

[MS-UPSCWS]: User Profile Service Application Caching Web Service Protocol

Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation for protocols, file formats, languages, standards as well as overviews of the interaction among each of these technologies.
- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you may make copies of it in order to develop implementations of the technologies described in the Open Specifications and may distribute portions of it in your implementations using these technologies or your documentation as necessary to properly document the implementation. You may also distribute in your implementation, with or without modification, any schema, IDL's, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that may cover your implementations of the technologies described in the Open Specifications. Neither this notice nor Microsoft's delivery of the documentation grants any licenses under those or any other Microsoft patents. However, a given Open Specification may be covered by Microsoft [Open Specification Promise](#) or the [Community Promise](#). If you would prefer a written license, or if the technologies described in the Open Specifications are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting iplg@microsoft.com.
- **Trademarks.** The names of companies and products contained in this documentation may be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights. For a list of Microsoft trademarks, visit www.microsoft.com/trademarks.
- **Fictitious Names.** The example companies, organizations, products, domain names, email addresses, logos, people, places, and events depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

Reservation of Rights. All other rights are reserved, and this notice does not grant any rights other than specifically described above, whether by implication, estoppel, or otherwise.

Tools. The Open Specifications do not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments you are free to take advantage of them. Certain Open Specifications are intended for use in conjunction with publicly available standard specifications and network programming art, and assumes that the reader either is familiar with the aforementioned material or has immediate access to it.

1 Introduction

The User Profile Service Application Caching Web Service Protocol enables a protocol client to retrieve user information from a database that stores user profile data for a site.

Sections 1.8, 2, and 3 of this specification are normative and can contain the terms MAY, SHOULD, MUST, MUST NOT, and SHOULD NOT as defined in RFC 2119. Sections 1.5 and 1.9 are also normative but cannot contain those terms. All other sections and examples in this specification are informative.

1.1 Glossary

The following terms are defined in [\[MS-GLOS\]](#):

- authentication**
- GUID**
- Hypertext Transfer Protocol (HTTP)**
- Hypertext Transfer Protocol over Secure Sockets Layer (HTTPS)**
- security identifier (SID)**
- SOAP**
- SOAP action**
- SOAP body**
- SOAP fault**
- Transmission Control Protocol (TCP)**
- Unicode**
- XML namespace**

The following terms are defined in [\[MS-OFCSGLOS\]](#):

- application server**
- back-end database server**
- base64 encoding**
- colleague**
- email address**
- endpoint**
- login name**
- request identifier**
- Session Initiation Protocol (SIP) address**
- SOAP fault detail**
- stream**
- Uniform Resource Identifier (URI)**
- user profile**
- user profile record identifier**
- User Profile Service**
- user profile store**
- Web Services Description Language (WSDL)**
- WSDL message**
- WSDL operation**
- XML namespace prefix**
- XML schema**

The following terms are specific to this document:

MAY, SHOULD, MUST, SHOULD NOT, MUST NOT: These terms (in all caps) are used as described in [\[RFC2119\]](#). All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

1.2 References

References to Microsoft Open Specifications documentation do not include a publishing year because links are to the latest version of the documents, which are updated frequently. References to other documents include a publishing year when one is available.

1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact dochelp@microsoft.com. We will assist you in finding the relevant information.

1.3 Overview

This protocol allows protocol clients to gain access to **user profile** information through a middle-tier **application server**, instead of a **back-end database server**. A typical scenario is a protocol client fetching user profile properties, such as the name, **email address**, picture URL, or **colleagues** of one or more users, by using user credentials, such as an user name or **security identifier (SID)**, or another field, such as the **user profile record identifier**, that identify those users. The middle-tier application server caches user profile fields that are commonly used and exposes them to protocol clients through this protocol. Consequently, this protocol helps distribute the load from the database tier to the application tier; it helps the protocol server scale to handle higher loads because read requests for commonly used fields are the operations performed most frequently. In addition, this protocol is designed for bulk operations. Protocol clients can use this protocol to gain access to user profile information for many users simultaneously, and the corresponding response can contain data for as many users as requested. This feature optimizes the efficiency of operations for a large user base.

