- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you may make copies of it in order to develop implementations of the technologies described in the Open Specifications and may distribute portions of it in your implementations using these technologies or your documentation as necessary to properly document the implementation. You may also distribute in your implementation, with or without modification, any schema, IDL's, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that may cover your implementations of the technologies described in the Open Specifications. Neither this notice nor Microsoft's delivery of the documentation grants any licenses under those or any other Microsoft patents. However, a given Open Specification may be covered by Microsoft [Open Specification Promise](#) or the [Community Promise](#). Reservation of Rights. All other rights are reserved, and this notice does not grant any rights other than specifically described above, whether by implication, estoppel, or otherwise.

Tools. The Open Specifications do not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments you are free to take advantage of them. Certain Open Specifications are intended for use in conjunction with publicly available standard specifications and network programming art, and assumes that the reader either is familiar with the aforementioned material or has immediate access to it.

Preliminary Documentation. This Open Specification provides documentation for past and current releases and/or for the pre-release (beta) version of this technology. This Open Specification is final

documentation for past or current releases as specifically noted in the document, as applicable; it is preliminary documentation for the pre-release (beta) versions. Microsoft will release final documentation in connection with the commercial release of the updated or new version of this technology. 1 Introduction

The Publishing Client-Side Object Model Protocol defines types, methods, and properties that a protocol client uses to manage publishing web sites on a protocol server, for example operations involving the navigation hierarchy or URLs.

Sections 1.8, 2, and 3 of this specification are normative and can contain the terms MAY, SHOULD, MUST, MUST NOT, and SHOULD NOT as defined in RFC 2119. Sections 1.5 and 1.9 are also normative but cannot contain those terms. All other sections and examples in this specification are informative.

The following terms are specific to this document:

catalog friendly URL: A web address that is designed to be easily readable by both people and search engine web crawler programs. This type of URL has additional segments appended to control the web page content.

catalog friendly URL suffix: The additional segment that is appended to a friendly Uniform Resource Locator (URL) in order to construct a catalog friendly URL.

current navigation menu: The navigation menu that appears vertically on the left side of the default master page and shows the set of current navigation nodes.

global navigation menu: The navigation menu that appears horizontally at the top of the default master page and shows the set of navigation nodes from the site map provider's root node.

pinned term: A term in a term set that cannot be directly moved or deleted.

portal site map provider: A site map provider that uses the location of objects, such as pages, in the file system as its source data for constructing a site map.

publishing page: A document that binds to a page layout to generate an HTML page for display to a reader. Publishing pages have specific fields that contain the content that is displayed in an HTML page.

root node: The highest-ranking or uppermost node in a hierarchy of information.

site map provider: An object that provides a hierarchy of nodes that represent navigation for a site (2).

switchable site map provider: A site map provider that uses other site map providers as its source data when constructing a site map.

taxonomy navigation: A hierarchy of navigation menus that represents the navigation menus in terms and term sets and are independent of where their underlying objects, such as pages, are located.

taxonomy site map provider: A site map provider that uses taxonomy navigation as its source data for constructing a site map.

MAY, SHOULD, MUST, SHOULD NOT, MUST NOT: These terms (in all caps) are used as described in [\[RFC2119\]](#). All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

1.3 Overview

This protocol defines types, methods, and properties that a protocol client uses to manage publishing web sites on a protocol server. For example, a protocol client can retrieve a tree of menu entries from the protocol server. The menu data could be used to provide custom rendering for various scenarios, such as custom menus for a mobile device. Also, a protocol client can update the managed navigation data on the protocol server. This enables a protocol client to modify URLs, the hierarchy, and other aspects of menu navigation.

1.4 Relationship to Other Protocols

The Publishing Client-Side Object Model Protocol is a set of types, properties, and methods that can be accessed by using the SharePoint Client Query Protocol as described in [\[MS-CSOM\]](#). This protocol uses JSON as described in [\[RFC4627\]](#) to format data returned to a protocol client. This protocol also uses HTTP, as described in [\[RFC2616\]](#), and HTTPS, as described in [\[RFC2818\]](#). The dependencies for this protocol are shown in the following layering diagram.

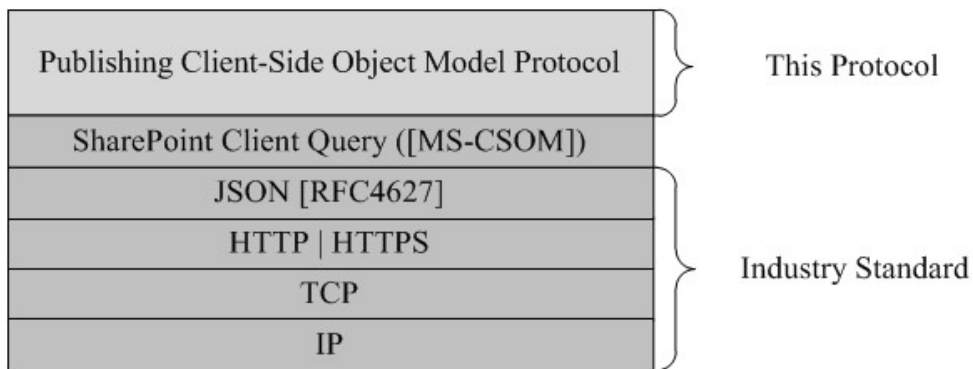

Figure 1: This protocol in relation to other protocols

1.5 Prerequisites/Preconditions

This protocol operates against a **site (2)** that is identified by a **Uniform Resource Locator (URL)** that is known by protocol clients. This protocol assumes that authentication has been performed by underlying protocols.

1.6 Applicability Statement

This protocol can be used by a protocol client to manage publishing web sites on a protocol server, for example operations involving the navigation hierarchy or URLs. This protocol is optimized to enable a protocol client to specify the exact set of data and operations to perform in a single batch, making it suitable for situations where the connection speed between the protocol client and the protocol server can be slow. This protocol is not suitable and is inefficient if both the protocol client and protocol server are on the same computer. In this case, the client should use an API that does not require communication over a network.

3.1.1 Abstract Data Model

This section describes a conceptual model of possible data organization that an implementation maintains to participate in this protocol. The described organization is provided to facilitate the explanation of how the protocol behaves. This document does not mandate that implementations adhere to this model as long as their external behavior is consistent with that described in this document.

This protocol deals with various structures associated with sites (2), **items**, navigation, and other structures as specified in [\[MS-WSSTS\]](#).

This protocol also deals with **terms**, **term sets**, and other Enterprise managed metadata as specified in [\[MS-EMMCOSM\]](#). Changes by types in this protocol that affect underlying terms do not apply until the protocol client calls the **TermStore.CommitAll** ([\[MS-EMMCOSM\]](#) section 3.1.5.23.2.1.1) method.

3.1.1.1 Parent Type

This protocol deals with various types that are logically derived from a parent type. The following table lists the relationship between such types.

Parent type	Derived type(s)
Microsoft.SharePoint.Client.Publishing.Navigation.NavigationTermSetItem (section 3.1.5.9)	Microsoft.SharePoint.Client.Publishing.Navigation.NavigationTerm (section 3.1.5.6) Microsoft.SharePoint.Client.Publishing.Navigation.NavigationTermSet (section 3.1.5.8)

Type: CSOM String

labelTitle: The *Title* of the target label that the page is requested in.

Type: CSOM String

Remarks:

This method is a static CSOM method.

