

# [MS-SSWPS]: Secure Store Web Service Protocol Specification

## Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation for protocols, file formats, languages, standards as well as overviews of the interaction among each of these technologies.
- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you may make copies of it in order to develop implementations of the technologies described in the Open Specifications and may distribute portions of it in your implementations using these technologies or your documentation as necessary to properly document the implementation. You may also distribute in your implementation, with or without modification, any schema, IDL's, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that may cover your implementations of the technologies described in the Open Specifications. Neither this notice nor Microsoft's delivery of the documentation grants any licenses under those or any other Microsoft patents. However, a given Open Specification may be covered by Microsoft [Open Specification Promise](#) or the [Community Promise](#). If you would prefer a written license, or if the technologies described in the Open Specifications are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting [iplg@microsoft.com](mailto:iplg@microsoft.com).
- **Trademarks.** The names of companies and products contained in this documentation may be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights.
- **Fictitious Names.** The example companies, organizations, products, domain names, e-mail addresses, logos, people, places, and events depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

**Reservation of Rights.** All other rights are reserved, and this notice does not grant any rights other than specifically described above, whether by implication, estoppel, or otherwise.

**Tools.** The Open Specifications do not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments you are free to take advantage of them. Certain Open Specifications are intended for use in conjunction with publicly available standard specifications and network programming art, and assumes that the reader either is familiar with the aforementioned material or has immediate access to it.

**Preliminary Documentation.** This Open Specification provides documentation for past and current releases and/or for the pre-release (beta) version of this technology. This Open Specification is final

documentation for past or current releases as specifically noted in the document, as applicable; it is preliminary documentation for the pre-release (beta) versions. Microsoft will release final documentation in connection with the commercial release of the updated or new version of this technology. As the documentation may change between this preliminary version and the final version of this technology, there are risks in relying on preliminary documentation. To the extent that you incur additional development obligations or any other costs as a result of relying on this preliminary documentation, you do so at your own risk.

## Revision Summary

Date	Revision History	Revision Class	Comments
07/13/2009	0.1	Major	Initial Availability
08/28/2009	0.2	Editorial	Revised and edited the technical content
11/06/2009	0.3	Editorial	Revised and edited the technical content
02/19/2010	1.0	Major	Updated and revised the technical content
03/31/2010	1.01	Editorial	Revised and edited the technical content
04/30/2010	1.02	Editorial	Revised and edited the technical content
06/07/2010	1.03	Editorial	Revised and edited the technical content
06/29/2010	1.04	Editorial	Changed language and formatting in the technical content.
07/23/2010	1.04	No change	No changes to the meaning, language, or formatting of the technical content.
09/27/2010	1.04	No change	No changes to the meaning, language, or formatting of the technical content.
11/15/2010	1.04	No change	No changes to the meaning, language, or formatting of the technical content.
12/17/2010	1.04	No change	No changes to the meaning, language, or formatting of the technical content.
03/18/2011	1.04	No change	No changes to the meaning, language, or formatting of the technical content.
06/10/2011	1.04	No change	No changes to the meaning, language, or formatting of the technical content.
01/20/2012	2.0	Major	Significantly changed the technical content.
04/11/2012	2.0	No change	No changes to the meaning, language, or formatting of the technical content.
07/16/2012	2.0	No change	No changes to the meaning, language, or formatting of the technical content.

Date	Revision History	Revision Class	Comments
09/12/2012	2.0	No change	No changes to the meaning, language, or formatting of the technical content.

Preliminary

# 1 Introduction

This document specifies the Secure Store Web Service Protocol. This protocol provides an interface for protocol clients to store and retrieve credentials and related information typically used to authenticate in business systems.

Sections 1.8, 2, and 3 of this specification are normative and can contain the terms MAY, SHOULD, MUST, MUST NOT, and SHOULD NOT as defined in RFC 2119. Sections 1.5 and 1.9 are also normative but cannot contain those terms. All other sections and examples in this specification are informative.

## 1.1 Glossary

The following terms are defined in [\[MS-GLOS\]](#):

**base64**  
**certificate**  
**checksum**  
**credential**  
**GUID**  
**Hypertext Transfer Protocol (HTTP)**  
**Hypertext Transfer Protocol over Secure Sockets Layer (HTTPS)**  
**salt**

The following terms are defined in [\[MS-OFCGLOS\]](#):

**application server**  
**claim**  
**claim issuer**  
**claim type**  
**claim value**  
**endpoint**  
**group target application**  
**individual target application**  
**line-of-business (LOB) system**  
**master secret key**  
**Secure Store Service (SSS)**  
**Secure Store Service (SSS) store**  
**Secure Store Service (SSS) ticket**  
**Secure Store Service (SSS) user**  
**security principal**  
**Simple Object Access Protocol (SOAP)**  
**SOAP action**  
**SOAP body**  
**SOAP fault**  
**Status-Code**  
**Structured Query Language (SQL)**  
**target application**  
**target application field**  
**Uniform Resource Identifier (URI)**  
**Uniform Resource Locator (URL)**  
**Web Services Description Language (WSDL)**  
**WSDL message**  
**WSDL operation**  
**XML namespace**

## **XML namespace prefix**

## **XML schema**

The following terms are specific to this document:

**Open Data Protocol (OData):** A web protocol for querying and updating data specified in [MS-ODATA].

**Secure Store Service (SSS) partition:** A group of target applications and credentials that are identified by a GUID and are contained in a single Secure Store Service (SSS) store.

**MAY, SHOULD, MUST, SHOULD NOT, MUST NOT:** These terms (in all caps) are used as described in [\[RFC2119\]](#). All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

## **1.2 References**

References to Microsoft Open Specifications documentation do not include a publishing year because links are to the latest version of the technical documents, which are updated frequently. References to other documents include a publishing year when one is available.

### **1.2.1 Normative References**

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact [dochelp@microsoft.com](mailto:dochelp@microsoft.com). We will assist you in finding the relevant information. Please check the archive site, <http://msdn2.microsoft.com/en-us/library/E4BD6494-06AD-4aed-9823-445E921C9624>, as an additional source.

## 1.3 Protocol Overview (Synopsis)

Enterprises have a variety of data stored in various **line-of-business (LOB) systems**. Typically, each of these systems has its own security model where the same user is represented by a unique system-specific **security principal (2)**. A set of **credentials** is required as input before a user is allowed to access to the LOB system.

It is common for modern business applications to deliver functionality that requires data to be manipulated in more than a single software system concurrently. As a result, the user experience can be cumbersome, as each time a particular system is accessed, the user has to authenticate to it by providing his or her credentials for that particular system. It also burdens the user by requiring him or her to maintain different credentials for each system.

To improve the user experience and address the preceding issue, it is possible to store descriptions of LOB systems as **target applications** as well as the actual credentials for each user of each LOB system. Then an integrated application that spans multiple systems can programmatically obtain the credentials of the current **Secure Store Service (SSS) user** from the store and authenticate without prompting the SSS user for credentials each time a particular LOB system demands authentication. The SSS user never needs to authenticate more than once as long as the stored credentials remain valid with respect to the LOB.

This protocol allows multiple protocol clients sharing a single **SSS** configuration to communicate with a single protocol server.

This protocol allows protocol clients to create, read, update and delete target application definitions in an **application server**. It allows a protocol client to create, read, update and delete the credentials associated with each target application. Additionally, it allows a protocol client to create an **SSS ticket** that encapsulates the identity of a user of the protocol client into a token that may be later redeemed by a different user of the protocol client to retrieve credentials on behalf of the initial user. The information handled and returned by the protocol client can contain highly sensitive information, so consumers of the protocol client need to secure the channel of communication and this data appropriately.

## 1.4 Relationship to Other Protocols

This protocol uses the **SOAP** message protocol for formatting request and response messages, as described in [\[SOAP1.1\]](#), [\[SOAP1.2/1\]](#) and [\[SOAP1.2/2\]](#). It transmits those messages by using **HTTP**, as described in [\[RFC2616\]](#), or **Hypertext Transfer Protocol over Secure Sockets Layer (HTTPS)**, as described in [\[RFC2818\]](#).

The following diagram shows the underlying messaging and transport stack used by the protocol:

**Figure 1: This protocol in relation to other protocols**

## 1.5 Prerequisites/Preconditions

This protocol operates against a protocol server that exposes one or more **endpoint (4) URIs** that are known by protocol clients. The endpoint (4) URI of the protocol server and the transport that is used by the protocol server are either known by the protocol client or obtained by using the discovery mechanism that is described in [\[MS-SPTWS\]](#).

The protocol client obtains the requisite ApplicationClassId and ApplicationVersion values and the endpoint (4) URI of the protocol server that provides the discovery mechanism, as described in [\[MS-SPTWS\]](#), by means that are independent of either protocol.

An **SSS partition** already exists on the server and is known by protocol clients.

This protocol requires the protocol client to have permission to call the methods on the protocol server.

The protocol client implements the token-based security mechanisms that are required by the protocol server and related security protocols, as described in [\[MS-SPSTWS\]](#).

## 1.6 Applicability Statement

This protocol is designed for storing and retrieving credentials and related information typically used to authenticate to line-of-business (LOB) systems.

The information handled by the protocol client can contain highly sensitive information, so the protocol client needs to be consumed in an environment that is appropriately secured.

## 1.7 Versioning and Capability Negotiation

This document covers versioning issues in the following areas:

- **Supported Transports:** This protocol can be implemented by using transports that support sending SOAP messages, as specified in section [2.1](#).
- **Protocol Versions:** This protocol is not versioned.

**Capability Negotiation:** This protocol does not support version negotiation.

## 1.8 Vendor-Extensible Fields

None.

## **1.9 Standards Assignments**

None.

Preliminary

## 2 Messages

In the following sections, the schema definition might differ from the processing rules imposed by the protocol. The **WSDL** in this specification matches the WSDL that shipped with the product and provides a base description of the schema. The text that introduces the WSDL might specify differences that reflect actual Microsoft product behavior. For example, the schema definition might allow for an element to be **empty**, **null**, or **not present** but the behavior of the protocol as specified restricts the same elements to being **non-empty**, **present**, and **not null**.

### 2.1 Transport

Protocol servers MUST support SOAP over either HTTP or HTTPS.

All protocol messages MUST be transported using HTTP bindings at the transport level.

Protocol messages MUST be formatted as specified either in [\[SOAP1.1\]](#) section 4 or in [\[SOAP1.2/1\]](#) section 5. Protocol server faults MUST be returned either using HTTP **Status-Codes** or using **SOAP faults** as specified either in [\[SOAP1.1\]](#) section 4.4 or in [\[SOAP1.2/1\]](#) section 5.4.

If the HTTPS transport is used, a server **certificate (1)** MUST be deployed.

This protocol does not define any means for activating a server or a client. The server MUST be configured and begin listening in an implementation-specific way. The client MUST know the format and transport used by the server. For example, the server could use the SOAP format over an HTTP transport.

### 2.2 Common Message Syntax

This section contains common definitions that are used by this protocol. The syntax of the definitions uses **XML schema**, as specified in [\[XMLSCHEMA1\]](#) and [\[XMLSCHEMA2\]](#), and WSDL, as specified in [\[WSDL\]](#).

#### 2.2.1 Namespaces

This specification defines and references various **XML namespaces** using the mechanisms specified in [\[XMLNS\]](#). Although this specification associates a specific **XML namespace prefix** for each XML namespace that is used, the choice of any particular XML namespace prefix is implementation-specific and not significant for interoperability.

Prefix	Namespace URI	Reference

## 2.2.2 Messages

### 2.2.2.1 Serializing Error Complex Types in Soap Faults

Complex types designated as error complex types and returned as responses by the protocol server MUST be formatted as SOAP Faults, as specified in [\[SOAP1.2/1\]](#) section 5.4.

**Code:** MUST contain a **Value** sub-element, which MUST be set by the sender. MAY contain a **Subcode** sub-element.

**Reason:** MUST contain a **Text** sub-element, which MUST be ignored by the protocol client.

**Detail:** MUST contain the error complex type or be empty.

## 2.2.3 Elements

This specification does not define any common XML schema element definitions.

## 2.2.4 Complex Types

The following table summarizes the set of common XML schema complex type definitions defined by this specification. XML schema complex type definitions that are specific to a particular operation are described with the operation.

Complex Type	Description
ArgumentException	The <b>ArgumentException</b> complex type is an error complex type that contains information about a protocol-server-side error because of an argument with an invalid value. The complex type MUST only be included as part of a SOAP fault as specified in

<b>Complex Type</b>	<b>Description</b>
	section <a href="#">2.2.2.1</a> .
ArgumentNullException	The <b>ArgumentNullException</b> complex type is an error complex type that contains information about a protocol-server-side error because of a NULL value in an argument which does not accept NULL values. The complex type MUST only be included as part of a SOAP fault as specified in section <a href="#">2.2.2.1</a> .
ArgumentOutOfRangeException	The <b>ArgumentOutOfRangeException</b> complex type is an error complex type that contains information about a protocol-server-side error because of an argument that is outside the range of implementation specific permissible values. The complex type MUST only be included as part of a SOAP fault as specified in section <a href="#">2.2.2.1</a> .
ArrayOfKeyValueOfstringstring	The <b>ArrayOfKeyValueOfstringstring</b> complex type<1> representing the list of <b>CustomSettings</b> specified in section <a href="#">2.2.4.19</a> .
ArrayOfSecureStoreServiceClaim	The <b>ArrayOfSecureStoreServiceClaim</b> complex type represents a list of SecureStoreServiceClaims.
ArrayOfSerializableSecureStoreCredential	The <b>ArrayOfSerializableSecureStoreCredential</b> complex type represents a list of SerializableSecureStoreCredentials. Its count MUST be between 1 and 10, inclusive.
ArrayOfTargetApplication	The <b>ArrayOfTargetApplication</b> complex type represents a list of TargetApplications.
ArrayOfTargetApplicationField	The <b>ArrayOfTargetApplicationField</b> complex type represents a list of TargetApplicationFields. The number of TargetApplicationField elements MUST be between 1 and 10, inclusive.
ConnectionSettings	The <b>ConnectionSettings</b> complex type<2> contains information about an <b>endpoint (4)</b> which can be used to connect to it.
Exception	The <b>Exception</b> complex type is an error complex type that contains information about a protocol-server-side error. The complex type MUST only be included as part of a SOAP fault as specified in section <a href="#">2.2.2.1</a> .
SecureStoreServiceClaim	The <b>SecureStoreServiceClaim</b> complex type contains information about a <b>claim (2)</b> .
SecureStoreServiceCredentialsNotFoundFault	An error complex type containing information about a server-side error because of credentials not being found in <b>SSS store</b> . The complex type MUST only be included as part of a soap fault.
SecureStoreServiceFault	An error complex type containing information about a server-side error because of a violation of constraints on SSS store. The complex type MUST only be included as part of a soap fault as specified

<b>Complex Type</b>	<b>Description</b>
	in section <a href="#">2.2.2.1</a> .
SecureStoreServiceTargetApplicationNotFoundFault	An error complex type containing information about a server-side error because specified target application not being found in SSS store. The complex type MUST be included as part of a soap fault.
SerializableSecureStoreCredential	The <b>SerializableSecureStoreCredential</b> complex type contains information about secure store credential.
SystemException	The <b>SystemException</b> complex type is an error complex type that contains information about a protocol-server-side error because of an attempt to perform an operation that is invalid for the current state of the protocol server.
TargetApplication	The <b>TargetApplication</b> complex type contains information about the target application definition.
TargetApplicationClaims	The <b>TargetApplicationClaims</b> complex type contains information about claims (2) that represent the SSS users that are administrators, group members, or SSS users that can redeem a SSS ticket of a target application.
TargetApplicationField	The <b>TargetApplicationField</b> complex type contains credential field definition information for the target application.

#### 2.2.4.1 ArgumentException

**Namespace:** <http://schemas.datacontract.org/2004/07/System>

The **ArgumentException** complex type is an error complex type that contains information about a protocol-server-side error because of an argument with an invalid value. The complex type MUST only be included as part of a SOAP fault as specified in section [2.2.2.1](#).

```
<xs:complexType name="ArgumentException" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexContent mixed="false">
    <xs:extension base="q2:SystemException"/>
  </xs:complexContent>
</xs:complexType>
```

#### 2.2.4.2 ArgumentNullException

**Namespace:** <http://schemas.datacontract.org/2004/07/System>

The **ArgumentNullException** complex type is an error complex type that contains information about a protocol-server-side error because of a NULL value in an argument which does not accept NULL values. The complex type MUST only be included as part of a SOAP fault as specified in section [2.2.2.1](#).

```
<xs:complexType name="ArgumentNullException" xmlns:xs="http://www.w3.org/2001/XMLSchema">
```

```

<xs:complexContent mixed="false">
    <xs:extension base="q2:ArgumentException"/>
</xs:complexContent>
</xs:complexType>

```

#### 2.2.4.3 ArgumentOutOfRangeException

**Namespace:** <http://schemas.datacontract.org/2004/07/System>

The **ArgumentOutOfRangeException** complex type is an error complex type that contains information about a protocol-server-side error because of an argument that is outside the range of implementation specific permissible values. The complex type MUST only be included as part of a SOAP fault as specified in section [2.2.2.1](#).

```

<xs:complexType name="ArgumentOutOfRangeException">
    xmlns:xs="http://www.w3.org/2001/XMLSchema">
    <xs:complexContent mixed="false">
        <xs:extension base="q2:ArgumentException"/>
    </xs:complexContent>
</xs:complexType>

```

#### 2.2.4.4 ArrayOfSecureStoreServiceClaim

**Namespace:** <http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Server>

The **ArrayOfSecureStoreServiceClaim** complex type represents a list of SecureStoreServiceClaims.

```

<xs:complexType name="ArrayOfSecureStoreServiceClaim">
    xmlns:xs="http://www.w3.org/2001/XMLSchema">
    <xs:sequence>
        <xs:element minOccurs="0" maxOccurs="unbounded" name="SecureStoreServiceClaim">
            nillable="true" type="tns1:SecureStoreServiceClaim"/>
    </xs:sequence>
</xs:complexType>

```

**SecureStoreServiceClaim:** Element specified by [SecureStoreServiceClaim](#) complex type.

#### 2.2.4.5 ArrayOfSerializableSecureStoreCredential

**Namespace:** <http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Server>

The **ArrayOfSerializableSecureStoreCredential** complex type represents a list of SerializableSecureStoreCredentials. Its count MUST be between 1 and 10, inclusive.

```

<xs:complexType name="ArrayOfSerializableSecureStoreCredential">
    xmlns:xs="http://www.w3.org/2001/XMLSchema">
    <xs:sequence>
        <xs:element minOccurs="0" maxOccurs="unbounded" name="SerializableSecureStoreCredential">
            nillable="true" type="tns1:SerializableSecureStoreCredential"/>
    </xs:sequence>
</xs:complexType>

```

**SerializableSecureStoreCredential:** Element specified by [SerializableSecureStoreCredential](#) complex type. It MUST not be NULL.

#### 2.2.4.6 ArrayOfTargetApplication

**Namespace:** <http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Server>

The **ArrayOfTargetApplication** complex type represents a list of TargetApplications.

```
<xs:complexType name="ArrayOfTargetApplication" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="TargetApplication" nillable="true"
      type="tns1:TargetApplication"/>
  </xs:sequence>
</xs:complexType>
```

**TargetApplication:** Element specified by [TargetApplication](#) complex type.

#### 2.2.4.7 ArrayOfTargetApplicationField

**Namespace:** <http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Server>

The **ArrayOfTargetApplicationField** complex type represents a list of TargetApplicationFields. The number of TargetApplicationField elements MUST be between 1 and 10, inclusive.

```
<xs:complexType name="ArrayOfTargetApplicationField"
  xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="TargetApplicationField"
      nillable="true" type="tns1:TargetApplicationField"/>
  </xs:sequence>
</xs:complexType>
```

**TargetApplicationField:** Element specified by [TargetApplicationField](#) complex type.

#### 2.2.4.8 Exception

**Namespace:** <http://schemas.datacontract.org/2004/07/System>

The **Exception** complex type is an error complex type that contains information about a protocol-server-side error. The complex type MUST only be included as part of a SOAP fault as specified in section [2.2.2.1](#).

```
<xs:complexType name="Exception" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:any minOccurs="0" maxOccurs="unbounded" namespace="##local" processContents="skip"/>
  </xs:sequence>
  <xs:attribute ref="tns2:FactoryType"/>
</xs:complexType>
```

**tns2:FactoryType:** This specifies a factory class that can deserialize the type.

#### 2.2.4.9 SecureStoreServiceClaim

**Namespace:** <http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Server>

The **SecureStoreServiceClaim** complex type contains information about a claim (2).

```
<xs:complexType name="SecureStoreServiceClaim" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element name="claimIssuer" nillable="true" type="xs:string"/>
    <xs:element name="claimType" nillable="true" type="xs:string"/>
    <xs:element name="claimValue" nillable="true" type="xs:string"/>
  </xs:sequence>
</xs:complexType>
```

**claimIssuer:** A **claim issuer**. It MUST be between 1 and 2084 characters, inclusive, in length.

**claimType:** A **claim type**. It MUST be between 1 and 2084 characters, inclusive, in length.

**claimValue:** A **claim value**. It MUST be between 1 and 2048 characters, inclusive, in length.

#### 2.2.4.10 SecureStoreServiceCredentialsNotFoundFault

**Namespace:** <http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Server>

An error complex type containing information about a server-side error because of credentials not being found in SSS store. The complex type MUST only be included as part of a soap fault.

```
<xs:complexType name="SecureStoreServiceCredentialsNotFoundFault" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" name="CredentialManagementUrl" nillable="true" type="xs:anyURI"/>
    <xs:element minOccurs="0" name="Message" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="TargetApplicationId" nillable="true" type="xs:string"/>
  </xs:sequence>
</xs:complexType>
```

**CredentialManagementUrl:** The URL for managing credentials for a target application. It MUST be NULL or contain between 1 and 2084 characters, inclusive, in length.

**Message:** An implementation specific description of the violation. It MUST NOT be NULL.

**TargetApplicationId:** The name of the target application. It MUST be between 1 and 256 characters, inclusive, in length. It MUST NOT be NULL.

#### 2.2.4.11 SecureStoreServiceFault

**Namespace:** <http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Server>

An error complex type containing information about a server-side error because of a violation of constraints on SSS store. The complex type MUST only be included as part of a soap fault as specified in section [2.2.2.1](#).

```
<xs:complexType name="SecureStoreServiceFault" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
```

```
<xs:element minOccurs="0" name="Message" nillable="true" type="xs:string"/>
</xs:sequence>
</xs:complexType>
```

**Message:** A description of the violation. It MUST not be NULL.

#### 2.2.4.12 SecureStoreServiceTargetApplicationNotFoundFault

**Namespace:** <http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Server>

An error complex type containing information about a server-side error because specified target application not being found in SSS store. The complex type MUST be included as part of a soap fault.

```
<xs:complexType name="SecureStoreServiceTargetApplicationNotFoundFault"
  xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" name="Message" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="TargetApplicationId" nillable="true" type="xs:string"/>
  </xs:sequence>
</xs:complexType>
```

**Message:** An implementation specific description of the violation. It MUST NOT be NULL.

**TargetApplicationId:** The name of the target application. It MUST be between 1 and 256 characters, inclusive, in length.

#### 2.2.4.13 SerializableSecureStoreCredential

**Namespace:** <http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Server>

The **SerializableSecureStoreCredential** complex type contains information about secure store credential.

```
<xs:complexType name="SerializableSecureStoreCredential"
  xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element name="credential" nillable="true" type="xs:base64Binary"/>
    <xs:element
      xmlns:tns="http://schemas.datacontract.org/2004/07/Microsoft.BusinessData.Infrastructure.SecureStore"
      name="credentialType" type="tns:SecureStoreCredentialType"/>
  </xs:sequence>
</xs:complexType>
```

**credential:** It contains the byte array of the credential. It MUST not be NULL.

**credentialType:** Element specified by [SecureStoreCredentialType](#) simple type.

#### 2.2.4.14 SystemException

**Namespace:** <http://schemas.datacontract.org/2004/07/System>

The **SystemException** complex type is an error complex type that contains information about a protocol-server-side error because of an attempt to perform an operation that is invalid for the current state of the protocol server.

```
<xs:complexType name="SystemException" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexContent mixed="false">
    <xs:extension base="q2:Exception"/>
  </xs:complexContent>
</xs:complexType>
```

#### 2.2.4.15 TargetApplication

**Namespace:** <http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Server>

The **TargetApplication** complex type contains information about the target application definition.

```
<xs:complexType name="TargetApplication" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element name="appId" nillable="true" type="xs:string"/>
    <xs:element name="contactEmail" nillable="true" type="xs:string"/>
    <xs:element name="credentialManagementUrl" nillable="true" type="xs:anyURI"/>
    <xs:element name="friendlyName" nillable="true" type="xs:string"/>
    <xs:element name="ticketTimeout" type="xs:int"/>
    <xs:element
      xmlns:tns="http://schemas.datacontract.org/2004/07/Microsoft.BusinessData.Infrastructure.SecureStore"
      name="type" type="tns:TargetApplicationType"/>
  </xs:sequence>
</xs:complexType>
```

**appId:** The name of the target application. It MUST be between 1 and 256 characters, inclusive, in length.

**contactEmail:** The e-mail address of an administrator who owns the administration responsibility for this target application. It MUST either be NULL, or be a valid formatted e-mail address and less than or equal to 128 characters in length.

