[MS-OXWSPSNTIF]:
Push Notifications Web Service Protocol

Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation ("this documentation") for protocols, file formats, data portability, computer languages, and standards support. Additionally, overview documents cover inter-protocol relationships and interactions.
- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you can make copies of it in order to develop implementations of the technologies that are described in this documentation and can distribute portions of it in your implementations that use these technologies or in your documentation as necessary to properly document the implementation. You can also distribute in your implementation, with or without modification, any schemas, IDLs, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications documentation.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that might cover your implementations of the technologies described in the Open Specifications documentation. Neither this notice nor Microsoft's delivery of this documentation grants any licenses under those patents or any other Microsoft patents. However, a given Open Specifications document might be covered by the Microsoft [Open Specifications Promise](https://docs.microsoft.com/en-us/openspecs/windows_web_services/open_specifications_promise) or the Microsoft [Community Promise](https://docs.microsoft.com/en-us/openspecs/windows_web_services/community_promise). If you would prefer a written license, or if the technologies described in this documentation are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting iplg@microsoft.com.
- **License Programs.** To see all of the protocols in scope under a specific license program and the associated patents, visit the [Patent Map](https://docs.microsoft.com/en-us/openspecs/windows_web_services/technology_compatibility_map).
- **Trademarks.** The names of companies and products contained in this documentation might be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights. For a list of Microsoft trademarks, visit [www.microsoft.com/trademarks](https://www.microsoft.com/trademarks).
- **Fictitious Names.** The example companies, organizations, products, domain names, email addresses, logos, people, places, and events that are depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

**Reservation of Rights.** All other rights are reserved, and this notice does not grant any rights other than as specifically described above, whether by implication, estoppel, or otherwise.

**Tools.** The Open Specifications documentation does not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments, you are free to take advantage of them. Certain Open Specifications documents are intended for use in conjunction with publicly available standards specifications and network programming art and, as such, assume that the reader either is familiar with the aforementioned material or has immediate access to it.

**Support.** For questions and support, please contact [dochelp@microsoft.com](mailto:dochelp@microsoft.com).

Push Notifications Web Service Protocol  
Copyright © 2022 Microsoft Corporation  
Release: February 15, 2022
1 Introduction

The Push Notifications Web Service Protocol enables clients to receive subscribed event updates sent by the server.

Sections 1.5, 1.8, 1.9, 2, and 3 of this specification are normative. All other sections and examples in this specification are informative.

1.1 Glossary

This document uses the following terms:

- **endpoint**: A communication port that is exposed by an application server for a specific shared service and to which messages can be addressed.

- **Hypertext Transfer Protocol (HTTP)**: An application-level protocol for distributed, collaborative, hypermedia information systems (text, graphic images, sound, video, and other multimedia files) on the World Wide Web.

- **Hypertext Transfer Protocol Secure (HTTPS)**: An extension of HTTP that securely encrypts and decrypts web page requests. In some older protocols, "Hypertext Transfer Protocol over Secure Sockets Layer" is still used (Secure Sockets Layer has been deprecated). For more information, see [SSL3] and [RFC5246].

- **SOAP**: A lightweight protocol for exchanging structured information in a decentralized, distributed environment. SOAP uses XML technologies to define an extensible messaging framework, which provides a message construct that can be exchanged over a variety of underlying protocols. The framework has been designed to be independent of any particular programming model and other implementation-specific semantics. SOAP 1.2 supersedes SOAP 1.1. See [SOAP1.2-1/2003].

- **SOAP action**: The HTTP request header field used to indicate the intent of the SOAP request, using a URI value. See [SOAP1.1] section 6.1.1 for more information.

- **SOAP body**: A container for the payload data being delivered by a SOAP message to its recipient. See [SOAP1.2-1/2007] section 5.3 for more information.

- **SOAP header**: A mechanism for implementing extensions to a SOAP message in a decentralized manner without prior agreement between the communicating parties. See [SOAP1.2-1/2007] section 5.2 for more information.