Return Type: **CSOM Int32**

Returns the language code identifier (LCID) that is in use for **taxonomy navigation** when retrieving a **Term** ([\[MS-EMMCSON\]](#) section 3.1.5.16) object for the specified Web site (2). The LCID SHOULD be assigned as the **TermStore.WorkingLanguage** ([\[MS-EMMCSON\]](#) section 3.1.5.23.1.1.6) when making changes to taxonomy navigation.

Parameters:

web: The Web site (2) from which to retrieve the LCID.

Returns a cached **WebNavigationSettings** (section [3.1.5.19](#)) object. If the object is not already in the taxonomy navigation cache, it will be added. This method returns null if there are no navigation settings defined for the Web site (2), or if the settings data is not valid (such as a user entering a wrong value for a setting.)

Parameters:

web: The Web site (2) from which to retrieve the navigation settings.

Type: Microsoft.SharePoint.Client.Web

Remarks:

Because the object is fetched from the cache, this method is more efficient than explicitly constructing an instance of **WebNavigationSettings**.

3.1.5.5 Microsoft.SharePoint.Client.Publishing.Navigation.CustomizableString

TypeId: {13EBB0D0-559A-4248-BA69-C57D5FABF4C4}

ShortName: SP.Publishing.Navigation.CustomizableString

3.1.5.5.1 Properties

3.1.5.5.1.1 Scalar Properties

3.1.5.5.1.1.1 DefaultValue

Type: CSOM String

Accessibility: Read Only

Gets the default value for the property.

Remarks:

The protocol server MUST NOT return null for this property. The protocol server can return an **empty string (1)** as a valid value.

3.1.5.5.1.1.2 UsesDefaultValue

Type: CSOM Boolean

Accessibility: Read/Write

Gets or sets whether the **CustomizableString** object (section [3.1.5.5](#)) uses the default value.

Remarks:

If true then the **Value** (section [3.1.5.5.1.1.3](#)) property MUST return the default value as specified by the **DefaultValue** (section [3.1.5.5.1.1.1](#)) property. If false, then the **Value** property returns the custom value. If the **UsesDefaultValue** property is false and the protocol client assigns it to be true, then the custom value is set to a copy of the current default value; in this state, if something caused the **DefaultValue** to change, the **Value** property MUST retain the custom value.

3.1.5.5.1.1.3 Value

Type: CSOM String

Accessibility: Read/Write

Gets or sets the current value of the property.

Remarks:

If the **UsesDefaultValue** (section [3.1.5.5.1.1.2](#)) property is true, then the **Value** property MUST return the default value, as specified by the **DefaultValue** (section [3.1.5.5.1.1.1](#)) property. If the **UsesDefaultValue** property is false, then the **Value** property returns the custom value.

The **Value** property MUST NOT return null. If the protocol client makes an assignment to the **Value** property (even if the new value is the same as the current value), then the **UsesDefaultValue** property MUST be set to false.

3.1.5.5.1.2 ObjectPath Properties

None.

3.1.5.5.2 Methods

3.1.5.5.2.1 Scalar Methods

3.1.5.5.2.2 ObjectPath Methods

3.1.5.6 Microsoft.SharePoint.Client.Publishing.Navigation.NavigationTerm

TypeId: {74B7367A-E303-43E8-891E-DAC764C96E53}

ShortName: SP.Publishing.Navigation.NavigationTerm

Specifies navigation behavior and properties for a term that is used for taxonomy navigation. The **NavigationTerm** class is based on the **Term** class ([\[MS-EMMCOSOM\]](#) section 3.1.5.16).

Remarks:

The properties of the **NavigationTerm** class MAY be stored in **TermSet.CustomProperties** ([\[MS-EMMCOSOM\]](#) section 3.1.5.20.1.1.3). However this protocol intends that the properties be accessed through the **NavigationTerm** class for clarity and efficiency.

Each **NavigationTerm** object belongs to a **NavigationTermSet** object (section [3.1.5.8](#)).

The **NavigationTerm** object has two modes: an "editable" mode that is required in order to make updates to the object, and a "read-only" mode that, when used, improves performance by retrieving the object from the taxonomy navigation cache. The read-only mode is indicated by the **NavigationTermSetItem.IsReadOnly** property (section [3.1.5.9.1.1.4](#)).

If the **NavigationTerm** is read-only and the protocol client attempts to assign any property or call any method that would change the object state, then the protocol server MUST return an **InvalidOperationException** error.

3.1.5.6.1 Properties

3.1.5.6.1.1 Scalar Properties

3.1.5.6.1.1.1 AssociatedFolderUrl

Type: CSOM String

Accessibility: Read/Write

Gets or sets a URL value that is used to associate certain page URLs with this object, associating it with a particular location in the site map provider hierarchy.

Remarks:

This property is used to help calculate the current node for a site map provider. The current node indicates a page's location in the navigation hierarchy, for example as displayed by a breadcrumb control "Investor Relations > News > Press Releases". Typically the current node is determined by searching the navigation hierarchy to find a node whose link matches the URL of the page being viewed, for example "/Pages/PressReleases/January2010.aspx". If a current node cannot be found

(for example, the January2010.aspx page is not linked by any navigation node), then the breadcrumb would be empty. This problem could be solved by assigning the containing folder "/Pages/PressReleases" to the **AssociatedFolderUrl** property of the "Press Releases" term; the breadcrumb will now show "Investor Relations > News > Press Releases" for any page in that folder (unless the page is explicitly linked by a navigation node).

3.1.5.6.1.1.2 ExcludeFromCurrentNavigation

Type: CSOM Boolean

Accessibility: Read/Write

Gets or sets whether this navigation term (and its child terms) will be hidden from the **current navigation menu**. The current navigation menu (also called the "left nav") is the contextual navigation pane typically on the left side of the page.

3.1.5.6.1.1.3 ExcludeFromGlobalNavigation

Type: CSOM Boolean

Accessibility: Read/Write

Gets or sets a value that indicates whether this navigation term (and its child terms) will be hidden from the **global navigation menu**. Global navigation (also called "top nav") is the unchanging menu bar along the top of the page.

3.1.5.6.1.1.4 HoverText

Type: CSOM String

Accessibility: Read/Write

Gets or sets an informational description that is typically displayed by menu and bread crumb controls when the cursor hovers over the navigation link.

3.1.5.6.1.1.5 Id

Type: CSOM GUID

Accessibility: Read Only

See **Microsoft.SharePoint.Client.Publishing.Navigation.NavigationTermSetItem.ID**, specified in section [3.1.5.9.1.1.1](#).

3.1.5.6.1.1.6 IsDeprecated

Type: CSOM Boolean

Accessibility: Read Only

Gets a value that indicates whether the underlying term is a **deprecated term**.

Remarks:

This property returns the underlying **Term.IsDeprecated** ([\[MS-EMMCSON\]](#) section 3.1.5.16.1.1.6) property. It is true if the term is deprecated; otherwise, false.

3.1.5.6.1.1.7 LinkType

Type: Microsoft.SharePoint.Client.Publishing.Navigation.NavigationLinkType

Accessibility: Read/Write

See **Microsoft.SharePoint.Client.Publishing.Navigation.NavigationTermSetItem.LinkType**, specified in section [3.1.5.9.1.1.2](#).

3.1.5.6.1.1.8 SimpleLinkUrl

Type: CSOM String

Accessibility: Read/Write

Gets or sets a URL that this **NavigationTerm** (section [3.1.5.6](#)) object links to.

Remarks:

This property is only used when **LinkType** (section [3.1.5.6.1.1.7](#)) is set to **NavigationLinkType.SimpleLink** (section [3.1.5.3.1.3](#)). If the protocol client attempts to assign the property for a different link type, then the protocol server MAY return an **InvalidOperationException** error.