**credentialManagementUrl:** The URL for managing credentials for this target application. It MUST be NULL or contain between 1 and 2084 characters, inclusive, in length.

**friendlyName:** The descriptive name of the target application. It MUST be between 1 and 256 characters, inclusive, in length.

**ticketTimeout:** The validity in minutes for SSS tickets for this target application. This value MUST be between 1 and 525600, inclusive, if the target application type is IndividualWithTicketing or GroupWithTicketing. This value MUST be set to NULL if the target application type is not equal to IndividualWithTicketing or GroupWithTicketing.

**type:** The element specified by the **TargetApplicationType** simple type (section [2.2.5.5](#)).

#### 2.2.4.16 TargetApplicationClaims

**Namespace:** <http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Server>

The **TargetApplicationClaims** complex type contains information about claims (2) that represent the SSS users that are administrators, group members, or SSS users that can redeem a SSS ticket of a target application.

```
<xs:complexType name="TargetApplicationClaims" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element name="administratorClaims" nillable="true"
      type="tns1:ArrayOfSecureStoreServiceClaim"/>
    <xs:element name="groupClaims" nillable="true"
      type="tns1:ArrayOfSecureStoreServiceClaim"/>
    <xs:element name="ticketRedeemerClaims" nillable="true"
      type="tns1:ArrayOfSecureStoreServiceClaim"/>
  </xs:sequence>
</xs:complexType>
```

**administratorClaims:** The set of claims (2) that represent the group of SSS users that are administrators of a target application. It MUST NOT be NULL. It MUST contain more than 0 items.

**groupClaims:** The set of claims (2) that represent the group of SSS users that are group members for a **group target application**. If the specified target application is a group target application, the value MUST NOT be NULL.

**ticketRedeemerClaims:** The set of claims (2) that represent the group of SSS users that can redeem a SSS ticket for a target application. If the specified target application is a target application with ticketing, the value MUST NOT be NULL.

#### 2.2.4.17 TargetApplicationField

**Namespace:** <http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Server>

The **TargetApplicationField** complex type contains credential field definition information for the target application.

```
<xs:complexType name="TargetApplicationField" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element
      xmlns:tns="http://schemas.datacontract.org/2004/07/Microsoft.BusinessData.Infrastructure.SecureStore"
      name="credentialType" type="tns:SecureStoreCredentialType"/>
    <xs:element name="masked" type="xs:boolean"/>
    <xs:element name="name" nillable="true" type="xs:string"/>
  </xs:sequence>
</xs:complexType>
```

**credentialType:** The type of the credential that the **target application field** contains.

**masked:** A Boolean value that specifies whether the target application field needs to be masked when displayed in an implementation specific user interface.

**name:** The name of the target application field. It MUST be between 1 and 256 characters, inclusive, in length.

#### 2.2.4.18 ArrayOfKeyValueOfstringstring

**Namespace:** <http://schemas.microsoft.com/2003/10/Serialization/Arrays>

The **ArrayOfKeyValueOfstringstring** complex type [\(3\)](#) representing the list of **CustomSettings** specified in section [2.2.4.19](#).

```
<xs:complexType name="ArrayOfKeyValueOfstringstring"
  xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="KeyValueOfstringstring">
      <xs:complexType>
        <xs:sequence>
          <xs:element name="Key" nillable="true" type="xs:string"/>
          <xs:element name="Value" nillable="true" type="xs:string"/>
        </xs:sequence>
      </xs:complexType>
    </xs:element>
  </xs:sequence>
</xs:complexType>
```

**KeyValueOfstringstring:** Element specified by **CustomSettings** in section [2.2.4.19](#)

**KeyValueOfstringstring.Key:** The name of the custom setting for the connection settings object.

**KeyValueOfstringstring.Value:** The value of the custom setting for the connection settings object.

## 2.2.4.19 ConnectionSettings

**Namespace:**

<http://schemas.datacontract.org/2004/07/Microsoft.BusinessData.Infrastructure.SecureStore>

The **ConnectionSettings** complex type [\(4\)](#) contains information about an **endpoint (4)** which can be used to connect to it.

```
<xs:complexType name="ConnectionSettings" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" name="AuthenticationMode" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="ConnectionSettingsType"
      type="tns:ConnectionSettingsType"/>
    <xs:element xmlns:q1="http://schemas.microsoft.com/2003/10/Serialization/Arrays"
      minOccurs="0" name="CustomSettings" nillable="true" type="q1:ArrayOfKeyValueOfstringstring"/>
    <xs:element minOccurs="0" name="Description" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="Name" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="ParentName" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="ProxySSOApplicationId" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="ProxyTarget" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="SSOApplicationId" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="SSOProviderImplId" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="Target" nillable="true" type="xs:string"/>
  </xs:sequence>
</xs:complexType>
```

**AuthenticationMode:** The **authentication mode** used by the **endpoint (4)**. It MUST be NULL or contain between 1 and 256 characters, inclusive, in length.

**ConnectionSettingsType:** The element specified by the **ConnectionSettingsType** simple type (section [2.2.5.6](#)).

**CustomSettings:** A **dictionary**, of string type key and value pairs, which is meant to store additional information about an **endpoint (4)** that cannot be stored as part of the **ConnectionSettings** complex type. The list MUST be serialized into **ArrayOfKeyValueOfstringstring** complex type (section [2.2.4.18](#)) and the length of the serialized string MUST not exceed 4000 characters.

**Description:** The description of the **endpoint (4)**. It MUST be NULL or contain between 1 and 1024 characters, inclusive, in length.

**Name:** The unique name used to identify the **endpoint (4)**. It MUST contain between 1 and 256 characters, inclusive, in length.

**ParentName:** The unique name used to identify the parent of the **endpoint (4)**. It MUST be NULL or contain between 1 and 256 characters, inclusive, in length.

**ProxySSOApplicationId:** The appId of the target application (section [2.2.4.15](#)) to the proxy of the **endpoint (4)**. It MUST be NULL or contain between 1 and 256 characters, inclusive, in length.

**ProxyTarget:** The URL of the proxy for the **endpoint (4)**. It MUST be NULL or contain between 1 and 2084 characters, inclusive, in length.

**SSOApplicationId:** The appId of the target application (section [2.2.4.15](#)) to the **endpoint (4)**. It MUST be NULL or contain between 1 and 256 characters, inclusive, in length.

**SSOProviderImplId:** The name of the implementation of the target application for the **endpoint (4)**.

**Target:** The URL of the **endpoint (4)**. It MUST be NULL or contain between 1 and 2084 characters, inclusive, in length.

## 2.2.5 Simple Types

The following table summarizes the set of common XML schema simple type definitions defined by this specification. XML schema simple type definitions that are specific to a particular operation are described with the operation.

Simple type	Description
char	Reserved.
ConnectionSettingsType	<b>ConnectionSettingsType</b> <a href="#"><code>&lt;5&gt;</code></a> is an enumeration indicating the type of <b>ConnectionSettings</b> (section <a href="#">2.2.4.19</a> ).
duration	Reserved.
guid	Specifies the string representation of a <b>GUID</b> in the form of a GUID string.
SecureStoreCredentialType	<b>SecureStoreCredentialType</b> is an enumeration indicating the type of <b>SerializableSecureStoreCredential</b> (section <a href="#">2.2.4.13</a> ).
TargetApplicationType	<b>TargetApplicationType</b> is an enumeration indicating the type of <b>TargetApplication</b> (section <a href="#">2.2.4.15</a> ).

### 2.2.5.1 char

**Namespace:** <http://schemas.microsoft.com/2003/10/Serialization/>

Reserved.

```
<xs:simpleType name="char" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:int"/>
</xs:simpleType>
```

### 2.2.5.2 duration

**Namespace:** <http://schemas.microsoft.com/2003/10/Serialization/>

Reserved.

```
<xs:simpleType name="duration" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:duration">
    <xs:pattern value="\-?P(\d*D)?(T(\d*H)?(\d*M)?(\d*(\.\d*)?S)?)?" />
    <xs:minInclusive value="-P10675199DT2H48M5.4775808S"/>
    <xs:maxInclusive value="P10675199DT2H48M5.4775807S"/>
  </xs:restriction>
</xs:simpleType>
```

### 2.2.5.3 guid

**Namespace:** <http://schemas.microsoft.com/2003/10/Serialization/>

Specifies the string representation of a GUID in the form of a GUID string.

```
<xs:simpleType name="guid" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:pattern value="[\da-fA-F]{8}-[\da-fA-F]{4}-[\da-fA-F]{4}-[\da-fA-F]{4}-[\da-fA-F]{12}"/>
  </xs:restriction>
</xs:simpleType>
```

### 2.2.5.4 SecureStoreCredentialType

**Namespace:**

<http://schemas.datacontract.org/2004/07/Microsoft.BusinessData.Infrastructure.SecureStore>

**SecureStoreCredentialType** is an enumeration indicating the type of **SerializableSecureStoreCredential** (section [2.2.4.13](#)).

```
<xs:simpleType name="SecureStoreCredentialType" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:enumeration value="UserName"/>
    <xs:enumeration value="Password"/>
    <xs:enumeration value="Pin"/>
    <xs:enumeration value="Key"/>
    <xs:enumeration value="Generic"/>
    <xs:enumeration value="WindowsUserName"/>
    <xs:enumeration value="WindowsPassword"/>
    <xs:enumeration value="Certificate"/>
    <xs:enumeration value="CertificatePassword"/>
  </xs:restriction>
```

```
</xs:simpleType>
```

The following table specifies the allowable values for **SecureStoreCredentialType**.

Value	Meaning
UserName	User name credential type.
Password	Password credential type.
Pin	Personal identification number (PIN) credential type.
Key	Key credential type.
Generic	Generic credential type.
WindowsUserName	Windows user name credential type.
WindowsPassword	Windows password credential type.
Certificate	Certificate credential type.
CertificatePassword	Certificate password credential type.

## 2.2.5.5 TargetApplicationType

### Namespace:

<http://schemas.datacontract.org/2004/07/Microsoft.BusinessData.Infrastructure.SecureStore>

**TargetApplicationType** is an enumeration indicating the type of **TargetApplication** (section [2.2.4.15](#)).

```
<xs:simpleType name="TargetApplicationType" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:enumeration value="Individual"/>
    <xs:enumeration value="Group"/>
    <xs:enumeration value="IndividualWithTicketing"/>
    <xs:enumeration value="GroupWithTicketing"/>
    <xs:enumeration value="RestrictedIndividual"/>
    <xs:enumeration value="RestrictedGroup"/>
  </xs:restriction>
</xs:simpleType>
```

The following table specifies the allowable values for **TargetApplicationType**.

Value	Meaning
Individual	An <b>individual target application</b> that stores credentials for individual SSS users. The credentials are meant to be used by applications that perform no additional authorization against the data stored or retrieved from the system to which the credentials are used to authenticate.
Group	A group target application that stores credentials for a group of SSS users. The credentials are meant to be used by applications that perform no additional authorization against the data stored or retrieved from the system to which the credentials are used to authenticate.

<b>Value</b>	<b>Meaning</b>
IndividualWithTicketing	An individual target application that stores credentials for individual SSS users. The credentials are meant to be used by applications that perform no additional authorization against the data stored or retrieved from the system to which the credentials are used to authenticate. This target application also allows a user to create an SSS ticket. When using an SSS ticket, a user "A" can retrieve the credentials for another user "B", by using an SSS ticket created by user "B".
GroupWithTicketing	A group target application that stores credentials for a group of SSS users. The credentials are meant to be used by applications that perform no additional authorization against the data stored or retrieved from the system to which the credentials are used to authenticate. This target application also allows a user to create an SSS ticket. When using an SSS ticket, a user "A" can retrieve the credentials for another user "B", by using an SSS ticket created by user "B".
RestrictedIndividual	An individual target application that stores credentials for individual SSS users. The credentials are meant to be used by applications that perform additional, implementation specific, authorization against sensitive data stored or retrieved from the system to which the credentials are used to authenticate.
RestrictedGroup	A group target application that stores credentials for a group of SSS users. The credentials are meant to be used by applications that perform additional, implementation specific, authorization against sensitive data stored or retrieved from the system to which the credentials are used to authenticate.

## 2.2.5.6 ConnectionSettingsType

### Namespace:

<http://schemas.datacontract.org/2004/07/Microsoft.BusinessData.Infrastructure.SecureStore>

**ConnectionSettingsType** [<6>](#) is an enumeration indicating the type of **ConnectionSettings** (section [2.2.4.19](#)).

```
<xs:simpleType name="ConnectionSettingsType" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:enumeration value="None"/>
    <xs:enumeration value="OData"/>
    <xs:enumeration value="ODataMetadata"/>
    <xs:enumeration value="SQL"/>
  </xs:restriction>
</xs:simpleType>
```

The following table specifies the allowable values for **ConnectionSettingsType**.

<b>Value</b>	<b>Meaning</b>
None	No specific type.
OData	<b>OData</b> connection settings object type.
ODataMetadata	OData Metadata connection settings object type
SQL	<b>SQL</b> connection settings object type.

## **2.2.6 Attributes**

This specification does not define any common XML schema attribute definitions.

## **2.2.7 Groups**

This specification does not define any common XML schema group definitions.

## **2.2.8 Attribute Groups**

This specification does not define any common XML schema attribute group definitions.

## **2.2.9 Common Data Structures**

This specification does not define any common XML schema data structures.

### 3 Protocol Details

In the following sections, the schema definition might differ from the processing rules imposed by the protocol. The WSDL in this specification matches the WSDL that shipped with the product and provides a base description of the schema. The text that introduces the WSDL might specify differences that reflect actual Microsoft product behavior. For example, the schema definition might allow for an element to be **empty**, **null**, or **not present** but the behavior of the protocol as specified restricts the same elements to being **non-empty**, **present**, and **not null**.

The client side of this protocol is simply a pass-through. That is, no additional timers or other state is required on the client side of this protocol. Calls made by the higher-layer protocol or application are passed directly to the transport, and the results returned by the transport are passed directly back to the higher-layer protocol or application.

Except where specified, protocol clients SHOULD interpret HTTP status codes returned by the protocol server as specified in [\[RFC2616\]](#) (Section 10, Status Code Definitions).

This protocol allows protocol servers to notify protocol clients of application-level faults using SOAP faults. Except where specified, these SOAP faults are not significant for interoperability, and protocol clients can interpret them in an implementation-specific manner.

This protocol allows protocol servers to perform implementation-specific authorization checks and notify protocol clients of authorization faults using SOAP faults as specified previously in this section.

#### 3.1 Server Details

All operations, except the **ChangeMasterSecretKey** operation, consist of a basic request-response pair and the server treats each request as an independent transaction that is unrelated to any previous request.

##### 3.1.1 Abstract Data Model

This section describes a conceptual model of possible data organization that an implementation maintains to participate in this protocol. The described organization is provided to facilitate the explanation of how the protocol behaves. This document does not mandate that implementations adhere to this model as long as their external behavior is consistent with that described in this document.

The protocol server maintains the following sets of data for this protocol within an SSS store. Data is maintained until updated or removed.

**SSS configuration:** A set of information that dictates the behavior of the protocol server and protocol clients. It includes information such as the number of days the SSS audit entries are preserved, and a flag to indicate the auditing is enabled and timestamp indicating the version of the SSS configuration information set.

**Target application definitions:** A set of target applications that each consist of a unique identifier, programmatic name, descriptive name, e-mail contact, claims (2) representing the set of SSS users who can administer the target application, claims (2) representing the members of a group target application, claims (2) representing the users who can redeem an SSS ticket, and a set of credential field labels and information about how they can each be displayed in a user interface.

**Issued SSS tickets:** A set of unexpired tokens that represent the SSS tickets issued, along with the date and time of issue.

**Credentials:** A set of credentials for a single SSS user or for a set of SSS users, for each target application. An identifier is associated with each set of credentials, the unique identifier of the owning target application and an identity claim (2) that specifies the security principal (2) who owns the credentials, if the credentials are associated with an individual target application.

**Master Secret Key:** A secret key used by the protocol client to symmetrically encrypt and decrypt the credentials and SSS ticket to secure them, along with associated **salt** and implementation specific **checksum**. It is stored encrypted using implementation-specific means.

### 3.1.2 Timers

None.

### 3.1.3 Initialization

None.

### 3.1.4 Message Processing Events and Sequencing Rules

The specifications of the operations in this section identify the conditions under which the protocol server MUST respond with corresponding error complex types. In addition, if the protocol server encounters an error specific to its implementation, it SHOULD respond with any fault listed in the WSDL for its operation. The responses MUST be formatted as SOAP faults, using error complex types serialized as specified in section [2.2.2.1](#). The different error complex types have the following meanings:

Error Complex Type	Condition
ArgumentException	The protocol server encounters an invalid argument value while performing implementation-specific operations.
ArgumentNullException	While performing implementation-specific operations, the protocol server encounters a NULL value for an argument that does not accept NULL values.
ArgumentOutOfRangeException	The protocol server encounters an argument with a value outside the range of permissible values while performing implementation-specific operations.
SecureStoreServiceFault	The protocol server encounters a server-side error because of a violation of constraints on SSS store while performing implementation-specific operations.
SecureStoreServiceTargetApplicationNotFoundFault	The target application identified by the applicationId parameter does not exist in the specified SSS partition.

The following table summarizes the list of operations as defined by this specification:

Operation	Description
ChangeMasterSecretKey	This operation is used to change the <b>master secret key</b> .
CreateApplication	This operation is used to create a new target application in the

<b>Operation</b>	<b>Description</b>
	specified SSS partition.
CreateConnectionSettings	This operation is used to create a new connection settings object in the specified SSS partition. <a href="#">&lt;7&gt;</a>
DeleteAllUserCredentials	This operation is used to delete the credentials of an SSS user for all the individual target applications in the specified SSS partition.
DeleteApplication	This operation is used to delete the specified target application in the SSS partition. The caller MUST be an administrator of the specified target application.
DeleteConnectionSettings	This operation is used to delete an existing connection settings object from the specified SSS partition. <a href="#">&lt;8&gt;</a>
DeleteCredentials	This operation is used to delete all the credentials of the caller for the specified individual target application in the specified SSS partition.
DeleteUserCredentials	This operation is used to delete all the credentials for an SSS user for the specified individual target application in the specified SSS partition. The caller MUST be an administrator of the specified target application.
GetAllConnectionSettings	This operation is used to fetch all the connection settings object, of the specified type, in the specified SSS partition. <a href="#">&lt;9&gt;</a>
GetApplication	This operation is used to retrieve target application for the specified target application name in the specified SSS partition. The caller MUST be an administrator of the specified target application.
GetApplicationAdministratorClaims	This operation is used to retrieve the set of claims (2) that represent the group of SSS users that are administrators for the specified target application in the specified SSS partition. The caller MUST be an administrator of the specified target application.
GetApplicationClaims	This operation is used to retrieve the set of claims (2) that represent the SSS users that are administrators, group members and SSS users that can redeem an SSS ticket for the specified target application in the specified SSS partition. The caller MUST be an administrator of the specified target application. Upon successful execution, this protocol server MUST return three collections. The first collection MUST contain the claims (2) that represent the group of SSS users who are administrators of the specified target application. The second collection MUST contain the claims (2) of the members of the group target application if the specified target application is a group target application. If the specified target application is not a group target application, the collection MUST have zero items. The third collection MUST contain the claims (2) of who can redeem an SSS ticket for the specified target application. If the target application type is not IndividualWithTicketing or GroupWithTicketing, the collection MUST have zero items.
GetApplicationFields	This operation is used to retrieve all the target application fields for the specified target application in the SSS partition. The caller

<b>Operation</b>	<b>Description</b>
	MUST be an administrator of the specified target application.
GetApplicationGroupClaims	This operation is used to retrieve the set of claims (2) that represent the group of SSS users that are group members for a specified group target application in the specified SSS partition. If the specified target application is not a group target application the set MUST have 0 items. The caller MUST be an administrator of the specified target application.
GetApplications	This operation is used to retrieve a list of all the target applications in the specified SSS partition where the caller is an administrator of the target applications. If the caller has implementation specific authorization to retrieve all the target applications in the specified SSS partition then all the target applications in the specified SSS partition are returned.
GetApplicationTicketRedeemerClaims	This operation is used to retrieve the set of claims (2) that represent the group of SSS users that can redeem an SSS ticket for a specified target application in the specified SSS partition. If the target application type is not IndividualWithTicketing or GroupWithTicketing, the set MUST have 0 items. The caller MUST be an administrator of the specified target application.
GetChangeMasterSecretKeyToken	This operation is used to retrieve an implementation-specific string used as a token for changing the master secret key.
GetChildConnectionSettings	This operation is used to fetch the connection settings object of the specified parent name in the specified SSS partition. <a href="#">&lt;10&gt;</a>
GetConnectionSettings	This operation is used to fetch the connection settings object for the specified name in the specified SSS partition. <a href="#">&lt;11&gt;</a> The credentials to connect to the target application and its proxy are also retrieved if the parameter to include them is specified.
GetCredentials	This operation is used to retrieve the credentials of the caller for the specified target application in the specified SSS partition, when the type of the specified target application is not <b>RestrictedIndividual</b> or <b>RestrictedGroup</b> .
GetRestrictedCredentials	This operation is used to retrieve the credentials of the caller for the specified target application in the specified SSS partition, when the type of the specified target application is either <b>RestrictedIndividual</b> or <b>RestrictedGroup</b> .
GetUserApplication	This operation is used to retrieve target application for the specified target application name that can be accessed by the caller in the specified SSS partition. To retrieve a target application the specified target application MUST be an individual target application or if the target application is a group target application, the caller MUST be a member of the group target application.
GetUserApplicationFields	This operation is used to retrieve all the target application fields for the specified target application name that can be accessed by the caller in the SSS partition. To retrieve the target application fields the specified target application MUST be an individual target application or if the target application is a group target application, the caller MUST be a member of the group target application.

<b>Operation</b>	<b>Description</b>
GetUserApplications	This operation is used to retrieve the information for all the target applications that can be accessed by the caller in the specified SSS partition. The target applications that can be accessed by the caller MUST include all the group target applications in the specified SSS partition where the caller is a member of the group target application and all the individual target applications in the specified SSS partition.
IsMasterSecretKeyPopulated	This operation is used to determine whether the master secret key exists in the SSS store.
IssueTicket	This operation is used to issue a SSS ticket to represent the calling SSS user in the specified SSS partition. The issued SSS ticket is then stored in the SSS store to be redeemed at a later time by another SSS user with a RedeemTicket request, as specified in section <a href="#">3.1.4.22</a> , to retrieve the credentials associated with the original SSS user represented by the SSS ticket.
RedeemTicket	This operation is used to redeem a SSS ticket issued by a previous IssueTicket request, as specified in section <a href="#">3.1.4.21</a> , to retrieve the set of credentials associated with the SSS user represented by the specified SSS ticket for the specified target application in the specified SSS partition from the SSS store.
SetChangeKeyPassphrase	This operation is used to store the specified byte array used to perform implementation-specific encryption on the master secret key on the protocol server.
SetCredentials	This operation is used to set credentials for the caller for the specified individual target application in the specified SSS partition.
SetGroupCredentials	This operation is used to set credentials for the specified group target application in the specified SSS partition. The caller MUST be an administrator of the specified group target application.
SetMasterSecretKey	This operation is used to retrieve the encrypted master secret key from the SSS store and decrypt using the specified passphrase hash as the key using an implementation specific algorithm. The plain text master secret key is maintained locally by the protocol server for encrypting and decrypting credentials.
SetUserCredentials	This operation is used to set the credentials for an SSS user for the specified individual target application in the SSS partition. The caller MUST be an administrator of the specified individual target application.
UpdateApplication	This operation is used to update the specified target application in the SSS partition. The caller MUST be an administrator of the specified target application.
UpdateConnectionSettings	This operation is used to update an existing connection settings object in the specified SSS partition. <a href="#">&lt;12&gt;</a>

### **3.1.4.1 ChangeMasterSecretKey**

This operation is used to change the master secret key.

```

<wsdl:operation name="ChangeMasterSecretKey" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
    <wsdl:input
        wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreserviceApplication/ChangeMasterSecretKey"
        message="tns3:ISecureStoreServiceApplication_ChangeMasterSecretKey_InputMessage"
        xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>

```

The protocol client sends an **ISecureStoreServiceApplication\_ChangeMasterSecretKey\_InputMessage** request message and the protocol server MUST NOT respond with any message.