- **Uniform Resource Locator (URL)**: A string of characters in a standardized format that identifies a document or resource on the World Wide Web. The format is as specified in [RFC1738].

- **web server**: A server computer that hosts websites and responds to requests from applications.

- **Web Services Description Language (WSDL)**: An XML format for describing network services as a set of endpoints that operate on messages that contain either document-oriented or procedure-oriented information. The operations and messages are described abstractly and are bound to a concrete network protocol and message format in order to define an endpoint. Related concrete endpoints are combined into abstract endpoints, which describe a network service. WSDL is extensible, which allows the description of endpoints and their messages regardless of the message formats or network protocols that are used.

- **WSDL message**: An abstract, typed definition of the data that is communicated during a WSDL operation [WSDL]. Also, an element that describes the data being exchanged between web service providers and clients.
**WSDL port type:** A named set of logically-related, abstract **Web Services Description Language (WSDL)** operations and messages.

**XML namespace:** A collection of names that is used to identify elements, types, and attributes in XML documents identified in a URI reference [RFC3986]. A combination of XML namespace and local name allows XML documents to use elements, types, and attributes that have the same names but come from different sources. For more information, see [XMLNS-2ED].

**XML namespace prefix:** An abbreviated form of an XML namespace, as described in [XML].

**XML schema:** A description of a type of XML document that is typically expressed in terms of constraints on the structure and content of documents of that type, in addition to the basic syntax constraints that are imposed by XML itself. An XML schema provides a view of a document type at a relatively high level of abstraction.

**MAY, SHOULD, MUST, SHOULD NOT, MUST NOT:** These terms (in all caps) are used as defined in [RFC2119]. All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

### 1.2 References

Links to a document in the Microsoft Open Specifications library point to the correct section in the most recently published version of the referenced document. However, because individual documents in the library are not updated at the same time, the section numbers in the documents may not match. You can confirm the correct section numbering by checking the Errata.

#### 1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact dochelp@microsoft.com. We will assist you in finding the relevant information.

[MS-OXWSCDATA] Microsoft Corporation, "Common Web Service Data Types".

[MS-OXWSNTIF] Microsoft Corporation, "Notifications Web Service Protocol".

1.2.2 Informative References

1.3 Overview

This protocol provides clients with subscribed event updates that are sent by the server. Clients subscribe to these notifications, as described in [MS-OXWSNTIF], by creating a push subscription that specifies where the server is to send notifications. The clients then create a web service that enables them to receive the notifications sent to them by the server.

1.4 Relationship to Other Protocols

A client that implements this protocol can use the Autodiscover Publishing and Lookup SOAP-Based Web Service Protocol, as described in [MS-OXWSADISC], or the Autodiscover Publishing and Lookup Protocol, as described in [MS-OXDSCLI], to identify the target endpoint to use for each operation.

This protocol uses the Simple Object Access Protocol (SOAP) Protocol, as described in [SOAP1.1], to specify the structure information exchanged between the client and server. This protocol uses the XML Protocol, as described in [XMLSCHEMA1] and [XMLSCHEMA2], to describe the message content sent to and from the server.

This protocol uses SOAP over HTTP, as described in [RFC2616], and SOAP over HTTPS, as described in [RFC2818], as shown in the following layering diagram.

![Diagram](image)

Figure 1: This protocol in relation to other protocols

The notification information that is sent to this protocol is used when requests are made by using the Notifications Web Service Protocol [MS-OXWSNTIF].

For conceptual background information and overviews of the relationships and interactions between this and other protocols, see [MS-OXPROTO].
1.5 Prerequisites/Preconditions

The endpoint URL that is returned by either the Autodiscover Publishing Lookup SOAP-Based Web Service Protocol, as described in [MS-OXWSADISC], or the Autodiscover Publishing and Lookup Protocol, as described in [MS-OXDSCLI], is required to form the HTTP request to the web server that hosts this protocol. The operations that this protocol defines cannot be accessed unless the correct endpoint is identified in the HTTP web requests that target this protocol.

