateSoapOut" />
</wsdl:operation>
```

The following is the WSDL binding specification of the operation.

```
<wsdl:operation name="AddDelegate">
   <soap:operation
soapAction="http://schemas.microsoft.com/exchange/services/2006/messages/AddDelegate" />
   <wsdl:input>
      <soap:header message="tns:AddDelegateSoapIn" part="Impersonation" use="literal"/>
      <soap:header message="tns:AddDelegateSoapIn" part="MailboxCulture" use="literal"/>
      <soap:header message="tns:AddDelegateSoapIn" part="RequestVersion" use="literal"/>
      <soap:body parts="request" use="literal" />
   </wsdl:input>
   <wsdl:output>
      <soap:body parts="AddDelegateResult" use="literal" />
      <soap:header message="tns:AddDelegateSoapOut" part="ServerVersion" use="literal"/>
   </wsdl:output>
</wsdl:operation>
```

3.1.4.1.1 Messages

The following table lists the **WSDL message** definitions that are specific to this operation.

Message name	Description
AddDelegateSoapIn	Specifies the **SOAP message** that adds one or more delegates to the mailbox.
AddDelegateSoapOut	Specifies the SOAP message that is returned by the server in response.

3.1.4.1.1.1 tns:AddDelegateSoapIn Message

The **AddDelegateSoapIn** WSDL message specifies the **AddDelegate** operation request to add one or more delegates to a mailbox.

```
<wsdl:message name="AddDelegateSoapIn">
   <wsdl:part name="request" element="tns:AddDelegate" />
   <wsdl:part name="Impersonation" element="t:ExchangeImpersonation"/>
   <wsdl:part name="MailboxCulture" element="t:MailboxCulture"/>
   <wsdl:part name="RequestVersion" element="t:RequestServerVersion"/>
</wsdl:message>
```

The **AddDelegateSoapIn** WSDL message is the input message for the **SOAP action**
http://schemas.microsoft.com/exchange/services/2006/messages/AddDelegate.

The parts of the **AddDelegateSoapIn** WSDL message are described in the following table.

Part name	Element/type	Description
request	**tns:AddDelegate** (section 3.1.4.1.2.1)	Specifies the **SOAP body** of the request to add one or more delegates to a mailbox.
Impersonation	**t:ExchangeImpersonation** ([MS-OXWSCDATA] section 2.2.3.3)	Specifies a **SOAP header** that identifies the user whom the client application is impersonating.
MailboxCulture	**t:MailboxCulture** ([MS-OXWSCDATA] section 2.2.3.6)	Specifies a SOAP header that identifies the culture to use for accessing the mailbox. The cultures are defined by [RFC3066].
RequestVersion	**t:RequestServerVersion** ([MS-OXWSCDATA] section 2.2.3.9)	Specifies a SOAP header that identifies the schema version for the **AddDelegate** operation request.

3.1.4.1.1.2   tns:AddDelegateSoapOut Message

The **AddDelegateSoapOut** WSDL message specifies the server response to the **AddDelegate** operation request to add one or more delegates to a mailbox.

```
<wsdl:message name="AddDelegateSoapOut">
    <wsdl:part name="AddDelegateResult" element="tns:AddDelegateResponse" />
    <wsdl:part name="ServerVersion" element="t:ServerVersionInfo"/>
</wsdl:message>
```

The **AddDelegateSoapOut** WSDL message is the output message for the SOAP action http://schemas.microsoft.com/exchange/services/2006/messages/AddDelegate.

The parts of the **AddDelegateSoapOut** WSDL message are described in the following table.

Part name	Element/type	Description
AddDelegateResult	**tns:AddDelegateResponse** (section 3.1.4.1.2.2)	Specifies the SOAP body of the response to an **AddDelegate** operation request.
ServerVersion	**t:ServerVersionInfo** ([MS-OXWSCDATA] section 2.2.3.10)	Specifies a SOAP header that identifies the server version for the response.

The **AddDelegate** operation returns an **AddDelegateResponse** element with the **ResponseClass** attribute set to "Success". The **ResponseCode** element of the **AddDelegateResponse** element is set to "NoError".

The operation returns the **ResponseMessages** element of the **AddDelegateResponse** element. A **DelegateUserResponseMessageType** element of the **ResponseMessages** element is returned for each **DelegateUser** element in the **AddDelegate** request. If the delegate was added successfully, the **ResponseClass** attribute of the **DelegateUserResponseMessageType** element is set to "Success". The **ResponseCode** element of the **DelegateUserResponseMessageType** is set to "NoError".

Each successful **DelegateUserResponseMessageType** element includes a **DelegateUser** element, which includes a **UserId** element, a **ReceiveCopiesOfMeetingRequests** element, and a **ViewPrivateItems** element.

If the delegate was not added successfully, the **ResponseClass** attribute of the **DelegateUserResponseMessageType** element is set to "Error". The **ResponseCode** element of the **DelegateUserResponseMessageType** can be one of the error values listed in the following table. These errors and other common errors are defined in [MS-OXWSCDATA] section 2.2.5.23.

Error Value	Description
ErrorAddDelegatesFailed	Occurs when a list with added delegates cannot be saved.
ErrorDelegateAlreadyExists	Occurs in an **AddDelegate** operation when the specified user already exists in the list of delegates.
ErrorDelegateCannotAddOwner	Occurs in an **AddDelegate** operation when the specified user to be added is the owner of the mailbox.
ErrorDelegateValidationFailed	Occurs in an **AddDelegate** operation when an added delegate user is not valid.
ErrorInvalidDelegatePermission	Specifies that the specified folder permissions are invalid.

3.1.4.1.2 Elements

The following table lists the XML schema element definitions that are specific to this operation.

Element name	Description
AddDelegate	Specifies a request to add one or more delegates to a mailbox.
AddDelegateResponse	Specifies the response body content from a request to add one or more delegates to a mailbox.

3.1.4.1.2.1 tns:AddDelegate Element

The **AddDelegate** element specifies the request message for an **AddDelegate** operation.