- The protocol server MUST ignore this request if the specified **token** is not valid or the caller fails an implementation specific authorization check for changing the master secret key.
- If the master secret key does not exist, the protocol server MUST randomly generate a master secret key and perform implementation-specific encryption on it using the given byte array and store the encrypted master secret key in the SSS store.
- If the master secret key exists, the protocol server MUST randomly generate a new master secret key and perform implementation-specific encryption on it using the given byte array and store the encrypted master secret key in the SSS store. Then, the protocol server MUST also re-encrypt all the credentials stored in the SSS store using the generated master secret key.

### 3.1.4.1.1 Messages

The following table summarizes the set of **WSDL message** definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_ChangeMasterSecretKey_InputMessage	The request WSDL message for the <b>ChangeMasterSecretKey WSDL operation</b> .

#### 3.1.4.1.1.1

#### ISecureStoreServiceApplication\_ChangeMasterSecretKey\_InputMessage

The request WSDL message for the **ChangeMasterSecretKey** WSDL operation.

The **SOAP action** value is:

```
http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/ChangeMasterSecretKey
```

The **SOAP body** contains the **ChangeMasterSecretKey** element.

### 3.1.4.1.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
ChangeMasterSecretKey	The input data for the <b>ChangeMasterSecretKey</b> WSDL operation.

### 3.1.4.1.2.1 ChangeMasterSecretKey

The input data for the **ChangeMasterSecretKey** WSDL operation.

```
<xs:element name="ChangeMasterSecretKey" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" name="token" nillable="true" type="xs:string"/>
      <xs:element minOccurs="0" name="passPhraseHash" nillable="true"
type="xs:base64Binary"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**token:** A string that will be used by the protocol server to determine whether this operation is allowed. This string is retrieved by the operation described in section [3.1.4.14](#).

**passPhraseHash:** A byte array, derived from an implementation specific hash of an administrator supplied passphrase, used as an encryption key to encrypt the master secret key using an implementation specific algorithm. It MUST be 32 bytes in length.

### 3.1.4.1.3 Complex Types

None.

### 3.1.4.1.4 Simple Types

None.

### 3.1.4.1.5 Attributes

None.

### 3.1.4.1.6 Groups

None.

### 3.1.4.1.7 Attribute Groups

None.

## 3.1.4.2 CreateApplication

This operation is used to create a new target application in the specified SSS partition.

```
<wsdl:operation name="CreateApplication" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
  wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/CreateApplication"
```

```

message="tns3:ISecureStoreServiceApplication_CreateApplication_InputMessage"
xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
<wsdl:output
wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/CreateApplicationResponse"
message="tns3:ISecureStoreServiceApplication_CreateApplication_OutputMessage"
xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
<wsdl:fault
wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/CreateApplicationArgumentNullExceptionFault"
name="ArgumentNullExceptionFault"
message="tns3:ISecureStoreServiceApplication_CreateApplication_ArgumentNullExceptionFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
<wsdl:fault
wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/CreateApplicationArgumentOutOfRangeExceptionFault"
name="ArgumentOutOfRangeExceptionFault"
message="tns3:ISecureStoreServiceApplication_CreateApplication_ArgumentOutOfRangeExceptionFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
<wsdl:fault
wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/CreateApplicationArgumentExceptionFault" name="ArgumentExceptionFault"
message="tns3:ISecureStoreServiceApplication_CreateApplication_ArgumentExceptionFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
<wsdl:fault
wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/CreateApplicationSecureStoreServiceFaultFault"
name="SecureStoreServiceFaultFault"
message="tns3:ISecureStoreServiceApplication_CreateApplication_SecureStoreServiceFaultFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>

```

The protocol client sends an **ISecureStoreServiceApplication\_CreateApplication\_InputMessage** request message and the protocol server MUST respond with an **ISecureStoreServiceApplication\_CreateApplication\_OutputMessage** response message.

When a target application is created, the protocol client MUST specify claims for target application administrators. If the target application type is **Group**, the protocol client MUST specify the **groupClaims** member of the *applicationClaims* parameter. If the target application type is **IndividualWithTicketing** or **GroupWithTicketing**, the protocol client MUST specify the **ticketRedeemerClaims** member of the *applicationClaims* parameter.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentException	The <b>administratorClaims</b> member in the specified <i>applicationClaims</i> parameter is NULL or empty.
ArgumentException	The target application is group target application, but the <b>groupClaims</b> member in the specified <i>applicationClaims</i> parameter is NULL or empty.
ArgumentException	The target application type is IndividualWithTicketing or GroupWithTicketing, but the <b>ticketRedeemerClaims</b> member in the specified <i>applicationClaims</i> parameter is NULL or empty.

Error Complex Type	Condition
ArgumentException	The <b>contactEmail</b> member of the <i>application</i> parameter is not a valid e-mail address, as determined using implementation-specific checks, or its length is greater than 128.
ArgumentException	The <b>applicationId</b> member of the <i>application</i> parameter has a length equal to 0 or greater than 256.
ArgumentException	The <b>friendlyName</b> member of the <i>application</i> parameter has a length equal to zero or greater than 256.
ArgumentException	The <b>type</b> member of the <i>application</i> parameter is not a valid <a href="#">TargetApplicationType</a> .
ArgumentException	The <b>credentialManagementUrl</b> member of the <i>application</i> parameter is not a valid <b>URL</b> or its length is greater than 2084.
ArgumentOutOfRangeException	The number of target application fields in the specified <i>applicationFields</i> parameter is zero or greater than 10.
ArgumentOutOfRangeException	The target application type is IndividualWithTicketing or GroupWithTicketing, but the <b>ticketTimeout</b> member of <i>application</i> parameter is 0 or greater than 525600. <a href="#"><b>&lt;13&gt;</b></a>
SecureStoreServiceFault	The caller failed an implementation-specific authorization check for creating the target application.
SecureStoreServiceFault	The protocol server does not have a master secret key.
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation-specific validation of <i>rawPartitionId</i> failed. <a href="#"><b>&lt;14&gt;</b></a>
SecureStoreServiceFault	The specified target application already exists.

### 3.1.4.2.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_CreateApplication_InputMessage	The request WSDL message for the <b>CreateApplication</b> WSDL operation.
ISecureStoreServiceApplication_CreateApplication_OutputMessage	The response WSDL message for the <b>CreateApplication</b> WSDL operation.

#### 3.1.4.2.1.1 ISecureStoreServiceApplication\_CreateApplication\_InputMessage

The request WSDL message for the **CreateApplication** WSDL operation.

The SOAP action value is:

<http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/CreateApplication>

The SOAP body contains the **CreateApplication** element.

### 3.1.4.2.1.2 ISecureStoreServiceApplication\_CreateApplication\_OutputMessage

The response WSDL message for the **CreateApplication** WSDL operation.

The SOAP body contains the **CreateApplicationResponse** element.

### 3.1.4.2.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
CreateApplication	The input data for the <b>CreateApplication</b> WSDL operation.
CreateApplicationResponse	The result data for the <b>CreateApplication</b> WSDL operation.

#### 3.1.4.2.2.1 CreateApplication

The input data for the **CreateApplication** WSDL operation.

```
<xs:element name="CreateApplication" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Service" minOccurs="0" name="application" nillable="true" type="tns1:TargetApplication"/>
      <xs:element xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Service" minOccurs="0" name="applicationFields" nillable="true" type="tns1:ArrayOfTargetApplicationField"/>
      <xs:element xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Service" minOccurs="0" name="applicationClaims" nillable="true" type="tns1:TargetApplicationClaims"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the target application is to be created.

**application:** The target application to be created.

**applicationFields:** List of the target application fields for the target application.

**applicationClaims:** claims for the target application.

#### 3.1.4.2.2.2 CreateApplicationResponse

The result data for the **CreateApplication** WSDL operation.

```
<xs:element name="CreateApplicationResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
```

```
<xs:complexType>
  <xs:sequence/>
</xs:complexType>
</xs:element>
```

## 3.1.4.3 DeleteAllUserCredentials

This operation is used to delete the credentials of an SSS user for all the individual target applications in the specified SSS partition.

```
<wsdl:operation name="DeleteAllUserCredentials"
  xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/DeleteAllUserCredentials"
    message="tns3:ISecureStoreServiceApplication_DeleteAllUserCredentials_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/DeleteAllUserCredentialsResponse"
    message="tns3:ISecureStoreServiceApplication_DeleteAllUserCredentials_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/DeleteAllUserCredentialsArgumentNullExceptionFault"
    name="ArgumentNullExceptionFault"
    message="tns3:ISecureStoreServiceApplication_DeleteAllUserCredentials_ArgumentNullExceptionFaultMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/DeleteAllUserCredentialsSecureStoreServiceFault"
    name="SecureStoreServiceFault"
    message="tns3:ISecureStoreServiceApplication_DeleteAllUserCredentials_SecureStoreServiceFault"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/DeleteAllUserCredentialsArgumentExceptionFault"
```

```

name="ArgumentExceptionFault"
message="tns3:ISecureStoreServiceApplication_DeleteAllUserCredentials_ArgumentExceptionFault_
FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>

```

The protocol client sends an **ISecureStoreServiceApplication\_DeleteAllUserCredentials\_InputMessage** request message and the protocol server responds with an **ISecureStoreServiceApplication\_DeleteAllUserCredentials\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with one exact error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
SecureStoreServiceFault	The caller failed an implementation specific authorization check for deleting an SSS user's credentials for all the individual target applications.
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation specific validation of <i>rawPartitionId</i> failed <a href="#"><i>&lt;15&gt;</i></a> .
SecureStoreServiceFault	There are no credentials found for the SSS user specified by claim (2) parameter in the specified SSS partition.
SecureStoreServiceFault	The protocol server does not have a master secret key.

### 3.1.4.3.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_DeleteAllUserCredentials_InputMessage	The request WSDL message for the <b>DeleteAllUserCredentials</b> WSDL operation.
ISecureStoreServiceApplication_DeleteAllUserCredentials_OutputMessage	The response WSDL message for the <b>DeleteAllUserCredentials</b> WSDL operation.

#### 3.1.4.3.1.1

#### ISecureStoreServiceApplication\_DeleteAllUserCredentials\_InputMessage

The request WSDL message for the **DeleteAllUserCredentials** WSDL operation.

The SOAP action value is:

<http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/DeleteAllUserCredentials>

The SOAP body contains the **DeleteAllUserCredentials** element.

#### 3.1.4.3.1.2

#### **ISecureStoreServiceApplication\_DeleteAllUserCredentials\_OutputMessage**

The response WSDL message for the **DeleteAllUserCredentials** WSDL operation.

The SOAP body contains the **DeleteAllUserCredentialsResponse** element.

#### 3.1.4.3.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
DeleteAllUserCredentials	The input data for the <b>DeleteAllUserCredentials</b> WSDL operation.
DeleteAllUserCredentialsResponse	The result data for the <b>DeleteAllUserCredentials</b> WSDL operation.

##### 3.1.4.3.2.1 DeleteAllUserCredentials

The input data for the **DeleteAllUserCredentials** WSDL operation.

```
<xs:element name="DeleteAllUserCredentials" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>

</wsdl:operation>

```

The protocol client sends an **ISecureStoreServiceApplication\_DeleteApplication\_InputMessage** request message and the protocol server MUST respond with an **ISecureStoreServiceApplication\_DeleteApplication\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentException	The length of the <i>applicationId</i> parameter is 0 or greater than 256.
SecureStoreServiceFault	The caller is not an administrator of the specified target application.
SecureStoreServiceFault	The protocol server does not have a master secret key.
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation specific validation of <i>rawPartitionId</i> failed <a href="#"><u>&lt;16&gt;</u></a> .
SecureStoreServiceTargetApplicationNotFoundFault	The target application identified by the <i>applicationId</i> parameter does not exist in the specified SSS partition.

### 3.1.4.4.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_DeleteApplication_InputMessage	The request WSDL message for the <b>DeleteApplication</b> WSDL operation.
ISecureStoreServiceApplication_DeleteApplication_OutputMessage	The response WSDL message for the <b>DeleteApplication</b> WSDL operation.

#### 3.1.4.4.1.1 ISecureStoreServiceApplication\_DeleteApplication\_InputMessage

The request WSDL message for the **DeleteApplication** WSDL operation.

The SOAP action value is:

```
http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/DeleteApplication
```

The SOAP body contains the **DeleteApplication** element.

### **3.1.4.4.1.2 ISecureStoreServiceApplication\_DeleteApplication\_OutputMessage**

The response WSDL message for the **DeleteApplication** WSDL operation.

The SOAP body contains the **DeleteApplicationResponse** element.

### **3.1.4.4.2 Elements**

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
DeleteApplication	The input data for the <b>DeleteApplication</b> WSDL operation.
DeleteApplicationResponse	The result data for the <b>DeleteApplication</b> WSDL operation.

#### **3.1.4.4.2.1 DeleteApplication**

The input data for the **DeleteApplication** WSDL operation.

```
<xs:element name="DeleteApplication" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element minOccurs="0" name="applicationId" nillable="true" type="xs:string"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the target application to be deleted.

**applicationId:** The name of the target application. It MUST be between 1 and 256 characters, inclusive, in length.

#### **3.1.4.4.2.2 DeleteApplicationResponse**

The result data for the **DeleteApplication** WSDL operation.

```
<xs:element name="DeleteApplicationResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence/>
  </xs:complexType>
</xs:element>
```

        message="tns3:ISecureStoreServiceApplication_DeleteCredentials_ArgumentExceptionFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The protocol client sends an **ISecureStoreServiceApplication\_DeleteCredentials\_InputMessage** request message and the protocol server responds with an **ISecureStoreServiceApplication\_DeleteCredentials\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentException	The length of specified <i>applicationId</i> parameter is 0 or greater than 256.
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation specific validation of <i>rawPartitionId</i> failed.
SecureStoreServiceCredentialsNotFoundFault	There are no credentials found for the caller in the SSS store for the specified target application.
SecureStoreServiceTargetApplicationNotFoundFault	The target application identified by the specified <i>applicationId</i> parameter is a group target application.
SecureStoreServiceTargetApplicationNotFoundFault	The target application specified by the <i>applicationId</i> parameter cannot be found in the SSS store.

### 3.1.4.5.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_DeleteCredentials_InputMessage	The request WSDL message for the <b>DeleteCredentials</b> WSDL operation.
ISecureStoreServiceApplication_DeleteCredentials_OutputMessage	The response WSDL message for the <b>DeleteCredentials</b> WSDL operation.

#### 3.1.4.5.1.1 ISecureStoreServiceApplication\_DeleteCredentials\_InputMessage

The request WSDL message for the **DeleteCredentials** WSDL operation.

The SOAP action value is:

```
http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/DeleteCredentials
```

The SOAP body contains the **DeleteCredentials** element.

#### 3.1.4.5.1.2 ISecureStoreServiceApplication\_DeleteCredentials\_OutputMessage

The response WSDL message for the **DeleteCredentials** WSDL operation.

The SOAP body contains the **DeleteCredentialsResponse** element.

### 3.1.4.5.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
DeleteCredentials	The input data for the <b>DeleteCredentials</b> WSDL operation.
DeleteCredentialsResponse	The result data for the <b>DeleteCredentials</b> WSDL operation.

#### 3.1.4.5.2.1 DeleteCredentials

The input data for the **DeleteCredentials** WSDL operation.

```
<xs:element name="DeleteCredentials" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element minOccurs="0" name="applicationId" nillable="true" type="xs:string"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the target application.

**applicationId:** The name of the target application. It MUST be between 1 and 256 characters, inclusive, in length.

#### 3.1.4.5.2.2 DeleteCredentialsResponse

The result data for the **DeleteCredentials** WSDL operation.

```
<xs:element name="DeleteCredentialsResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence/>
  </xs:complexType>
</xs:element>
```

    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The protocol client sends an **ISecureStoreServiceApplication\_DeleteUserCredentials\_InputMessage** request message and

the protocol server responds with an **ISecureStoreServiceApplication\_DeleteUserCredentials\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentException	The length of specified <i>applicationId</i> parameter is 0 or greater than 256.
SecureStoreServiceFault	The caller is not an administrator of the specified target application.
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation specific validation of <i>rawPartitionId</i> failed <a href="#"><u>&lt;17&gt;</u></a> .
SecureStoreServiceCredentialsNotFoundFault	The target application identified by the specified <i>applicationId</i> parameter is a group target application.
SecureStoreServiceCredentialsNotFoundFault	There are no credentials found for the SSS user specified by claim (2) parameter in the SSS store for the specified target application.
SecureStoreServiceFault	The protocol server does not have a master secret key.
SecureStoreServiceTargetApplicationNotFoundFault	The target application specified by the <i>applicationId</i> parameter cannot be found in the SSS store.

### 3.1.4.6.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_DeleteUserCredentials_InputMessage	The request WSDL message for the <b>DeleteUserCredentials</b> WSDL operation.
ISecureStoreServiceApplication_DeleteUserCredentials_OutputMessage	The response WSDL message for the <b>DeleteUserCredentials</b> WSDL operation.

#### 3.1.4.6.1.1 ISecureStoreServiceApplication\_DeleteUserCredentials\_InputMessage

The request WSDL message for the **DeleteUserCredentials** WSDL operation.

The SOAP action value is:

`http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/DeleteUserCredentials`

The SOAP body contains the **DeleteUserCredentials** element.

#### 3.1.4.6.1.2

#### **ISecureStoreServiceApplication\_DeleteUserCredentials\_OutputMessage**

The response WSDL message for the **DeleteUserCredentials** WSDL operation.

The SOAP body contains the **DeleteUserCredentialsResponse** element.

#### 3.1.4.6.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
DeleteUserCredentials	The input data for the <b>DeleteUserCredentials</b> WSDL operation.
DeleteUserCredentialsResponse	The result data for the <b>DeleteUserCredentials</b> WSDL operation.

##### 3.1.4.6.2.1 DeleteUserCredentials

The input data for the **DeleteUserCredentials** WSDL operation.

```
<xs:element name="DeleteUserCredentials" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element minOccurs="0" name="applicationId" nillable="true" type="xs:string"/>
      <xs:element xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Serve
r" minOccurs="0" name="claim" nillable="true" type="tns1:SecureStoreServiceClaim"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the target application.

**applicationId:** The name of the target application. It MUST be between 1 and 256 characters, inclusive, in length.

**claim:** The identity claim (2) for the SSS user whose credentials are to be deleted.

##### 3.1.4.6.2.2 DeleteUserCredentialsResponse

The result data for the **DeleteUserCredentials** WSDL operation.

```
<xs:element name="DeleteUserCredentialsResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence/>
  </xs:complexType>
</xs:element>
```

## **3.1.4.7 GetApplication**

This operation is used to retrieve target application for the specified target application name in the specified SSS partition. The caller MUST be an administrator of the specified target application.

```
<wsdl:operation name="GetApplication" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplication"
    message="tns3:ISecureStoreServiceApplication_GetApplication_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplicationResponse"
    message="tns3:ISecureStoreServiceApplication_GetApplication_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplicationSecureStoreServiceFaultFault"
    name="SecureStoreServiceFaultFault"
    message="tns3:ISecureStoreServiceApplication_GetApplication_SecureStoreServiceFaultFault_FaultMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplicationArgumentNullExceptionFault"
    name="ArgumentNullExceptionFault"
    message="tns3:ISecureStoreServiceApplication_GetApplication_ArgumentNullExceptionFault_FaultMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplicationSecureStoreServiceTargetApplicationNotFoundFaultFault"
    name="SecureStoreServiceTargetApplicationNotFoundFaultFault"
    message="tns3:ISecureStoreServiceApplication_GetApplication_SecureStoreServiceTargetApplicationNotFoundFaultFault_FaultMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplicationArgumentExceptionFault"
    name="ArgumentExceptionFault"
    message="tns3:ISecureStoreServiceApplication_GetApplication_ArgumentExceptionFault_FaultMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The protocol client sends an **ISecureStoreServiceApplication\_GetApplication\_InputMessage** request message and the protocol server MUST respond with an **ISecureStoreServiceApplication\_GetApplication\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentException	The length of the <i>applicationId</i> parameter is 0 or greater than 256.
SecureStoreServiceFault	The caller is not an administrator of the specified target application.
SecureStoreServiceFault	The protocol server does not have a master secret key.
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation specific validation of <i>rawPartitionId</i> failed< <a href="#">18</a> >.
SecureStoreServiceTargetApplicationNotFoundFault	The target application specified by the <i>applicationId</i> parameter cannot be found in the SSS store.

### 3.1.4.7.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_GetApplication_InputMessage	The request WSDL message for the <b>GetApplication</b> WSDL operation.
ISecureStoreServiceApplication_GetApplication_OutputMessage	The response WSDL message for the <b>GetApplication</b> WSDL operation.

#### 3.1.4.7.1.1 ISecureStoreServiceApplication\_GetApplication\_InputMessage

The request WSDL message for the **GetApplication** WSDL operation.

The SOAP action value is:

```
http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplication
```

The SOAP body contains the **GetApplication** element.

#### 3.1.4.7.1.2 ISecureStoreServiceApplication\_GetApplication\_OutputMessage

The response WSDL message for the **GetApplication** WSDL operation.

The SOAP body contains the **GetApplicationResponse** element.

### 3.1.4.7.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
GetApplication	The input data for the <b>GetApplication</b> WSDL operation.
GetApplicationResponse	The result data for the <b>GetApplication</b> WSDL operation.

#### 3.1.4.7.2.1 GetApplication

The input data for the **GetApplication** WSDL operation.

```
<xs:element name="GetApplication" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element minOccurs="0" name="applicationId" nillable="true" type="xs:string"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the target application.

**applicationId:** The name of the target application. It MUST be between 1 and 256 characters, inclusive, in length.

#### 3.1.4.7.2.2 GetApplicationResponse

The result data for the **GetApplication** WSDL operation.

```
<xs:element name="GetApplicationResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Service" minOccurs="0" name="GetApplicationResult" nillable="true" type="tns1:TargetApplication"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**GetApplicationResult:** target application information for specified **applicationId** parameter in the specified SSS partition.

### 3.1.4.7.3 Complex Types

None.

### 3.1.4.7.4 Simple Types

</wsdl:operation>
```

The protocol client sends an  
**ISecureStoreServiceApplication\_GetApplicationAdministratorClaims\_InputMessage**

request message and the protocol server responds with an **ISecureStoreServiceApplication\_GetApplicationAdministratorClaims\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentException	The length of the specified <i>applicationId</i> parameter is 0 or greater than 256.
SecureStoreServiceFault	The protocol server does not have a master secret key.
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation specific validation of <i>rawPartitionId</i> failed <a href="#">&lt;19&gt;</a> .
SecureStoreServiceFault	The caller is not an administrator of the specified target application.

### 3.1.4.8.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_GetApplicationAdministratorClaims_InputMessage	The request WSDL message for the <b>GetApplicationAdministratorClaims</b> WSDL operation.
ISecureStoreServiceApplication_GetApplicationAdministratorClaims_OutputMessage	The response WSDL message for the <b>GetApplicationAdministratorClaims</b> WSDL operation.

#### 3.1.4.8.1.1

#### **ISecureStoreServiceApplication\_GetApplicationAdministratorClaims\_InputMessage**

The request WSDL message for the **GetApplicationAdministratorClaims** WSDL operation.

The SOAP action value is:

`http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplicationAdministratorClaims`

The SOAP body contains the **GetApplicationAdministratorClaims** element.

#### 3.1.4.8.1.2

#### **ISecureStoreServiceApplication\_GetApplicationAdministratorClaims\_OutputMessage**

The response WSDL message for the **GetApplicationAdministratorClaims** WSDL operation.

The SOAP body contains the **GetApplicationAdministratorClaimsResponse** element.

### 3.1.4.8.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
GetApplicationAdministratorClaims	The input data for the <b>GetApplicationAdministratorClaims</b> WSDL operation.
GetApplicationAdministratorClaimsResponse	The result data for the <b>GetApplicationAdministratorClaims</b> WSDL operation.

#### 3.1.4.8.2.1 GetApplicationAdministratorClaims

The input data for the **GetApplicationAdministratorClaims** WSDL operation.