1.6 Applicability Statement

The protocol specified in this document is applicable to tightly coupled client/server environments in which the client and the server are always connected. This protocol is not applicable to environments in which the client connects to the server periodically. If clients are loosely coupled with the server, the Notifications Web Service Protocol, as described in [MS-OXWSNTIF], is applicable.

1.7 Versioning and Capability Negotiation

This document covers versioning issues in the following areas:

- **Supported Transports:** This protocol uses multiple transports with SOAP 1.1, as specified in section 2.1 and in [SOAP1.1].

- **Protocol Versions:** This protocol specifies only one WSDL port type version. The WSDL version of the request is identified by using the `t:RequestServerVersion` element, as described in [MS-OXWSCDATA] section 2.2.3.9.

- **Security and Authentication Methods:** This protocol relies on the web server that is hosting it to perform authentication.

- **Localization:** This protocol includes text strings in various messages. Localization considerations for such strings are specified in section 3.1.4.

- **Capability Negotiation:** This protocol does not support version negotiation.

1.8 Vendor-Extensible Fields

None.

1.9 Standards Assignments

None.
2 Messages

In the following sections, the schema definition might differ from the processing rules imposed by the protocol. The WSDL in this specification provides a base description of the protocol. The schema in this specification provides a base description of the message syntax. The text that specifies the WSDL and schema might specify restrictions that reflect actual protocol behavior. For example, the schema definition might allow for an element to be empty, null, or not present but the behavior of the protocol as specified restricts the same elements to being non-empty, not null, or present.

2.1 Transport

The SOAP version supported is SOAP 1.1. For more details, see [SOAP1.1].

This protocol relies on the web server that hosts the application to perform authentication. This protocol MUST support SOAP over HTTP, as specified in [RFC2616]. The protocol SHOULD use secure communications by means of HTTPS, as defined in [RFC2818].

2.2 Common Message Syntax

This section contains common definitions that are used by this protocol. The syntax of the definitions uses XML schema as defined in [XMLSCHEMA1] and [XMLSCHEMA2], and WSDL as defined in [WSDL].

2.2.1 Namespaces

This specification defines and references various XML namespaces by using the mechanisms specified in [XMLNS]. Although this specification associates a specific XML namespace prefix for each XML namespace that is used, the choice of any particular XML namespace prefix is implementation-specific and not significant for interoperability.

2.2.2 Messages

This specification does not define any common WSDL message definitions.
2.2.3 Elements
This specification does not define any common XML schema element definitions.

2.2.4 Complex Types
This specification does not define any common XML schema complex type definitions.

2.2.5 Simple Types
This specification does not define any common XML schema simple type definitions.

2.2.6 Attributes
This specification does not define any common XML schema attribute definitions.

2.2.7 Groups
This specification does not define any common XML schema group definitions.

2.2.8 Attribute Groups
This specification does not define any common XML schema attribute group definitions.
3 Protocol Details

The client side of this protocol is simply a pass-through. That is, no additional timers or other state is required on the client side of this protocol. Calls made by the higher-layer protocol or application are passed directly to the transport, and the results that are returned by the transport are passed directly back to the higher-layer protocol or application.

3.1 ExchangeServicePortType Server Details

This protocol defines a single port type with one operation.

3.1.1 Abstract Data Model

None.

3.1.2 Timers

None.

3.1.3 Initialization

None.

3.1.4 Message Processing Events and Sequencing Rules

The following table summarizes the WSDL operations as defined by this specification.

<table>
<thead>
<tr>
<th>Operation name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SendNotification</td>
<td>Sends subscription information from the server to the client application.</td>
</tr>
</tbody>
</table>

3.1.4.1 SendNotification Operation

The SendNotification operation sends subscription information from the server to the client application.