3.1.5.6.1.1.9 TaxonomyName

Type: CSOM String

Accessibility: Read Only

See

Microsoft.SharePoint.Client.Publishing.Navigation.NavigationTermSetItem.TaxonomyName, specified in section [3.1.5.9.1.1.3](#).

3.1.5.6.1.1.10 TopicDescription

Type: CSOM String

Accessibility: Read/Write

Gets or sets user-defined text content that can optionally be displayed by the **TargetUrl** (section [3.1.5.6.1.2.5](#)) template.

Remarks:

Suppose that several different **NavigationTerm** objects have **TargetUrl**'s pointing to the same page URL, but showing different page content for each term, for example "Camping Gear," "Fishing," and "Tents." The **TopicDescription** property could store different introductory text for each product category.

This property is only used when the **LinkType** (section [3.1.5.6.1.1.7](#)) is **NavigationLinkType.FriendlyUrl** (section [3.1.5.3.1.2](#)). If the protocol client attempts to assign the property for a different link type, then the protocol server MAY return an **InvalidOperationException** error.

3.1.5.6.1.1.11 TopicImageUrl

Type: CSOM String

Accessibility: Read/Write

Gets or sets the URL of an image that can optionally be displayed by the **TargetUrl** (section [3.1.5.6.1.2.5](#)) template.

Remarks:

Suppose that several different **NavigationTerm** objects have **TargetUrl**'s pointing to the same page URL, but showing different page content for each term, for example "Camping Gear," "Fishing," and "Tents." The **TopicImageUrl** property could store the URL for an image of camping equipment, a person fishing, or a tent.

This property is only used when the **LinkType** (section [3.1.5.6.1.1.7](#)) is **NavigationLinkType.FriendlyUrl** (section [3.1.5.3.1.2](#)). If the protocol client attempts to assign the property for a different link type, then the protocol server MAY return an **InvalidOperationException** error.

3.1.5.6.1.1.12 IsPinned

Type: CSOM Boolean

Accessibility: Read Only

Gets a value that indicates whether the term is pinned.

Remarks:

Returns true if the term is a **pinned term**; otherwise false. This property returns the **Term.IsPinned** property ([\[MS-EMMCSON\]](#) section 3.1.5.16.1.1.15) for the underlying term.

3.1.5.6.1.1.13 IsPinnedRoot

Type: CSOM Boolean

Accessibility: Read Only

Gets a value that indicates whether the term is the root of a subtree of pinned terms.

Remarks:

Returns true if the term is the root of a hierarchy of pinned terms; otherwise, false. This property returns the **Term.IsPinnedRoot** property for the underlying term.

3.1.5.6.1.1.14 IsReadOnly

Type: CSOM Boolean

Accessibility: Read Only

See **Microsoft.SharePoint.Client.Publishing.Navigation.NavigationTermSetItem.IsReadOnly**, specified in section [3.1.5.9.1.1.4](#).

3.1.5.6.1.2 ObjectPath Properties

3.1.5.6.1.2.1 CatalogTargetUrl

Type: Microsoft.SharePoint.Client.Publishing.Navigation.CustomizableString

Accessibility: Read Only

Gets or sets the target URL used when performing URL rewriting for **catalog friendly URLs** based on this term.

Remarks:

Normally the protocol server performs URL rewriting to render the friendly URL for this a navigation term using the page specified by the **TargetUrl** property (section [3.1.5.6.1.2.5](#)). For example, for the term "Cameras" the URLs might look like this:

friendly URL: `http://example.com/products/cameras`

target URL: `/store/Pages/TopicTemplate.aspx`

However, if a **catalog friendly URL suffix** is appended, then the **CatalogTargetUrl** property will be used instead. Continuing the example term "Cameras":

catalog friendly URL: `http://example.com/products/cameras/nice-pix-35mm/sku12345`

URL suffix: `nice-pix-35mm/sku12345`

catalog target URL: `/store/Pages/CatalogItemTemplate.aspx`

Typically catalog friendly URLs are used for products such as the hypothetical "Nice Pix 35mm camera" in the preceding example, which do not have a corresponding navigation term, but belong to the category represented by that term. However, the interpretation of the catalog friendly URL suffix is left to the target URL and other usage scenarios are possible.

If the **CatalogTargetUrl** value is an empty string (1), then URL rewriting will not be performed for the term and the catalog friendly URL MAY result in an HTTP 404 error.

The **CatalogTargetUrl** property is a **CustomizableString** (section [3.1.5.5](#)) object. The default value is inherited from the **CatalogTargetUrlForChildTerms.Value** (section [3.1.5.5.1.1.3](#)) property of the immediate parent node.

This property is only used when the **LinkType** (section [3.1.5.6.1.1.7](#)) is **NavigationLinkType.FriendlyUrl** (section [3.1.5.3.1.2](#)). Remarks:

The protocol server performs URL rewriting to render the friendly URL for this a navigation term using the page specified by the **TargetUrl** property (section [3.1.5.6.1.2.5](#)). For example, for the term "Cameras" the URLs might look like this:

friendly URL: <http://example.com/products/cameras>

target URL: </store/Pages/TopicTemplate.aspx>

The protocol server MAY support implementation-specific relative URL syntaxes such as "~site/Pages/TopicTemplate.aspx" or "~sitecollection/Pages/TopicTemplate.aspx".

The **TargetUrl** property is a **CustomizableString** (section [3.1.5.5](#)) object. The default value is inherited from the **TargetUrlForChildTerms.Value** (section [3.1.5.5.1.1.3](#)) property of the immediate parent node.

This property is only used when the **LinkType** (section [3.1.5.6.1.1.7](#)) is **NavigationLinkType.FriendlyUrl** (section [3.1.5.3.1.2](#)). If the protocol client attempts to assign the property for a different link type, then the protocol server MAY return an **InvalidOperationException** error.

Type: Microsoft.SharePoint.Client.Publishing.Navigation.NavigationTermSetView

Remarks:

This method supports editing of **NavigationTerm** objects that are not yet in use by a Web site (2). If a **NavigationTerm** object is in use, then a simpler approach is to call the **GetAsEditable** (section [3.1.5.6.2.2.2](#)) method to obtain a copy of the **NavigationTerm** object that can be edited.

Type: CSOM String

This method supports editing of **NavigationTerm** objects that are not yet in use by a Web site (2). The **NavigationTermSet** class is based on the **TermSet** class ([\[MS-EMMCSOM\]](#) section 3.1.5.20). **NavigationTermSet** inherits from the **NavigationTermSetItem** class (section [3.1.5.9](#)).

Remarks:

The properties of the **NavigationTermSet** class MAY be stored in **TermSet.CustomProperties** ([\[MS-EMMCSOM\]](#) section 3.1.5.20.1.1.3). However, this protocol intends that the properties be accessed through the **NavigationTermSet** class for clarity and efficiency.

The **NavigationTermSet** object has two modes: an "editable" mode that is required in order to make updates to the object, and a "read-only" mode that, when used, improves performance by retrieving the object from the taxonomy navigation cache. The read-only mode is indicated by the **NavigationTermSetItem.IsReadOnly** property (section [3.1.5.9.1.1.4](#)). Use the **GetAsEditable** (section [3.1.5.8.2.2.4](#)) method to obtain an editable instance.

Type: Microsoft.SharePoint.Client.Publishing.Navigation.NavigationLinkType

Accessibility: Read/Write

Gets or sets a value that indicates what kind of link is used by the navigation node that the taxonomy site map provider creates for a **NavigationTerm**. For a **NavigationTermSet** (section [3.1.5.8](#)) object, the value is always **NavigationLinkType.Root** (section [3.1.5.3.1.1](#)).