```
<xs:element name="tns:AddDelegate"
  type="tns:AddDelegateType"
 />
```

3.1.4.1.2.2 tns:AddDelegateResponse Element

The **AddDelegateResponse** element specifies the response message for an **AddDelegate** operation.

```
<xs:element name="AddDelegateResponse"
  type="tns:AddDelegateResponseMessageType"
 />
```

3.1.4.1.3 Complex Types

The following table lists the XML schema complex type definitions that are specific to this operation.

Complex type name	Description
AddDelegateResponseMessageType	Specifies the response message for the **AddDelegate** operation.
AddDelegateType	Specifies the request message for the **AddDelegate** operation.

3.1.4.1.3.1   tns:AddDelegateResponseMessageType Complex Type

The **AddDelegateResponseMessageType** complex type specifies the response message from the **AddDelegate** operation. The **AddDelegateResponseMessageType** complex type extends the **BaseDelegateResponseMessageType** complex type, as specified in section 2.2.4.2.

```
<xs:complexType name="AddDelegateResponseMessageType">
  <xs:complexContent>
    <xs:extension
      base="tns:BaseDelegateResponseMessageType"
    />
  </xs:complexContent>
</xs:complexType>
```

3.1.4.1.3.2   tns:AddDelegateType Complex Type

The **AddDelegateType** complex type specifies a request to add one or more delegates to a primary account's mailbox by using the **AddDelegate** operation. The **AddDelegateType** complex type extends the **BaseDelegateType** complex type, as specified in section 2.2.4.3.

```
<xs:complexType name="AddDelegateType">
  <xs:complexContent>
    <xs:extension
      base="tns:BaseDelegateType"
    >
      <xs:sequence>
        <xs:element name="DelegateUsers"
          type="t:ArrayOfDelegateUserType"
        />
        <xs:element name="DeliverMeetingRequests"
          type="t:DeliverMeetingRequestsType" minOccurs="0"
        />
      </xs:sequence>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

The following table lists the child elements of the **AddDelegateType** complex type.

Element name	Type	Description
DelegateUsers	**t:ArrayOfDelegateUserType** (section 2.2.4.5)	Specifies the delegates to add to the mailbox.
DeliverMeetingRequests	**t:DeliverMeetingRequestsType**	Specifies how meeting-related messages are handled between

Element name	Type	Description
	(section 2.2.5.2)	the delegate and the primary account.

3.1.4.1.4 Simple Types

None.

3.1.4.1.5 Attributes

None.

3.1.4.1.6 Groups

None.

3.1.4.2 GetDelegate Operation

The **GetDelegate** operation gets one or more delegates that are assigned to a mailbox.

The following is the WSDL port type specification for the operation.

```
<wsdl:operation name="GetDelegate">
    <wsdl:input message="tns:GetDelegateSoapIn" />
    <wsdl:output message="tns:GetDelegateSoapOut" />
</wsdl:operation>
```

The following is the WSDL binding specification for the operation.

```
<wsdl:operation name="GetDelegate">
   <soap:operation
soapAction="http://schemas.microsoft.com/exchange/services/2006/messages/GetDelegate" />
   <wsdl:input>
      <soap:header message="tns:GetDelegateSoapIn" part="Impersonation" use="literal"/>
      <soap:header message="tns:GetDelegateSoapIn" part="MailboxCulture" use="literal"/>
      <soap:header message="tns:GetDelegateSoapIn" part="RequestVersion" use="literal"/>
      <soap:body parts="request" use="literal" />
   </wsdl:input>
   <wsdl:output>
      <soap:body parts="GetDelegateResult" use="literal" />
      <soap:header message="tns:GetDelegateSoapOut" part="ServerVersion" use="literal"/>
   </wsdl:output>
</wsdl:operation>
```

3.1.4.2.1 Messages

The following table lists the WSDL message definitions that are specific to this operation.

Message name	Description
GetDelegateSoapIn	Specifies the SOAP message that requests one or more delegates to the mailbox.

Message name	Description
GetDelegateSoapOut	Specifies the SOAP message that is returned by the server in response.

3.1.4.2.1.1 tns:GetDelegateSoapIn Message

The **GetDelegateSoapIn** WSDL message specifies the **GetDelegate** operation request to return one or more delegates to a mailbox.

```
<wsdl:message name="GetDelegateSoapIn">
   <wsdl:part name="request" element="tns:GetDelegate" />
   <wsdl:part name="Impersonation" element="t:ExchangeImpersonation"/>
   <wsdl:part name="MailboxCulture" element="t:MailboxCulture"/>
   <wsdl:part name="RequestVersion" element="t:RequestServerVersion"/>
</wsdl:message>
```

The **GetDelegateSoapIn** WSDL message is the input message for the SOAP action http://schemas.microsoft.com/exchange/services/2006/messages/GetDelegate.

The parts of the **GetDelegateSoapIn** WSDL message are described in the following table.

Part name	Element/type	Description
request	**tns:GetDelegate** (section 3.1.4.2.2.1)	Specifies the SOAP body of the request to return one or more mailbox delegates.
Impersonation	**t:ExchangeImpersonation** ([MS-OXWSCDATA] section 2.2.3.3)	Specifies a SOAP header that identifies the user whom the client application is impersonating.
MailboxCulture	**t:MailboxCulture** ([MS-OXWSCDATA] section 2.2.3.6)	Specifies a SOAP header that identifies the culture to use for accessing the mailbox. The cultures are specified by [RFC3066].
RequestVersion	**t:RequestServerVersion** ([MS-OXWSCDATA] section 2.2.3.9)	Specifies a SOAP header that identifies the schema version for the **GetDelegate** operation request.

3.1.4.2.1.2 tns:GetDelegateSoapOut Message

The **GetDelegateSoapOut** WSDL message specifies the server response to the **GetDelegate** operation request to return one or more mailbox delegates.

```
<wsdl:message name="GetDelegateSoapOut">
   <wsdl:part name="GetDelegateResult" element="tns:GetDelegateResponse" />
   <wsdl:part name="ServerVersion" element="t:ServerVersionInfo"/>
</wsdl:message>
```

The **GetDelegateSoapOut** WSDL message is the output message for the SOAP action http://schemas.microsoft.com/exchange/services/2006/messages/GetDelegate.

