

[MS-SPSTWS]: SharePoint Security Token Service Web Service Protocol Specification

Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation for protocols, file formats, languages, standards as well as overviews of the interaction among each of these technologies.
- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you may make copies of it in order to develop implementations of the technologies described in the Open Specifications and may distribute portions of it in your implementations using these technologies or your documentation as necessary to properly document the implementation. You may also distribute in your implementation, with or without modification, any schema, IDL's, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that may cover your implementations of the technologies described in the Open Specifications. Neither this notice nor Microsoft's delivery of the documentation grants any licenses under those or any other Microsoft patents. However, a given Open Specification may be covered by Microsoft [Open Specification Promise](#) or the [Community Promise](#). If you would prefer a written license, or if the technologies described in the Open Specifications are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting iplg@microsoft.com.
- **Trademarks.** The names of companies and products contained in this documentation may be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights.
- **Fictitious Names.** The example companies, organizations, products, domain names, e-mail addresses, logos, people, places, and events depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

Reservation of Rights. All other rights are reserved, and this notice does not grant any rights other than specifically described above, whether by implication, estoppel, or otherwise.

Tools. The Open Specifications do not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments you are free to take advantage of them. Certain Open Specifications are intended for use in conjunction with publicly available standard specifications and network programming art, and assumes that the reader either is familiar with the aforementioned material or has immediate access to it.

Preliminary Documentation. This Open Specification provides documentation for past and current releases and/or for the pre-release (beta) version of this technology. This Open Specification is final documentation for past or current releases as specifically noted in the document, as applicable; it is preliminary documentation for the pre-release (beta) versions. Microsoft will release final documentation in connection with the commercial release of the updated or new version of this technology. As the documentation may change between this preliminary version and the final version of this technology, there are risks in relying on preliminary documentation. To the extent that you incur additional development obligations or any other costs as a result of relying on this preliminary documentation, you do so at your own risk.

Revision Summary

Preliminary

1 Introduction

This document specifies the SharePoint Security Token Service Web Service Protocol, which defines restrictions for several related protocols and enables interoperability and authentication with Web services that are provided by protocol servers.

Sections 1.8, 2, and 3 of this specification are normative and can contain the terms MAY, SHOULD, MUST, MUST NOT, and SHOULD NOT as defined in RFC 2119. Sections 1.5 and 1.9 are also normative but cannot contain those terms. All other sections and examples in this specification are informative.

1.1 Glossary

The following terms are defined in [\[MS-GLOS\]](#):

authentication
security identifier (SID)

The following terms are defined in [\[MS-OFCGLOS\]](#):

culture name
request identifier
security token service (STS)
site subscription
site subscription identifier
SOAP message
Web Services Description Language (WSDL)
XML schema

The following terms are specific to this document:

MAY, SHOULD, MUST, SHOULD NOT, MUST NOT: These terms (in all caps) are used as described in [\[RFC2119\]](#). All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

1.2 References

References to Microsoft Open Specifications documentation do not include a publishing year because links are to the latest version of the technical documents, which are updated frequently. References to other documents include a publishing year when one is available.

1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact dochelp@microsoft.com. We will assist you in finding the relevant information. Please check the archive site, <http://msdn2.microsoft.com/en-us/library/E4BD6494-06AD-4aed-9823-445E921C9624>, as an additional source.

1.3 Protocol Overview (Synopsis)

This protocol specifies restrictions for a set of protocols and provides clarifications that enable interoperability when invoking Web services that are provided by the protocol server. See section [1.2](#) of this document for the references of the related protocols. This protocol and the related protocols can be used by protocol clients and protocol servers to implement **authentication**.

This protocol uses the model described in [\[WSTrust\]](#) and restricts messages as described in [\[SAMLCore\]](#).

In addition, this protocol relies on several underlying protocols. The exchanged messages are based on SOAP, as described in [\[SOAP1.1\]](#) and [\[SOAP1.2/1\]](#), over XML, as described in [\[XML\]](#). This protocol also requires a transport. This document does not specify which transport to use. However, this protocol does depend on the transport to help provide message integrity and protection.

For NTLM authentication, this protocol refers to the [\[MS-TNAP\]](#) protocol specification, which describes the NTLM authentication method.

1.4 Relationship to Other Protocols

Other than the normative references this protocol doesn't use any other protocols.