The following is the WSDL port type specification for the SendNotification operation.

```
<wsl:operation name="SendNotification">
  <wsl:input message="tns:SendNotificationSoapIn" />
  <wsl:output message="tns:SendNotificationSoapOut" />
</wsl:operation>
```

The following is the WSDL binding specification for the SendNotification operation.

```
<wsdl:operation name="SendNotification">
  <soap:operation
  <wsdl:input>
    <soap:header message="tns:SendNotificationSoapIn" part="RequestVersion" use="literal"/>
    <soap:body parts="request" use="literal"/>
  </wsdl:input>
  <wsdl:output>
```

```
3.1.4.1.1 Messages

The following table lists and describes the WSDL message definitions that are specific to the SendNotification operation.

<table>
<thead>
<tr>
<th>Message name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SendNotificationSoapIn</td>
<td>Specifies a request to the SendNotification operation.</td>
</tr>
<tr>
<td>SendNotificationSoapOut</td>
<td>Specifies a response from the SendNotification operation.</td>
</tr>
</tbody>
</table>

3.1.4.1.1.1 tns:SendNotificationSoapIn Message

The SendNotificationSoapIn WSDL message specifies the SendNotification operation request to send a notification to the client application.

```xml
<wsdl:message name="SendNotificationSoapIn">
  <wsdl:part name="request" element="tns:SendNotification"/>
  <wsdl:part name="RequestVersion" element="t:RequestServerVersion"/>
</wsdl:message>
```

The SendNotificationSoapIn WSDL message is the input message for the SOAP action http://schemas.microsoft.com/exchange/services/2006/messages/SendNotification.

The parts of the SendNotificationSoapIn WSDL message are listed and described in the following table.

<table>
<thead>
<tr>
<th>Part name</th>
<th>Element/type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>request</td>
<td>tns:SendNotification (section 3.1.4.1.2.1)</td>
<td>Specifies the SOAP body of the request.</td>
</tr>
<tr>
<td>RequestVersion</td>
<td>t:RequestServerVersion ([MS-OXWSCDATA] section 2.2.3.9)</td>
<td>Specifies a SOAP header that identifies the schema version for the SendNotification operation request.</td>
</tr>
</tbody>
</table>

3.1.4.1.1.2 tns:SendNotificationSoapOut Message

The SendNotificationSoapOut WSDL message specifies the response to the SendNotification operation request.

```xml
<wsdl:message name="SendNotificationSoapOut">
  <wsdl:part name="SendNotificationResult" element="tns:SendNotificationResult"/>
</wsdl:message>
```

The SendNotificationSoapOut WSDL message is the output message for the SOAP action http://schemas.microsoft.com/exchange/services/2006/messages/SendNotification.
The parts of the **SendNotificationSoapOut** WSDL message are listed and described in the following table.

<table>
<thead>
<tr>
<th>Part name</th>
<th>Element/type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SendNotificationResult</td>
<td>tns:SendNotificationResult</td>
<td>Specifies SOAP body of the response message.</td>
</tr>
</tbody>
</table>

### 3.1.4.1.2 Elements

The following table lists and describes the **XML schema** element definitions that are specific to the **SendNotification** operation.

<table>
<thead>
<tr>
<th>Element name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SendNotification</td>
<td>Specifies the push notifications that are sent by the server to the client application.</td>
</tr>
<tr>
<td>SendNotificationResult</td>
<td>Specifies the response of a client application to a push notification.</td>
</tr>
</tbody>
</table>

#### 3.1.4.1.2.1 SendNotification Element

The **SendNotification** element specifies the push notifications that are sent by the server to the client application.

```xml
<xs:element name="SendNotification"
             type="m:SendNotificationResponseType"/>
```

#### 3.1.4.1.2.2 SendNotificationResult Element

The **SendNotificationResult** element specifies the response of a client application to a push notification.

```xml
<xs:element name="SendNotificationResult"
             type="m:SendNotificationResultType"/>
```

### 3.1.4.1.3 Complex Types

The following table lists and describes the **XML schema** complex type definitions that are specific to the **SendNotification** operation.

<table>
<thead>
<tr>
<th>Complex type name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SendNotificationResponseMessageType</td>
<td>Specifies the status and result of a single SendNotification operation request.</td>
</tr>
<tr>
<td>SendNotificationResponseType</td>
<td>Specifies the push notifications that are sent by the server to the client application.</td>
</tr>
<tr>
<td>SendNotificationResultType</td>
<td>Specifies the response of a client application to a push notification.</td>
</tr>
</tbody>
</table>
3.1.4.1.3.1  m:SendNotificationResponseMessageType Complex Type

The SendNotificationResponseMessageType complex type specifies the status and result of a single SendNotification operation request. The SendNotificationResponseMessageType complex type extends the ResponseMessageType complex type, as specified in [MS-OXWSCDATA] section 2.2.4.67.