The parts of the **GetDelegateSoapOut** WSDL message are described in the following table.

Part name	Element/type	Description
GetDelegateResult	tns:GetDelegateResponse (section 3.1.4.2.2.2)	Specifies the SOAP body of the response to a **GetDelegate** operation request.
ServerVersion	t:ServerVersionInfo ([MS-OXWSCDATA] section 2.2.3.10)	Specifies a SOAP header that identifies the server version for the response.

The **GetDelegate** operation returns a **GetDelegateResponse** element with the **ResponseClass** attribute set to "Success". The **ResponseCode** element of the **GetDelegateResponse** element is set to "NoError".

If there are delegates assigned to the mailbox, the operation returns the **ResponseMessages** element of the **GetDelegateResponse** element. A **DelegateUserResponseMessageType** element of the **ResponseMessages** element is returned for each delegate returned. If a delegate was retrieved successfully, the **ResponseClass** attribute of the **DelegateUserResponseMessageType** element is set to "Success". The **ResponseCode** element of the **DelegateUserResponseMessageType** is set to "NoError".

Each successful **DelegateUserResponseMessageType** element includes a **UserId** element, a **DelegatePermissions** element, a **RecceiveCopiesOfMeetingMessages** element, and a **ViewPrivateItems** element.

If the request was not successful, the **ResponseClass** attribute of the **DelegateUserResponseMessageType** element is set to "Error". The **ResponseCode** element of the **DelegateUserResponseMessageType** is set to a value of the **ResponseCodeType** simple type, as specified in [MS-OXWSCDATA] section 2.2.5.23.

3.1.4.2.2 Elements

The following table lists the XML schema element definitions that are specific to this operation.

Element name	Description
GetDelegate	Specifies a request to get one or more delegates to a mailbox.
GetDelegateResponse	Specifies the response body content from a request to get delegates to a mailbox.

3.1.4.2.2.1 tns:GetDelegate Element

The **GetDelegate** element specifies the base element for a **GetDelegate** operation.

```
<xs:element name="tns:GetDelegate"
  type="tns:GetDelegateType"
 />
```

3.1.4.2.2.2 tns:GetDelegateResponse Element

The **GetDelegateResponse** element specifies the response message for a **GetDelegate** operation.

```
<xs:element name="GetDelegateResponse"
```

```
      type="tns:GetDelegateResponseMessageType"
   />
```

3.1.4.2.3 Complex Types

The following table lists the XML schema complex type definitions that are specific to this operation.

Complex type name	Description
GetDelegateResponseMessageType	Specifies the response message for the **GetDelegate** operation.
GetDelegateType	Specifies the request message for the **GetDelegate** operation.

3.1.4.2.3.1 tns:GetDelegateResponseMessageType Complex Type

The **GetDelegateResponseMessageType** complex type specifies the response message from the **GetDelegate** operation. The **GetDelegateResponseMessageType** complex type extends the **BaseDelegateResponseMessageType** complex type, as specified in section 2.2.4.2.

```
<xs:complexType name="GetDelegateResponseMessageType">
  <xs:complexContent>
    <xs:extension
      base="tns:BaseDelegateResponseMessageType"
    >
      <xs:sequence>
        <xs:element name="DeliverMeetingRequests"
          type="t:DeliverMeetingRequestsType"
          minOccurs="0"
         />
      </xs:sequence>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

The following table lists the child elements of the **GetDelegateResponseMessageType** complex type.

Element name	Type	Description
DeliverMeetingRequests	**t:DeliverMeetingRequestsType** (section 2.2.5.2)	Specifies how meeting-related messages are handled between the delegates in the response and the primary account. This element can be present.<2>

3.1.4.2.3.2 tns:GetDelegateType Complex Type

The **GetDelegateType** complex type specifies a request to return the delegates that are users associated with a primary account's mailbox. The **GetDelegateType** complex type extends the **BaseDelegateType** complex type, as specified in section 2.2.4.3.

```
<xs:complexType name="GetDelegateType">
  <xs:complexContent>
    <xs:extension
      base="tns:BaseDelegateType"
    >
      <xs:sequence>
        <xs:element name="UserIds"
          type="t:ArrayOfUserIdType"
          minOccurs="0"
        />
      </xs:sequence>
      <xs:attribute name="IncludePermissions"
        type="xs:boolean"
        use="required"
      />
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

The following table lists the child elements of the **GetDelegateType** complex type.

Element name	Type	Description
UserIds	**t:ArrayOfUserIdType** (section 2.2.4.6)	Specifies one or more user identifiers of the delegates to be returned for the primary account's mailbox.

3.1.4.2.4   Simple Types

None.

3.1.4.2.5   Attributes

None.

3.1.4.2.6   Groups

None.

3.1.4.3   RemoveDelegate Operation

The **RemoveDelegate** operation removes one or more delegates from a mailbox.

The following is the WSDL port type specification of the operation.

```
<wsdl:operation name="RemoveDelegate">
     <wsdl:input message="tns:RemoveDelegateSoapIn" />
     <wsdl:output message="tns:RemoveDelegateSoapOut" />
</wsdl:operation>
```

The following is the WSDL binding specification of the operation.

```
<wsdl:operation name="RemoveDelegate">
```

```
      <soap:operation
soapAction="http://schemas.microsoft.com/exchange/services/2006/messages/RemoveDelegate" />
      <wsdl:input>
         <soap:header message="tns:RemoveDelegateSoapIn" part="Impersonation" use="literal"/>
         <soap:header message="tns:RemoveDelegateSoapIn" part="MailboxCulture" use="literal"/>
         <soap:header message="tns:RemoveDelegateSoapIn" part="RequestVersion" use="literal"/>
         <soap:body parts="request" use="literal" />
      </wsdl:input>
      <wsdl:output>
         <soap:body parts="RemoveDelegateResult" use="literal" />
         <soap:header message="tns:RemoveDelegateSoapOut" part="ServerVersion" use="literal"/>
      </wsdl:output>
   </wsdl:operation>
```

3.1.4.3.1 Messages

The following table lists the WSDL message definitions that are specific to this operation.