1.4 Relationship to Other Protocols

This protocol uses the **Simple Object Access Protocol (SOAP)** message protocol for formatting request and response messages, as described in [\[SOAP1.1\]](#), [\[SOAP1.2/1\]](#) and [\[SOAP1.2/2\]](#). It transmits those messages by using **Hypertext Transfer Protocol (HTTP)**, as described in [\[RFC2616\]](#).

The User Profile Service Application Caching Web Service Protocol uses SOAP over HTTP(S) as shown in the following layering diagram.

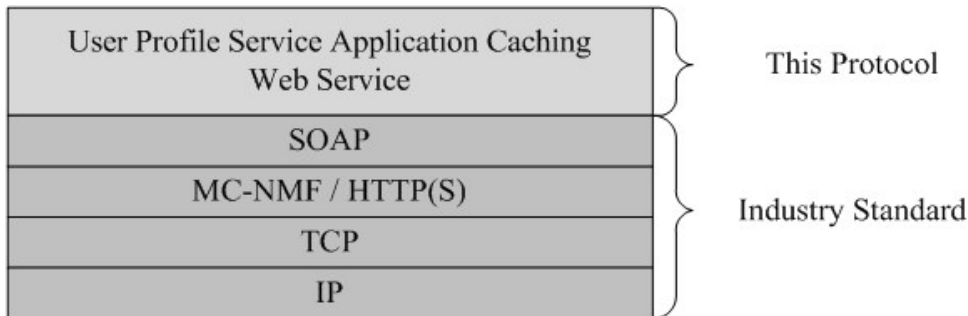

Figure 1: This protocol in relation to other protocols

1.5 Prerequisites/Preconditions

This protocol operates against a protocol server that exposes one or more **endpoint (4) URIs** that are known by protocol clients. Both the protocol server endpoint (4) URI and transport are either known by the protocol client or are obtained by using the discovery mechanism described in [\[MS-SPTWS\]](#).

The protocol client can obtain the **ApplicationClassId** and **ApplicationVersion** of the protocol server with which it communicates. The endpoint (4) URI of a protocol server is required to provide the discovery mechanism described in [\[MS-SPTWS\]](#).

This protocol requires the protocol client to have the necessary permission settings to call methods on the protocol server. The protocol also requires that the protocol client implements the token-based security needed for the protocol server and the security protocols described in [\[MS-SPSTWS\]](#).

1.6 Applicability Statement

This protocol is designed to retrieve user profile data for multiple users in one call. The number of users for which that data is retrieved is limited only by the configuration of the transport layer.

1.7 Versioning and Capability Negotiation

Supported Transports: This protocol can be implemented by using transports that support sending SOAP messages, as described in section [2.1](#).

1.8 Vendor-Extensible Fields

None.

1.9 Standards Assignments

None.

2 Messages

In the following sections, the schema definition might be less restrictive than the processing rules imposed by the protocol. The **WSDL** in this specification matches the WSDL that shipped with the product and provides a base description of the schema. The text that introduces the WSDL specifies additional restrictions that reflect actual Microsoft product behavior. For example, the schema definition might allow for an element to be empty, null, or not present but the behavior of the protocol as specified restricts the same elements to being non-empty, not null, and present.

2.1 Transport

Protocol servers **MUST** support Simple Object Access Protocol (SOAP) over Hypertext Transfer Protocol (HTTP), **Hypertext Transfer Protocol over Secure Sockets Layer (HTTPS)**, or **TCP**.

All protocol messages **MUST** be transported by using HTTP or TCP bindings at the transport level.

Protocol messages **MUST** be formatted as specified in either [\[SOAP1.1\]](#) section 4 or [\[SOAP1.2/1\]](#) section 5. Protocol server faults **MUST** be returned by using HTTP status codes, as specified in [\[RFC2616\]](#) section 10, or **SOAP faults**, as specified in [\[SOAP1.1\]](#) section 4.4 or [\[SOAP1.2/1\]](#) section 5.4.

If the HTTPS transport is used, a server certificate **MUST** be deployed.

This protocol **MAY** transmit an additional SOAP header, the **ServiceContext** header, as specified in [\[MS-SPSTWS\]](#).