1.5 Prerequisites/Preconditions

Clients that need to request a SharePoint token should use the following endpoints:

- To request a token using Windows as an authentication method with a **security token service (STS)**, the endpoint URL is exposed through the site URL under [http\[s\]://host:port/site/_vti_bin/sts/spsecuritytokenservice.svc/windows](http[s]://host:port/site/_vti_bin/sts/spsecuritytokenservice.svc/windows)
 - NTLM authentication is out of scope of this document and is described in [\[MS-TNAP\]](#).
- To request a token using an authenticated session cookie as a method of authentication with an STS, the endpoint URL is exposed through the site URL under [http\[s\]://host:port/site/_vti_bin/sts/spsecuritytokenservice.svc/cookie](http[s]://host:port/site/_vti_bin/sts/spsecuritytokenservice.svc/cookie)

To use the STS Windows endpoint, the web application that hosts the site MUST have NTLM authentication enabled.

To use an STS cookie endpoint, the web application that hosts the site MUST have forms-based authentication enabled.

The authenticated session cookie MUST be requested, as specified in the [\[MS-OFBA\]](#) protocol standard.

When a SAML token is presented to SharePoint for the purposes of authenticating, the token conforms to the [\[SAMLCore\]](#) specification, uses the [\[WSFederation\]](#) protocol standard and follows the [\[WSTrust1.3\]](#) protocol.

In the server scenarios, SharePoint services consumers request the tokens from the local computer STS via the SharePoint object model. No endpoint is used, although this document describes the token that the local computer STS creates to access SharePoint services.

The transport protocol MUST use TCP.

1.6 Applicability Statement

This protocol is applicable when interoperability with Web service implementations provided by the protocol server require both claims based authentication and to interoperate with external web services configured to use [\[WSFederation\]](#) with SharePoint.

1.7 Versioning and Capability Negotiation

None.

1.8 Vendor-Extensible Fields

None.

1.9 Standards Assignments

None.

2 Messages

2.1 Transport

This document does not define how **SOAP messages** are transmitted over a network. However, this protocol does depend on a transport to help protect messages. Refer to section [5](#) for more information about the security of the messages.

2.2 Common Message Syntax

This section contains common definitions that are used by this protocol. The syntax of the definitions uses **XML schema**, as specified in [\[XMLSCHEMA1\]](#) and [\[XMLSCHEMA2\]](#), and **WSDL**, as specified in [\[WSDL\]](#).

2.2.1 Namespaces

The following namespaces are defined by this document. These namespaces are used to identify the claim types created by the STS.

- <http://schemas.microsoft.com/sharepoint/2009/08/claims/useridentifier>
 - Prefix: spuid
 - Description: URI for the user's unique identifier claim type.
- <http://schemas.microsoft.com/sharepoint/2009/08/claims/userlogonname>
 - Prefix: spuln
 - Description: URI for the user logon name claim type.
- <http://schemas.microsoft.com/sharepoint/2009/08/claims/identityprovider>
 - Prefix: spip
 - Description: URI for the identity provider claim type.
- <http://schemas.microsoft.com/sharepoint/2009/08/claims/distributionlistsid>
 - Prefix: spdl
 - Description: URI for the distribution list **security identifier (SID)** claim type.
- <http://schemas.microsoft.com/sharepoint/2009/08/claims/farmid>
 - Prefix: spfid
 - Description: URI for the farm identifier claim type.
- <http://schemas.microsoft.com/sharepoint/2009/08/claims/processidentitysid>
 - Prefix: sppsid
 - Description: URI for the process identity SID claim type.
- <http://schemas.microsoft.com/sharepoint/2009/08/claims/processidentitylogonname>

- Prefix: sppln
- Description: URI for the process logon name claim type.

The following namespaces are referenced by this document.

Prefix	Namespace URI	Reference
wst	http://docs.oasis-open.org/ws-sx/ws-trust/200512	[WSTRUST]
wst14	http://docs.oasis-open.org/ws-sx/ws-trust/200802	[WSTRUST]
fed	http://docs.oasis-open.org/ws-fed/federation/200706	[WS-FEDERATION]

2.2.2 Messages

This section defines restrictions to SOAP extensions, as specified for the [WSS], [WSFederation], [WSTrust], and [SAMLCore]. This section contains two subsections. Section 2.2.2.1 specifies restrictions on **RequestSecurityToken** (RST) messages, as specified in [WSTrust], [WSSC], and [WSSC1.3]. Section 2.2.2.2 specifies restrictions on **RequestSecurityTokenResponse** (RSTR) messages, as specified in [WSTrust], [WSSC], and [WSSC1.3].

This document considers [WSSE 1.0], [WSS], [BSP], [WSSC], [WSSC1.3] and [SAMLCore] to be normative, unless otherwise specified in sections 2.2.2.1 and 2.2.2.2 of this document.