Message name	Description
RemoveDelegateSoapIn	Specifies the SOAP message that removes one or more delegates from the mailbox.
RemoveDelegateSoapOut	Specifies the SOAP message that is returned by the server in response.

3.1.4.3.1.1 tns:RemoveDelegateSoapIn Message

The **RemoveDelegateSoapIn** WSDL message specifies the **RemoveDelegate** operation request to remove one or more delegates from a mailbox.

```
<wsdl:message name="RemoveDelegateSoapIn">
   <wsdl:part name="request" element="tns:RemoveDelegate" />
   <wsdl:part name="Impersonation" element="t:ExchangeImpersonation"/>
   <wsdl:part name="MailboxCulture" element="t:MailboxCulture"/>
   <wsdl:part name="RequestVersion" element="t:RequestServerVersion"/>
</wsdl:message>
```

The **RemoveDelegateSoapIn** WSDL message is the input message for the SOAP action
http://schemas.microsoft.com/exchange/services/2006/messages/RemoveDelegate.

The parts of the **RemoveDelegateSoapIn** WSDL message are described in the following table.

Part name	Element/type	Description
request	**tns:RemoveDelegate** (section 3.1.4.3.2.2)	Specifies the SOAP body of the request to remove one or more delegates from a mailbox.
Impersonation	**t:ExchangeImpersonation** ([MS-OXWSCDATA] section 2.2.3.3)	Specifies a SOAP header that identifies the user whom the client application is impersonating.
MailboxCulture	**t:MailboxCulture** ([MS-OXWSCDATA] section 2.2.3.6)	Specifies a SOAP header that identifies the culture to use for accessing the mailbox. The cultures are defined by [RFC3066].

Part name	Element/type	Description
RequestVersion	**t:RequestServerVersion** ([MS-OXWSCDATA] section 2.2.3.9)	Specifies a SOAP header that identifies the schema version for the **RemoveDelegate** operation request.

3.1.4.3.1.2 tns:RemoveDelegateSoapOut Message

The **RemoveDelegateSoapOut** WSDL message specifies the server response to the **RemoveDelegate** operation request to remove one or more delegates from a mailbox.

```
<wsdl:message name="RemoveDelegateSoapOut">
    <wsdl:part name="RemoveDelegateResult" element="tns:RemoveDelegateResponse" />
    <wsdl:part name="ServerVersion" element="t:ServerVersionInfo"/>
</wsdl:message>
```

The **RemoveDelegateSoapOut** WSDL message is the output message for the SOAP action http://schemas.microsoft.com/exchange/services/2006/messages/RemoveDelegate.

The parts of the **RemoveDelegateSoapOut** WSDL message are described in the following table.

Part name	Element/type	Description
RemoveDelegateResult	**tns:RemoveDelegateResponse** (section 3.1.4.3.2.1)	Specifies the SOAP body of the response to a **RemoveDelegate** request.
ServerVersion	**t:ServerVersionInfo** ([MS-OXWSCDATA] section 2.2.3.10)	Specifies a SOAP header that identifies the server version for the response.

The **RemoveDelegate** operation returns a **RemoveDelegateResponse** element with the **ResponseClass** attribute set to "Success". The **ResponseCode** element of the **RemoveDelegateResponse** element is set to "NoError".

The operation returns the **ResponseMessages** element of the **RemoveDelegateResponse** element. A **DelegateUserResponseMessageType** element of the **ResponseMessages** element is returned for each **DelegateUser** element in the **RemoveDelegate** request. If the delegate was removed successfully, the **ResponseClass** attribute of the **DelegateUserResponseMessageType** element is set to "Success". The **ResponseCode** element of the D**elegateUserResponseMessageType** is set to "NoError".

If the delegate was not removed successfully, the **ResponseClass** attribute of the **DelegateUserResponseMessageType** element is set to "Error". The **ResponseCode** element of the **DelegateUserResponseMessageType** can be "ErrorRemoveDelegatesFailed". This error and other common errors are specified in [MS-OXWSCDATA] section 2.2.5.23.

3.1.4.3.2 Elements

The following table lists the XML schema element definitions that are specific to this operation.

Element name	Description
RemoveDelegate	Specifies a request to remove one or more delegates from a mailbox.

Element name	Description
RemoveDelegateResponse	Specifies the response body content from a request to remove delegates from a mailbox.

3.1.4.3.2.1   tns:RemoveDelegateResponse Element

The **RemoveDelegateResponse** element specifies the response message for a **RemoveDelegate** operation.

```
<xs:element name="RemoveDelegateResponse"
  type="tns:RemoveDelegateResponseMessageType"
 />
```

3.1.4.3.2.2   tns:RemoveDelegate Element

The **RemoveDelegate** element specifies the base element for a **RemoveDelegate** operation.

```
<xs:element name="RemoveDelegate"
  type="tns:RemoveDelegateType"
 />
```

3.1.4.3.3   Complex Types

The following table lists the XML schema complex type definitions that are specific to this operation.

Complex type name	Description
RemoveDelegateResponseMessageType	Specifies the response message for the **RemoveDelegate** operation.
RemoveDelegateType	Specifies the request message for the **RemoveDelegate** operation.

3.1.4.3.3.1   tns:RemoveDelegateType Complex Type

The **RemoveDelegateType** complex type specifies a request to remove delegates from a primary account's mailbox by using the **RemoveDelegate** operation. The **RemoveDelegateType** complex type extends the **BaseDelegateType** complex type, as specified in section 2.2.4.3.

```
<xs:complexType name="RemoveDelegateType">
  <xs:complexContent>
    <xs:extension
      base="tns:BaseDelegateType"
    >
      <xs:sequence>
        <xs:element name="UserIds"
          type="t:ArrayOfUserIdType"
         />
      </xs:sequence>
    </xs:extension>
```

```
        </xs:complexContent>
     </xs:complexType>
```

The following table lists the child elements of the **RemoveDelegateType** complex type.

Element name	Type	Description
UserIds	**t:ArrayOfUserIdType** (section 2.2.4.6)	Specifies a list of user identifiers of the delegates to remove from the mailbox.