Remarks:

The link type is specified by the **NavigationLinkType** (section [3.1.5.3](#)) enumeration. The link type also determines whether the protocol server will use URL rewriting to implement a friendly URL or catalog friendly URL for a **NavigationTerm**.

3.1.5.9.1.1.3 TaxonomyName

Type: CSOM String

Accessibility: Read Only

Gets the underlying **Term.Name** ([\[MS-EMMCSON\]](#) section 3.1.5.16.1.1.12) or **TermSet.Name** ([\[MS-EMMCSON\]](#) section 3.1.5.20.1.1.10) property.

3.1.5.9.1.1.4 IsReadOnly

Type: CSOM Boolean

Accessibility: Read Only

This returns true if the object is in "read-only" mode; otherwise it is in "editable" mode. See the **NavigationTermSetItem** documentation (section [3.1.5.9](#)) for a discussion of these two modes.

3.1.5.9.1.2 ObjectPath Properties

3.1.5.9.1.2.1 CatalogTargetUrlForChildTerms

Type: Microsoft.SharePoint.Client.Publishing.Navigation.CustomizableString

Accessibility: Read Only

Gets or sets the default value of the **CatalogTargetUrl** property for child **NavigationTerm** (section [3.1.5.6](#)) objects.

Remarks:

This property does not affect the current node.

This property is a **CustomizableString** (section [3.1.5.5](#)) object. The default value is inherited from the **CatalogTargetUrlForChildTerms.Value** (section [3.1.5.5.1.1.3](#)) property of the immediate parent node. In the case of a **NavigationTermSet** (section [3.1.5.8](#)) object, the default value is an empty string (1).

3.1.5.9.1.2.2 TargetUrlForChildTerms

Type: Microsoft.SharePoint.Client.Publishing.Navigation.CustomizableString

Accessibility: Read Only

Gets the default value that is to be used for the **TargetUrl** (section [3.1.5.6.1.2.5](#)) property on child **NavigationTerm** (section [3.1.5.6](#)) objects.

Remarks:

This property does not affect the current node.

This property is a **CustomizableString** (section [3.1.5.5](#)) object. The default value is inherited from the **TargetUrlForChildTerms.Value** (section [3.1.5.5.1.1.3](#)) property of the immediate parent node. In the case of a **NavigationTermSet** (section [3.1.5.8](#)) object, the default value is an empty string (1).

3.1.5.9.1.2.3 Terms

Type: Microsoft.SharePoint.Client.Publishing.Navigation.NavigationTermCollection

Accessibility: Read Only

Gets a collection of all immediate child **NavigationTerm** (section [3.1.5.6](#)) objects of this **NavigationTerm** or **NavigationTermSet** (section [3.1.5.8](#)) object.

Remarks:

The **Terms** collection may exclude certain objects according to the trimming specified by the associated **NavigationTerm.View** (section [3.1.5.6.1.2.10](#)). For example, if **NavigationTermSetView.ExcludeDeprecatedTerms** (section [3.1.5.10.1.1.1](#)) is true, then objects will be trimmed (that is, excluded) from the collection if their **NavigationTerm.IsDeprecated** property (section [3.1.5.6.1.1.6](#)) is true.

3.1.5.9.1.2.4 Title

Type: Microsoft.SharePoint.Client.Publishing.Navigation.CustomizableString

Accessibility: Read Only

Gets or sets the title that menus and breadcrumbs will display for the navigation node.

Remarks:

This property is a **CustomizableString** (section [3.1.5.5](#)) object. For a **NavigationTerm** object, the default value MUST be the **Term.Name** ([\[MS-EMMCSON\]](#) section 3.1.5.16.1.1.12) property for the underlying term. For a **NavigationTermSet** object, this property SHOULD be the same as the Web site (2) title, as indicated by the **NavigationTermSetView.WebTitle** property (section [3.1.5.10.1.1.8](#)) for the current view.

3.1.5.9.1.2.5 View

Type: Microsoft.SharePoint.Client.Publishing.Navigation.NavigationTermSetView

Accessibility: Read Only

Gets the **NavigationTermSetView** (section [3.1.5.10](#)) object that is used to calculate certain properties for this **NavigationTerm**.

3.1.5.9.2 Methods

3.1.5.9.2.1 Scalar Methods

3.1.5.9.2.1.1 GetResolvedDisplayUrl

Return Type: CSOM String

Returns the server-relative URL that is displayed for this **NavigationTermSet** (section [3.1.5.8](#)) or **NavigationTerm** (section [3.1.5.6](#)) object.

Parameters:

browserQueryString: A query string that, if specified, is included in the resolved URL.

Type: CSOM String

Remarks:

The URL MAY be resolved by expanding any implementation-specific tokens such as "~sitecollection/". If the *browserQueryString* parameter is provided, it is used as the query string part of the resulting URL.

The URL is derived differently depending on the **NavigationLinkType** (section [3.1.5.3](#)) value. If the term is of type **NavigationLinkType.SimpleLink** (section [3.1.5.3.1.3](#)) then the **NavigationTerm.SimpleLinkUrl** (section [3.1.5.6.1.1.8](#)) property MUST be returned. If the term is of type **NavigationLinkType.FriendlyUrl** (section [3.1.5.3.1.2](#)), then the friendly URL MUST be returned. If a valid URL is not specified, then the protocol server MUST return null.

3.1.5.9.2.2 ObjectPath Methods

3.1.5.9.2.2.1 CreateTerm

Return Type: Microsoft.SharePoint.Client.Publishing.Navigation.NavigationTerm

Creates a new **NavigationTerm** (section [3.1.5.6](#)) object with the specified *termName* for the **Term.Name** property ([\[MS-EMMCSON\]](#) section 3.1.5.16.1.1.12). This operation is similar to **TermSetItem.CreateTerm** method ([\[MS-EMMCSON\]](#) section 3.1.5.22.2.2.1), but with two important differences:

1. If the **Terms** collection ([\[MS-EMMCSON\]](#) section 3.1.5.22.1.2.1) already contains a sibling term whose **Term.Name** property would conflict with *termName*, then the protocol server MUST generate a unique name. For example, if the name "St. Louis" is already in use, the *termName* could be changed to "St. Louis (2)". The method for generating the unique value is implementation-specific and MAY depend on the active language code identifier (LCID).
2. If the *linkType* is **NavigationLinkType.FriendlyUrl** (section [3.1.5.3.1.2](#)), and if the **Terms** collection already contains a sibling term whose **NavigationTerm.FriendlyUrlSegment** (section [3.1.5.6.1.2.3](#)) would conflict with the default **FriendlyUrlSegment** for the newly created term, then the protocol server MUST generate a unique segment and assign it as the custom value for the **CustomizableString** object (section [3.1.5.5](#)). For example, suppose *termName* is "St. Louis" but there is already a friendly URL "http://example.com/locations/st-louis". In this case, the newly created term's URL segment could be assigned as "st-louis-2" instead of "st-louis".

The method for generating the unique value is implementation-specific and MAY depend on the active language code identifier (LCID).

Parameters:

termName: The name for the new **NavigationTerm** object. The name to be stored in the **NavigationTerm.TaxonomyName** (section [3.1.5.6.1.1.9](#)) property.

Type: CSOM String

linkType: The type of link for the new **NavigationTerm** object as specified by the **NavigationLinkType** (section [3.1.5.3](#)) enumeration.

Type: Microsoft.SharePoint.Client.Publishing.Navigation.NavigationLinkType

termId: A unique identifier for the new **NavigationTerm** object.