When authenticating to SharePoint 2010 with SAML 1.1 tokens, assumptions and considerations for this protocol are specified in the [WSFederation] document section 13.

2.2.2.1 RST

WS-Trust specifies the framework for requesting and returning security tokens using **RequestSecurityToken** (**RST**) and **RequestSecurityTokenResponse** (**RSTR**) messages. An **RST** message provides the means for requesting a security token from a security token service (STS) or a protocol server (as defined in [WSS]). It has an extensible format (as defined in [WSFederation]) that allows the protocol client to specify a range of parameters that the security token MUST satisfy.

The body of an **RST** message MUST contain exactly one **RequestSecurityToken** element, as specified in [WSTrust] sections 3.1, 3.3, 5.1, and 5.3

The **AppliesTo** element (as defined in [WS-Trust1.3]) MUST be used.

The **RequestSecurityToken** element MUST NOT be signed.

2.2.2.2 RSTR

A **RequestSecurityTokenResponse** (**RSTR**) message returns a token in response to a request from a protocol client. The requested token and supporting state are returned by the protocol server without any intermediate exchanges of trust messages.

The **RSTR** message body MUST contain exactly one **RequestSecurityTokenResponse** element, as specified in [WS-Trust1.3] sections 3.2, 3.3, 5.2, and 5.3.

The **RequestSecurityTokenResponse** element MUST be contained in a **RequestSecurityTokenResponseCollection** element, as specified in [WS-Trust1.3] section 4.3. The **RequestSecurityTokenResponseCollection** element MUST NOT contain more than one **RequestSecurityTokenResponse** element.

The **RequestedSecurityToken** element MUST contain one or more SAML (Security Assertion Markup Language) security assertion.

The **RequestedSecurityToken** element MUST contain a saml:AuthenticationStatement **Assertion** as defined in [\[SAMLCore\]](#) with a **Subject** element that specify the principal that is the subject of the statement. It MUST contain one **NameIdentifier** element as defined in [\[SAMLToken1.1\]](#) section 2.4.2.1. The principal specified in the NameIdentifier assertion MUST be equal to the claim specified by an administrator as an user identity claim, as specified in section [2.2.1](#).

2.2.3 Elements

This specification does not define any common XML schema element definitions.

2.2.4 Complex Types

The following table summarizes the set of common XML schema complex type definitions defined by this specification. XML schema complex type definitions that are specific to a particular operation are described with the operation.

Complex type	Description
ServiceContext	Common properties that are sent with a web service request.