3.1.4.3.3.2   tns:RemoveDelegateResponseMessageType Complex Type

The **RemoveDelegateResponseMessageType** complex type specifies the response message from the **RemoveDelegate** operation. The **RemoveDelegateResponseMessageType** complex type extends the **BaseDelegateResponseMessageType** complex type, as specified in section 2.2.4.2.

```
<xs:complexType name="RemoveDelegateResponseMessageType">
  <xs:complexContent>
    <xs:extension
      base="tns:BaseDelegateResponseMessageType"
     />
  </xs:complexContent>
</xs:complexType>
```

3.1.4.3.4   Simple Types

None.

3.1.4.3.5   Attributes

None.

3.1.4.3.6   Groups

None.

3.1.4.4   UpdateDelegate Operation

The **UpdateDelegate** operation updates one or more delegates to a mailbox.

The following is the WSDL port type specification of the operation.

```
<wsdl:operation name="UpdateDelegate">
     <wsdl:input message="tns:UpdateDelegateSoapIn" />
     <wsdl:output message="tns:UpdateDelegateSoapOut" />
</wsdl:operation>
```

The following is the WSDL binding specification of the operation.

```
<wsdl:operation name="UpdateDelegate">
   <soap:operation
soapAction="http://schemas.microsoft.com/exchange/services/2006/messages/UpdateDelegate" />
   <wsdl:input>
      <soap:header message="tns:UpdateDelegateSoapIn" part="Impersonation" use="literal"/>
      <soap:header message="tns:UpdateDelegateSoapIn" part="MailboxCulture" use="literal"/>
      <soap:header message="tns:UpdateDelegateSoapIn" part="RequestVersion" use="literal"/>
      <soap:body parts="request" use="literal" />
   </wsdl:input>
   <wsdl:output>
      <soap:body parts="UpdateDelegateResult" use="literal" />
      <soap:header message="tns:UpdateDelegateSoapOut" part="ServerVersion" use="literal"/>
   </wsdl:output>
</wsdl:operation>
```

3.1.4.4.1 Messages

The following table lists the WSDL message definitions that are specific to this operation.

Message name	Description
UpdateDelegateSoapIn	Specifies the SOAP message that requests that one or more delegates to a mailbox be updated.
UpdateDelegateSoapOut	Specifies the SOAP message that is returned by the server in response.

3.1.4.4.1.1 tns:UpdateDelegateSoapIn Message

The **UpdateDelegateSoapIn** WSDL message specifies the **UpdateDelegate** operation request to modify one or more delegates to a mailbox.

```
<wsdl:message name="UpdateDelegateSoapIn">
   <wsdl:part name="request" element="tns:UpdateDelegate" />
   <wsdl:part name="Impersonation" element="t:ExchangeImpersonation"/>
   <wsdl:part name="MailboxCulture" element="t:MailboxCulture"/>
   <wsdl:part name="RequestVersion" element="t:RequestServerVersion"/>
</wsdl:message>
```

The **UpdateDelegateSoapIn** WSDL message is the input message for the SOAP action
http://schemas.microsoft.com/exchange/services/2006/messages/UpdateDelegate.

The parts of the **UpdateDelegateSoapIn** WSDL message are described in the following table.

Part name	Element/type	Description
request	**tns:UpdateDelegate** (section 3.1.4.4.2.2)	Specifies the SOAP body of the request to modify one or more delegates to a mailbox.
Impersonation	**t:ExchangeImpersonation** ([MS-OXWSCDATA] section 2.2.3.3)	Specifies a SOAP header that identifies the user whom the client application is impersonating.
MailboxCulture	**t:MailboxCulture** ([MS-OXWSCDATA] section 2.2.3.6)	Specifies a SOAP header that identifies the culture to use for accessing the mailbox. The cultures are defined by [RFC3066].

Release: October 30, 2014

Part name	Element/type	Description
RequestVersion	**t:RequestServerVersion** ([MS-OXWSCDATA] section 2.2.3.9)	Specifies a SOAP header that identifies the schema version for the **UpdateDelegate** operation request.

3.1.4.4.1.2   tns:UpdateDelegateSoapOut message

The **UpdateDelegateSoapOut** WSDL message specifies the server response to the **UpdateDelegate** operation request to modify one or more delegates to a mailbox.

```
<wsdl:message name="UpdateDelegateSoapOut">
   <wsdl:part name="UpdateDelegateResult" element="tns:UpdateDelegateResponse" />
   <wsdl:part name="ServerVersion" element="t:ServerVersionInfo"/>
</wsdl:message>
```

The **UpdateDelegateSoapOut** WSDL message is the output message for the SOAP action http://schemas.microsoft.com/exchange/services/2006/messages/UpdateDelegate.

The parts of the **UpdateDelegateSoapOut** WSDL message are described in the following table.

Part name	Element/type	Description
UpdateDelegateResult	**tns:UpdateDelegateResponse** (section 3.1.4.4.2.1)	Specifies the SOAP body of the response to the request to modify one or more delegates to a mailbox.
ServerVersion	**t:ServerVersionInfo** ([MS-OXWSCDATA] section 2.2.3.10)	Specifies a SOAP header that identifies the server version for the response.

The **UpdateDelegate** operation returns an **UpdateDelegateResponse** element with the **ResponseClass** attribute set to "Success". The **ResponseCode** element of the **UpdateDelegateResponse** element is set to "NoError".

The operation returns the **ResponseMessages** element of the **UpdateDelegateResponse** element. A **DelegateUserResponseMessageType** element of the **ResponseMessages** element is returned for each **DelegateUser** element in the **UpdateDelegate** request. If the delegate was updated successfully, the **ResponseClass** attribute of the **DelegateUserResponseMessageType** element is set to "Success". The **ResponseCode** element of the **DelegateUserResponseMessageType** is set to "NoError".

Each successful **DelegateUserResponseMessageType** element includes a **DelegateUser** element, which includes a **UserId** element, a **ReceiveCopiesOfMeetingRequests** element, and a **ViewPrivateItems** element.