```xml
<xs:complexType name="SendNotificationResponseMessageType">
  <xs:complexContent>
    <xs:extension base="m:ResponseMessageType">
      <xs:sequence>
        <xs:element name="Notification" type="t:NotificationType" minOccurs="1"/>
      </xs:sequence>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

The following table lists and describes the child elements of the SendNotificationResponseMessageType complex type.

<table>
<thead>
<tr>
<th>Element name</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Notification</td>
<td>t:NotificationType (MS-OXWSNTIF section 2.2.4.8)</td>
<td>Specifies the subscription and the events that have occurred since the last notification.</td>
</tr>
</tbody>
</table>

3.1.4.1.3.2  m:SendNotificationResponseType Complex Type

The SendNotificationResponseType complex type specifies the push notifications that are sent by the server to the client application. The SendNotificationResponseType complex type extends the BaseResponseMessageType complex type, as specified in [MS-OXWSCDATA] section 2.2.4.18.

```xml
<xs:complexType name="SendNotificationResponseType">
  <xs:complexContent>
    <xs:extension base="m:BaseResponseMessageType"/>
  </xs:complexContent>
</xs:complexType>
```

3.1.4.1.3.3  m:SendNotificationResultType Complex Type

The SendNotificationResultType complex type specifies the response of a client application to a push notification.

```xml
<xs:complexType name="SendNotificationResultType">
  <xs:sequence>
    <xs:element name="SubscriptionStatus"/>
  </xs:sequence>
</xs:complexType>
```
The following table lists and describes the child elements of the `SendNotificationResultType` complex type.

<table>
<thead>
<tr>
<th>Element name</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SubscriptionStatus</td>
<td><code>t:SubscriptionStatusType</code> (section 3.1.4.1.4.1)</td>
<td>Specifies the status of a push subscription.</td>
</tr>
</tbody>
</table>

### 3.1.4.1.4 Simple Types

The following table lists and describes the XML schema simple type definitions that are specific to the `SendNotification` operation.

<table>
<thead>
<tr>
<th>Simple type name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SubscriptionStatusType</td>
<td>Specifies the status type of a push subscription.</td>
</tr>
</tbody>
</table>

#### 3.1.4.1.4.1 `t:SubscriptionStatusType` Simple Type

The `SubscriptionStatusType` simple type specifies the status of a push subscription.

```xml
<xs:simpleType name="SubscriptionStatusType">
  <xs:restriction base="xs:string">
    <xs:enumeration value="OK"/>
    <xs:enumeration value="Unsubscribe"/>
  </xs:restriction>
</xs:simpleType>
```

The following table lists and describes the values that are defined by the `SubscriptionStatusType` simple type.

<table>
<thead>
<tr>
<th>Value name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>OK</td>
<td>Specifies that the server will continue to send notifications.</td>
</tr>
<tr>
<td>Unsubscribe</td>
<td>Specifies that the server will stop sending notifications and end the subscription.</td>
</tr>
</tbody>
</table>

6 Appendix A: Full WSDL

The XML files that are listed in the following table are required in order to implement the functionality described in this document.

<table>
<thead>
<tr>
<th>File name</th>
<th>Description</th>
<th>Section</th>
</tr>
</thead>
<tbody>
<tr>
<td>MS-OXWSPSNTIF.wsdl</td>
<td>Contains the <strong>WSDL</strong> for the implementation of this protocol.</td>
<td>6</td>
</tr>
<tr>
<td>MS-OXWSPSNTIF-messages.xsd</td>
<td>Contains the <strong>XML schema</strong> message definitions that are used in this protocol.</td>
<td>7.1</td>
</tr>
<tr>
<td>MS-OXWSPSNTIF-types.xsd</td>
<td>Contains the XML schema type definitions that are used in this protocol.</td>
<td>7.2</td>
</tr>
</tbody>
</table>

These files have to be placed in a common folder in order for the WSDL to validate and operate. Also, any schema files that are included in or imported into the MS-OXWSPSNTIF-types.xsd or MS-OXWSPSNTIF-messages.xsd schemas have to be placed in the common folder along with the files listed in the table.