Type: CSOM GUID

Remarks:

The new **NavigationTerm** will be a child of this object.

3.1.5.9.2.2.2 GetTaxonomyTermStore

Return Type: Microsoft.SharePoint.Client.Taxonomy.TermStore

Returns the underlying **TermStore** ([\[MS-EMMCOSM\]](#) section 3.1.5.23) object.

Remarks:

If the **NavigationTermSet** (section [3.1.5.8](#)) object is in the "editable" mode, then this method returns the underlying **TermStore** object. If the protocol client calls this method when the **NavigationTermSet** object is read-only, then the protocol server MUST return an **InvalidOperationException** error.

Parameters: None

3.1.5.10

Microsoft.SharePoint.Client.Publishing.Navigation.NavigationTermSetView

TypeId: {097234E9-47DA-431F-BD12-173C296B187B}

ShortName: SP.Publishing.Navigation.NavigationTermSetView

The **NavigationTermSetView** class stores contextual information (for example the active Web site (2), site map provider, and policy for trimming child nodes) that affects the calculation of certain properties for the **NavigationTerm** (section [3.1.5.6](#)) objects in a **NavigationTermSet** (section [3.1.5.8](#)).

Remarks:

Resolving URLs depends on which Web site (2) is in use. For example, the **NavigationTerm.GetResolvedDisplayUrl** (section [3.1.5.6.2.1.3](#)) method resolves a relative URL differently when the **TermSet** ([\[MS-EMMCOSM\]](#) section 3.1.5.20) object is attached to a different Web site (2).

To minimize the size of **NavigationTermSet** objects in the taxonomy navigation cache, this additional contextual information is separated into the **NavigationTermSetView** class. This allows the protocol server to return different cached views of the **NavigationTermSet** without making expensive copies of the internal tree structure. The protocol client can call **NavigationTermSet.GetWithNewView** section [3.1.5.8.2.2.6](#)) to switch between views.

3.1.5.10.1 Properties

3.1.5.10.1.1 Scalar Properties

3.1.5.10.1.1.1 ExcludeDeprecatedTerms

Type: CSOM Boolean

Accessibility: Read/Write

Gets or sets a value that indicates whether **NavigationTerm** (section [3.1.5.6](#)) objects are trimmed if the underlying term is a deprecated term.

Remarks:

When traversing a tree of **NavigationTerm** objects, if this property is true then objects MUST be excluded from the **NavigationTermSetItem.Terms** collection (section [3.1.5.9.1.2.3](#)) whenever the **NavigationTerm.IsDeprecated** property is true (section [3.1.5.6.1.1.6](#)).

3.1.5.10.1.1.2 ExcludeTermsByPermissions

Type: CSOM Boolean

Accessibility: Read/Write

Gets or sets a value that indicates whether **NavigationTerm** (section [3.1.5.6](#)) objects are trimmed if the current user does not have permission to view the linked URL.

Remarks:

When traversing a tree of **NavigationTerm** objects, if this property is true then objects MUST be excluded from the **NavigationTermSetItem.Terms** collection (section [3.1.5.9.1.2.3](#)) whenever the current user does not have permissions to view the page referenced by **NavigationTerm.GetResolvedTargetUrl** (section [3.1.5.6.2.1.4](#)). This property only applies to **publishing pages** within the current Web site (2).

3.1.5.10.1.1.3 ExcludeTermsByProvider

Type: CSOM Boolean

Accessibility: Read/Write

Gets or sets a value that indicates whether **NavigationTerm** (section [3.1.5.6](#)) objects are trimmed according to the active site map provider.

Remarks:

When traversing a tree of **NavigationTerm** objects, if this property is true then objects MUST be excluded from the **NavigationTermSetItem.Terms** collection (section [3.1.5.9.1.2.3](#)) whenever the term is marked as hidden for the site map provider indicated by the

NavigationTermSetView.SiteMapProviderName property (section [3.1.5.10.1.1.6](#)). To mark a term as hidden, use the properties **NavigationTerm.ExcludeFromGlobalNavigation** (section [3.1.5.6.1.1.3](#)) and **NavigationTerm.ExcludeFromCurrentNavigation** (section [3.1.5.6.1.1.2](#)).

3.1.5.10.1.1.4 ServerRelativeSiteUrl

Type: CSOM String

Accessibility: Read Only

Returns the server-relative URL for the **site collection** associated with this view.

Remarks:

For example, this property MAY be used by the **NavigationTerm.GetResolvedTargetUrl** method (section [3.1.5.6.2.1.4](#)) to resolve an implementation-defined relative URL syntax. For example, if the **ServerRelativeSiteUrl** is "/sites/spsite", then the protocol server could resolve "~sitecollection/Pages/Example.aspx" as "/sites/spsite/Pages/Example.aspx".

This property's value may also be an empty string (1).

3.1.5.10.1.1.5 ServerRelativeWebUrl

Type: CSOM String

Accessibility: Read Only

Returns the server-relative URL for the Web site (2) associated with this view.

Remarks:

For example, this property MAY be used by the **NavigationTerm.GetResolvedTargetUrl** method (section [3.1.5.6.2.1.4](#)) to resolve an implementation-defined relative URL syntax. For example, if the **ServerRelativeWebUrl** is "/sites/spsite/spweb", then the protocol server could resolve "~site/Pages/Example.aspx" as "/sites/spsite/spweb/Pages/Example.aspx".

This property's value may also be an empty string (1).

3.1.5.10.1.1.6 SiteMapProviderName

Type: CSOM String

Accessibility: Read/Write

Gets or sets the name used to refer to the site map provider to be used for trimming **NavigationTerm** (section [3.1.5.6](#)) objects.

Remarks:

This property is used to trim child navigation nodes when **ExcludeTermsByProvider** (section [3.1.5.10.1.1.3](#)) is true. It is valid to assign an empty string (1) to **SiteMapProviderName**; in this case, no trimming is performed for the current view.

3.1.5.10.1.1.7 WebId

Type: CSOM GUID

Accessibility: Read Only

Gets the unique identifier of the Web site (2) associated with this view.

3.1.5.10.1.1.8 WebTitle

Type: CSOM String

Accessibility: Read Only

Gets the title of the Web site (2) associated with this view.

Remarks:

This property is used as the **NavigationTermSetItem.Title** property (section [3.1.5.9.1.2.4](#)) for the **NavigationTermSet** (section [3.1.5.8](#)) object that is the root of the navigation hierarchy.

This property's value may also be an empty string (1).

3.1.5.10.1.2 ObjectPath Properties

None.

3.1.5.10.2 Methods

3.1.5.10.2.1 Scalar Methods

3.1.5.10.2.1.1 set_ExcludeDeprecatedTerms

Return Type: None

Parameters: None

3.1.5.10.2.2.3 CSOM Constructor

Creates a new instance of the **NavigationTermSetView** class and initializes its properties. The Boolean typed properties will be initialized to false, and the other properties will be assigned according to the *web* and *siteMapProviderName* parameters.

Parameters:

web: The Web site (2) whose data will be used to initialize the **NavigationTermSetView** properties.

Type: Microsoft.SharePoint.Client.Web

siteMapProviderName: The site map provider name to be assigned to the **SiteMapProviderName** property (section [3.1.5.10.1.1.6](#)).

Type: CSOM String

3.1.5.11

Microsoft.SharePoint.Client.Publishing.Navigation.SiteMapProviderSettingsBase

TypeId: {A183AD83-E647-434A-BEEF-D173BDBD57A9}

ShortName: SP.Publishing.Navigation.SiteMapProviderSettingsBase

The **SiteMapProviderSettingsBase** class is the common base class for the **SwitchableSiteMapProviderSettings** (section [3.1.5.16](#)) and **TaxonomySiteMapProviderSettings** (section [3.1.5.18](#)) classes.