If the delegate was not updated successfully, the **ResponseClass** attribute of the **DelegateUserResponseMessageType** element is set to "Error". The **ResponseCode** element of the **DelegateUserResponseMessageType** can be one of the error values listed in the following table. These errors and other common errors are specified in [MS-OXWSCDATA] section 2.2.5.23.

Error Value	Description
ErrorInvalidDelegatePermission	Specifies that the specified folder permissions are invalid.

Error Value	Description
ErrorUpdateDelegatesFailed	Specifies that the delegate list failed to be saved after delegates were updated.

3.1.4.4.2 Elements

The following table lists the XML schema element definitions that are specific to this operation.

Element name	Description
UpdateDelegate	Specifies a request to update one or more delegates to a mailbox.
UpdateDelegateResponse	Specifies the response body content from a request to update delegates to a mailbox.

3.1.4.4.2.1 tns:UpdateDelegateResponse Element

The **UpdateDelegateResponse** element specifies the response message for an **UpdateDelegate** operation.

```
<xs:element name="UpdateDelegateResponse"
  type="tns:UpdateDelegateResponseMessageType"
 />
```

3.1.4.4.2.2 tns:UpdateDelegate Element

The **UpdateDelegate** element specifies the base element for an **UpdateDelegate** operation request.

```
<xs:element name="UpdateDelegate"
  type="tns:UpdateDelegateType"
 />
```

3.1.4.4.3 Complex Types

The following table lists the XML schema complex type definitions that are specific to this operation.

Complex type name	Description
UpdateDelegateResponseMessageType	Specifies the response message for the **UpdateDelegate** operation.
UpdateDelegateType	Specifies the request message for the **UpdateDelegate** operation.

3.1.4.4.3.1   tns:UpdateDelegateType Complex Type

The **UpdateDelegateType** complex type specifies a request to update delegates to a primary account's mailbox by using the **UpdateDelegate** operation. The **UpdateDelegateType** complex type extends the **BaseDelegateType** complex type, as specified in section 2.2.4.3.

```
<xs:complexType name="UpdateDelegateType">
  <xs:complexContent>
    <xs:extension
      base="tns:BaseDelegateType"
    >
      <xs:sequence>
        <xs:element name="DelegateUsers"
          type="t:ArrayOfDelegateUserType"
          minOccurs="0"
        />
        <xs:element name="DeliverMeetingRequests"
          type="t:DeliverMeetingRequestsType"
          minOccurs="0"
        />
      </xs:sequence>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

The following table lists the child elements of the **UpdateDelegateType** complex type.

Element name	Type	Description
DelegateUsers	**t:ArrayOfDelegateUserType** (section 2.2.4.5)	Specifies the identities of the delegates to update on a mailbox. This element can be present.
DeliverMeetingRequests	**t:DeliverMeetingRequestsType** (section 2.2.5.2)	Specifies how meeting-related messages are handled between the delegate and the primary account. This element can be present.

3.1.4.4.3.2   tns:UpdateDelegateResponseMessageType Complex Type

The **UpdateDelegateResponseMessageType** complex type specifies the response message from the **UpdateDelegate** operation. The **UpdateDelegateResponseMessageType** complex type extends the **BaseDelegateResponseMessageType** complex type, as specified in section 2.2.4.2.

```
<xs:complexType name="UpdateDelegateResponseMessageType">
  <xs:complexContent>
    <xs:extension
      base="tns:BaseDelegateResponseMessageType"
    />
  </xs:complexContent>
</xs:complexType>
```

3.1.4.4.4 Simple Types

None.

3.1.4.4.5 Attributes

None.

3.1.4.4.6 Groups

None.

3.1.5 Timer Events

None.

3.1.6 Other Local Events

None.

4   Protocol Examples

The examples in section through section show the operations of this protocol.

4.1   AddDelegate Operation

The following example shows an **AddDelegate** request to give user1 delegate permissions on folders that are owned by user2. User1 is given Author-level permissions to user2's Calendar folder and Reviewer-level permissions to user2's Contacts folder. User1 will not receive copies of meeting messages and will be unable to view private items in user2's mailbox. Meeting requests will be sent to both user1 and user2.

```
<?xml version="1.0" encoding="utf-8"?>
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"
               xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types">
  <soap:Header>
    <t:RequestServerVersion Version="Exchange2013"/>
  </soap:Header>
  <soap:Body xmlns="http://schemas.microsoft.com/exchange/services/2006/messages">
    <AddDelegate>
      <Mailbox>
        <t:EmailAddress>user2@example.com</t:EmailAddress>
      </Mailbox>
      <DelegateUsers>
        <t:DelegateUser>
          <t:UserId>
            <t:PrimarySmtpAddress>user1@example.com</t:PrimarySmtpAddress>
          </t:UserId>
          <t:DelegatePermissions>
            <t:CalendarFolderPermissionLevel>Author</t:CalendarFolderPermissionLevel>
            <t:ContactsFolderPermissionLevel>Reviewer</t:ContactsFolderPermissionLevel>
          </t:DelegatePermissions>
          <t:ReceiveCopiesOfMeetingMessages>false</t:ReceiveCopiesOfMeetingMessages>
          <t:ViewPrivateItems>false</t:ViewPrivateItems>
        </t:DelegateUser>
      </DelegateUsers>
      <DeliverMeetingRequests>DelegatesAndMe</DeliverMeetingRequests>
    </AddDelegate>
  </soap:Body>
</soap:Envelope>
```

The following example shows a successful **AddDelegate** response to an **AddDelegate** request.