This section provides the contents of the MS-OXWSPSNTIF.wsdl file.

```xml
<?xml version="1.0" encoding="utf-8"?>
<wsdl:definitions xmlns:soap="http://schemas.xmlsoap.org/wsdl/soap/">
  xmlns:soap12="http://schemas.xmlsoap.org/wsdl/soap12/"
  xmlns:tns="http://schemas.microsoft.com/exchange/services/2006/messages"
  xmlns:s="http://www.w3.org/2001/XMLSchema"
  targetNamespace="http://schemas.microsoft.com/exchange/services/2006/messages"
  xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/"
  xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types">
  <wsdl:types>
    <xs:schema xmlns:xs="http://www.w3.org/2001/XMLSchema">
      <xs:import namespace="http://schemas.microsoft.com/exchange/services/2006/messages" schemaLocation="MS-OXWSPSNTIF-messages.xsd"/>
    </xs:schema>
  </wsdl:types>
  <wsdl:message name="SendNotificationSoapIn">
    <wsdl:part name="request" element="tns:SendNotification"/>
  </wsdl:message>
  <wsdl:message name="SendNotificationSoapOut">
    <wsdl:part name="SendNotificationResult" element="tns:SendNotificationResult"/>
  </wsdl:message>
  <wsdl:portType name="NotificationServicePortType">
    <wsdl:operation name="SendNotification">
      <wsdl:input message="tns:SendNotificationSoapIn"/>
      <wsdl:output message="tns:SendNotificationSoapOut"/>
    </wsdl:operation>
  </wsdl:portType>

  <wsdl:binding name="NotificationServiceBinding" type="tns:NotificationServicePortType">
    <wsdl:documentation>
      <wsi:Claim conformsTo="http://ws-i.org/profiles/basic/1.0" xmlns:wsi="http://ws-i.org/schemas/conformanceClaim"/>
    </wsdl:documentation>
    <soap:binding transport="http://schemas.xmlsoap.org/soap/http" style="document"/>
    <wsdl:operation name="SendNotification">
      <soap:operation>
        <soapAction http://schemas.microsoft.com/exchange/services/2006/messages/SendNotification"/>
      </soap:operation>
    </wsdl:operation>
  </wsdl:binding>
</wsdl:definitions>
```
<soap:header message="tns:SendNotificationSoapIn" part="RequestVersion" use="literal"/>
<soap:body parts="request" use="literal"/>
</wsdl:input>
<wsdl:output>
<soap:body use="literal"/>
</wsdl:output>
</wsdl:operation>

</wsdl:binding>

<wsdl:binding name="NotificationServiceBinding12" type="tns:NotificationServicePortType">
<soap12:binding transport="http://schemas.xmlsoap.org/soap/http" style="document"/>
<wsdl:operation name="SendNotification">
<wsdl:input>
<soap12:header message="tns:SendNotificationSoapIn" part="RequestVersion" use="literal"/>
<soap12:body parts="request" use="literal"/>
</wsdl:input>
<wsdl:output>
<soap12:body use="literal"/>
</wsdl:output>
</wsdl:operation>
</wsdl:binding>
</wsdl:definitions>
7 Appendix B: Full XML Schema

For ease of implementation, the following sections provide the full XML schema for this protocol.