2.2.4.1 ServiceContext (from namespace <http://schemas.microsoft.com/sharepoint/servicecontext>)

The ServiceContext element specifies common properties that are sent with a web service request.

```
<xs:element name="ServiceContext">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="correlationId" minOccurs="1" maxOccurs="1"
      xmlns:q13="http://schemas.microsoft.com/2003/10/Serialization/" type="q13:guid"/>
      <xs:element name="language" minOccurs="1" maxOccurs="1" type="xs:string"/>
      <xs:element name="region" minOccurs="1" maxOccurs="1" type="xs:string"/>
      <xs:element name="siteSubscriptionId" minOccurs="1" maxOccurs="1"
      xmlns:q14="http://schemas.microsoft.com/2003/10/Serialization/" type="q14:guid"/>
      <xs:attribute name="nil" type="xs:string" use="optional" fixed="true" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

correlationId: The **request identifier** for the current request.

language: The **culture name** that corresponds to the language used by the request.

region: The culture name that corresponds to the regional settings used by the request.

siteSubscriptionId: A **site subscription identifier** that corresponds to the site that the request originated from. If the site does not have a site subscription, the nil attribute MUST be specified.

2.2.5 Simple Types

This specification does not define any common XML schema simple type definitions.

2.2.6 Attributes

This specification does not define any common XML schema attribute definitions.

2.2.7 Groups

This specification does not define any common XML schema group definitions.

2.2.8 Attribute Groups

This specification does not define any common XML schema attribute group definitions.

2.2.9 Common Data Structures

This specification does not define any common XML schema data structures.

3 Protocol Details

The protocol details for the messages defined in section 2.2.2.1 of this document are specified in [WSSE 1.0], [WSS], [SAMLCore], [SAMLToken1.1], [BSP], [WSSC], and [WSSC1.3]. The protocol details for the messages defined in section 2.2.2.2 of this document are specified in [WS-Trust1.3], [WSSC], [WSFederation], and [WSSC1.3]. This document does not specify any unique protocols.

The protocol described in this document implements only one of the operations defined in [WS-Trust1.3] as specified in section 3.1.4 of this document.

3.1 Server Details

3.1.1 Abstract Data Model

None.

3.1.2 Timers

None.

3.1.3 Initialization

None.

3.1.4 Message Processing Events and Sequencing Rules

This protocol only implements the Issuance Binding operation as defined in [WS-Trust1.3]. It provides abstract methods of Cancel, Renew, and Validate binding operations.

3.1.5 Timer Events

None.

3.1.6 Other Local Events

None.

3.2 Client Details

3.2.1 Abstract Data model

None.

3.2.2 Timers

None.

3.2.3 Initialization

None.

3.2.4 Message Processing Events and Sequencing Rules

Group SID (Security Identifier) claims MUST be compressed in the issued tokens, see the following for details of the compression algorithm.

Claim is defined in [WS-Federation] specification's terminology section and Group SID is a SID, which is defined in [MS-GLOS], that identifies a group object, which is defined in [MS-GLOS].

To calculate the Transformed SID from a GroupSidClaim, replace the last instance of the character '-' (dash) with the character ';' (semi-colon).

For each set S of **GroupSidClaim** claims that share an Original Issuer replace those claims with a new claim, constructed as follows:

- 1.Claim type set to <http://schemas.microsoft.com/sharepoint/2009/08/claims/SidCompressed>
- 2.Claim value type set to "group claim value type"
- 3.Original Issuer set to the Original Issuer that are common to Set S
- 4.Claim value set to a semi-colon-separated list of Transformed SIDs for each claim in Set S.

The term Original Issuer refers to the name of the security token service that issued these claims.

When receiving a token with compressed group SID claim, the opposite process MUST be used to build the original claim set that stores one group SID per claim.

3.2.5 Timer Events

None.

3.2.6 Other Local Events

None.

4 Protocol Examples

4.1 Security Token Request

In this example, the protocol client requests a security token from the protocol server using a username and password combination. Consider the following WSDL Message which is sent by the protocol client:

```
<HttpRequest>
  <Method>POST</Method>
  <QueryString></QueryString>
  <WebHeaders>
    <Content-Length>1346</Content-Length>
    <Content-Type>application/soap+msbin1</Content-Type>
    <Authorization>Negotiate
T1RMTVNTUAADAAAAAAAFgAAAAAAAAAABYAAAAAAAAAFgAAAAAAAAAABYAAAANcKY4gYAchcAA
AAPk9yL+ts+ej9l3CqHBN13Nw==</Authorization>
    <Expect>100-continue</Expect>
    <Host>localhost:32843</Host>
  </WebHeaders>
</HttpRequest>
<s:Envelope xmlns:s="http://www.w3.org/2003/05/soap-envelope"
  xmlns:a="http://www.w3.org/2005/08/addressing">
  <s:Header>
    <a:Action s:mustUnderstand="1">http://docs.oasis-open.org/ws-sx/ws-
trust/200512/RST/Issue</a:Action>
    <a:MessageID>urn:uuid:0c9b2158-be51-4222-afa8-b55036b5aedef</a:MessageID>
    <a:ReplyTo>

4.2 Security Token Containing a Compressed Sid Claim

In the following example, the protocol client issues a SecurityTokenRequest for a user who has GroupSidClaims. Consider the following WSDL message for this request:

```

<HttpRequest>
    <Method>POST</Method>
    <QueryString></QueryString>
    <WebHeaders>
        <Content-Length>510</Content-Length>
        <Content-Type>application/soap+msbin1</Content-Type>
        <Authorization>Negotiate
TlRMTVNTUAADAAAAAAAFgAAAAAAAAAAAABYAAAAAAAAAFgAAAAAAAAAABYAAAAANcKY4gYAcchcAA
AAP4dX8Niq7yPURkRs9JHMbw==</Authorization>
        <Expect>100-continue</Expect>
        <Host>localhost:32843</Host>
    </WebHeaders>
</HttpRequest>
<s:Envelope xmlns:s="http://www.w3.org/2003/05/soap-envelope"
xmlns:a="http://www.w3.org/2005/08/addressing">
    <s:Header>
        <a:Action s:mustUnderstand="1">http://docs.oasis-open.org/ws-sx/ws-
trust/200512/RST/Issue</a:Action>
        <a:MessageID>urn:uuid:f1ff81d7-3e43-43f4-b7fc-b5fa6d6d8dc5</a:MessageID>
        <a:ReplyTo>
            <a:Address>http://www.w3.org/2005/08/addressing/anonymous</a:Address>
        </a:ReplyTo>
        <a:To
s:mustUnderstand="1">http://localhost:32843/SecurityTokenServiceApplication/securitytoken.svc
</a:To>
        <s:Header>
        <s:Body>
            <trust:RequestSecurityToken xmlns:trust="http://docs.oasis-open.org/ws-sx/ws-
trust/200512">
                <wsp:AppliesTo xmlns:wsp="http://schemas.xmlsoap.org/ws/2004/09/policy">
                    <a:EndpointReference>
                        <a:Address>https://server.example.com/</a:Address>
                    </a:EndpointReference>
                </wsp:AppliesTo>
                <trust:KeyType>http://docs.oasis-open.org/ws-sx/ws-trust/200512/Bearer</trust:KeyType>
                <trust:RequestType>http://docs.oasis-open.org/ws-sx/ws-
trust/200512/Issue</trust:RequestType>
            </trust:RequestSecurityToken>
        </s:Body>
    </s:Envelope>
```