```
<?xml version="1.0" encoding="utf-8"?>
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"
               xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
               xmlns:xsd="http://www.w3.org/2001/XMLSchema">
  <soap:Header>
    <t:ServerVersionInfo MajorVersion="8"
            MinorVersion="1"
            MajorBuildNumber="206"
            MinorBuildNumber="0"
            Version="Exchange2013"
            xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types"/>
  </soap:Header>
  <soap:Body>
```

```
        <tns:AddDelegateResponse
                xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types"
                ResponseClass="Success"
                xmlns:m="http://schemas.microsoft.com/exchange/services/2006/messages">
          <tns:ResponseCode>NoError</tns:ResponseCode>
          <tns:ResponseMessages>
            <tns:DelegateUserResponseMessageType ResponseClass="Success">
              <tns:ResponseCode>NoError</tns:ResponseCode>
              <tns:DelegateUser>
                  <t:UserId>
                    <t:SID>S-1-5-21-1333220396-2200287332-232816053-1116</t:SID>
                    <t:PrimarySmtpAddress>User1@example.com</t:PrimarySmtpAddress>
                    <t:DisplayName>User1</t:DisplayName>
                  </t:UserId>
                  <t:ReceiveCopiesOfMeetingMessages>false</t:ReceiveCopiesOfMeetingMessages>
                <t:ViewPrivateItems>false</t:ViewPrivateItems>
                </tns:DelegateUser>
            </tns:DelegateUserResponseMessageType>
          </tns:ResponseMessages>
        </tns:AddDelegateResponse>
      </soap:Body>
    </soap:Envelope>
```

4.2 GetDelegate Operation

The following code example shows how to retrieve the delegate settings for all the delegates that
are set on user3's mailbox. All the permissions for each user are returned in the response.

```
<?xml version="1.0" encoding="utf-8"?>
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"
               xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types">
  <soap:Header>
    <t:RequestServerVersion Version="Exchange2013"/>
  </soap:Header>
  <soap:Body>
    <GetDelegate xmlns="http://schemas.microsoft.com/exchange/services/2006/messages"
                 xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types"
                 IncludePermissions="true">
      <Mailbox>
        <t:EmailAddress>user3@example.com</t:EmailAddress>
      </Mailbox>
    </GetDelegate>
  </soap:Body>
</soap:Envelope>
```

The following example of a **GetDelegate** response shows a successful response to a **GetDelegate**
request. The response contains information about the delegate access permissions, whether the
delegate can view private items, whether the delegate receives copies of meeting messages, and to
whom meeting requests were delivered.

```
<?xml version="1.0" encoding="utf-8"?>
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"
               xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
               xmlns:xsd="http://www.w3.org/2001/XMLSchema">
  <soap:Header>
    <t:ServerVersionInfo MajorVersion="8"
```

```
               MinorVersion="1"
               MajorBuildNumber="206"
               MinorBuildNumber="0"
               Version="Exchange2013"
               xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types"/>
  </soap:Header>
  <soap:Body>
    <tns:GetDelegateResponse
           xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types"
           ResponseClass="Success"
           xmlns:m="http://schemas.microsoft.com/exchange/services/2006/messages">
      <tns:ResponseCode>NoError</tns:ResponseCode>
      <tns:ResponseMessages>
        <tns:DelegateUserResponseMessageType ResponseClass="Success">
          <tns:ResponseCode>NoError</tns:ResponseCode>
          <tns:DelegateUser>
              <t:UserId>
                <t:SID>S-1-5-21-1333220396-2200287332-232816053-1116</t:SID>
                <t:PrimarySmtpAddress>User1@example.com</t:PrimarySmtpAddress>
                <t:DisplayName>User1</t:DisplayName>
              </t:UserId>
              <t:DelegatePermissions>
                <t:CalendarFolderPermissionLevel>Author</t:CalendarFolderPermissionLevel>
                <t:ContactsFolderPermissionLevel>Reviewer</t:ContactsFolderPermissionLevel>
              </t:DelegatePermissions>
              <t:ReceiveCopiesOfMeetingMessages>false</t:ReceiveCopiesOfMeetingMessages>
           <t:ViewPrivateItems>false</t:ViewPrivateItems>
            </tns:DelegateUser>
          </tns:DelegateUserResponseMessageType>
      </tns:ResponseMessages>
      <tns:DeliverMeetingRequests>DelegatesAndMe</tns:DeliverMeetingRequests>
      </tns:GetDelegateResponse>
  </soap:Body>
</soap:Envelope>
```

4.3   RemoveDelegate Operation

The following code example shows how to remove two delegates from user1's mailbox. In this example, one delegate is removed by using the delegate's primary SMTP address, and the other one is removed by using the delegate's **security identifier (SID)**.

```
<?xml version="1.0" encoding="utf-8"?>
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"
               xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types">
  <soap:Header>
    <t:RequestServerVersion Version="Exchange2013"/>
  </soap:Header>
  <soap:Body>
    <RemoveDelegate xmlns="http://schemas.microsoft.com/exchange/services/2006/messages"
                    xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types">
      <Mailbox>
        <t:EmailAddress>user1@example.com</t:EmailAddress>
      </Mailbox>
      <UserIds>
        <t:UserId>
          <t:PrimarySmtpAddress>user2@example.com</t:PrimarySmtpAddress>
        </t:UserId>
```

```
            <t:UserId>
               <t:SID>S-1-5-21-1333220396-2200287332-232816053-1118</t:SID>
            </t:UserId>
          </UserIds>
        </RemoveDelegate>
      </soap:Body>
    </soap:Envelope>
```

The following example of a **RemoveDelegate** response shows a successful response to a **RemoveDelegate** request. The response contains a **DelegateUserResponseMessageType** element for each delegate that is removed from the mailbox.

```
    <?xml version="1.0" encoding="utf-8"?>
    <soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"
                   xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
                   xmlns:xsd="http://www.w3.org/2001/XMLSchema">
      <soap:Header>
        <t:ServerVersionInfo
                MajorVersion="8"
                MinorVersion="1"
                MajorBuildNumber="206"
                MinorBuildNumber="0"
                Version="Exchange2013"
                xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types"/>
      </soap:Header>
      <soap:Body>
        <tns:RemoveDelegateResponse
             xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types"
             ResponseClass="Success"
             xmlns:m="http://schemas.microsoft.com/exchange/services/2006/messages">
          <tns:ResponseCode>NoError</tns:ResponseCode>
          <tns:ResponseMessages>
            <tns:DelegateUserResponseMessageType ResponseClass="Success">
              <tns:ResponseCode>NoError</tns:ResponseCode>
            </tns:DelegateUserResponseMessageType>
            <tns:DelegateUserResponseMessageType ResponseClass="Success">
              <tns:ResponseCode>NoError</tns:ResponseCode>
            </tns:DelegateUserResponseMessageType>
          </tns:ResponseMessages>
        </tns:RemoveDelegateResponse>
      </soap:Body>
    </soap:Envelope>
```

4.4 UpdateDelegate Operation

The following example of an **UpdateDelegate** request shows how to update delegate permissions on user1's account. User2 is granted the None permission level for the Tasks folder and is granted permission to view private items. User3 is granted Reviewer permissions for the Journal folder. Meeting requests are sent to the delegates, and information about the request is sent to user1.