```
<xs:element name="GetApplicationAdministratorClaims"
  xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" 
        minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
        <xs:element minOccurs="0" name="applicationId" nillable="true" type="xs:string"/>
      </xs:sequence>
    </xs:complexType>
  </xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the target application.

**applicationId:** The name of the target application. It MUST be between 1 and 256 characters, inclusive, in length.

#### 3.1.4.8.2.2 GetApplicationAdministratorClaimsResponse

The result data for the **GetApplicationAdministratorClaims** WSDL operation.

```
<xs:element name="GetApplicationAdministratorClaimsResponse"
  xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element
        xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Serve
        r" minOccurs="0" name="GetApplicationAdministratorClaimsResult" nillable="true"
        type="tns1:ArrayOfSecureStoreServiceClaim"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**GetApplicationAdministratorClaimsResult:** the element contains claims of administrators of the specified target application on the specified SSS partition. If the **target application** for the specified **applicationId** does not exist on the specified **SSS partition**, the result contains 0 items.

### **3.1.4.8.3 Complex Types**

None.

### **3.1.4.8.4 Simple Types**

### **3.1.4.8.5 Attributes**

None.

### **3.1.4.8.6 Groups**

None.

### **3.1.4.8.7 Attribute Groups**

None.

## **3.1.4.9 GetApplicationClaims**

This operation is used to retrieve the set of claims (2) that represent the SSS users that are administrators, group members and SSS users that can redeem an SSS ticket for the specified target application in the specified SSS partition. The caller MUST be an administrator of the specified target application.

Upon successful execution, this protocol server MUST return three collections.

The first collection MUST contain the claims (2) that represent the group of SSS users who are administrators of the specified target application.

The second collection MUST contain the claims (2) of the members of the group target application if the specified target application is a group target application. If the specified target application is not a group target application, the collection MUST have zero items.

The third collection MUST contain the claims (2) of who can redeem an SSS ticket for the specified target application. If the target application type is not IndividualWithTicketing or GroupWithTicketing, the collection MUST have zero items.

```
<wsdl:operation name="GetApplicationClaims" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplicationClaims"
    message="tns3:ISecureStoreServiceApplication_GetApplicationClaims_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplicationClaimsResponse"
    message="tns3:ISecureStoreServiceApplication_GetApplicationClaims_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplicationClaimsSecureStoreServiceFaultFault"
    name="SecureStoreServiceFaultFault"
    message="tns3:ISecureStoreServiceApplication_GetApplicationClaims_SecureStoreServiceFaultFault_Message" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
```

```

<wsdl:fault
wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStores
erviceApplication/GetApplicationClaimsArgumentNullExceptionFault"
name="ArgumentNullExceptionFault"
message="tns3:ISecureStoreServiceApplication_GetApplicationClaims_ArgumentNullExceptionFault_
FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
<wsdl:fault

tMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>

```

The protocol client sends an **ISecureStoreServiceApplication\_GetApplicationClaims\_InputMessage** request message and the protocol server responds with an **ISecureStoreServiceApplication\_GetApplicationClaims\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentException	The length of the specified <b>applicationId</b> parameter is 0 or greater than 256.
SecureStoreServiceFault	The protocol server does not have a master secret key.
SecureStoreServiceFault	The specified <b>rawPartitionId</b> parameter is NULL or an implementation-specific validation of <b>rawPartitionId</b> failed.
SecureStoreServiceFault	The caller is not an administrator of the specified target application.
SecureStoreServiceTargetApplicationNotFoundFault	The target application specified by the <b>applicationId</b> parameter cannot be found in the SSS store.
ArgumentNullException	The specified <b>applicationId</b> parameter is NULL.

### 3.1.4.9.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_GetApplicationClaims_InputMessage	The request WSDL message for the <b>GetApplicationClaims</b> WSDL operation.
ISecureStoreServiceApplication_GetApplicationClaims_OutputMessage	The response WSDL message for the <b>GetApplicationClaims</b> WSDL operation.

### 3.1.4.9.1.1 ISecureStoreServiceApplication\_GetApplicationClaims\_InputMessage

The request WSDL message for the **GetApplicationClaims** WSDL operation.

The SOAP action value is:

```
http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplicationClaims
```

The SOAP body contains the **GetApplicationClaims** element.

### 3.1.4.9.1.2

### ISecureStoreServiceApplication\_GetApplicationClaims\_OutputMessage

The response WSDL message for the **GetApplicationClaims** WSDL operation.

The SOAP body contains the **GetApplicationClaimsResponse** element.

### 3.1.4.9.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
GetApplicationClaims	The input data for the <b>GetApplicationClaims</b> WSDL operation.
GetApplicationClaimsResponse	The result data for the <b>GetApplicationClaims</b> WSDL operation.

### 3.1.4.9.2.1 GetApplicationClaims

The input data for the **GetApplicationClaims** WSDL operation.

```
<xs:element name="GetApplicationClaims" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element minOccurs="0" name="applicationId" nullable="true" type="xs:string"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the target application.

**applicationId:** The name of the target application. It MUST be between 1 and 256 characters, inclusive, in length.

### 3.1.4.9.2.2 GetApplicationClaimsResponse

The result data for the **GetApplicationClaims** WSDL operation.

```
<xs:element name="GetApplicationClaimsResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element
        xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Serve
        r" minOccurs="0" name="GetApplicationClaimsResult" nillable="true"
        type="tns1:TargetApplicationClaims"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**GetApplicationClaimsResult:** set of claims (2) that represent the SSS users that are administrators, group members or SSS users that can redeem an SSS ticket for the specified target application in the specified SSS partition.

### 3.1.4.9.3 Complex Types

## 3.1.4.10 GetApplicationFields

This operation is used to retrieve all the target application fields for the specified target application in the SSS partition. The caller MUST be an administrator of the specified target application.

```
<wsdl:operation name="GetApplicationFields" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStores
    erviceApplication/GetApplicationFields"
    message="tns3:ISecureStoreServiceApplication_GetApplicationFields_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStores
```

```

        serviceApplication/GetApplicationFieldsResponse"
        message="tns3:ISecureStoreServiceApplication_GetApplicationFields_OutputMessage"
        xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
        <wsdl:fault
        wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreserviceApplication/GetApplicationFieldsSecureStoreServiceFaultFault"
        name="SecureStoreServiceFaultFault"
        message="tns3:ISecureStoreServiceApplication_GetApplicationFields_SecureStoreServiceFaultFaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
        <wsdl:fault
        wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreserviceApplication/GetApplicationFieldsArgumentNullExceptionFault"
        name="ArgumentNullExceptionFault"
        message="tns3:ISecureStoreServiceApplication_GetApplicationFields_ArgumentNullExceptionFaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
        <wsdl:fault
        wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreserviceApplication/GetApplicationFieldsArgumentExceptionFault" name="ArgumentExceptionFault"
        message="tns3:ISecureStoreServiceApplication_GetApplicationFields_ArgumentExceptionFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
        <wsdl:fault
        wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreserviceApplication/GetApplicationFieldsSecureStoreServiceTargetApplicationNotFoundFaultFault"

        message="tns3:ISecureStoreServiceApplication_GetApplicationFields_SecureStoreServiceTargetApplicationNotFoundFaultFaultMessage"
        xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
    </wsdl:operation>

```

The protocol client sends an **ISecureStoreServiceApplication\_GetApplicationFields\_InputMessage** request message and the protocol server MUST respond with an **ISecureStoreServiceApplication\_GetApplicationFields\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentException	The length of the specified <i>applicationId</i> parameter is less than 1 or greater than 256.
ArgumentNullException	While performing implementation-specific operations, the protocol server encounters a NULL value for an argument that does not accept NULL values.
SecureStoreServiceFault	The caller is not an administrator of the specified target application.
SecureStoreServiceFault	The protocol server does not have a master secret key.
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation specific validation of <i>rawPartitionId</i> failed<20>.
SecureStoreServiceTargetApplicationNotFoundFault	The target application specified by the <i>applicationId</i>

Error Complex Type	Condition
	parameter cannot be found in the SSS store.

### 3.1.4.10.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_GetApplicationFields_InputMessage	The request WSDL message for the <b>GetApplicationFields</b> WSDL operation.
ISecureStoreServiceApplication_GetApplicationFields_OutputMessage	The response WSDL message for the <b>GetApplicationFields</b> WSDL operation.

#### 3.1.4.10.1.1 ISecureStoreServiceApplication\_GetApplicationFields\_InputMessage

The request WSDL message for the **GetApplicationFields** WSDL operation.

The SOAP action value is:

```
http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplicationFields
```

The SOAP body contains the **GetApplicationFields** element.

#### 3.1.4.10.1.2

#### ISecureStoreServiceApplication\_GetApplicationFields\_OutputMessage

The response WSDL message for the **GetApplicationFields** WSDL operation.

The SOAP body contains the **GetApplicationFieldsResponse** element.

### 3.1.4.10.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
GetApplicationFields	The input data for the <b>GetApplicationFields</b> WSDL operation.
GetApplicationFieldsResponse	The result data for the <b>GetApplicationFields</b> WSDL operation.

#### 3.1.4.10.2.1 GetApplicationFields

The input data for the **GetApplicationFields** WSDL operation.

```
<xss:element name="GetApplicationFields" xmlns:xss="http://www.w3.org/2001/XMLSchema">
  <xss:complexType>
```

```

<xs:sequence>
    <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
    <xs:element minOccurs="0" name="applicationId" nillable="true" type="xs:string"/>
</xs:sequence>
</xs:complexType>
</xs:element>

```

**rawPartitionId:** A GUID that identifies the SSS partition of the target application.

**applicationId:** The name of the target application. It MUST be between 1 and 256 characters, inclusive, in length.

### 3.1.4.10.2.2 GetApplicationFieldsResponse

The result data for the **GetApplicationFields** WSDL operation.

```

<xs:element name="GetApplicationFieldsResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
    <xs:complexType>
        <xs:sequence>
            <xs:element
                xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Service"
                minOccurs="0" name="GetApplicationFieldsResult" nillable="true"
                type="tns1:ArrayOfTargetApplicationField"/>
        </xs:sequence>
    </xs:complexType>
</xs:element>

```

**GetApplicationFieldsResult:** The list of target application fields for the specified target application.

</wsdl:operation>
```

The protocol client sends an **ISecureStoreServiceApplication\_GetApplicationGroupClaims\_InputMessage** request message and the protocol server responds with an **ISecureStoreServiceApplication\_GetApplicationGroupClaims\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentException	The length of the specified <i>applicationId</i> parameter is 0 or greater than 256.
SecureStoreServiceFault	The protocol server does not have a master secret key.

Error Complex Type	Condition
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation specific validation of <i>rawPartitionId</i> failed<21>.
SecureStoreServiceFault	The caller is not an administrator of the specified target application.
SecureStoreServiceTargetApplicationNotFoundFault	The target application specified by the <i>applicationId</i> parameter cannot be found in the SSS store.

### 3.1.4.11.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_GetApplicationGroupClaims_InputMessage	The request WSDL message for the <b>GetApplicationGroupClaims</b> WSDL operation.
ISecureStoreServiceApplication_GetApplicationGroupClaims_OutputMessage	The response WSDL message for the <b>GetApplicationGroupClaims</b> WSDL operation.

#### 3.1.4.11.1.1

##### ISecureStoreServiceApplication\_GetApplicationGroupClaims\_InputMessage

The request WSDL message for the **GetApplicationGroupClaims** WSDL operation.

The SOAP action value is:

```
http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplicationGroupClaims
```

The SOAP body contains the **GetApplicationGroupClaims** element.

#### 3.1.4.11.1.2

##### ISecureStoreServiceApplication\_GetApplicationGroupClaims\_OutputMessage

The response WSDL message for the **GetApplicationGroupClaims** WSDL operation.

The SOAP body contains the **GetApplicationGroupClaimsResponse** element.

### 3.1.4.11.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
GetApplicationGroupClaims	The input data for the <b>GetApplicationGroupClaims</b> WSDL operation.
GetApplicationGroupClaimsResponse	The result data for the <b>GetApplicationGroupClaims</b> WSDL operation.

### 3.1.4.11.2.1 GetApplicationGroupClaims

The input data for the **GetApplicationGroupClaims** WSDL operation.

```
<xs:element name="GetApplicationGroupClaims" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element minOccurs="0" name="applicationId" nillable="true" type="xs:string"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the target application.

**applicationId:** The name of the target application. It MUST be between 1 and 256 characters, inclusive, in length.

### 3.1.4.11.2.2 GetApplicationGroupClaimsResponse

The result data for the **GetApplicationGroupClaims** WSDL operation.

```
<xs:element name="GetApplicationGroupClaimsResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Service" minOccurs="0" name="GetApplicationGroupClaimsResult" nillable="true" type="tns1:ArrayOfSecureStoreServiceClaim"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**GetApplicationGroupClaimsResult:** the element contains set of claims (2) that represent the group of SSS users that are group members for a specified group target application in the specified SSS partition.

If the specified target application is not a group target application the set MUST have 0 items.

### 3.1.4.11.3 Complex Types

None.

#### **3.1.4.11.4 Simple Types**

None.

#### **3.1.4.11.5 Attributes**

None.

#### **3.1.4.11.6 Groups**

None.

#### **3.1.4.11.7 Attribute Groups**

None.

### **3.1.4.12 GetApplications**

This operation is used to retrieve a list of all the target applications in the specified SSS partition where the caller is an administrator of the target applications. If the caller has implementation specific authorization to retrieve all the target applications in the specified SSS partition then all the target applications in the specified SSS partition are returned.

```
<wsdl:operation name="GetApplications" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplications"
    message="tns3:ISecureStoreServiceApplication_GetApplications_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplicationsResponse"
    message="tns3:ISecureStoreServiceApplication_GetApplications_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplicationsSecureStoreServiceFaultFault"
    name="SecureStoreServiceFaultFault"
    message="tns3:ISecureStoreServiceApplication_GetApplications_SecureStoreServiceFaultFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The protocol client sends an **ISecureStoreServiceApplication\_GetApplications\_InputMessage** request message and the protocol server MUST respond with an **ISecureStoreServiceApplication\_GetApplications\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
SecureStoreServiceFault	An implementation specific authorization check for retrieving all the target applications failed.

Error Complex Type	Condition
SecureStoreServiceFault	The protocol server does not have a master secret key.
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation specific validation of <i>rawPartitionId</i> failed<22>.

### 3.1.4.12.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_GetApplications_InputMessage	The request WSDL message for the <b>GetApplications</b> WSDL operation.
ISecureStoreServiceApplication_GetApplications_OutputMessage	The response WSDL message for the <b>GetApplications</b> WSDL operation.

#### 3.1.4.12.1.1 ISecureStoreServiceApplication\_GetApplications\_InputMessage

The request WSDL message for the **GetApplications** WSDL operation.

The SOAP action value is:

```
http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplications
```

The SOAP body contains the **GetApplications** element.

#### 3.1.4.12.1.2 ISecureStoreServiceApplication\_GetApplications\_OutputMessage

The response WSDL message for the **GetApplications** WSDL operation.

The SOAP body contains the **GetApplicationsResponse** element.

### 3.1.4.12.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
GetApplications	The input data for the <b>GetApplications</b> WSDL operation.
GetApplicationsResponse	The result data for the <b>GetApplications</b> WSDL operation.

#### 3.1.4.12.2.1 GetApplications

The input data for the **GetApplications** WSDL operation.

```
<xss:element name="GetApplications" xmlns:xss="http://www.w3.org/2001/XMLSchema">
  <xss:complexType>
```

```
<xs:sequence>
  <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
</xs:sequence>
</xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the target applications.

#### 3.1.4.12.2.2 GetApplicationsResponse

The result data for the **GetApplications** WSDL operation.

```
<xs:element name="GetApplicationsResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Service" minOccurs="0" name="GetApplicationsResult" nillable="true" type="tns1:ArrayOfTargetApplication"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**GetApplicationsResult:** The list of target applications in the specified SSS partition.

#### 3.1.4.12.3 Complex Types

None.

#### 3.1.4.12.4 Simple Types

None.

#### 3.1.4.12.5 Attributes

None.

#### 3.1.4.12.6 Groups

None.

#### 3.1.4.12.7 Attribute Groups

None.

### 3.1.4.13 GetApplicationTicketRedeemerClaims

This operation is used to retrieve the set of claims (2) that represent the group of SSS users that can redeem an SSS ticket for a specified target application in the specified SSS partition. If the target application type is not IndividualWithTicketing or GroupWithTicketing, the set MUST have 0 items. The caller MUST be an administrator of the specified target application.

```

<wsdl:operation name="GetApplicationTicketRedeemerClaims"
  xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplicationTicketRedeemerClaims"
    message="tns3:ISecureStoreServiceApplication_GetApplicationTicketRedeemerClaims_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplicationTicketRedeemerClaimsResponse"
    message="tns3:ISecureStoreServiceApplication_GetApplicationTicketRedeemerClaims_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplicationTicketRedeemerClaimsArgumentNullExceptionFault"
    name="ArgumentNullException"
    message="tns3:ISecureStoreServiceApplication_GetApplicationTicketRedeemerClaims_ArgumentNullExceptionFaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplicationTicketRedeemerClaimsSecureStoreServiceFault"
    name="SecureStoreServiceFault"
    message="tns3:ISecureStoreServiceApplication_GetApplicationTicketRedeemerClaims_SecureStoreServiceFaultFaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplicationTicketRedeemerClaimsSecureStoreServiceTargetApplicationNotFoundFault"
    name="SecureStoreServiceTargetApplicationNotFoundFault"
    message="tns3:ISecureStoreServiceApplication_GetApplicationTicketRedeemerClaims_SecureStoreServiceTargetApplicationNotFoundFaultFaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetApplicationTicketRedeemerClaimsArgumentExceptionFault"
    name="ArgumentException"
    message="tns3:ISecureStoreServiceApplication_GetApplicationTicketRedeemerClaims_ArgumentExceptionFaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The protocol client sends an **ISecureStoreServiceApplication\_GetApplicationTicketRedeemerClaims\_InputMessage** request message and the protocol server responds with an **ISecureStoreServiceApplication\_GetApplicationTicketRedeemerClaims\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentException	The length of the specified <i>applicationId</i> parameter is 0 or greater than 256.
SecureStoreServiceFault	The protocol server does not have a master secret key.
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation specific validation of <i>rawPartitionId</i> failed <a href="#">2.2.2.1</a> .
SecureStoreServiceFault	The caller is not an administrator of the specified target application.

### 3.1.4.13.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_GetApplicationTicketRedeemerClaims_I nputMessage	The request WSDL message for the <b>GetApplicationTicketRedeemer Claims</b> WSDL operation.
ISecureStoreServiceApplication_GetApplicationTicketRedeemerClaims_O utputMessage	The response WSDL message for the <b>GetApplicationTicketRedeemer Claims</b> WSDL operation.

#### 3.1.4.13.1.1

#### ISecureStoreServiceApplication\_GetApplicationTicketRedeemerClaims\_InputMes sage

The request WSDL message for the **GetApplicationTicketRedeemerClaims** WSDL operation.

The SOAP action value is:

`http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplica  
tion/GetApplicationTicketRedeemerClaims`

The SOAP body contains the **GetApplicationTicketRedeemerClaims** element.

#### 3.1.4.13.1.2

#### ISecureStoreServiceApplication\_GetApplicationTicketRedeemerClaims\_OutputMe ssage

The response WSDL message for the **GetApplicationTicketRedeemerClaims** WSDL operation.

The SOAP body contains the **GetApplicationTicketRedeemerClaimsResponse** element.

### 3.1.4.13.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
GetApplicationTicketRedeemerClaims	The input data for the <b>GetApplicationTicketRedeemerClaims</b> WSDL operation.
GetApplicationTicketRedeemerClaimsResponse	The result data for the <b>GetApplicationTicketRedeemerClaims</b> WSDL operation.

### **3.1.4.13.2.1 GetApplicationTicketRedeemerClaims**

The input data for the **GetApplicationTicketRedeemerClaims** WSDL operation.

```
<xs:element name="GetApplicationTicketRedeemerClaims"
  xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" 
        minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element minOccurs="0" name="applicationId" nillable="true" type="xs:string"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the target application.

**applicationId:** The name of the target application. It MUST be between 1 and 256 characters, inclusive, in length.

### **3.1.4.13.2.2 GetApplicationTicketRedeemerClaimsResponse**

The result data for the **GetApplicationTicketRedeemerClaims** WSDL operation.

```
<xs:element name="GetApplicationTicketRedeemerClaimsResponse"
  xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element
        xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Service"
        minOccurs="0" name="GetApplicationTicketRedeemerClaimsResult" nillable="true"
        type="tns1:ArrayOfSecureStoreServiceClaim"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**GetApplicationTicketRedeemerClaimsResult:** the element contains set of claims (2) that represent the group of SSS users that can redeem an SSS ticket for a specified target application in the specified SSS partition.

If the target application type is not IndividualWithTicketing or GroupWithTicketing, the set MUST have 0 items.

### **3.1.4.13.3 Complex Types**

None.

### 3.1.4.13.6 Groups

None.

### 3.1.4.13.7 Attribute Groups

None.

## 3.1.4.14 GetChangeMasterSecretKeyToken

This operation is used to retrieve an implementation-specific string used as a token for changing the master secret key.

```
<wsdl:operation name="GetChangeMasterSecretKeyToken"
  xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetChangeMasterSecretKeyToken"
    message="tns3:ISecureStoreServiceApplication_GetChangeMasterSecretKeyToken_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetChangeMasterSecretKeyTokenResponse"
    message="tns3:ISecureStoreServiceApplication_GetChangeMasterSecretKeyToken_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The protocol client sends an **ISecureStoreServiceApplication\_GetChangeMasterSecretKeyToken\_InputMessage** request message and the protocol server responds with an **ISecureStoreServiceApplication\_GetChangeMasterSecretKeyToken\_OutputMessage** response message.

- The protocol server MUST ignore this request if the caller fails an implementation-specific authorization check for changing the master secret key.
- The protocol server MUST invalidate the token after an implementation-specific time period.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
Exception	The token cannot be reserved because of an implementation-specific reason.
Exception	The token cannot be reserved because a previously reserved token is still valid. <a href="#">24</a>

### 3.1.4.14.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_GetChangeMasterSecretKeyToken_InputMessage	The request WSDL message for the <b>GetChangeMasterSecretKeyToken</b> WSDL operation.
ISecureStoreServiceApplication_GetChangeMasterSecretKeyToken_OutputMessage	The response WSDL message for the <b>GetChangeMasterSecretKeyToken</b> WSDL operation.

#### 3.1.4.14.1.1

##### **ISecureStoreServiceApplication\_GetChangeMasterSecretKeyToken\_InputMessage**

The request WSDL message for the **GetChangeMasterSecretKeyToken** WSDL operation.

The SOAP action value is:

```
http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetChangeMasterSecretKeyToken
```

The SOAP body contains the **GetChangeMasterSecretKeyToken** element.

#### 3.1.4.14.1.2

##### **ISecureStoreServiceApplication\_GetChangeMasterSecretKeyToken\_OutputMessage**

The response WSDL message for the **GetChangeMasterSecretKeyToken** WSDL operation.

The SOAP body contains the **GetChangeMasterSecretKeyTokenResponse** element.

#### 3.1.4.14.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
GetChangeMasterSecretKeyToken	The input data for the <b>GetChangeMasterSecretKeyToken</b> WSDL operation.
GetChangeMasterSecretKeyTokenResponse	The result data for the <b>GetChangeMasterSecretKeyToken</b> WSDL operation.

#### 3.1.4.14.2.1 GetChangeMasterSecretKeyToken

The input data for the **GetChangeMasterSecretKeyToken** WSDL operation.