3.1.5.11.1 Properties

3.1.5.11.1.1 Scalar Properties

3.1.5.11.1.1.1 Disabled

Type: CSOM Boolean

Accessibility: Read/Write

Gets or sets a value that indicates whether the site map provider is disabled.

Remarks:

True if the site map provider is disabled; otherwise, false. If the site map provider is disabled, then any **web controls** bound to the provider can display an error message. Disabling a taxonomy site map provider also prevents its friendly URLs from being processed by the protocol server. The configuration settings such as **TaxonomySiteMapProviderSettings.TermSetId** (section [3.1.5.18.1.1.3](#)) are preserved and will take effect again when the settings are re-enabled.

This property takes precedence over all other site map provider settings.

3.1.5.11.1.1.2 Name

Type: CSOM String

Accessibility: Read Only

Gets the name of the site map provider that will use the settings provided by the **SwitchableSiteMapProviderSettings** (section [3.1.5.16](#)) or **TaxonomySiteMapProviderSettings** (section [3.1.5.18](#)) objects.

Remarks:

This property is used to identify the provider in the web.config "SiteMap" section.

3.1.5.11.1.1.3 UseParentSiteMap

Type: CSOM Boolean

Accessibility: Read/Write

Gets or sets a value that indicates whether settings are inherited from the **parent site**.

Remarks:

If true, then the settings on the **SwitchableSiteMapProviderSettings** (section [3.1.5.16](#)) or **TaxonomySiteMapProviderSettings** (section [3.1.5.18](#)) object are ignored, and the settings are inherited from the parent site.

If the protocol client attempts to call **Update** (section [3.1.5.19.2.1.1](#)) to save settings where the **UseParentSiteMap** would be true for a Web site (2) that is located at the root of its site collection, then the protocol server MUST return an **InvalidOperationException** error.

3.1.5.13

Microsoft.SharePoint.Client.Publishing.Navigation.StandardNavigationScheme

ShortName: SP.Publishing.Navigation.StandardNavigationScheme

Flag: false

This enumeration represents two "standard" navigation schemes.

Remarks:

See the **StandardNavigationSettings** class (section [3.1.5.14](#)) for more information about "standard" configurations.

3.1.5.13.1 Field Values

3.1.5.13.1.1 GlobalNavigation

Value: 0

The navigation scheme is global navigation (also called "top nav"). It is the unchanging menu bar along the top of the page.

3.1.5.13.1.2 CurrentNavigation

Value: 1

The navigation scheme is current Navigation (also called "left nav"). It is the contextual navigation pane typically on the left side of the page. The starting node normally changes to reflect the current page's location in the site map.

3.1.5.14

Microsoft.SharePoint.Client.Publishing.Navigation.StandardNavigationSettings

TypeId: {5EBDD423-1350-43F9-AD8C-CBE0887C7C42}

ShortName: SP.Publishing.Navigation.StandardNavigationSettings

The **StandardNavigationSettings** class is used to manage the "standard" navigation configurations for a site collection, versus other "advanced" configurations that are possible.

Remarks:

Each site map provider has independent configurations, and the web.config file may define many different providers that are used together to produce the final navigation for a Web site (2).

By contrast, the protocol server's administrative user interface presents a simplified perspective with only two schemes: global navigation and current navigation. Each scheme can be configured for only one of three navigation sources: taxonomy site map provider, **portal site map provider**, and inherit from parent site. The OM classes and members whose names contain the word "standard" refer to the simplified configurations supported by the administrative user interface, as compared to the more advanced configurations that can be specified by manipulating the objects in the **WebNavigationSettings.SiteMapProviderSettingsList** collection (section [3.1.5.19.1.2.3](#)).

3.1.5.14.1 Properties

3.1.5.14.1.1 Scalar Properties

3.1.5.14.1.1.1 PortalTargetProviderName

Type: CSOM String

Accessibility: Read Only

Gets the name of the portal site map provider.

Remarks:

This property depends on the **Scheme** (section [3.1.5.14.1.1.2](#)) property. If Scheme is set to **StandardNavigationScheme.GlobalNavigation** (section [3.1.5.13.1.1](#)), then "GlobalNavigationPortalProvider" is returned. If **Scheme** is set to **StandardNavigationScheme.CurrentNavigation** (section [3.1.5.13.1.2](#)), then "CurrentNavigationPortalProvider" is returned.

3.1.5.14.1.1.2 Scheme

Type: Microsoft.SharePoint.Client.Publishing.Navigation.StandardNavigationScheme

Accessibility: Read Only

Gets a value that indicates whether the settings apply to global or current navigation.

3.1.5.14.1.1.3 Source

Type: Microsoft.SharePoint.Client.Publishing.Navigation.StandardNavigationSource

Accessibility: Read/Write

Gets or sets the navigation source for the site collection.

Remarks:

This property determines whether the switchable site map provider will use the taxonomy site map provider or the portal site map provider in the standard configurations. If the settings are in an advanced configuration, then this property returns **StandardNavigationSource.Unknown** (section [3.1.5.15.1.1](#)). If the protocol client attempts to assign the **StandardNavigationSource.Unknown** value to this property, the protocol server MUST return an **InvalidOperationException** error.

3.1.5.14.1.1.4 SwitchableTargetProviderName

Type: CSOM String

Accessibility: Read Only

Gets the name of the **switchable site map provider**.

Remarks:

Returns the name of the standard switchable site map provider, as defined in the web.config file.

This property depends on the **Scheme** (section [3.1.5.14.1.1.2](#)) property. If Scheme is set to **StandardNavigationScheme.GlobalNavigation** (section [3.1.5.13.1.1](#)), then "GlobalNavigationSwitchableProvider" is returned. If **Scheme** is set to **StandardNavigationScheme.CurrentNavigation** (section [3.1.5.13.1.2](#)), then "CurrentNavigationSwitchableProvider" is returned.

3.1.5.14.1.1.5 TaxonomyTargetProviderName

Type: CSOM String

Accessibility: Read Only

Gets the name of the taxonomy site map provider.

Remarks:

Returns the name of the standard taxonomy site map provider, as defined in the web.config file.

This property depends on the **Scheme** (section [3.1.5.14.1.1.2](#)) property. If Scheme is set to **StandardNavigationScheme.GlobalNavigation** (section [3.1.5.13.1.1](#)), then "GlobalNavigationTaxonomyProvider" is returned. If **Scheme** is set to **StandardNavigationScheme.CurrentNavigation** (section [3.1.5.13.1.2](#)), then "CurrentNavigationTaxonomyProvider" is returned.

3.1.5.14.1.1.6 TermSetId

Type: CSOM GUID

Accessibility: Read/Write

Gets or sets a unique identifier for the **TermSet** ([\[MS-EMMCOSM\]](#) section 3.1.5.20) object used by the taxonomy site map provider.

Remarks:

This property is ignored unless **StandardNavigationSource.TaxonomyProvider** (section [3.1.5.15.1.3](#)) is selected. It specifies the **TaxonomySiteMapProviderSettings.TermSetId** (section [3.1.5.18.1.1.3](#)) property for the provider name indicated by the **TaxonomyTargetProviderName** property (section [3.1.5.14.1.1.5](#)).

3.1.5.14.1.1.7 TermStoreId

Type: CSOM GUID

Accessibility: Read/Write

Gets or sets a unique identifier for the **TermStore** ([\[MS-EMMCOSM\]](#) section 3.1.5.23) object used by the taxonomy site map provider.