```
    <?xml version="1.0" encoding="utf-8"?>
    <soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"
                   xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
                   xmlns:xsd="http://www.w3.org/2001/XMLSchema">
      <soap:Header>
```

```
      <t:ServerVersionInfo MajorVersion="8"
              MinorVersion="1"
              MajorBuildNumber="206"
              MinorBuildNumber="0"
              Version="Exchange2013"
              xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types"/>
  </soap:Header>
  <soap:Body>
    <tns:UpdateDelegateResponse
          xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types"
          ResponseClass="Success"
          xmlns:m="http://schemas.microsoft.com/exchange/services/2006/messages">
      <tns:ResponseCode>NoError</tns:ResponseCode>
      <tns:ResponseMessages>
        <tns:DelegateUserResponseMessageType ResponseClass="Success">
          <tns:ResponseCode>NoError</tns:ResponseCode>
          <tns:DelegateUser>
            <t:UserId>
              <t:SID>S-1-5-21-1333220396-2200287332-232816053-1117</t:SID>
              <t:PrimarySmtpAddress>User2@example.com</t:PrimarySmtpAddress>
              <t:DisplayName>User2</t:DisplayName>
            </t:UserId>
            <t:ReceiveCopiesOfMeetingMessages>true</t:ReceiveCopiesOfMeetingMessages>
            <t:ViewPrivateItems>true</t:ViewPrivateItems>
          </tns:DelegateUser>
        </tns:DelegateUserResponseMessageType>
        <tns:DelegateUserResponseMessageType ResponseClass="Success">
          <tns:ResponseCode>NoError</tns:ResponseCode>
          <tns:DelegateUser>
            <t:UserId>
              <t:SID>S-1-5-21-1333220396-2200287332-232816053-1118</t:SID>
              <t:PrimarySmtpAddress>User3@example.com</t:PrimarySmtpAddress>
              <t:DisplayName>User3</t:DisplayName>
            </t:UserId>
            <t:ReceiveCopiesOfMeetingMessages>true</t:ReceiveCopiesOfMeetingMessages>
            <t:ViewPrivateItems>false</t:ViewPrivateItems>
          </tns:DelegateUser>
        </tns:DelegateUserResponseMessageType>
      </tns:ResponseMessages>
    </tns:UpdateDelegateResponse>
  </soap:Body>
</soap:Envelope>
```

The following example shows a successful response to an **UpdateDelegate** operation.

```
<?xml version="1.0" encoding="utf-8"?>
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"
               xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"

</tns:UpdateDelegateResponse>
  </soap:Body>
</soap:Envelope>
```

5 Security

5.1 Security Considerations for Implementers

None.

5.2 Index of Security Parameters

None.

6   Appendix A: Full WSDL

The XML files that are listed in the following table are required in order to implement the functionality specified in this document. The contents of each file are included in this section.

File name	Description	Section
MS-OXWSDLGM.wsdl	Contains the WSDL for the implementation of this protocol.	6
MS-OXWSDLGM-messages.xsd	Contains the XML schema message definitions that are used in this protocol.	7.1
MS-OXWSDLGM-types.xsd	Contains the XML schema type definitions that are used in this protocol.	7.2

These files have to be placed in a common folder in order for the WSDL to validate and operate. Also, any schema files that are included in or imported into the MS-OXWSDLGM-types.xsd or MS-OXWSDLGM-messages.xsd schemas have to be placed in the common folder along with these files.

This section contains the contents of the MS-OXWSDLGM.wsdl file.

7 Appendix B: Full XML Schema

For ease of implementation, the following sections provide the full XML schema for this protocol.

Schema name	Prefix	Section
Messages schema	tns:	7.1
Types schema	t:	7.2

These files have to be placed in a common folder in order for the WSDL to validate and operate. Also, any schema files that are included in or imported into the MS-OXWSDLGM-types.xsd or MS-OXWSDLGM-messages.xsd schemas have to be placed in the common folder along with the files listed in the table.

7.1 Messages Schema

This section contains the contents of the MS-OXWSDLGM-messages.xsd file and information about additional files that this schema file requires to operate correctly.

MS-OXWSDLGM-messages.xsd includes the file listed in the following table. For the schema file to operate correctly, this file has to be in the folder that contains the WSDL, types schema, and messages schema files for this protocol.

File name	Defining specification
MS-OXWSCDATA-messages.xsd	[MS-OXWSCDATA] section 7.1

```xml
<?xml version="1.0" encoding="utf-8"?>
<xs:schema xmlns:m="http://schemas.microsoft.com/exchange/services/2006/messages"

          <xs:enumeration value="Author"/>
          <xs:enumeration value="Custom"/>
        </xs:restriction>
      </xs:simpleType>
    </xs:schema>
```

8 Appendix C: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include released service packs:

- Microsoft Exchange Server 2007 Service Pack 1 (SP1)

- Microsoft Exchange Server 2010

- Microsoft Exchange Server 2013

Exceptions, if any, are noted below. If a service pack or Quick Fix Engineering (QFE) number appears with the product version, behavior changed in that service pack or QFE. The new behavior also applies to subsequent service packs of the product unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms SHOULD or SHOULD NOT implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies that the product does not follow the prescription.

<1> Section 2.2.5.2: Exchange 2007 SP1 and Exchange 2010 do not use the "NoForward" enumeration value.

<2> Section 3.1.4.2.3.1: When the **DeliverMeetingRequests** element is set to "NoForward" for a delegate, Exchange 2010 SP1, Exchange 2010 SP2, and Exchange 2013 do not include the **DeliverMeetingRequests** element in the response.

9 Change Tracking

No table of changes is available. The document is either new or has had no changes since its last release.