```
<xss:element name="GetChangeMasterSecretKeyToken" xmlns:xss="http://www.w3.org/2001/XMLSchema">
  <xss:complexType>
    <xss:sequence/>
  </xss:complexType>
```

```
</xs:element>
```

### 3.1.4.14.2.2 GetChangeMasterSecretKeyTokenResponse

The result data for the **GetChangeMasterSecretKeyToken** WSDL operation.

```
<xs:element name="GetChangeMasterSecretKeyTokenResponse"
  xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" name="GetChangeMasterSecretKeyTokenResult" nillable="true"
        type="xs:string"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**GetChangeMasterSecretKeyTokenResult:** A token that can be used to change the master secret key.

### 3.1.4.14.3 Complex Types

None.

### 3.1.4.14.7 Attribute Groups

None.

## 3.1.4.15 GetCredentials

This operation is used to retrieve the credentials of the caller for the specified target application in the specified SSS partition, when the type of the specified target application is not **RestrictedIndividual** or **RestrictedGroup**.

```
<wsdl:operation name="GetCredentials" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreserviceApplication/GetCredentials"
    message="tns3:ISecureStoreServiceApplication_GetCredentials_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreserviceApplication/GetCredentialsResponse"
```

```

message="tns3:ISecureStoreServiceApplication_GetCredentials_OutputMessage"
xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
<wsdl:fault
wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetCredentialsArgumentNullExceptionFault" name="ArgumentNullExceptionFault"
message="tns3:ISecureStoreServiceApplication_GetCredentials_ArgumentNullExceptionFault_Message" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
<wsdl:fault
wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetCredentialsSecureStoreServiceFaultFault"
name="SecureStoreServiceFaultFault"
message="tns3:ISecureStoreServiceApplication_GetCredentials_SecureStoreServiceFaultFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
<wsdl:fault
wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetCredentialsSecureStoreServiceCredentialsNotFoundFaultFault"
name="SecureStoreServiceCredentialsNotFoundFaultFault"
message="tns3:ISecureStoreServiceApplication_GetCredentials_SecureStoreServiceCredentialsNotFoundFaultFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
<wsdl:fault
wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetCredentialsSecureStoreServiceTargetApplicationNotFoundFaultFault"
name="SecureStoreServiceTargetApplicationNotFoundFaultFault"
message="tns3:ISecureStoreServiceApplication_GetCredentials_SecureStoreServiceTargetApplicationNotFoundFaultFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
<wsdl:fault
wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetCredentialsArgumentExceptionFault" name="ArgumentExceptionFault"
message="tns3:ISecureStoreServiceApplication_GetCredentials_ArgumentExceptionFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The protocol client sends an **ISecureStoreServiceApplication\_GetCredentials\_InputMessage** request message and the protocol server responds with an **ISecureStoreServiceApplication\_GetCredentials\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentException	The length of the specified <b>applicationId</b> parameter is less than 1 or greater than 256.
SecureStoreServiceCredentialsNotFoundFault	The credentials are not found for the target application identified by the specified <b>applicationId</b> parameter.
SecureStoreServiceFault	The specified <b>rawPartitionId</b> parameter is NULL or an implementation-specific validation of <b>rawPartitionId</b> failed.
SecureStoreServiceFault	The protocol server does not have a master secret key.
SecureStoreServiceTargetApplicationNotFoundFault	The type of the specified target application in the specified SSS partition is either <b>RestrictedIndividual</b> or <b>RestrictedGroup</b> .

Error Complex Type	Condition
SecureStoreServiceTargetApplicationNotFoundFault	The target application specified by the <b>applicationId</b> parameter cannot be found in the SSS store.

### 3.1.4.15.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_GetCredentials_InputMessage	The request WSDL message for the <b>GetCredentials</b> WSDL operation.
ISecureStoreServiceApplication_GetCredentials_OutputMessage	The response WSDL message for the <b>GetCredentials</b> WSDL operation.

#### 3.1.4.15.1.1 ISecureStoreServiceApplication\_GetCredentials\_InputMessage

The request WSDL message for the **GetCredentials** WSDL operation.

The SOAP action value is:

```
http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetCredentials
```

The SOAP body contains the **GetCredentials** element.

#### 3.1.4.15.1.2 ISecureStoreServiceApplication\_GetCredentials\_OutputMessage

The response WSDL message for the **GetCredentials** WSDL operation.

The SOAP body contains the **GetCredentialsResponse** element.

### 3.1.4.15.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
GetCredentials	The input data for the <b>GetCredentials</b> WSDL operation.
GetCredentialsResponse	The result data for the <b>GetCredentials</b> WSDL operation.

#### 3.1.4.15.2.1 GetCredentials

The input data for the **GetCredentials** WSDL operation.

```
<xs:element name="GetCredentials" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
```

```
<xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/"  
minOccurs="0" name="rawPartitionId" type="tns2:guid"/>  
    <xs:element minOccurs="0" name="applicationId" nillable="true" type="xs:string"/>  
    </xs:sequence>  
</xs:complexType>  
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the target application.

**applicationId:** The name of the target application. It MUST be between 1 and 256 characters, inclusive, in length.

### 3.1.4.15.2.2 GetCredentialsResponse

The result data for the **GetCredentials** WSDL operation.

```
<xs:element name="GetCredentialsResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">  
    <xs:complexType>  
        <xs:sequence>  
            <xs:element  
                xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Serve  
r" minOccurs="0" name="GetCredentialsResult" nillable="true"  
                type="tns1:ArrayOfSerializableSecureStoreCredential"/>  
        </xs:sequence>  
    </xs:complexType>  
</xs:element>
```

**GetCredentialsResult:** A list of credentials of the caller for the specified target application in the specified SSS partition.

### 3.1.4.15.3 Complex Types

None.

### 3.1.4.15.4 Simple Types

None.

### 3.1.4.15.5 Attributes

None.

### 3.1.4.15.6 Groups

None.

### 3.1.4.15.7 Attribute Groups

None.

### 3.1.4.16 GetRestrictedCredentials

This operation is used to retrieve the credentials of the caller for the specified target application in the specified SSS partition, when the type of the specified target application is either **RestrictedIndividual** or **RestrictedGroup**.

```
<wsdl:operation name="GetRestrictedCredentials"
  xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input

</wsdl:operation>
```

The protocol client sends an **ISecureStoreServiceApplication\_GetRestrictedCredentials\_InputMessage** request message and the protocol server responds with an **ISecureStoreServiceApplication\_GetRestrictedCredentials\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section

[2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentException	The length of the specified <b>applicationId</b> parameter is 0 or greater than 256.
SecureStoreServiceCredentialsNotFoundFault	The credentials are not found for the target application identified by the specified <b>applicationId</b> parameter.
SecureStoreServiceFault	The specified <b>rawPartitionId</b> parameter is NULL or an implementation specific validation of <b>rawPartitionId</b> failed.
SecureStoreServiceFault	The protocol server does not have a master secret key.
SecureStoreServiceTargetApplicationNotFoundFault	The target application specified by the <b>applicationId</b> parameter cannot be found in the SSS store.

### 3.1.4.16.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_GetRestrictedCredentials_InputMessage	The request WSDL message for the <b>GetRestrictedCredentials</b> WSDL operation.
ISecureStoreServiceApplication_GetRestrictedCredentials_OutputMessage	The response WSDL message for the <b>GetRestrictedCredentials</b> WSDL operation.

#### 3.1.4.16.1.1

##### ISecureStoreServiceApplication\_GetRestrictedCredentials\_InputMessage

The request WSDL message for the **GetRestrictedCredentials** WSDL operation.

The SOAP action value is:

`http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetRestrictedCredentials`

The SOAP body contains the **GetRestrictedCredentials** element.

#### 3.1.4.16.1.2

##### ISecureStoreServiceApplication\_GetRestrictedCredentials\_OutputMessage

The response WSDL message for the **GetRestrictedCredentials** WSDL operation.

The SOAP body contains the **GetRestrictedCredentialsResponse** element.

### 3.1.4.16.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
GetRestrictedCredentials	The input data for the <b>GetRestrictedCredentials</b> WSDL operation.
GetRestrictedCredentialsResponse	The result data for the <b>GetRestrictedCredentials</b> WSDL operation.

#### 3.1.4.16.2.1 GetRestrictedCredentials

The input data for the **GetRestrictedCredentials** WSDL operation.

```
<xs:element name="GetRestrictedCredentials" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element minOccurs="0" name="applicationId" nillable="true" type="xs:string"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the target application.

**applicationId:** The name of the target application. It MUST be between 1 and 256 characters, inclusive, in length.

#### 3.1.4.16.2.2 GetRestrictedCredentialsResponse

The result data for the **GetRestrictedCredentials** WSDL operation.

```
<xs:element name="GetRestrictedCredentialsResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Service" minOccurs="0" name="GetRestrictedCredentialsResult" nillable="true" type="tns1:ArrayOfSerializableSecureStoreCredential"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**GetRestrictedCredentialsResult:** A list of credentials of the caller for the specified target application in the specified SSS partition.

### 3.1.4.16.3 Complex Types

    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The protocol client sends an **ISecureStoreServiceApplication\_GetUserApplication\_InputMessage** request message and the protocol server MUST respond with an **ISecureStoreServiceApplication\_GetUserApplication\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentException	The length of the <i>applicationId</i> parameter is 0 or greater than 256.
SecureStoreServiceFault	The protocol server does not have a master secret key.
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation specific validation of <i>rawPartitionId</i> failed <a href="#"><code>&lt;25&gt;</code></a> .
SecureStoreServiceTargetApplicationNotFoundFault	The target application identified by the <i>applicationId</i> parameter does not exist in the specified SSS partition.

### 3.1.4.17.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_GetUserApplication_InputMessage	The request WSDL message for the <b> GetUserApplication</b> WSDL operation.
ISecureStoreServiceApplication_GetUserApplication_OutputMessage	The response WSDL message for the <b> GetUserApplication</b> WSDL operation.

#### 3.1.4.17.1.1 ISecureStoreServiceApplication\_GetUserApplication\_InputMessage

The request WSDL message for the  **GetUserApplication** WSDL operation.

The SOAP action value is:

`http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetUserApplication`

The SOAP body contains the  **GetUserApplication** element.

#### 3.1.4.17.1.2 ISecureStoreServiceApplication\_GetUserApplication\_OutputMessage

The response WSDL message for the  **GetUserApplication** WSDL operation.

The SOAP body contains the  **GetUserApplicationResponse** element.

### 3.1.4.17.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
GetUserApplication	The input data for the <b> GetUserApplication</b> WSDL operation.
GetUserApplicationResponse	The result data for the <b> GetUserApplication</b> WSDL operation.

#### 3.1.4.17.2.1 GetUserApplication

The input data for the  **GetUserApplication** WSDL operation.

```
<xs:element name=" GetUserApplication" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element minOccurs="0" name="applicationId" nillable="true" type="xs:string"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the target application.

**applicationId:** The name of the target application. It MUST be between 1 and 256 characters, inclusive, in length.

#### 3.1.4.17.2.2 GetUserApplicationResponse

The result data for the  **GetUserApplication** WSDL operation.

```
<xs:element name=" GetUserApplicationResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Service" minOccurs="0" name=" GetUserApplicationResult" nillable="true" type="tns1:TargetApplication"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**GetUserApplicationResult:** target application information for specified **applicationId** parameter that can be accessed by the caller in the specified SSS partition.

### 3.1.4.17.3 Complex Types

None.

#### **3.1.4.17.4 Simple Types**

None.

```

```
</wsdl:operation>
```

The protocol client sends an **ISecureStoreServiceApplication\_GetUserApplicationFields\_InputMessage** request message and the protocol server MUST respond with an **ISecureStoreServiceApplication\_GetUserApplicationFields\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentException	The length of the specified <i>applicationId</i> parameter is 0 or greater than 256.
SecureStoreServiceFault	The protocol server does not have a master secret key.
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation specific validation of <i>rawPartitionId</i> failed <a href="#"><u>&lt;26&gt;</u></a> .
SecureStoreServiceTargetApplicationNotFoundFault	The target application identified by the <i>applicationId</i> parameter does not exist in the specified SSS partition.

### 3.1.4.18.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_GetUserApplicationFields_InputMessage	The request WSDL message for the <b> GetUserApplicationFields</b> WSDL operation.
ISecureStoreServiceApplication_GetUserApplicationFields_OutputMessage	The response WSDL message for the <b> GetUserApplicationFields</b> WSDL operation.

#### 3.1.4.18.1.1

#### **ISecureStoreServiceApplication\_GetUserApplicationFields\_InputMessage**

The request WSDL message for the  **GetUserApplicationFields** WSDL operation.

The SOAP action value is:

<http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/ GetUserApplicationFields>

The SOAP body contains the  **GetUserApplicationFields** element.

#### 3.1.4.18.1.2

#### **ISecureStoreServiceApplication\_GetUserApplicationFields\_OutputMessage**

The response WSDL message for the  **GetUserApplicationFields** WSDL operation.

The SOAP body contains the  **GetUserApplicationFieldsResponse** element.

#### 3.1.4.18.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
GetUserApplicationFields	The input data for the <b> GetUserApplicationFields</b> WSDL operation.
GetUserApplicationFieldsResponse	The result data for the <b> GetUserApplicationFields</b> WSDL operation.

##### 3.1.4.18.2.1 **GetUserApplicationFields**

The input data for the  **GetUserApplicationFields** WSDL operation.

```
<xs:element name=" GetUserApplicationFields" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element minOccurs="0" name="applicationId" nillable="true" type="xs:string"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the target application.

**applicationId:** The name of the target application. It MUST be between 1 and 256 characters, inclusive, in length.

##### 3.1.4.18.2.2 **GetUserApplicationFieldsResponse**

The result data for the  **GetUserApplicationFields** WSDL operation.

```
<xs:element name=" GetUserApplicationFieldsResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Service" minOccurs="0" name=" GetUserApplicationFieldsResult" nillable="true" type="tns1:ArrayOfTargetApplicationField"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

```
</xs:sequence>
</xs:complexType>
</xs:element>
```

**GetUserApplicationFieldsResult:** The list of target application fields for the specified target application that can be accessed by the caller.

## 3.1.4.19 GetUserApplications

This operation is used to retrieve the information for all the target applications that can be accessed by the caller in the specified SSS partition. The target applications that can be accessed by the caller MUST include all the group target applications in the specified SSS partition where the caller is a member of the group target application and all the individual target applications in the specified SSS partition.

```
<wsdl:operation name="GetUserApplications" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/ GetUserApplications"
    message="tns3:ISecureStoreServiceApplication_GetUserApplications_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/ GetUserApplicationsResponse"
    message="tns3:ISecureStoreServiceApplication_GetUserApplications_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/ GetUserApplicationsSecureStoreServiceFaultFault"
    name="SecureStoreServiceFaultFault"
    message="tns3:ISecureStoreServiceApplication_GetUserApplications_SecureStoreServiceFaultFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The protocol client sends an **ISecureStoreServiceApplication\_GetUserApplications\_InputMessage** request message and the protocol server MUST respond with an **ISecureStoreServiceApplication\_GetUserApplications\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
SecureStoreServiceFault	The protocol server does not have a master secret key.
SecureStoreServiceFault	The specified <b>rawPartitionId</b> parameter is NULL or an implementation specific validation of <b>rawPartitionId</b> failed.

### 3.1.4.19.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_GetUserApplications_InputMessage	The request WSDL message for the <b> GetUserApplications</b> WSDL operation.
ISecureStoreServiceApplication_GetUserApplications_OutputMessage	The response WSDL message for the <b> GetUserApplications</b> WSDL operation.

#### 3.1.4.19.1.1 ISecureStoreServiceApplication\_GetUserApplications\_InputMessage

The request WSDL message for the  **GetUserApplications** WSDL operation.

The SOAP action value is:

`http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/ GetUserApplications`

The SOAP body contains the  **GetUserApplications** element.

#### 3.1.4.19.1.2 ISecureStoreServiceApplication\_GetUserApplications\_OutputMessage

The response WSDL message for the  **GetUserApplications** WSDL operation.

The SOAP body contains the  **GetUserApplicationsResponse** element.

### 3.1.4.19.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
GetUserApplications	The input data for the <b> GetUserApplications </b> WSDL operation.
GetUserApplicationsResponse	The result data for the <b> GetUserApplications </b> WSDL operation.

### 3.1.4.19.2.1 GetUserApplications

The input data for the  **GetUserApplications**  WSDL operation.

```
<xs:element name=" GetUserApplications " xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition.

### 3.1.4.19.2.2 GetUserApplicationsResponse

The result data for the  **GetUserApplications**  WSDL operation.

```
<xs:element name=" GetUserApplicationsResponse " xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Serve
r" minOccurs="0" name=" GetUserApplicationsResult " nillable="true" type="tns1:ArrayOfTargetApplication"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**GetUserApplicationsResult:** The list of all the target applications returned that can be accessed by the caller.

### 3.1.4.20 IsMasterSecretKeyPopulated

This operation is used to determine whether the master secret key exists in the SSS store.

```
<wsdl:operation name="IsMasterSecretKeyPopulated"
  xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/IsMasterSecretKeyPopulated"
    message="tns3:ISecureStoreServiceApplication_IsMasterSecretKeyPopulated_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/IsMasterSecretKeyPopulatedResponse"
    message="tns3:ISecureStoreServiceApplication_IsMasterSecretKeyPopulated_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

#### 3.1.4.20.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_IsMasterSecretKeyPopulated_InputMessage	The request WSDL message for the <b>IsMasterSecretKeyPopulated</b> WSDL operation.
ISecureStoreServiceApplication_IsMasterSecretKeyPopulated_OutputMessage	The response WSDL message for the <b>IsMasterSecretKeyPopulated</b> WSDL operation.

##### 3.1.4.20.1.1

##### **ISecureStoreServiceApplication\_IsMasterSecretKeyPopulated\_InputMessage**

The request WSDL message for the **IsMasterSecretKeyPopulated** WSDL operation.

The SOAP action value is:

<http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/IsMasterSecretKeyPopulated>

The SOAP body contains the **IsMasterSecretKeyPopulated** element.

##### 3.1.4.20.1.2

##### **ISecureStoreServiceApplication\_IsMasterSecretKeyPopulated\_OutputMessage**

The response WSDL message for the **IsMasterSecretKeyPopulated** WSDL operation.

The SOAP body contains the **IsMasterSecretKeyPopulatedResponse** element.

### 3.1.4.20.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
IsMasterSecretKeyPopulated	The input data for the <b>IsMasterSecretKeyPopulated</b> WSDL operation.
IsMasterSecretKeyPopulatedResponse	The result data for the <b>IsMasterSecretKeyPopulated</b> WSDL operation.

#### 3.1.4.20.2.1 IsMasterSecretKeyPopulated

The input data for the **IsMasterSecretKeyPopulated** WSDL operation.

```
<xs:element name="IsMasterSecretKeyPopulated" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence/>
  </xs:complexType>
</xs:element>
```

#### 3.1.4.20.2.2 IsMasterSecretKeyPopulatedResponse

The result data for the **IsMasterSecretKeyPopulated** WSDL operation.

```
<xs:element name="IsMasterSecretKeyPopulatedResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" name="IsMasterSecretKeyPopulatedResult" type="xs:boolean"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**IsMasterSecretKeyPopulatedResult:** The result data for an IsMasterSecretKeyPopulated operation. If the master secret key is stored in SSS store, the server MUST set this element's value to true. Otherwise, the server MUST set this element's value to false.

### 3.1.4.20.3 Complex Types

None.

### 3.1.4.20.4 Simple Types

None.

### 3.1.4.20.5 Attributes

None.

### 3.1.4.20.6 Groups

None.

### 3.1.4.20.7 Attribute Groups

None.

### 3.1.4.21 IssueTicket

This operation is used to issue a SSS ticket to represent the calling SSS user in the specified SSS partition. The issued SSS ticket is then stored in the SSS store to be redeemed at a later time by another SSS user with a RedeemTicket request, as specified in section [3.1.4.22](#), to retrieve the credentials associated with the original SSS user represented by the SSS ticket.

```
<wsdl:operation name="IssueTicket" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/IssueTicket"
    message="tns3:ISecureStoreServiceApplication_IssueTicket_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/IssueTicketResponse"
    message="tns3:ISecureStoreServiceApplication_IssueTicket_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/IssueTicketSecureStoreServiceFaultFault"
    name="SecureStoreServiceFaultFault"
    message="tns3:ISecureStoreServiceApplication_IssueTicket_SecureStoreServiceFaultFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The protocol client sends an **ISecureStoreServiceApplication\_IssueTicket\_InputMessage** request message and the protocol server responds with an **ISecureStoreServiceApplication\_IssueTicket\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
SecureStoreServiceFault	The protocol server does not have a master secret key.
SecureStoreServiceFault	The specified <b>rawPartitionId</b> parameter is NULL or an implementation specific validation of <b>rawPartitionId</b> failed.
SecureStoreServiceFault	The security principle in whose context the protocol client is operating in is not authorized to request a SSS ticket from the SSS store.

#### 3.1.4.21.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_IssueTicket_InputMessage	The request WSDL message for the <b>IssueTicket</b> WSDL operation.
ISecureStoreServiceApplication_IssueTicket_OutputMessage	The response WSDL message for the <b>IssueTicket</b> WSDL operation.

### 3.1.4.21.1.1 ISecureStoreServiceApplication\_IssueTicket\_InputMessage

The request WSDL message for the **IssueTicket** WSDL operation.

The SOAP action value is:

<http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/IssueTicket>

The SOAP body contains the **IssueTicket** element.

### 3.1.4.21.1.2 ISecureStoreServiceApplication\_IssueTicket\_OutputMessage

The response WSDL message for the **IssueTicket** WSDL operation.

The SOAP body contains the **IssueTicketResponse** element.

## 3.1.4.21.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
IssueTicket	The input data for the <b>IssueTicket</b> WSDL operation.
IssueTicketResponse	The result data for the <b>IssueTicket</b> WSDL operation.

### 3.1.4.21.2.1 IssueTicket

The input data for the **IssueTicket** WSDL operation.

```
<xs:element name="IssueTicket" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccur="0" name="rawPartitionId" type="tns2:guid"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the SSS ticket is to be issued.

### 3.1.4.21.2.2 IssueTicketResponse

The result data for the **IssueTicket** WSDL operation.

```

<xs:element name="IssueTicketResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" name="IssueTicketResult" nillable="true" type="xs:string"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>

```

**IssueTicketResult:** A **base64** encoded string that identifies the SSS ticket.

### 3.1.4.21.3 Complex Types

None.

### 3.1.4.21.4 Simple Types

None.

### 3.1.4.21.5 Attributes

None.

### 3.1.4.21.6 Groups

None.

### 3.1.4.21.7 Attribute Groups

None.