Remarks:

This property is ignored unless **StandardNavigationSource.TaxonomyProvider** (section [3.1.5.15.1.3](#)) is selected. It specifies the **TaxonomySiteMapProviderSettings.TermStoreId** (section [3.1.5.18.1.1.4](#)) property for the provider name indicated by the **TaxonomyTargetProviderName** property (section [3.1.5.14.1.1.5](#)).

3.1.5.14.1.2 ObjectPath Properties

3.1.5.14.1.2.1 WebNavigationSettings

Type: Microsoft.SharePoint.Client.Publishing.Navigation.WebNavigationSettings

Accessibility: Read Only

Gets the parent **WebNavigationSettings** (section [3.1.5.19](#)) object of this **StandardNavigationSettings** (section [3.1.5.14](#)) object.

3.1.5.14.2 Methods

3.1.5.14.2.1 Scalar Methods

None.

3.1.5.14.2.2 ObjectPath Methods

None.

3.1.5.15

Microsoft.SharePoint.Client.Publishing.Navigation.StandardNavigationSource

ShortName: SP.Publishing.Navigation.StandardNavigationSource

Flag: false

StandardNavigationSource is an enumeration that specifies the three "standard" configurations that can be assigned to the "global" and "current" schemes described by the **StandardNavigationScheme** enumeration (section [3.1.5.13](#)).

Remarks:

See the **StandardNavigationSettings** class (section [3.1.5.14](#)) for more information about "standard" configurations.

3.1.5.15.1 Field Values

3.1.5.15.1.1 Unknown

Value: 0

Indicates that the navigation scheme is in an advanced configuration that does not correspond to one of the "standard" configurations.

3.1.5.15.1.2 PortalProvider

Value: 1

Indicates that the navigation scheme is configured so that the switchable site map provider is pointing to the portal site map provider, and the taxonomy site map provider is disabled so that the protocol server will not process its friendly URLs.

3.1.5.15.1.3 TaxonomyProvider

Value: 2

Indicates that the navigation scheme is configured so that the switchable site map provider is pointing to the taxonomy site map provider.

3.1.5.15.1.4 InheritFromParentWeb

Value: 3

Indicates that the navigation scheme is inheriting its settings from the parent site. If this value is used, then the **SwitchableSiteMapProviderSettings.UseParentSiteMap** section [3.1.5.16.1.1.4](#)) property MUST be set to true, and the **TaxonomySiteMapProviderSettings.UseParentSiteMap** (section [3.1.5.18.1.1.6](#)) property MUST be set to true, and the portal site map provider is configured to inherit its settings from the parent site.

3.1.5.16

Microsoft.SharePoint.Client.Publishing.Navigation.SwitchableSiteMapProviderSettings

TypeId: {2F5E980F-D6B8-46ED-A867-2FB75A9302B4}

Accessibility: Read/Write

Gets or sets the name of the site map provider, as specified in the web.config file.

Remarks:

Parameters:

name: The value to be assigned to the **SiteMapProviderSettingsBase.Name** property (section [3.1.5.11.1.1.2](#)).

Type: CSOM String

3.1.5.17.1.1.1 MaximumCacheSizeInBytes

Type: CSOM Int64

Accessibility: Read/Write

Gets or sets the maximum size for the taxonomy navigation cache.

Remarks:

This property is not enforced strictly. The limit can be exceeded temporarily until the next pruning operation. During the pruning operation objects are discarded until the total memory usage no longer exceeds the limit. Zero can be specified as the limit, which causes all objects to be freed whenever the pruning operation occurs.

3.1.5.17.1.1.2 UsePersistedTermSets

Type: CSOM Boolean

Accessibility: Read/Write

Gets or sets a value that indicates whether the taxonomy navigation cache should attempt to load persisted term sets when Managed Metadata Service is offline.

Remarks:

If true, then the taxonomy navigation system will attempt to load cached **TermSet** ([\[MS-EMMCSON\]](#) section 3.1.5.20) objects from persisted files in the **content database** if they cannot be obtained from the Managed Metadata Service (for example because it is offline). The "Persisted Navigation Term Set" timer job is responsible for maintaining these files.

Accessibility: Read Only

Gets a value that indicates whether the **TaxonomySession.DefaultKeywordsTermStore** ([\[MS-EMMCSON\]](#) section 3.1.5.15.1.2.1) property will be used.

Remarks:

This property MUST return true if the **TermStoreId** (section [3.1.5.18.1.1.4](#)) property's value is the empty GUID; false otherwise. If true, the protocol server uses the **TaxonomySession.DefaultKeywordsTermStore** object to find the referenced **TermSetId**.

3.1.5.18.1.1.6 UseParentSiteMap

Type: CSOM Boolean

Accessibility: Read/Write

Remarks:

True if new pages will automatically create a **NavigationTerm** (section [3.1.5.6](#)); otherwise, false.

3.1.5.19.1.1.2 CreateFriendlyUrlsForNewPages

Type: CSOM Boolean

Accessibility: Read/Write

Gets or sets a value that indicates whether clicking the **New Page** button will automatically create a friendly URL for the newly created page.

Remarks:

True if new pages will automatically create a friendly URL; otherwise, false.

3.1.5.19.1.1.3 DefaultTargetUrlForChildTerms

Type: CSOM String

Accessibility: Read/Write

Gets or sets a default target URL for new child **NavigationTerm** (section [3.1.5.6](#)) objects.

Remarks:

This property allows features to specify a publishing page that should be used as the default **NavigationTerm.TargetUrl** (section [3.1.5.6.1.2.5](#)) for newly created navigation term sets.

The protocol server applies this property as part of the **WebNavigationSettings.Update** (section [3.1.5.19.2.1.1](#)) operation: If the change to the settings causes a new term set to become referenced by a taxonomy site map provider, and if its **NavigationTermSet.TargetUrlForChildTerms** property (section [3.1.5.8.1.2.2](#)) is equal to the empty string (1), then it will be assigned to be equal to the **WebNavigationSettings.DefaultTargetUrlForChildTerms** value.

3.1.5.19.1.2 ObjectPath Properties

3.1.5.19.1.2.1 CurrentNavigation

Type: Microsoft.SharePoint.Client.Publishing.Navigation.StandardNavigationSettings

Accessibility: Read Only

Returns an object that manages the "standard" navigation settings for the **StandardNavigationScheme.CurrentNavigation** (section [3.1.5.13.1.2](#)) scheme.

Remarks:

The protocol server MUST NOT return null.

It MUST NOT be NULL.

3.1.5.19.1.2.2 GlobalNavigation

Type: Microsoft.SharePoint.Client.Publishing.Navigation.StandardNavigationSettings

Accessibility: Read Only

Returns an object that manages the "standard" navigation settings for the **StandardNavigationScheme.GlobalNavigation** (section [3.1.5.13.1.1](#)) scheme.

Remarks:

The protocol server MUST NOT return null.

It MUST NOT be NULL.

3.1.5.19.1.2.3 SiteMapProviderSettingsList

Type: Microsoft.SharePoint.Client.Publishing.Navigation.SiteMapProviderSettingsCollection

Accessibility: Read Only

Returns a collection of differently typed objects that inherit from the base class **SiteMapProviderSettingsBase** (section [3.1.5.11](#)), which store the navigation settings for this Web site (2).

Remarks:

Whereas the **GlobalNavigation** (section [3.1.5.19.1.2.2](#)) and **CurrentNavigation** (section [3.1.5.19.1.2.1](#)) properties provide a simplified perspective for managing "standard" configurations, the **SiteMapProviderSettingsList** property allows access to the complete object state that is required to manage advanced configurations. This is described in more detail in section [3.1.5.14](#).