The protocol server responds with the following SecurityTokenRequestResponse. This response contains an example of GroupSidClaims.

```

<s:Envelope xmlns:a="http://www.w3.org/2005/08/addressing"
xmlns:s="http://www.w3.org/2003/05/soap-envelope">
    <s:Header>
```

```

5 Security

5.1 Security Considerations for Implementers

Security assumptions and considerations for this protocol are specified in the following documents:

- [\[WSFederation\]](#) section 16
- [\[WSSC\]](#) section 11
- [\[WSSE 1.0\]](#) section 13
- [\[WSS\]](#) section 13
- [\[BSP\]](#) section 17
- [\[WSSKTP1.1\]](#) section 4
- [\[SAMLToken1.1\]](#) section 4
- [\[WSTrust\]](#) section 12
- [\[WSSC\]](#) section 11
- [\[WSSC1.3\]](#) section 10
- [\[MS-TNAP\]](#) section 5

Message integrity assumptions and considerations for this protocol are specified in following documents:

- [\[WSTrust\]](#) section 4.5
- [\[WSSP1.2\]](#) section 4.1

Message confidentiality assumptions and considerations for this protocol are specified in following documents:

- [\[WSFederation\]](#) section 12
- [\[WSS\]](#) section 15

This protocol uses a range of cryptographic algorithms. Some of these algorithms can be considered weak depending on the security threats for specific usage scenarios. This specification neither classifies nor prescribes cryptographic algorithms for specific usage scenarios.

When implementing and using this protocol, one MUST make every effort to ensure that the result is not vulnerable to any one of the wide range of attacks.

Encryption and message signing assumptions and considerations for this protocol are specified in the following documents:

- [\[WSS\]](#) section 8
- [\[WSTrust\]](#) sections 4.4 and 8.2 and 9.2

When selecting the encryption mechanism, the following restrictions MUST be considered:

For SharePoint services SAML tokens, the following rules MUST be followed:

- The cryptographic algorithm for signing the SAML token header MUST be SHA1.
- The cryptographic algorithm for signing the SAML token date value MUST be SHA256.

For external services SAML tokens, the following rules MUST be followed:

- The cryptographic algorithm for signing the SAML token header MUST be SHA256.
- The cryptographic algorithm for signing the SAML token date value MUST be SHA256.

All tokens MUST not encrypt the message.

5.2 Index of Security Parameters

None.

6 Appendix A: Full WSDL

For ease of implementation, the full WSDL and schema is provided in this appendix.

7 Appendix B: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include released service packs:

- Microsoft® Lync™ 2010
- Microsoft® Lync® 2013 Preview
- Microsoft® FAST™ Search Server 2010
- Microsoft® Office 2010 suites
- Microsoft® Office 2013 Preview
- Microsoft® Search Server 2010
- Microsoft® SharePoint® Designer 2010
- Microsoft® SharePoint® Designer 2013 Preview
- Microsoft® SharePoint® Foundation 2010
- Microsoft® SharePoint® Foundation 2013 Preview
- Microsoft® SharePoint® Server 2010
- Microsoft® SharePoint® Server 2013 Preview
- Microsoft® SharePoint® Workspace 2010
- Microsoft® Visio® 2010
- Microsoft® Visio® 2013 Preview

Exceptions, if any, are noted below. If a service pack or Quick Fix Engineering (QFE) number appears with the product version, behavior changed in that service pack or QFE. The new behavior also applies to subsequent service packs of the product unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms SHOULD or SHOULD NOT implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies that the product does not follow the prescription.

8 Change Tracking

No table of changes is available. The document is either new or has had no changes since its last release.