## 3.1.4.22 RedeemTicket

This operation is used to redeem a SSS ticket issued by a previous IssueTicket request, as specified in section [3.1.4.21](#), to retrieve the set of credentials associated with the SSS user represented by the specified SSS ticket for the specified target application in the specified SSS partition from the SSS store.

```

<wsdl:operation name="RedeemTicket" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/RedeemTicket"
    message="tns3:ISecureStoreServiceApplication_RedeemTicket_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/RedeemTicketResponse"
    message="tns3:ISecureStoreServiceApplication_RedeemTicket_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/RedeemTicketArgumentExceptionFault" name="ArgumentExceptionFault"
    message="tns3:ISecureStoreServiceApplication_RedeemTicket_ArgumentExceptionFault_FaultMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/RedeemTicketSecureStoreServiceFaultFault"

```

```

name="SecureStoreServiceFaultFault"
message="tns3:ISecureStoreServiceApplication_RedeemTicket_SecureStoreServiceFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
<wsdl:fault
wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/RedeemTicketSecureStoreServiceCredentialsNotFoundFaultFault"
name="SecureStoreServiceCredentialsNotFoundFaultFault"
message="tns3:ISecureStoreServiceApplication_RedeemTicket_SecureStoreServiceCredentialsNotFoundFaultFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
<wsdl:fault
wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/RedeemTicketSecureStoreServiceTargetApplicationNotFoundFaultFault"
name="SecureStoreServiceTargetApplicationNotFoundFaultFault"
message="tns3:ISecureStoreServiceApplication_RedeemTicket_SecureStoreServiceTargetApplicationNotFoundFaultFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
<wsdl:fault
wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/RedeemTicketArgumentNullExceptionFault" name="ArgumentNullExceptionFault"
message="tns3:ISecureStoreServiceApplication_RedeemTicket_ArgumentNullExceptionFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The protocol client sends an **ISecureStoreServiceApplication\_RedeemTicket\_InputMessage** request message and the protocol server responds with an **ISecureStoreServiceApplication\_RedeemTicket\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentException	The length of the specified <b>applicationId</b> parameter is 0 or greater than 256.
SecureStoreServiceCredentialsNotFoundFault	The credentials cannot be found for the target application identified by the specified <b>applicationId</b> parameter for the SSS user represented by the SSS ticket identified by the specified <b>base64EncodedTicket</b> parameter.
SecureStoreServiceFault	The protocol server does not have a master secret key.
SecureStoreServiceFault	The specified <b>rawPartitionId</b> parameter is NULL or an implementation specific validation of <b>rawPartitionId</b> failed.
SecureStoreServiceFault	The target application specified by the <b>applicationId</b> parameter is not a target application with ticketing.
SecureStoreServiceFault	The format of the <b>base64EncodedTicket</b> parameter is incorrect.
SecureStoreServiceFault	The SSS ticket specified by the <b>base64EncodedTicket</b> parameter cannot be found in the SSS store.

Error Complex Type	Condition
SecureStoreServiceFault	The security principal (2) in whose context the protocol client is operating in is not a member of the specified target application's ticket redeemer group.
SecureStoreServiceTargetApplicationNotFoundFault	The target application specified by the <b>applicationId</b> parameter cannot be found in the SSS store.

### 3.1.4.22.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_RedeemTicket_InputMessage	The request WSDL message for the <b>RedeemTicket</b> WSDL operation.
ISecureStoreServiceApplication_RedeemTicket_OutputMessage	The response WSDL message for the <b>RedeemTicket</b> WSDL operation.

#### 3.1.4.22.1.1 ISecureStoreServiceApplication\_RedeemTicket\_InputMessage

The request WSDL message for the **RedeemTicket** WSDL operation.

The SOAP action value is:

`http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/RedeemTicket`

The SOAP body contains the **RedeemTicket** element.

#### 3.1.4.22.1.2 ISecureStoreServiceApplication\_RedeemTicket\_OutputMessage

The response WSDL message for the **RedeemTicket** WSDL operation.

The SOAP body contains the **RedeemTicketResponse** element.

### 3.1.4.22.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
RedeemTicket	The input data for the <b>RedeemTicket</b> WSDL operation.
RedeemTicketResponse	The result data for the <b>RedeemTicket</b> WSDL operation.

#### 3.1.4.22.2.1 RedeemTicket

The input data for the **RedeemTicket** WSDL operation.

```

<xs:element name="RedeemTicket" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element minOccurs="0" name="applicationId" nillable="true" type="xs:string"/>
      <xs:element minOccurs="0" name="base64EncodedTicket" nillable="true" type="xs:string"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>

```

**rawPartitionId:** A GUID that identifies the SSS partition of the target application.

**applicationId:** The name of the target application. It MUST be between 1 and 256 characters, inclusive, in length.

**base64EncodedTicket:** A base64 encoded string that identifies the SSS ticket to be redeemed.

### 3.1.4.22.2 RedeemTicketResponse

The result data for the **RedeemTicket** WSDL operation.

```

<xs:element name="RedeemTicketResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Serve r" minOccurs="0" name="RedeemTicketResult" nillable="true" type="tns1:ArrayOfSerializableSecureStoreCredential"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>

```

**RedeemTicketResult:** A list of credentials associated with the SSS user represented by the specified SSS ticket for the specified target application in the specified SSS partition from the SSS store. The list MUST contain between 1 and 10 credentials, inclusive.

### 3.1.4.22.3 Complex Types

None.

### 3.1.4.22.4 Simple Types

None.

### 3.1.4.22.5 Attributes

None.

### 3.1.4.22.6 Groups

None.

### 3.1.4.22.7 Attribute Groups

None.

### 3.1.4.23 SetChangeKeyPassphrase

This operation is used to store the specified byte array used to perform implementation-specific encryption on the master secret key on the protocol server.

```
<wsdl:operation name="SetChangeKeyPassphrase" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/SetChangeKeyPassphrase"
    message="tns3:ISecureStoreServiceApplication_SetChangeKeyPassphrase_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/SetChangeKeyPassphraseResponse"
    message="tns3:ISecureStoreServiceApplication_SetChangeKeyPassphrase_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The protocol client sends an **ISecureStoreServiceApplication\_SetChangeKeyPassphrase\_InputMessage** request message and the protocol server MUST respond with an **ISecureStoreServiceApplication\_SetChangeKeyPassphrase\_OutputMessage** message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If the following error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
SecureStoreServiceFault	An implementation specific authorization check for storing the specified byte array fails.

#### 3.1.4.23.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_SetChangeKeyPassphrase_InputMessage	The request WSDL message for the <b>SetChangeKeyPassphrase</b> WSDL operation.
ISecureStoreServiceApplication_SetChangeKeyPassphrase_OutputMessage	The response WSDL message for the <b>SetChangeKeyPassphrase</b> WSDL operation.

### 3.1.4.23.1.1

#### **ISecureStoreServiceApplication\_SetChangeKeyPassphrase\_InputMessage**

The request WSDL message for the **SetChangeKeyPassphrase** WSDL operation.

The SOAP action value is:

```
http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/SetChangeKeyPassphrase
```

The SOAP body contains the **SetChangeKeyPassphrase** element.

### 3.1.4.23.1.2

#### **ISecureStoreServiceApplication\_SetChangeKeyPassphrase\_OutputMessage**

The response WSDL message for the **SetChangeKeyPassphrase** WSDL operation.

The SOAP body contains the **SetChangeKeyPassphraseResponse** element.

### 3.1.4.23.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
SetChangeKeyPassphrase	The input data for the <b>SetChangeKeyPassphrase</b> WSDL operation.
SetChangeKeyPassphraseResponse	The result data for the <b>SetChangeKeyPassphrase</b> WSDL operation.

### 3.1.4.23.2.1 SetChangeKeyPassphrase

The input data for the **SetChangeKeyPassphrase** WSDL operation.

```
<xss:element name="SetChangeKeyPassphrase" xmlns:xss="http://www.w3.org/2001/XMLSchema">
  <xss:complexType>
    <xss:sequence>
      <xss:element minOccurs="0" name="passPhraseHash" nillable="true"
        type="xss:base64Binary"/>
    </xss:sequence>
  </xss:complexType>
</xss:element>
```

**passPhraseHash:** A byte array, derived from an implementation specific hash of an administrator supplied passphrase, used as an encryption key to encrypt the master secret key using an implementation specific algorithm. It MUST be 32 bytes in length.

### 3.1.4.23.2.2 SetChangeKeyPassphraseResponse

The result data for the **SetChangeKeyPassphrase** WSDL operation.

```
<xss:element name="SetChangeKeyPassphraseResponse"
  xmlns:xss="http://www.w3.org/2001/XMLSchema">
```

```
<xs:complexType>
  <xs:sequence/>
</xs:complexType>
</xs:element>
```

### 3.1.4.23.3 Complex Types

## 3.1.4.24 SetCredentials

This operation is used to set credentials for the caller for the specified individual target application in the specified SSS partition.

```
<wsdl:operation name="SetCredentials" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/SetCredentials"
    message="tns3:ISecureStoreServiceApplication_SetCredentials_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/SetCredentialsResponse"
    message="tns3:ISecureStoreServiceApplication_SetCredentials_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/SetCredentialsSecureStoreServiceFaultFault"
    name="SecureStoreServiceFaultFault"
    message="tns3:ISecureStoreServiceApplication_SetCredentials_SecureStoreServiceFaultFault_FaultMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/SetCredentialsArgumentNullExceptionFault" name="ArgumentNullExceptionFault"
    message="tns3:ISecureStoreServiceApplication_SetCredentials_ArgumentNullExceptionFault_FaultMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/SetCredentialsSecureStoreServiceTargetApplicationNotFoundFaultFault"
    name="SecureStoreServiceTargetApplicationNotFoundFaultFault"
```

```

message="tns3:ISecureStoreServiceApplication_SetCredentials_SecureStoreServiceTargetApplicationNotFoundFaultFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:fault
wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/SetCredentialsArgumentExceptionFault" name="ArgumentExceptionFault"
message="tns3:ISecureStoreServiceApplication_SetCredentials_ArgumentExceptionFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>

```

The protocol client sends an **ISecureStoreServiceApplication\_SetCredentials\_InputMessage** request message and the protocol server responds with an **ISecureStoreServiceApplication\_SetCredentials\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentException	The length of the specified <b>applicationId</b> parameter is 0 or greater than 256.
SecureStoreServiceFault	The specified <b>rawPartitionId</b> parameter is NULL or an implementation specific validation of <b>rawPartitionId</b> failed.
SecureStoreServiceFault	The target application identified by the specified <b>applicationId</b> parameter is a group target application.
SecureStoreServiceFault	The specified <b>credentials</b> parameter is NULL, or its count is 0 or greater than 10.
SecureStoreServiceFault	The protocol server does not have a master secret key.
SecureStoreServiceTargetApplicationNotFoundFault	The target application specified by the <b>applicationId</b> parameter cannot be found in the SSS store.

### 3.1.4.24.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_SetCredentials_InputMessage	The request WSDL message for the <b>SetCredentials</b> WSDL operation.
ISecureStoreServiceApplication_SetCredentials_OutputMessage	The response WSDL message for the <b>SetCredentials</b> WSDL operation.

#### 3.1.4.24.1.1 ISecureStoreServiceApplication\_SetCredentials\_InputMessage

The request WSDL message for the **SetCredentials** WSDL operation.

The SOAP action value is:

```
http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/SetCredentials
```

The SOAP body contains the **SetCredentials** element.

### 3.1.4.24.1.2 ISecureStoreServiceApplication\_SetCredentials\_OutputMessage

The response WSDL message for the **SetCredentials** WSDL operation.

The SOAP body contains the **SetCredentialsResponse** element.

### 3.1.4.24.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
SetCredentials	The input data for the <b>SetCredentials</b> WSDL operation.
SetCredentialsResponse	The result data for the <b>SetCredentials</b> WSDL operation.

#### 3.1.4.24.2.1 SetCredentials

The input data for the **SetCredentials** WSDL operation.

```
<xs:element name="SetCredentials" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element minOccurs="0" name="applicationId" nillable="true" type="xs:string"/>
      <xs:element xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Service" minOccurs="0" name="credentials" nillable="true" type="tns1:ArrayOfSerializableSecureStoreCredential"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the target application.

**applicationId:** The name of the target application. It MUST be between 1 and 256 characters, inclusive, in length.

**credentials:** A list of credentials of the caller for the specified target application in the specified SSS partition. Its count MUST be between 1 and 10, inclusive.

#### 3.1.4.24.2.2 SetCredentialsResponse

The result data for the **SetCredentials** WSDL operation.

```
<xs:element name="SetCredentialsResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence/>
  </xs:complexType>
</xs:element>
```

### 3.1.4.24.3 Complex Types

</wsdl:operation>

```

The protocol client sends an **ISecureStoreServiceApplication\_SetGroupCredentials\_InputMessage** request message and the protocol server responds with an **ISecureStoreServiceApplication\_SetGroupCredentials\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentException	The length of the specified <i>applicationId</i> parameter is 0 or greater than 256.
SecureStoreServiceFault	The caller is not an administrator of the specified group target application.
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation specific validation of <i>rawPartitionId</i> failed <a href="#">27</a> .
SecureStoreServiceFault	The target application identified by the specified <i>applicationId</i> parameter is an individual target application.
SecureStoreServiceFault	The specified <i>credentials</i> parameter is NULL, or its count is 0 or greater than 10.
SecureStoreServiceFault	The protocol server does not have a master secret key.
SecureStoreServiceTargetApplicationNotFoundFault	The group target application specified by the <i>applicationId</i> parameter cannot be found in the SSS store.

### 3.1.4.25.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_SetGroupCredentials_InputMessage	The request WSDL message for the <b>SetGroupCredentials</b> WSDL operation.

Message	Description
ISecureStoreServiceApplication_SetGroupCredentials_OutputMessage	The response WSDL message for the <b>SetGroupCredentials</b> WSDL operation.

### 3.1.4.25.1.1 ISecureStoreServiceApplication\_SetGroupCredentials\_InputMessage

The request WSDL message for the **SetGroupCredentials** WSDL operation.

The SOAP action value is:

```
http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/SetGroupCredentials
```

The SOAP body contains the **SetGroupCredentials** element.

### 3.1.4.25.1.2

### ISecureStoreServiceApplication\_SetGroupCredentials\_OutputMessage

The response WSDL message for the **SetGroupCredentials** WSDL operation.

The SOAP body contains the **SetGroupCredentialsResponse** element.

## 3.1.4.25.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
SetGroupCredentials	The input data for the <b>SetGroupCredentials</b> WSDL operation.
SetGroupCredentialsResponse	The result data for the <b>SetGroupCredentials</b> WSDL operation.

### 3.1.4.25.2.1 SetGroupCredentials

The input data for the **SetGroupCredentials** WSDL operation.

```
<xs:element name="SetGroupCredentials" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element minOccurs="0" name="applicationId" nillable="true" type="xs:string"/>
      <xs:element xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Service" minOccurs="0" name="credentials" nillable="true" type="tns1:ArrayOfSerializableSecureStoreCredential"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the group target application.

**applicationId:** The name of the group target application. It MUST be between 1 and 256 characters, inclusive, in length.

**credentials:** An [ArrayOfSerializableSecureStoreCredential](#) object that specifies credentials for a group target application. Its count MUST be between 1 and 10, inclusive.

### 3.1.4.25.2.2 SetGroupCredentialsResponse

The result data for the **SetGroupCredentials** WSDL operation.

```
<xs:element name="SetGroupCredentialsResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence/>
  </xs:complexType>
</xs:element>
```

## 3.1.4.26 SetMasterSecretKey

This operation is used to retrieve the encrypted master secret key from the SSS store and decrypt using the specified passphrase hash as the key using an implementation specific algorithm. The plain text master secret key is maintained locally by the protocol server for encrypting and decrypting credentials.

```
<wsdl:operation name="SetMasterSecretKey" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/SetMasterSecretKey"
    message="tns3:ISecureStoreServiceApplication_SetMasterSecretKey_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/SetMasterSecretKeyResponse"
    message="tns3:ISecureStoreServiceApplication_SetMasterSecretKey_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
```

```

<wsdl:fault
wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStores
erviceApplication/SetMasterSecretKeySecureStoreServiceFaultFault"
name="SecureStoreServiceFaultFault"
message="tns3:ISecureStoreServiceApplication_SetMasterSecretKey_SecureStoreServiceFaultFault_
FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>

```

The protocol client sends an **ISecureStoreServiceApplication\_SetMasterSecretKey\_InputMessage** request message and the protocol server MUST respond with an **ISecureStoreServiceApplication\_SetMasterSecretKey\_OutputMessage** message.

- The protocol server MUST use the given byte array to perform implementation-specific decryption on the encrypted master secret key in the SSS store and store the decrypted key on the protocol server.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
SecureStoreServiceFault	The caller failed an implementation specific authorization check for setting the decrypted master secret key.
SecureStoreServiceFault	The protocol server cannot retrieve the master secret key from the SSS store.

### 3.1.4.26.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_SetMasterSecretKey_InputMessage	The request WSDL message for the <b>SetMasterSecretKey</b> WSDL operation.
ISecureStoreServiceApplication_SetMasterSecretKey_OutputMessage	The response WSDL message for the <b>SetMasterSecretKey</b> WSDL operation.

#### 3.1.4.26.1.1 ISecureStoreServiceApplication\_SetMasterSecretKey\_InputMessage

The request WSDL message for the **SetMasterSecretKey** WSDL operation.

The SOAP action value is:

```
http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplica
tion/SetMasterSecretKey
```

The SOAP body contains the **SetMasterSecretKey** element.

### 3.1.4.26.1.2

#### **ISecureStoreServiceApplication\_SetMasterSecretKey\_OutputMessage**

The response WSDL message for the **SetMasterSecretKey** WSDL operation.

The SOAP body contains the **SetMasterSecretKeyResponse** element.

### 3.1.4.26.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
SetMasterSecretKey	The input data for the <b>SetMasterSecretKey</b> WSDL operation.
SetMasterSecretKeyResponse	The result data for the <b>SetMasterSecretKey</b> WSDL operation.

### 3.1.4.26.2.1 SetMasterSecretKey

The input data for the **SetMasterSecretKey** WSDL operation.

```
<xs:element name="SetMasterSecretKey" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" name="passPhraseHash" nillable="true"
type="xs:base64Binary"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**passPhraseHash:** A byte array, derived from an implementation specific hash of an administrator supplied passphrase, used as a decryption key to decrypt the master secret key using an implementation specific algorithm. It MUST be 32 bytes in length.

### 3.1.4.26.2.2 SetMasterSecretKeyResponse

The result data for the **SetMasterSecretKey** WSDL operation.

```
<xs:element name="SetMasterSecretKeyResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence/>
  </xs:complexType>
</xs:element>
```

### 3.1.4.26.3 Complex Types

### **3.1.4.26.5 Attributes**

None.

### **3.1.4.26.6 Groups**

None.

### **3.1.4.26.7 Attribute Groups**

None.

### **3.1.4.27 SetUserCredentials**

This operation is used to set the credentials for an SSS user for the specified individual target application in the SSS partition. The caller MUST be an administrator of the specified individual target application.

```
<wsdl:operation name="SetUserCredentials" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/SetUserCredentials"
    message="tns3:ISecureStoreServiceApplication_SetUserCredentials_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/SetUserCredentialsResponse"
    message="tns3:ISecureStoreServiceApplication_SetUserCredentials_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/SetUserCredentialsArgumentNullExceptionFault"
    name="ArgumentNullExceptionFault"
    message="tns3:ISecureStoreServiceApplication_SetUserCredentials_ArgumentNullExceptionFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/SetUserCredentialsSecureStoreServiceFaultFault"
    name="SecureStoreServiceFaultFault"
    message="tns3:ISecureStoreServiceApplication_SetUserCredentials_SecureStoreServiceFaultFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/SetUserCredentialsSecureStoreServiceTargetApplicationNotFoundFaultFault"
    name="SecureStoreServiceTargetApplicationNotFoundFaultFault"
    message="tns3:ISecureStoreServiceApplication_SetUserCredentials_SecureStoreServiceTargetApplicationNotFoundFaultFault_FaultMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/SetUserCredentialsArgumentExceptionFault"
    name="ArgumentExceptionFault"
    message="tns3:ISecureStoreServiceApplication_SetUserCredentials_ArgumentExceptionFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The protocol client sends an **ISecureStoreServiceApplication\_SetUserCredentials\_InputMessage** request message and the protocol server responds with an **ISecureStoreServiceApplication\_SetUserCredentials\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentException	The length of the specified <i>applicationId</i> parameter is 0 or greater than 256.
SecureStoreServiceFault	The caller is not an administrator of the specified individual target application.
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation specific validation of <i>rawPartitionId</i> failed <a href="#"><code>&lt;28&gt;</code></a> .
SecureStoreServiceFault	The target application identified by the specified <i>applicationId</i> parameter is a group target application.
SecureStoreServiceFault	The specified <i>credentials</i> parameter is NULL, or its count is 0 or greater than 10.
SecureStoreServiceFault	The protocol server does not have a master secret key.
SecureStoreServiceTargetApplicationNotFoundFault	The target application specified by the <i>applicationId</i> parameter cannot be found in the SSS store.

### 3.1.4.27.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_SetUserCredentials_InputMessage	The request WSDL message for the <b>SetUserCredentials</b> WSDL operation.
ISecureStoreServiceApplication_SetUserCredentials_OutputMessage	The response WSDL message for the <b>SetUserCredentials</b> WSDL operation.

#### 3.1.4.27.1.1 ISecureStoreServiceApplication\_SetUserCredentials\_InputMessage

The request WSDL message for the **SetUserCredentials** WSDL operation.

The SOAP action value is:

`http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/SetUserCredentials`

The SOAP body contains the **SetUserCredentials** element.

### 3.1.4.27.1.2 ISecureStoreServiceApplication\_SetUserCredentials\_OutputMessage

The response WSDL message for the **SetUserCredentials** WSDL operation.

The SOAP body contains the **SetUserCredentialsResponse** element.

### 3.1.4.27.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
SetUserCredentials	The input data for the <b>SetUserCredentials</b> WSDL operation.
SetUserCredentialsResponse	The result data for the <b>SetUserCredentials</b> WSDL operation.

#### 3.1.4.27.2.1 SetUserCredentials

The input data for the **SetUserCredentials** WSDL operation.

```
<xs:element name="SetUserCredentials" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element minOccurs="0" name="applicationId" nillable="true" type="xs:string"/>
      <xs:element
        xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Service"
        minOccurs="0" name="claim" nillable="true" type="tns1:SecureStoreServiceClaim"/>
      <xs:element
        xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Service"
        minOccurs="0" name="credentials" nillable="true"
        type="tns1:ArrayOfSerializableSecureStoreCredential"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the target application.

**applicationId:** The name of the target application. It MUST be between 1 and 256 characters, inclusive, in length.

**claim:** The identity claim (2) for the SSS user whose credentials are to be set.

**credentials:** An [ArrayOfSerializableSecureStoreCredential](#) object that specifies credentials for an SSS user. The count of credentials MUST be between 1 and 10, inclusive.

#### 3.1.4.27.2.2 SetUserCredentialsResponse

The result data for the **SetUserCredentials** WSDL operation.

```
<xs:element name="SetUserCredentialsResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence/>
  </xs:complexType>
```

## 3.1.4.28 UpdateApplication

This operation is used to update the specified target application in the SSS partition. The caller MUST be an administrator of the specified target application.

```
<wsdl:operation name="UpdateApplication" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/UpdateApplication"
    message="tns3:ISecureStoreServiceApplication_UpdateApplication_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/UpdateApplicationResponse"
    message="tns3:ISecureStoreServiceApplication_UpdateApplication_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/UpdateApplicationArgumentNullExceptionFault"
    name="ArgumentNullExceptionFault"
    message="tns3:ISecureStoreServiceApplication_UpdateApplication_ArgumentNullExceptionFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/UpdateApplicationArgumentExceptionFault" name="ArgumentExceptionFault"
    message="tns3:ISecureStoreServiceApplication_UpdateApplication_ArgumentExceptionFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/UpdateApplicationSecureStoreServiceFaultFault"
    name="SecureStoreServiceFaultFault"
    message="tns3:ISecureStoreServiceApplication_UpdateApplication_SecureStoreServiceFaultFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/UpdateApplicationSecureStoreServiceTargetApplicationNotFoundFaultFault"
```

```

name="SecureStoreServiceTargetApplicationNotFoundFaultFault"
message="tns3:ISecureStoreServiceApplication_UpdateApplication_SecureStoreServiceTargetApplicationNotFoundFaultFault_FaultMessage"
xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>

```

The protocol client sends an **ISecureStoreServiceApplication\_UpdateApplication\_InputMessage** request message and the protocol server MUST respond with an **ISecureStoreServiceApplication\_UpdateApplication\_OutputMessage** response message, as follows:

- The protocol client MUST specify a target application, the SSS partition of the target application, a list of target application fields and the claim (2) sets associated with this target application.
- The protocol client MUST NOT change target application name, change the number of target application fields, change name or change type of the target application field.
- When changing target application type, if the specified existing target application is an individual target application, the updated target application MUST also be an individual target application; if the specified existing target application is a group target application, the updated target application MUST also be a group target application.
- The protocol server MUST store the values of the target application (section [2.2.4.15](#)) friendlyName, contactEmail, credentialManagementUrl, ticketTimeout, credentialType, administrators and target application field masked flag with the protocol client specified values.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentException	The <b>administratorClaims</b> member in the specified <i>applicationClaims</i> parameter is NULL or empty.
ArgumentException	The <b>contactEmail</b> member of the <i>application</i> parameter is not a valid e-mail address or its length is greater than 128.
ArgumentException	The <b>applicationId</b> member of the <i>application</i> parameter is 0 or greater than 256.
ArgumentException	The <b>friendlyName</b> member of the <i>application</i> parameter is 0 or greater than 256.
ArgumentException	The <b>type</b> member of the <i>application</i> parameter is not a valid <b>TargetApplicationType</b> (section <a href="#">2.2.5.5</a> ).
ArgumentException	The <b>credentialManagementUrl</b> member of the <i>application</i> parameter is not a valid URL or its length is greater than 2084.
SecureStoreServiceFault	The protocol server does not have a master secret key.