3.1.5.19.2 Methods

3.1.5.19.2.1 Scalar Methods

3.1.5.19.2.1.1 Update

Return Type: None

Writes the new settings to the Web site (2) that was passed to the constructor (section [3.1.5.19.2.2.2](#)).

Remarks:

If **TaxonomySiteMapProviderSettings** (section [3.1.5.18](#)) **list items** are present, then this method also checks whether the navigation term set is being changed for any taxonomy site map providers. If so, changes can be written to both the old **TermSet** and the new **TermSet** to indicate whether they are being used by this Web site (2).

This method also applies the **DefaultTargetUrlForChildTerms** property (section [3.1.5.19.1.1.3](#)) to newly selected term sets.

Parameters:

taxonomySession: The **TaxonomySession** ([\[MS-EMMCSON\]](#) section 3.1.5.15) object to use to make the update.

Type: Microsoft.SharePoint.Client.Taxonomy.TaxonomySession

3.1.5.19.2.1.2 ResetToDefaults

Return Type: None

This operation resets the **WebNavigationSettings** object to the default state that the protocol server would use for a newly created Web site (2). This default state MAY depend on whether the Web site (2) is located at the root of its site collection, for example to ensure an allowable value for the **SiteMapProviderSettingsBase.UseParentSiteMap** property (section [3.1.5.11.1.1.3](#)).

Parameters: None

3.1.5.19.2.2 ObjectPath Methods

3.1.5.19.2.2.1 GetStandardNavigationSettings

Return Type: Microsoft.SharePoint.Client.Publishing.Navigation.StandardNavigationSettings

Returns the **GlobalNavigation** (section [3.1.5.19.1.2.2](#)) or **CurrentNavigation** (section [3.1.5.19.1.2.1](#)) property depending on the value of the *scheme* parameter.

Parameters:

scheme: Indicates which type of navigation settings to return.

Type: Microsoft.SharePoint.Client.Publishing.Navigation.StandardNavigationScheme

3.1.5.19.2.2.2 CSOM Constructor

Creates a new instance of the **WebNavigationSettings** class that will be used to access the settings for the specified Web site (2).

Parameters:

web: The Web site (2) whose settings will be accessed.

Type: Microsoft.SharePoint.Client.Web

3.1.6 Timer Events

None.

3.1.7 Other Local Events

None.

4 Protocol Examples

4.1 Create a New Navigation Hierarchy

In this example, a new navigation hierarchy is created. The navigation hierarchy will be created using the menu names, link types, and URLs specified in the following table.

Menu name	Link type	URL
Home	Simple	http://www.contoso.com
Products	Friendly URL	/sites/site1/products
Bicycles	Friendly URL	/sites/site1/products/bicycles
Skis	Friendly URL	/sites/site1/products/skis
Events	Friendly URL	/sites/site1/events
Summer Expo	Friendly URL	/sites/site1/events/summer-expo

The operation is summarized in the following sequence of requests and responses.

The protocol client creates a **TaxonomySession** ([\[MS-EMMCSON\]](#) section 3.1.5.15) object, and queries for all **TermStore** ([\[MS-EMMCSON\]](#) section 3.1.5.23) objects.

</Request>

The protocol server returns a collection of **TermStore** objects. In this case, there is only one.

The protocol client calls the **TermStore.GetSiteCollectionGroup** () method to retrieve a **SiteCollectionGroup** () object. Then it calls the **SiteCollectionGroup.CreateTermSet** method to create a new navigation term set. The name of the new term set is "Navigation Demo".

It sets the **IsNavigationTermSet** (section [3.1.5.8.1.1.2](#)) property to true, and the **TargetUrlforChildTerms** (section [3.1.5.8.1.2.2](#)) property to "~site/Pages/Topics/Topic.aspx".

Finally the protocol client creates the navigation hierarchy of **NavigationTerm** (section [3.1.5.6](#)) objects. For the "Home" menu item, it sets the **SimpleLinkUrl** (section [3.1.5.6.1.1.8](#)) property to "http://www.contoso.com". All other **NavigationTerm** objects are configured to use a friendly URL.

4.2 Resolve URLs

In this example, URLs for navigation terms are resolved and returned to the protocol client. This is a useful operation in scenarios where the protocol client needs custom control over navigation. An example is where the protocol client is a mobile application that is rendering the menus for a small screen.

Using the menu items described in section [4.1](#), this example shows how to resolve the URLs for each top-level menu item: Home, Products, and Events.

The operation is summarized in the following sequence of requests and responses.

The protocol client creates a **TaxonomySession** ([MS-EMMCOSOM] section 3.1.5.15) object, and queries for all **TermStore** ([MS-EMMCOSOM] section 3.1.5.23) objects.

Request:

```
<Request AddExpandFieldSuffix="true" SchemaVersion="15.0.0.0" LibraryVersion="15.0.0.0"

```

The protocol server returns a collection of **TermStore** objects. In this case, there is only one.

Response:

```

The protocol client calls the **TermStore.GetTermSet** ([\[MS-EMMCSON\]](#) section 3.1.5.23.2.2.6) passing the ID of the "Navigation Demo" term set. It calls the **NavigationTermSet.GetAsResolvedByWeb** (section [3.1.5.8.2.2.7](#)) method to get the **NavigationTermSet** (section [3.1.5.8](#)) wrapper for the term set. Finally it queries for all child **NavigationTerm** (section [3.1.5.6](#)) objects and their **Title** (section [3.1.5.6.1.2.9](#)) properties to be loaded into the new **NavigationTermSet** object.

The protocol client iterates through the 3 child **NavigationTerm** objects. It calls the **GetResolvedTargetUrl** (section [3.1.5.6.2.1.4](#)) method on the Events **NavigationTerm** object.

Request:

```

The protocol server returns the resolved URL for Events.

Response:

Request:

```

4.3 Changing a View

In this example, the protocol client applies a **NavigationTermSetView** (section 3.1.5.10) object to a **NavigationTermSet** (section 3.1.5.8) object to exclude deprecated terms. This example uses the same menu items that are specified in section 4.1. The only change is that the **NavigationTerm** (section 3.1.5.6) object that represents the Events menu item is deprecated.

In the first query for **NavigationTerm** objects, the protocol client will receive the **NavigationTerm** objects for the Home, Products, and Events menu items. The protocol client then creates a **NavigationTermSetView** object that excludes deprecated terms. After applying the new **NavigationTermSetView** object, and querying again, the protocol client will receive only the **NavigationTerm** objects for Home and Products.

The operation is summarized in the following sequence of requests and responses.

The protocol client creates a **TaxonomySession** ([MS-EMMCSON] section 3.1.5.15) object, and queries for all **TermStore** ([MS-EMMCSON] section 3.1.5.23) objects.

The protocol client calls the **CreateEmptyInstance** (section [3.1.5.10.2.2.1](#)) method to create a new **NavigationTermSetView** object. Then it sets the **ExcludeDeprecatedTerms** (section [3.1.5.10.1.1.1](#)) property to true on the new object. Then it calls **GetWithNewView** (section [3.1.5.8.2.2.6](#)) to obtain a new **NavigationTermSet** object that will exclude deprecated terms.

6 Appendix A: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include released service packs:

- Microsoft® SharePoint® Server 2013 Preview

Exceptions, if any, are noted below. If a service pack or Quick Fix Engineering (QFE) number appears with the product version, behavior changed in that service pack or QFE. The new behavior also applies to subsequent service packs of the product unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms SHOULD or SHOULD NOT implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies that the product does not follow the prescription.