<table>
<thead>
<tr>
<th>Schema name</th>
<th>Prefix</th>
<th>Section</th>
</tr>
</thead>
<tbody>
<tr>
<td>Messages schema</td>
<td>m:</td>
<td>7.1</td>
</tr>
<tr>
<td>Types schema</td>
<td>t:</td>
<td>7.2</td>
</tr>
</tbody>
</table>

These files have to be placed in a common folder in order for the WSDL to validate and operate. Also, any schema files that are included in or imported into the MS-OXWSNTIF-types.xsd or MS-OXWSNTIF-messages.xsd schemas have to be placed in the common folder along with the files listed in the table.

7.1 Messages Schema

This section provides the contents of the MS-OXWSNTIF-messages.xsd file and information about additional files that this schema file requires to operate correctly.

MS-OXWSNTIF-messages.xsd includes the files listed in the following table. To operate correctly, these files have to be in the folder that contains the WSDL, types schema, and messages schema files for this protocol.

<table>
<thead>
<tr>
<th>File name</th>
<th>Defining specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>MS-OXWSCDATA-messages.xsd</td>
<td>[MS-OXWSCDATA] section 7.1</td>
</tr>
<tr>
<td>MS-OXWSNTIF-types.xsd</td>
<td>[MS-OXWSNTIF] section 7.2</td>
</tr>
</tbody>
</table>

```xml
<xs:schema xmlns:m="http://schemas.microsoft.com/exchange/services/2006/messages"
            xmlns:tns="http://schemas.microsoft.com/exchange/services/2006/messages"
            xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types"
            xmlns:xs="http://www.w3.org/2001/XMLSchema"
            targetNamespace="http://schemas.microsoft.com/exchange/services/2006/messages"
            elementFormDefault="qualified"
            version="Exchange2016"
            id="messages">
    <xs:import namespace="http://schemas.microsoft.com/exchange/services/2006/types"
                 schemaLocation="MS-OXWSNTIF-types.xsd"/>
    <xs:import namespace="http://schemas.microsoft.com/exchange/services/2006/types"
                 schemaLocation="MS-OXWSNTIF-types.xsd"/>
    <xs:include schemaLocation="MS-OXWSCDATA-messages.xsd"/>
    <xs:complexType name="SendNotificationResponseMessageType">
        <xs:complexContent>
            <xs:extension base="m:ResponseMessageType">
                <xs:sequence>
                    <xs:element name="Notification" type="t:NotificationType"/>
                </xs:sequence>
            </xs:extension>
        </xs:complexContent>
    </xs:complexType>
    <xs:complexType name="SendNotificationResultType">
        <xs:sequence>
            <xs:element name="SubscriptionStatus" type="t:SubscriptionStatusType"/>
        </xs:sequence>
    </xs:complexType>
    <xs:element name="SendNotificationResult" type="m:SendNotificationResultType"/>
</xs:schema>
```
7.2 Types Schema

This section provides the contents of the MS-OXWSNTIF-types.xsd file.

```xml
<?xml version="1.0" encoding="utf-8"?>
<xs:schema xmlns:t="http://schemas.microsoft.com/exchange/services/2006/types"
xmlns:tns="http://schemas.microsoft.com/exchange/services/2006/messages"
xmlns:xs="http://www.w3.org/2001/XMLSchema"
targetNamespace="http://schemas.microsoft.com/exchange/services/2006/types"
elementFormDefault="qualified" version="Exchange2016" id="types">
  <xs:simpleType name="SubscriptionStatusType">
    <xs:restriction base="xs:string">
      <xs:enumeration value="OK"/>
      <xs:enumeration value="Unsubscribe"/>
    </xs:restriction>
  </xs:simpleType>
</xs:schema>
```
8 Appendix C: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include updates to those products.

- Microsoft Exchange Server 2007
- Microsoft Exchange Server 2010
- Microsoft Exchange Server 2013
- Microsoft Exchange Server 2016
- Microsoft Exchange Server 2019

Exceptions, if any, are noted in this section. If an update version, service pack or Knowledge Base (KB) number appears with a product name, the behavior changed in that update. The new behavior also applies to subsequent updates unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms "SHOULD" or "SHOULD NOT" implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term "MAY" implies that the product does not follow the prescription.
9 Change Tracking

No table of changes is available. The document is either new or has had no changes since its last release.