Error Complex Type	Condition
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation specific validation of <i>rawPartitionId</i> failed<29>.
SecureStoreServiceFault	One or more target application field's name or <b>credentialType</b> member in the specified <i>applicationFields</i> parameter does not match with that of the existing target application fields.
SecureStoreServiceFault	The number of target application fields in the specified <i>applicationFields</i> parameter does not match the existing number of target application fields.
SecureStoreServiceFault	Change target application type between group target application and individual target application is not allowed.
SecureStoreServiceFault	The caller is not an administrator of the specified target application.
SecureStoreServiceTargetApplicationNotFoundFault	The target application specified by the <i>applicationId</i> parameter cannot be found in the SSS store.

### 3.1.4.28.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_UpdateApplication_InputMessage	The request WSDL message for the <b>UpdateApplication</b> WSDL operation.
ISecureStoreServiceApplication_UpdateApplication_OutputMessage	The response WSDL message for the <b>UpdateApplication</b> WSDL operation.

#### 3.1.4.28.1.1 ISecureStoreServiceApplication\_UpdateApplication\_InputMessage

The request WSDL message for the **UpdateApplication** WSDL operation.

The SOAP action value is:

`http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/UpdateApplication`

The SOAP body contains the **UpdateApplication** element.

#### 3.1.4.28.1.2 ISecureStoreServiceApplication\_UpdateApplication\_OutputMessage

The response WSDL message for the **UpdateApplication** WSDL operation.

The SOAP body contains the **UpdateApplicationResponse** element.

### 3.1.4.28.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
UpdateApplication	The input data for the <b>UpdateApplication</b> WSDL operation.
UpdateApplicationResponse	The result data for the <b>UpdateApplication</b> WSDL operation.

#### 3.1.4.28.2.1 UpdateApplication

The input data for the **UpdateApplication** WSDL operation.

```
<xs:element name="UpdateApplication" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element
        xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Service" minOccurs="0" name="application" nillable="true" type="tns1:TargetApplication"/>
        <xs:element
          xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Service" minOccurs="0" name="applicationFields" nillable="true" type="tns1:ArrayOfTargetApplicationField"/>
          <xs:element
            xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Service" minOccurs="0" name="applicationClaims" nillable="true" type="tns1:TargetApplicationClaims"/>
        </xs:sequence>
      </xs:complexType>
    </xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the target application to be updated.

**application:** target application information.

**applicationFields:** List of target application fields.

**applicationClaims:** claims (2) associated with the target application.

#### 3.1.4.28.2.2 UpdateApplicationResponse

The result data for the **UpdateApplication** WSDL operation.

```
<xs:element name="UpdateApplicationResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence/>
  </xs:complexType>
</xs:element>
```

</wsdl:operation>
```

The protocol client sends an **ISecureStoreServiceApplication\_CreateConnectionSettings\_InputMessage request message** and the protocol server MUST respond with an **ISecureStoreServiceApplication\_CreateConnectionSettings\_OutputMessage response message**.

When a connection settings object is created, the protocol client MUST specify an unique name, **Target** member in the specified *connectionSettings* parameter and the type, as specified in section [2.2.5.6](#). If the **ConnectionSettingsType** is of **ODataMetadata**, the protocol client MUST specify a **ParentName** for the connection settings object where the parent name is the name of another connection settings object of the type **OData**.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.4](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentNullException	The specified <i>connectionSettings</i> parameter is NULL.
ArgumentNullException	The <b>Name</b> member in the specified <i>connectionSettings</i> parameter is NULL or empty.
ArgumentNullException	The <b>Target</b> member in the specified <i>connectionSettings</i> parameter is NULL or empty.
SecureStoreServiceFault	The specified connection settings object already exists.
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation-specific validation of the <i>rawPartitionId</i> failed.
SecureStoreServiceFault	The caller failed an implementation-specific authorization check for creating the connection settings object.

### 3.1.4.29.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_CreateConnectionSettings_InputMessage	The request WSDL message for the <b>CreateConnectionSettings</b> WSDL operation.
ISecureStoreServiceApplication_CreateConnectionSettings_OutputMessage	The response WSDL message for the <b>CreateConnectionSettings</b> WSDL operation.

#### 3.1.4.29.1.1

#### ISecureStoreServiceApplication\_CreateConnectionSettings\_InputMessage

The request WSDL message for the **CreateConnectionSettings** WSDL operation.

The SOAP action value is:

```
http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/CreateConnectionSettings
```

The SOAP body contains the **CreateConnectionSettings** element.

#### 3.1.4.29.1.2

#### **ISecureStoreServiceApplication\_CreateConnectionSettings\_OutputMessage**

The response WSDL message for the **CreateConnectionSettings** WSDL operation.

The SOAP body contains the **CreateConnectionSettingsResponse** element.

#### 3.1.4.29.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
CreateConnectionSettings	The input data for the <b>CreateConnectionSettings</b> WSDL operation.
CreateConnectionSettingsResponse	The result data for the <b>CreateConnectionSettings</b> WSDL operation.

##### 3.1.4.29.2.1 CreateConnectionSettings

The input data for the **CreateConnectionSettings** WSDL operation.

```
<xs:element name="CreateConnectionSettings" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element xmlns:tns="http://schemas.datacontract.org/2004/07/Microsoft.BusinessData.Infrastructure.SecureStore" minOccurs="0" name="connectionSettings" nillable="true" type="tns:ConnectionSettings"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition in of the connection settings object to be created.

**connectionSettings:** The connection settings object to be created.

##### 3.1.4.29.2.2 CreateConnectionSettingsResponse

The result data for the **CreateConnectionSettings** WSDL operation.

```
<xs:element name="CreateConnectionSettingsResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence/>
  </xs:complexType>
</xs:element>
```

    name="ArgumentExceptionFault"
    message="tns3:ISecureStoreServiceApplication_DeleteConnectionSettings_ArgumentExceptionFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The protocol client sends an **ISecureStoreServiceApplication\_DeleteConnectionSettings\_InputMessage** request message and the protocol server MUST respond with an **ISecureStoreServiceApplication\_DeleteConnectionSettings\_OutputMessage** response message.

The protocol client MUST specify the unique name to identify the connection settings object and the object must be present in the SSS partition.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentNullException	The <i>name</i> parameter is NULL or empty.
SecureStoreServiceFault	The specified connection settings object does not exist.
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation-specific validation of the <i>rawPartitionId</i> failed.
SecureStoreServiceFault	The caller failed an implementation-specific authorization check for deleting the connection settings object.

### 3.1.4.30.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_DeleteConnectionSettings_InputMessage	The request WSDL message for the <b>DeleteConnectionSettings</b> WSDL operation.
ISecureStoreServiceApplication_DeleteConnectionSettings_OutputMessage	The response WSDL message for the <b>DeleteConnectionSettings</b> WSDL operation.

#### 3.1.4.30.1.1

#### **ISecureStoreServiceApplication\_DeleteConnectionSettings\_InputMessage**

The request WSDL message for the **DeleteConnectionSettings** WSDL operation.

The SOAP action value is:

`http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/DeleteConnectionSettings`

The SOAP body contains the **DeleteConnectionSettings** element.

### 3.1.4.30.1.2

#### **ISecureStoreServiceApplication\_DeleteConnectionSettings\_OutputMessage**

The response WSDL message for the **DeleteConnectionSettings** WSDL operation.

The SOAP body contains the **DeleteConnectionSettingsResponse** element.

### 3.1.4.30.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
DeleteConnectionSettings	The input data for the <b>DeleteConnectionSettings</b> WSDL operation.
DeleteConnectionSettingsResponse	The result data for the <b>DeleteConnectionSettings</b> WSDL operation.

#### 3.1.4.30.2.1 DeleteConnectionSettings

The input data for the **DeleteConnectionSettings** WSDL operation.

```
<xs:element name="DeleteConnectionSettings" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element minOccurs="0" name="name" nillable="true" type="xs:string"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the connection settings to be deleted.

**name:** The name of the connection settings. It MUST be between 1 and 256 characters, inclusive, in length.

#### 3.1.4.30.2.2 DeleteConnectionSettingsResponse

The result data for the **DeleteConnectionSettings** WSDL operation.

```
<xs:element name="DeleteConnectionSettingsResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence/>
  </xs:complexType>
</xs:element>
```

### **3.1.4.31 GetAllConnectionSettings**

This operation is used to fetch all the connection settings object, of the specified type, in the specified SSS partition.[<32>](#)

```
<wsdl:operation name="GetAllConnectionSettings"
  xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetAllConnectionSettings"
    message="tns3:ISecureStoreServiceApplication_GetAllConnectionSettings_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetAllConnectionSettingsResponse"
    message="tns3:ISecureStoreServiceApplication_GetAllConnectionSettings_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetAllConnectionSettingsArgumentExceptionFault"
    name="ArgumentExceptionFault"
    message="tns3:ISecureStoreServiceApplication_GetAllConnectionSettings_ArgumentExceptionFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetAllConnectionSettingsArgumentNullExceptionFault"
    name="ArgumentNullExceptionFault"
    message="tns3:ISecureStoreServiceApplication_GetAllConnectionSettings_ArgumentNullExceptionFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetAllConnectionSettingsSecureStoreServiceFault"
    name="SecureStoreServiceFault"
    message="tns3:ISecureStoreServiceApplication_GetAllConnectionSettings_SecureStoreServiceFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The protocol client sends an **ISecureStoreServiceApplication\_GetAllConnectionSettings\_InputMessage** request message and the protocol server MUST respond with an **ISecureStoreServiceApplication\_GetAllConnectionSettings\_OutputMessage** response message.

If the *type* parameter is not specified or is NULL or is empty, then all the connection settings objects in the specified SSS partition must be returned.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation-specific validation of the <i>rawPartitionId</i> failed.
SecureStoreServiceFault	The caller failed an implementation-specific authorization check for getting the connection settings object.

### 3.1.4.31.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_GetAllConnectionSettings_InputMessage	The request WSDL message for the <b>GetAllConnectionSettings</b> WSDL operation.
ISecureStoreServiceApplication_GetAllConnectionSettings_OutputMessage	The response WSDL message for the <b>GetAllConnectionSettings</b> WSDL operation.

#### 3.1.4.31.1.1

##### **ISecureStoreServiceApplication\_GetAllConnectionSettings\_InputMessage**

The request WSDL message for the **GetAllConnectionSettings** WSDL operation.

The SOAP action value is:

`http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetAllConnectionSettings`

The SOAP body contains the **GetAllConnectionSettings** element.

#### 3.1.4.31.1.2

##### **ISecureStoreServiceApplication\_GetAllConnectionSettings\_OutputMessage**

The response WSDL message for the **GetAllConnectionSettings** WSDL operation.

The SOAP body contains the **GetAllConnectionSettingsResponse** element.

### 3.1.4.31.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
GetAllConnectionSettings	The input data for the <b>GetAllConnectionSettings</b> WSDL operation.
GetAllConnectionSettingsResponse	The result data for the <b>GetAllConnectionSettings</b> WSDL operation.

#### 3.1.4.31.2.1 GetAllConnectionSettings

The input data for the **GetAllConnectionSettings** WSDL operation.

```
<xs:element name="GetAllConnectionSettings" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element
        xmlns:tns="http://schemas.datacontract.org/2004/07/Microsoft.BusinessData.Infrastructure.SecureStore" minOccurs="0" name="type" type="tns:ConnectionSettingsType"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the connection settings objects to be fetched.

**type:** The **ConnectionSettingsType** of the objects to be fetched as specified in section [2.2.5.6](#)

#### 3.1.4.31.2.2 GetAllConnectionSettingsResponse

The result data for the **GetAllConnectionSettings** WSDL operation.

```
<xs:element name="GetAllConnectionSettingsResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element
        xmlns:tns="http://schemas.datacontract.org/2004/07/Microsoft.BusinessData.Infrastructure.SecureStore" minOccurs="0" name="GetAllConnectionSettingsResult" nillable="true" type="tns:ArrayOfConnectionSettings"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**GetAllConnectionSettingsResult:** The list of **endpoint (4)** information for all or specified *type* parameter that can be accessed by the caller in the specified SSS partition.

### 3.1.4.31.3 Complex Types

The following table summarizes the XML schema complex type definitions that are specific to this operation.

Complex type	Description
ArrayOfConnectionSettings	The <b>array</b> of <b>endpoint (4)</b> information in the <b>ConnectionSettings</b> complex type as specified in section <a href="#">2.2.4.19</a>

### 3.1.4.31.3.1 ArrayOfConnectionSettings

**Namespace:**

<http://schemas.datacontract.org/2004/07/Microsoft.BusinessData.Infrastructure.SecureStore>

The list of **ConnectionSettings** complex type as described in section [2.2.4.19](#)

```
<xs:complexType name="ArrayOfConnectionSettings" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="ConnectionSettings" nillable="true"
      type="tns:ConnectionSettings"/>
  </xs:sequence>
</xs:complexType>
```

**ConnectionSettings:** The **ConnectionSettings** complex type as described in section [2.2.4.19](#)

## 3.1.4.32 GetChildConnectionSettings

This operation is used to fetch the connection settings object of the specified parent name in the specified SSS partition.[<33>](#)

```
<wsdl:operation name="GetChildConnectionSettings"
  xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStores
    erviceApplication/GetChildConnectionSettings"
    message="tns3:ISecureStoreServiceApplication_GetChildConnectionSettings_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStores
    erviceApplication/GetChildConnectionSettingsResponse"
    message="tns3:ISecureStoreServiceApplication_GetChildConnectionSettings_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
```

```

<wsdl:fault
wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStores
erviceApplication/GetChildConnectionSettingsSecureStoreServiceFaultFault"
name="SecureStoreServiceFaultFault"
message="tns3:ISecureStoreServiceApplication_GetChildConnectionSettings_SecureStoreServiceFau
ltFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
<wsdl:fault
wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStores
erviceApplication/GetChildConnectionSettingsArgumentExceptionFault"
name="ArgumentExceptionFault"
message="tns3:ISecureStoreServiceApplication_GetChildConnectionSettings_ArgumentExceptionFa
lt_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
<wsdl:fault
wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStores
erviceApplication/GetChildConnectionSettingsArgumentNullExceptionFault"
name="ArgumentNullExceptionFault"
message="tns3:ISecureStoreServiceApplication_GetChildConnectionSettings_ArgumentNullException
Fault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>

```

The protocol client sends an **ISecureStoreServiceApplication\_GetChildConnectionSettings\_InputMessage** request message and the protocol server MUST respond with an **ISecureStoreServiceApplication\_GetChildConnectionSettings\_OutputMessage** response message.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentNullException	The <i>parentName</i> parameter is NULL or empty.
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation-specific validation of the <i>rawPartitionId</i> failed.
SecureStoreServiceFault	The caller failed an implementation-specific authorization check for getting the connection settings object.

### 3.1.4.32.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_GetChildConnectionSettings_InputMessage	The request WSDL message for the <b>GetChildConnectionSetting s</b> WSDL operation.
ISecureStoreServiceApplication_GetChildConnectionSettings_OutputMessage	The response WSDL message for the <b>GetChildConnectionSetting s</b> WSDL operation.

### 3.1.4.32.1.1

#### **ISecureStoreServiceApplication\_GetChildConnectionSettings\_InputMessage**

The request WSDL message for the **GetChildConnectionSettings** WSDL operation.

The SOAP action value is:

```
http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetChildConnectionSettings
```

The SOAP body contains the **GetChildConnectionSettings** element.

### 3.1.4.32.1.2

#### **ISecureStoreServiceApplication\_GetChildConnectionSettings\_OutputMessage**

The response WSDL message for the **GetChildConnectionSettings** WSDL operation.

The SOAP body contains the **GetChildConnectionSettingsResponse** element.

### 3.1.4.32.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
GetChildConnectionSettings	The input data for the <b>GetChildConnectionSettings</b> WSDL operation.
GetChildConnectionSettingsResponse	The result data for the <b>GetChildConnectionSettings</b> WSDL operation.

### 3.1.4.32.2.1 GetChildConnectionSettings

The input data for the **GetChildConnectionSettings** WSDL operation.

```
<xs:element name="GetChildConnectionSettings" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element minOccurs="0" name="parentName" nillable="true" type="xs:string"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the connection settings.

**parentName:** The name of parent connection settings. It MUST be between 1 and 256 characters, inclusive, in length.

### 3.1.4.32.2.2 GetChildConnectionSettingsResponse

The result data for the **GetChildConnectionSettings** WSDL operation.

```

<xs:element name="GetChildConnectionSettingsResponse"
xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element
xmlns:tns="http://schemas.datacontract.org/2004/07/Microsoft.BusinessData.Infrastructure.Secu
reStore" minOccurs="0" name="GetChildConnectionSettingsResult" nullable="true"
type="tns:ConnectionSettings"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>

```

**GetChildConnectionSettingsResult:** endpoint (4) information for specified parentName parameter in the specified SSS partition.

</wsdl:operation>

```

The protocol client sends an **ISecureStoreServiceApplication\_GetConnectionSettings\_InputMessage** request message and the protocol server MUST respond with an **ISecureStoreServiceApplication\_GetConnectionSettings\_OutputMessage** response message.

If the protocol client sets the *includeCredentials* parameter, then the protocol server MUST try to fetch the credentials associated with the target application information in the connection settings object.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section [2.2.2.1](#). If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentNullException	The <i>name</i> parameter is NULL or empty.
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation-specific validation of the <i>rawPartitionId</i> failed.
SecureStoreServiceFault	The caller failed an implementation-specific authorization check for getting the connection settings object.

### 3.1.4.33.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_GetConnectionSettings_InputMessage	The request WSDL message for the <b>GetConnectionSettings</b> WSDL operation.
ISecureStoreServiceApplication_GetConnectionSettings_OutputMessage	The response WSDL message for the <b>GetConnectionSettings</b> WSDL operation.

### 3.1.4.33.1.1

#### **ISecureStoreServiceApplication\_GetConnectionSettings\_InputMessage**

The request WSDL message for the **GetConnectionSettings** WSDL operation.

The SOAP action value is:

```
http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetConnectionSettings
```

The SOAP body contains the **GetConnectionSettings** element.

### 3.1.4.33.1.2

#### **ISecureStoreServiceApplication\_GetConnectionSettings\_OutputMessage**

The response WSDL message for the **GetConnectionSettings** WSDL operation.

The SOAP body contains the **GetConnectionSettingsResponse** element.

### 3.1.4.33.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
GetConnectionSettings	The input data for the <b>GetConnectionSettings</b> WSDL operation.
GetConnectionSettingsResponse	The result data for the <b>GetConnectionSettings</b> WSDL operation.

### 3.1.4.33.2.1 GetConnectionSettings

The input data for the **GetConnectionSettings** WSDL operation.

```
<xs:element name="GetConnectionSettings" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element minOccurs="0" name="name" nillable="true" type="xs:string"/>
      <xs:element minOccurs="0" name="includeCredentials" type="xs:boolean"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the connection settings object.

**name:** The name of the connection settings object. It MUST be between 1 and 256 characters, inclusive, in length.

**includeCredentials:** A **Boolean** that indicates if the credentials are to be fetched with the **endpoint (4)** information.

### 3.1.4.33.2.2 GetConnectionSettingsResponse

The result data for the **GetConnectionSettings** WSDL operation.

```
<xs:element name="GetConnectionSettingsResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element
        xmlns:tns="http://schemas.datacontract.org/2004/07/Microsoft.BusinessData.Infrastructure.Secu
        reStore" minOccurs="0" name="GetConnectionSettingsResult" nillable="true"
        type="tns:ConnectionSettings"/>
      <xs:element
        xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Serve
        r" minOccurs="0" name="targetCredentials" nillable="true"
        type="tns1:ArrayOfSerializableSecureStoreCredential"/>
      <xs:element
        xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Serve
        r" minOccurs="0" name="proxyCredentials" nillable="true"
        type="tns1:ArrayOfSerializableSecureStoreCredential"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**GetConnectionSettingsResult:** endpoint (4) information in the **ConnectionSettings** complex type format.

**targetCredentials:** The credentials of the caller for the target application associated with the specified connection settings object.

**proxyCredentials:** The credentials of the caller for the target application associated with the proxy of the specified connection settings object.

### 3.1.4.34 UpdateConnectionSettings

This operation is used to update an existing connection settings object in the specified SSS partition.[<35>](#)

```

<wsdl:operation name="UpdateConnectionSettings"
  xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/UpdateConnectionSettings"
    message="tns3:ISecureStoreServiceApplication_UpdateConnectionSettings_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/UpdateConnectionSettingsResponse"
    message="tns3:ISecureStoreServiceApplication_UpdateConnectionSettings_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/UpdateConnectionSettingsSecureStoreServiceFaultFault"
    name="SecureStoreServiceFaultFault"
    message="tns3:ISecureStoreServiceApplication_UpdateConnectionSettings_SecureStoreServiceFaultFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/UpdateConnectionSettingsArgumentExceptionFault"
    name="ArgumentExceptionFault"
    message="tns3:ISecureStoreServiceApplication_UpdateConnectionSettings_ArgumentExceptionFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:fault
    wsaw:Action="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/UpdateConnectionSettingsArgumentNullExceptionFault"
    name="ArgumentNullExceptionFault"
    message="tns3:ISecureStoreServiceApplication_UpdateConnectionSettings_ArgumentNullExceptionFault_FaultMessage" xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The protocol client sends an **ISecureStoreServiceApplication\_UpdateConnectionSettings\_InputMessage** request message and the protocol server MUST respond with an **ISecureStoreServiceApplication\_UpdateConnectionSettings\_OutputMessage** response message.

When a connection settings object is updated, the protocol client MUST specify the name of an existing connection settings object, **Target** member in the specified *connectionSettings* parameter and the type, as specified in section 2.2.5.6. If the **ConnectionSettingsType** is of **ODataMetadata**, the protocol client MUST specify a **ParentName** for the connection settings object where the parent name is the name of another connection settings object of the type **OData**.

If any one of the conditions in the following table is met, the protocol server MUST respond with a SOAP fault containing the corresponding error complex type, serialized as specified in section 2.2.4. If more than one error condition is encountered, the protocol server MUST respond with exactly one error complex type, determined in an implementation-specific manner.

Error Complex Type	Condition
ArgumentNullException	The specified <i>connectionSettings</i> parameter is NULL.
ArgumentNullException	The <b>Name</b> member in the specified <i>connectionSettings</i> parameter is NULL or empty.
ArgumentNullException	The <b>Target</b> member in the specified <i>connectionSettings</i> parameter is NULL or empty.

Error Complex Type	Condition
SecureStoreServiceFault	The specified connection settings object does not exist.
SecureStoreServiceFault	The specified <i>rawPartitionId</i> parameter is NULL or an implementation-specific validation of the <i>rawPartitionId</i> failed.
SecureStoreServiceFault	The caller failed an implementation-specific authorization check for updating the connection settings object.

### 3.1.4.34.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
ISecureStoreServiceApplication_UpdateConnectionSettings_InputMessage	The request WSDL message for the <b>UpdateConnectionSettings</b> WSDL operation.
ISecureStoreServiceApplication_UpdateConnectionSettings_OutputMessage	The response WSDL message for the <b>UpdateConnectionSettings</b> WSDL operation.

#### 3.1.4.34.1.1

##### ISecureStoreServiceApplication\_UpdateConnectionSettings\_InputMessage

The request WSDL message for the **UpdateConnectionSettings** WSDL operation.

The SOAP action value is:

```
http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/UpdateConnectionSettings
```

The SOAP body contains the **UpdateConnectionSettings** element.

#### 3.1.4.34.1.2

##### ISecureStoreServiceApplication\_UpdateConnectionSettings\_OutputMessage

The response WSDL message for the **UpdateConnectionSettings** WSDL operation.

The SOAP body contains the **UpdateConnectionSettingsResponse** element.

### 3.1.4.34.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
UpdateConnectionSettings	The input data for the <b>UpdateConnectionSettings</b> WSDL

Element	Description
	operation.
UpdateConnectionSettingsResponse	The result data for the <b>UpdateConnectionSettings</b> WSDL operation.