This protocol does not define any means for activating a protocol server or protocol client. The protocol server **MUST** be configured and begin listening in an implementation-specific way. In addition, the protocol client **MUST** know the format and transport that is used by the server, for example, the SOAP format over an HTTP transport.

2.2 Common Message Syntax

This section contains common definitions that are used by this protocol. The syntax of the definitions uses **XML schema**, as specified in [\[XMLSCHEMA1\]](#) and [\[XMLSCHEMA2\]](#), and WSDL, as specified in [\[WSDL\]](#).

2.2.1 Namespaces

This specification defines and references various **XML namespaces** using the mechanisms specified in [\[XMLNS\]](#). Although this specification associates a specific **XML namespace prefix** for each XML namespace that is used, the choice of any particular XML namespace prefix is implementation-specific and not significant for interoperability.

Prefix	Namespace URI	Reference
q1	http://Microsoft/Office/Server/UserProfiles	
q2	http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.UserProfiles.Cache

2.2.2 Messages

This specification does not define any common **WSDL message** definitions.

2.2.3 Elements

This specification does not define any common XML schema element definitions.

2.2.4 Complex Types

The following table summarizes the set of common XML schema complex type definitions defined by this specification. XML schema complex type definitions that are specific to a particular operation are described with the operation.

Complex type	Description
ArrayOfUserData	ArrayOfUserData is a sequence of zero or more UserData complex types.
ConfigurationFault	The ConfigurationFault complex type describes errors that occur because of configuration failures either at the service endpoint (4) of this protocol or in transport layers. It is an extension of the UserProfileFault complex type.
InputFault	The InputFault complex type describes errors that occur because of invalid UserSearchCriteria input from a protocol client. The InputFault complex type is an extension of the UserProfileFault complex type.
UnknownFault	The UnknownFault complex type describes errors that occur for unknown reasons in the service endpoint (4) of this protocol. The UnknownFault complex type is an extension of the UserProfileFault complex type.
UserData	UserData is a complex type that contains the commonly used properties of the user profile data for a specific user in the user profile store .
UserProfileFault	The UserProfileFault complex type describes errors that occur because of errors within the service endpoint (4) of this protocol.

2.2.4.1 ConfigurationFault

Namespace: http://Microsoft/Office/Server/UserProfiles

The **ConfigurationFault** complex type describes errors that occur because of configuration failures either at the service endpoint (4) of this protocol or in transport layers. It is an extension of the **UserProfileFault** complex type.

```
<xs:complexType name="ConfigurationFault" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexContent mixed="false">
    <xs:extension base="q1:UserProfileFault">
      <xs:sequence/>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

2.2.4.2 InputFault

Namespace: http://Microsoft/Office/Server/UserProfiles

The **InputFault** complex type describes errors that occur because of invalid **UserSearchCriteria** input from a protocol client. The **InputFault** complex type is an extension of the **UserProfileFault** complex type.

```
<xs:complexType name="InputFault" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexContent mixed="false">
    <xs:extension base="q1:UserProfileFault">
      <xs:sequence/>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

2.2.4.3 UnknownFault

Namespace: http://Microsoft/Office/Server/UserProfiles

The **UnknownFault** complex type describes errors that occur for unknown reasons in the service endpoint (4) of this protocol. The **UnknownFault** complex type is an extension of the **UserProfileFault** complex type.

```
<xs:complexType name="UnknownFault" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexContent mixed="false">
    <xs:extension base="q1:UserProfileFault">
      <xs:sequence/>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

2.2.4.4 UserProfileFault

Namespace: http://Microsoft/Office/Server/UserProfiles

The **UserProfileFault** complex type describes errors that occur because of errors within the service endpoint (4) of this protocol.

```

<xs:complexType name="UserProfileFault" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" name="FailureDetail" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="FaultCode" type="q1:FaultCodes"/>
  </xs:sequence>
</xs:complexType>

```

FailureDetail: Specifies an error string. The protocol does not impose any restriction on the behavior of the protocol client with respect to this field.

FaultCode: Specifies a numerical indicator of the error that occurred. The protocol does not impose any restriction on the behavior of the protocol client with respect to this field.

2.2.4.5 ArrayOfUserData

Namespace: http://Microsoft/Office/Server/UserProfiles

ArrayOfUserData is a sequence of zero or more UserData complex types.