### 3.1.4.34.2.1 UpdateConnectionSettings

The input data for the **UpdateConnectionSettings** WSDL operation.

```
<xs:element name="UpdateConnectionSettings" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:tns2="http://schemas.microsoft.com/2003/10/Serialization/" minOccurs="0" name="rawPartitionId" type="tns2:guid"/>
      <xs:element xmlns:tns="http://schemas.datacontract.org/2004/07/Microsoft.BusinessData.Infrastructure.SecurityRestore" minOccurs="0" name="connectionSettings" nillable="true" type="tns:ConnectionSettings"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**rawPartitionId:** A GUID that identifies the SSS partition of the connection settings.

**connectionSettings:** The connection settings object, based on the complex type described in section [2.2.4.19](#), with the updated values for the members.

### 3.1.4.34.2.2 UpdateConnectionSettingsResponse

The result data for the **UpdateConnectionSettings** WSDL operation.

```
<xs:element name="UpdateConnectionSettingsResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence/>
  </xs:complexType>
</xs:element>
```

## 4 Protocol Examples

The following examples describe the process of communication between the protocol server and protocol client. In conjunction with the protocol specification in this document, this information is intended to provide a comprehensive view on how the protocol client operates with the protocol server when executing such an operation. The examples in this section manipulate target application and user claims for target application. However, the principals illustrated apply equally to other protocols described in this document.

### 4.1 Obtaining Information About the Applications in a Partition

This example describes the requests that are made to get all the target applications in a given partition. The server protocol will respond with a list that contains the target application name, contact e-mail, target application friendly name and type of application.

The protocol client calls **GetApplications** method on a protocol server named "server.contoso.com".

Protocol request:

```

## 4.2 Obtaining Information About an Application

This example describes the requests that are made to get the details of the target application with the target application name "MyTargetApplication". Note that the details do not contain the field information or the application claims information. Refer to the proper examples to get the application fields and the application claims.

The protocol client calls **GetApplication** method on a protocol server named "server.contoso.com".

Protocol request:

```

<Message>
  <HttpRequest
    xmlns="http://schemas.microsoft.com/2004/06/ServiceModel/Management/MessageTrace">
    <Method>POST</Method>
    <QueryString></QueryString>
    <WebHeaders>
      <Content-Length>104223</Content-Length>
      <Content-Type>application/soap+xml; charset=utf-8</Content-Type>
      <Expect>100-continue</Expect>
      <Host>server.contoso.com:32843</Host>
    </WebHeaders>
  </HttpRequest>
  <s:Envelope xmlns:s="http://www.w3.org/2003/05/soap-envelope">
    <s:Header>
      <a:Action s:mustUnderstand="1" u:Id="_4" xmlns:u="http://docs.oasis-
open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"
      xmlns:a="http://www.w3.org/2005/08/addressing">http://schemas.microsoft.com/sharepoint/2009/0
6/securestore/service/ISecureStoreServiceApplication/GetApplication</a:Action>

                    <d4p1:ticketTimeout>2</d4p1:ticketTimeout>
                </GetApplicationResult>
            </GetApplicationResponse>
        </s:Body>
    </s:Envelope>
</Message>
```

### 4.3 Retrieving the Application Fields of an Application

This example describes the requests that are made to get the application fields of the target application with the target application name "MyTargetApplication".

The protocol client calls **GetApplicationFields** method on a protocol server named "server.contoso.com".

Protocol request:

```

<Message>
    <HttpRequest
    xmlns="http://schemas.microsoft.com/2004/06/ServiceModel/Management/MessageTrace">
        <Method>POST</Method>
        <QueryString></QueryString>
        <WebHeaders>
            <Content-Length>104253</Content-Length>
            <Content-Type>application/soap+xml; charset=utf-8</Content-Type>
            <Expect>100-continue</Expect>
            <Host>server.contoso.com:32843</Host>
        </WebHeaders>
    </HttpRequest>
```

```

<s:Envelope xmlns:s="http://www.w3.org/2003/05/soap-envelope">
  <s:Header>
    <a:Action s:mustUnderstand="1" u:Id="_4" xmlns:u="http://docs.oasis-
open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"
    xmlns:a="http://www.w3.org/2005/08/addressing">http://schemas.microsoft.com/sharepoint/2009/0
6/securestoreservice/ISecureStoreServiceApplication/GetApplicationFields</a:Action>

```

        </d4p1:TargetApplicationField>
    </GetApplicationFieldsResult>
</GetApplicationFieldsResponse>
</s:Body>
</s:Envelope>
</Message>

```

## 4.4 Retrieving the Application Claims of an Application

This example describes the requests that are made to get the application claims of the target application with the target application name "MyTargetApplication".

The protocol client calls **GetApplicationClaims** method on a protocol server named "server.contoso.com".

Protocol request:

```

<Message>
    <HttpRequest
        xmlns="http://schemas.microsoft.com/2004/06/ServiceModel/Management/MessageTrace">
        <Method>POST</Method>
        <QueryString></QueryString>
        <WebHeaders>
            <Content-Length>104253</Content-Length>
            <Content-Type>application/soap+xml; charset=utf-8</Content-Type>
            <Expect>100-continue</Expect>
            <Host>server.contoso.com:32843</Host>
        </WebHeaders>
    </HttpRequest>
    <s:Envelope xmlns:s="http://www.w3.org/2003/05/soap-envelope">
        <s:Header>
            <a:Action s:mustUnderstand="1" u:Id="_4" xmlns:u="http://docs.oasis-
open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"

## 4.5 Deleting an Application

This example describes the requests that are made to delete the target application with the target application name "MyTargetApplication".

The protocol client calls **DeleteApplication** method on a protocol server named "server.contoso.com".

Protocol request:

```

<Message>
    <HttpRequest
    xmlns="http://schemas.microsoft.com/2004/06/ServiceModel/Management/MessageTrace">
        <Method>POST</Method>
        <QueryString></QueryString>
        <WebHeaders>
            <Content-Length>104249</Content-Length>
            <Content-Type>application/soap+xml; charset=utf-8</Content-Type>
            <Expect>100-continue</Expect>
```

```

        <Host>server.contoso.com:32843</Host>
    </WebHeaders>
</HttpRequest>
<s:Envelope xmlns:s="http://www.w3.org/2003/05/soap-envelope">
    <s:Header>
        <a:Action s:mustUnderstand="1" u:Id="_4" xmlns:u="http://docs.oasis-
open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"
        xmlns:a="http://www.w3.org/2005/08/addressing">http://schemas.microsoft.com/sharepoint/2009/0
6/securestoreservice/ISecureStoreServiceApplication/DeleteApplication</a:Action>
        <a:MessageID u:Id="_5" xmlns:u="http://docs.oasis-open.org/wss/2004/01/oasis-200401-
wss-wssecurity-utility-1.0.xsd"
        xmlns:a="http://www.w3.org/2005/08/addressing">urn:uuid:923d106c-d787-4f71-a9a9-
6d93dd1bc7d</a:MessageID>
        <a:ReplyTo u:Id="_6" xmlns:u="http://docs.oasis-open.org/wss/2004/01/oasis-200401-
wss-wssecurity-utility-1.0.xsd" xmlns:a="http://www.w3.org/2005/08/addressing">
            <a:Address>http://www.w3.org/2005/08/addressing/anonymous</a:Address>
        </a:ReplyTo>
        <a:To s:mustUnderstand="1" u:Id="_7" xmlns:u="http://docs.oasis-
open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"
        xmlns:a="http://www.w3.org/2005/08/addressing">http://server.contoso.com:32843/ad004cd209134a
ecaf4d241a7f56e3ce/SecureStoreService.svc</a:To>
        <o:Security s:mustUnderstand="1" xmlns:o="http://docs.oasis-
open.org/wss/2004/01/oasis-200401-wss-wssecurity-secext-1.0.xsd">

            <applicationId>MyTargetApplication</applicationId>
        </DeleteApplication>
    </s:Body>
</s:Envelope>
</Message>

```

The protocol server then responds with the following:

```

<Message>
    <s:Envelope xmlns:a="http://www.w3.org/2005/08/addressing"
    xmlns:s="http://www.w3.org/2003/05/soap-envelope">
        <s:Header>
            <a:Action
                s:mustUnderstand="1">http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecu
reStoreServiceApplication/DeleteApplicationResponse</a:Action>
        </s:Header>
        <s:Body>
            <DeleteApplicationResponse
                xmlns="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/"></DeleteApplicati
onResponse>
        </s:Body>
    </s:Envelope>
</Message>

```

## 4.6 Setting Up User Credentials for an Application

This example describes the requests that are made to set the credentials for user "CONTOSO\john" in the target application with target application name "MyTargetApplication".

The protocol client calls **SetUserCredentials** method on a protocol server named "server.contoso.com".

Protocol request:

```
<Message>
  <HttpRequest
    xmlns="http://schemas.microsoft.com/2004/06/ServiceModel/Management/MessageTrace">
    <Method>POST</Method>
    <QueryString></QueryString>
    <WebHeaders>
      <Content-Length>105337</Content-Length>
      <Content-Type>application/soap+xml; charset=utf-8</Content-Type>
      <Expect>100-continue</Expect>
      <Host>server.contoso.com:32843</Host>
    </WebHeaders>
  </HttpRequest>
  <s:Envelope xmlns:s="http://www.w3.org/2003/05/soap-envelope">
    <s:Header>
      <a:Action s:mustUnderstand="1" u:Id="_4" xmlns:u="http://docs.oasis-
open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"
      xmlns:a="http://www.w3.org/2005/08/addressing">http://schemas.microsoft.com/sharepoint/2009/0
6/securestoreservice/ISecureStoreServiceApplication/SetUserCredentials</a:Action>
      <a:MessageID u:Id="_5" xmlns:u="http://docs.oasis-open.org/wss/2004/01/oasis-200401-

        </s:Body>
    </s:Envelope>
</Message>

```

## 4.7 Updating Application Information

This example describes the requests that are made to update the information of the target application with the target application name "MyTargetApplication".

The protocol client calls **UpdateApplication** method on a protocol server named "server.contoso.com".

Protocol request:

```

<Message>
    <HttpRequest
        xmlns="http://schemas.microsoft.com/2004/06/ServiceModel/Management/MessageTrace">
        <Method>POST</Method>
        <QueryString></QueryString>
        <WebHeaders>
            <Content-Length>106489</Content-Length>
            <Content-Type>application/soap+xml; charset=utf-8</Content-Type>
            <Expect>100-continue</Expect>
            <Host>server.contoso.com:32843</Host>
        </WebHeaders>

```

```

</HttpRequest>
<s:Envelope xmlns:s="http://www.w3.org/2003/05/soap-envelope">
    <s:Header>
        <a:Action s:mustUnderstand="1" u:Id="_4" xmlns:u="http://docs.oasis-

            onResponse>
        </s:Body>
    </s:Envelope>
</Message>

```

## 4.8 Setting Group Credentials for an Application

This example describes the requests that are made to set the group credentials for the target application with the target application name "MyGroupTargetApplication".

The protocol client calls **SetGroupCredentials** method on a protocol server named "server.contoso.com".

Protocol request:

```

<Message>
    <HttpRequest
    xmlns="http://schemas.microsoft.com/2004/06/ServiceModel/Management/MessageTrace">
        <Method>POST</Method>
        <QueryString></QueryString>
        <WebHeaders>
            <Content-Length>104930</Content-Length>

```

```

    </s:Body>
</s:Envelope>
</Message>

```

## 4.9 Creating an Application in a Partition

This example describes the requests that are made to create a new target application in the specified partition. In this case, the target application is an individual type with two fields: "user name" and "password".

The protocol client calls **CreateApplication** method on a protocol server named "server.contoso.com".

Protocol request:

```

<Message>
    <HttpRequest
        xmlns="http://schemas.microsoft.com/2004/06/ServiceModel/Management/MessageTrace">
        <Method>POST</Method>
        <QueryString></QueryString>
        <WebHeaders>
            <Content-Length>106169</Content-Length>
            <Content-Type>application/soap+xml; charset=utf-8</Content-Type>
            <Expect>100-continue</Expect>
            <Host>server.contoso.com:32843</Host>
        </WebHeaders>
    </HttpRequest>
    <s:Envelope xmlns:s="http://www.w3.org/2003/05/soap-envelope">
        <s:Header>
            <a:Action s:mustUnderstand="1" u:Id="_4" xmlns:u="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"
                xmlns:a="http://www.w3.org/2005/08/addressing">http://schemas.microsoft.com/sharepoint/2009/06/secureservice/ISecureStoreServiceApplication/CreateApplication</a:Action>

            <a:Action
                s:mustUnderstand="1">http://schemas.microsoft.com/sharepoint/2009/06/secureserviceservice/ISe cu
                reStoreServiceApplication/CreateApplicationResponse</a:Action>

```

```

        </s:Header>
    <s:Body>
        <CreateApplicationResponse
            xmlns="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/"></CreateApplicationResponse>
    </s:Body>
</s:Envelope>
</Message>

```

## 4.10 Retrieving the Credentials of the Current User

This example describes the requests that are made to get the credentials associated with the current user. The credentials are stored in the target application with the target application name "MyTargetApplication". In this example the current user is "CONTOSO\john".

The protocol client calls **GetCredentials** method on a protocol server named "server.contoso.com".

Protocol request:

```

<Message>
    <HttpRequest
        xmlns="http://schemas.microsoft.com/2004/06/ServiceModel/Management/MessageTrace">
        <Method>POST</Method>
        <QueryString></QueryString>
        <WebHeaders>
            <Content-Length>104277</Content-Length>
            <Content-Type>application/soap+xml; charset=utf-8</Content-Type>
            <Expect>100-continue</Expect>
            <Host>server.contoso.com:32843</Host>
        </WebHeaders>
    </HttpRequest>
    <s:Envelope xmlns:s="http://www.w3.org/2003/05/soap-envelope">
        <s:Header>
            <a:Action s:mustUnderstand="1" u:Id="_4" xmlns:u="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"
                xmlns:a="http://www.w3.org/2005/08/addressing">http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISecureStoreServiceApplication/GetCredentials</a:Action>
            <a:MessageID u:Id="_5" xmlns:u="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"
                xmlns:a="http://www.w3.org/2005/08/addressing">urn:uuid:28742171-803c-42e3-86e4-0a5c9ec5bbd9</a:MessageID>
            <a:ReplyTo u:Id="_6" xmlns:u="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd" xmlns:a="http://www.w3.org/2005/08/addressing">
                <a:Address>http://www.w3.org/2005/08/addressing/anonymous</a:Address>
            </a:ReplyTo>
            <a:To s:mustUnderstand="1" u:Id="_7" xmlns:u="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"
                xmlns:a="http://www.w3.org/2005/08/addressing">http://server.contoso.com:32843/ad004cd209134aecaf4d241a7f56e3ce/SecureStoreService.svc</a:To>

```

```

        <applicationId>MyTargetApplication</applicationId>
    </GetCredentials>
</s:Body>
</s:Envelope>
</Message>

```

The protocol server then responds with the following:

```

<Message>
<s:Envelope xmlns:a="http://www.w3.org/2005/08/addressing"
xmlns:s="http://www.w3.org/2003/05/soap-envelope">
    <s:Header>
        <a:Action
s:mustUnderstand="1">http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/ISeCu
reStoreServiceApplication/GetCredentialsResponse</a:Action>
    </s:Header>
    <s:Body>
        <GetCredentialsResponse
xmlns="http://schemas.microsoft.com/sharepoint/2009/06/securestoreservice/">
            <GetCredentialsResult
xmlns:d4p1="http://schemas.datacontract.org/2004/07/Microsoft.Office.SecureStoreService.Serve
r" xmlns:i="http://www.w3.org/2001/XMLSchema-instance">
                <d4p1:SerializableSecureStoreCredential>
                    <d4p1:credential>SomeUser1</d4p1:credential>
                    <d4p1:credentialType>UserName</d4p1:credentialType>
                </d4p1:SerializableSecureStoreCredential>
                <d4p1:SerializableSecureStoreCredential>
                    <d4p1:credential>TopSecretPassword</d4p1:credential>
                    <d4p1:credentialType>Password</d4p1:credentialType>
                </d4p1:SerializableSecureStoreCredential>
            </GetCredentialsResult>
        </GetCredentialsResponse>
    </s:Body>
</s:Envelope>
</Message>

```

#### 4.11 Retrieving the Credentials of the Current User of a Restricted Application

This example describes the requests that are made to get the credentials stored in the restricted target application with the target application name "WindowsTargetApplication". The server protocol will respond with the credentials associated with the current user, in this case the current user is "CONTOSO\john".

The protocol client calls **GetRestrictedCredentials** method on a protocol server named "server.example.com".

Protocol request:

```

<Message>
    <HttpRequest
xmlns="http://schemas.microsoft.com/2004/06/ServiceModel/Management/MessageTrace">
        <Method>POST</Method>
        <QueryString></QueryString>
        <WebHeaders>
            <Content-Length>104277</Content-Length>

```

```

<Content-Type>application/soap+xml; charset=utf-8</Content-Type>
<Expect>100-continue</Expect>
<Host>server.contoso.com:32843</Host>
</WebHeaders>
</HttpRequest>
<s:Envelope xmlns:s="http://www.w3.org/2003/05/soap-envelope">
  <s:Header>
    <a:Action s:mustUnderstand="1" u:Id="_4" xmlns:u="http://docs.oasis-
open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"
      xmlns:a="http://www.w3.org/2005/08/addressing">http://schemas.microsoft.com/sharepoint/2009/0
6/securestoreservice/ISecureStoreServiceApplication/GetRestrictedCredentials</a:Action>
    <a:MessageID u:Id="_5" xmlns:u="http://docs.oasis-open.org/wss/2004/01/oasis-200401-
wss-wssecurity-utility-1.0.xsd"
      xmlns:a="http://www.w3.org/2005/08/addressing">urn:uuid:28742171-803c-42e3-86e4-
0a5c9ec5bbd9</a:MessageID>
    <a:ReplyTo u:Id="_6" xmlns:u="http://docs.oasis-open.org/wss/2004/01/oasis-200401-
wss-wssecurity-utility-1.0.xsd" xmlns:a="http://www.w3.org/2005/08/addressing">
      <a:Address>http://www.w3.org/2005/08/addressing/anonymous</a:Address>
    </a:ReplyTo>
    <a:To s:mustUnderstand="1" u:Id="_7" xmlns:u="http://docs.oasis-
open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"
      xmlns:a="http://www.w3.org/2005/08/addressing">http://server.contoso.com:32843/ad004cd209134a
ecaf4d241a7f56e3ce/SecureStoreService.svc</a:To>
    <o:Security s:mustUnderstand="1" xmlns:o="http://docs.oasis-
open.org/wss/2004/01/oasis-200401-wss-wssecurity-secext-1.0.xsd">
      <!-- This section is same as the preceding Example 1. -->
    </o:Security>
  </s:Header>
  <s:Body u:Id="_2" xmlns:u="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-
wsssecurity-utility-1.0.xsd">

Secure Store Web Service Protocol Specification

Copyright © 2012 Microsoft Corporation.

Release: September 12, 2012

## 5 Security

### 5.1 Security Considerations for Implementers

Because the information handled by this protocol can contain highly sensitive information, both the protocol server and the protocol client need to be consumed in environments that are appropriately secured. To protect the message, HTTPS can be used.

### 5.2 Index of Security Parameters

None.

## 6 Appendix A: Full WSDL

## 8 Appendix C: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include released service packs:

- Microsoft® SharePoint® Server 2010
- Microsoft® SharePoint® Server 2013 Preview

Exceptions, if any, are noted below. If a service pack or Quick Fix Engineering (QFE) number appears with the product version, behavior changed in that service pack or QFE. The new behavior also applies to subsequent service packs of the product unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms SHOULD or SHOULD NOT implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies that the product does not follow the prescription.

<1> Section 2.2.4: This type is available only in SharePoint Server 2013 Preview.

<2> Section 2.2.4: This type is available only in SharePoint Server 2013 Preview.

<3> Section 2.2.4.18: This type is available only in SharePoint Server 2013 Preview.

<4> Section 2.2.4.19: This type is available only in SharePoint Server 2013 Preview.

<5> Section 2.2.5: This type is available only in SharePoint Server 2013 Preview.

<6> Section 2.2.5.6: This type is available only in SharePoint Server 2013 Preview.

<7> Section 3.1.4: This operation is available only in SharePoint Server 2013 Preview.

<8> Section 3.1.4: This operation is available only in SharePoint Server 2013 Preview.

<9> Section 3.1.4: This operation is available only in SharePoint Server 2013 Preview.

<10> Section 3.1.4: This operation is available only in SharePoint Server 2013 Preview.

<11> Section 3.1.4: This operation is available only in SharePoint Server 2013 Preview.

<12> Section 3.1.4: This operation is available only in SharePoint Server 2013 Preview.

<13> Section 3.1.4.2: SharePoint Server 2010 will not return this error and the new target application is saved in the server. But the server will return a **SecureStoreServiceFault** error if the client later calls the **GetApplication** or **GetApplications** operation to retrieve the target application.

<14> Section 3.1.4.2: SharePoint Server 2010 will respond with a **SecurityAccessDeniedException** exception if the **rawPartitionId** parameter is NULL.

<15> Section 3.1.4.3: SharePoint Server 2010 will respond with a **SecurityAccessDeniedException** exception if the **rawPartitionId** parameter is NULL.

<16> Section 3.1.4.4: SharePoint Server 2010 will respond with a **SecurityAccessDeniedException** exception if the **rawPartitionId** parameter is NULL.

[<17> Section 3.1.4.6:](#) SharePoint Server 2010 will respond with a **SecurityAccessDeniedException** exception if the **rawPartitionId** parameter is NULL.

[<18> Section 3.1.4.7:](#) SharePoint Server 2010 will respond with a **SecurityAccessDeniedException** exception if the **rawPartitionId** parameter is NULL.

[<19> Section 3.1.4.8:](#) SharePoint Server 2010 will respond with a **SecurityAccessDeniedException** exception if the **rawPartitionId** parameter is NULL.

[<20> Section 3.1.4.10:](#) SharePoint Server 2010 will respond with a **SecurityAccessDeniedException** exception if the **rawPartitionId** parameter is NULL.

[<21> Section 3.1.4.11:](#) SharePoint Server 2010 will respond with a **SecurityAccessDeniedException** exception if the **rawPartitionId** parameter is NULL.

[<22> Section 3.1.4.12:](#) SharePoint Server 2010 will respond with a **SecurityAccessDeniedException** exception if the **rawPartitionId** parameter is NULL.

[<23> Section 3.1.4.13:](#) SharePoint Server 2010

will respond with a **SecurityAccessDeniedException** exception if the **rawPartitionId** parameter is NULL.

[<24> Section 3.1.4.14:](#) SharePoint Foundation 2010 invalidates the token after 1 minute.

[<25> Section 3.1.4.17:](#) SharePoint Server 2010 will respond with a **SecurityAccessDeniedException** exception if the **rawPartitionId** parameter is NULL.

[<26> Section 3.1.4.18:](#) SharePoint Server 2010 will respond with a **SecurityAccessDeniedException** exception if the **rawPartitionId** parameter is NULL.

[<27> Section 3.1.4.25:](#) SharePoint Server 2010 will respond with a **SecurityAccessDeniedException** exception if the **rawPartitionId** parameter is NULL.

[<28> Section 3.1.4.27:](#) SharePoint Server 2010 will respond with a **SecurityAccessDeniedException** exception if the **rawPartitionId** parameter is NULL.

[<29> Section 3.1.4.28:](#) SharePoint Server 2010 will respond with a **SecurityAccessDeniedException** exception if the **rawPartitionId** parameter is NULL.

[<30> Section 3.1.4.29:](#) This operation is available only in SharePoint Server 2013 Preview.

[<31> Section 3.1.4.30:](#) This operation is available only in SharePoint Server 2013 Preview.

[<32> Section 3.1.4.31:](#) This operation is available only in SharePoint Server 2013 Preview.

[<33> Section 3.1.4.32:](#) This operation is available only in SharePoint Server 2013 Preview.

[<34> Section 3.1.4.33:](#) This operation is available only in SharePoint Server 2013 Preview.

[<35> Section 3.1.4.34:](#) This operation is available only in SharePoint Server 2013 Preview.

## 9 Change Tracking

No table of changes is available. The document is either new or has had no changes since its last release.