```

<xs:complexType name="ArrayOfUserData" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="UserData" nillable="true"
type="q1:UserData"/>
  </xs:sequence>
</xs:complexType>

```

UserData: Specifies a **UserData** complex type.

2.2.4.6 UserData

Namespace: http://Microsoft/Office/Server/UserProfiles

UserData is a complex type that contains the commonly used properties of the user profile data for a specific user in the user profile store.

```

<xs:complexType name="UserData" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" name="Department" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="Email" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="LastUpdate" type="xs:dateTime"/>
    <xs:element minOccurs="0" name="MasterRecordID" type="xs:long"/>
    <xs:element minOccurs="0" name="NTName" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="PartitionID" type="tnsl:guid"/>
    <xs:element minOccurs="0" name="PictureUrl" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="PreferredName" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="ProfileSubtypeID" type="xs:int"/>
    <xs:element minOccurs="0" name="RecordID" type="xs:long"/>
    <xs:element minOccurs="0" name="SID" nillable="true" type="xs:base64Binary"/>
    <xs:element minOccurs="0" name="SipAddress" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="Title" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="UserID" type="tnsl:guid"/>
    <xs:element minOccurs="0" name="PersonalSpace" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="FeedIdentifier" nillable="true" type="xs:string"/>
    <xs:element minOccurs="0" name="FeedPrivacyActivity" nillable="true" type="xs:int"/>
    <xs:element minOccurs="0" name="IsPeopleListPublic" nillable="true" type="xs:boolean"/>
  </xs:sequence>
</xs:complexType>

```

```
<xs:element minOccurs="0" name="EmailOptin" nillable="true" type="xs:int"/>
<xs:element minOccurs="0" name="StatusNote" nillable="true" type="xs:string"/>
</xs:sequence>
</xs:complexType>
```

Department: The department at work to which the user belongs.

Email: The work-related email address of the user.

LastUpdate: The timestamp, in **UTC** format, when the user's user profile data was last modified.

MasterRecordID: The identifier of the primary record that stores the user profile data. If the **MasterRecordID** equals the **RecordID**, then this record **MUST** be the primary record of the user profile data of the user. The primary record is the main record for the user if the user has two user profiles.

NTName: The user name string that uniquely identifies the user within the authentication **domain** that is used to authenticate the user.

PartitionID: A **GUID** used to filter the current request. This value **MUST NOT** be null or empty.

PictureUrl: The URL of a picture by which the user prefers to be recognized.

PictureTimestamp: A string that serves as a version identifier for the user's picture. The value of this property **SHOULD** change whenever the contents of PictureUrl and/or the contents of the picture stored at PictureUrl are altered.

PicturePlaceholderState: An integer that indicates whether the picture located at the URL stored in the PictureUrl property is a placeholder image. Valid values are "0" (not a placeholder) and "1" (placeholder).

PictureExchangeSyncState: An integer that indicates whether the picture located at the URL stored in the PictureUrl property was retrieved from Microsoft Exchange Server. Valid values are "0" (not retrieved from Microsoft Exchange Server) and "1" (retrieved from Microsoft Exchange Server).

PreferredName: The display name of the user by which the user prefers to be addressed.

ProfileSubtypeID: An integer that indicates the type of profile. Valid values are "1" (user) and "2" (organization).

RecordID: An 8-byte, user profile record identifier.

SID: A security identifier (SID) that uniquely identifies the user within the authentication domain that is used to authenticate the user.

SipAddress: The **Session Initiation Protocol (SIP) address** of the user.

Title: The work title of the user.

UserID: A 16-byte GUID that uniquely identifies the user.

PersonalSpace: The URL of the personal site for the user.

FeedIdentifier: A string that identifies the feed source for the user. The format of the string is feed application defined.

FeedPrivacyActivity: An integer that, if nonzero, indicates that changes to the user profile may generate feed activities.

IsPeopleListPublic: A Boolean that, if true, indicates that other users are permitted to obtain this users list of followed people.

EmailOptin: An integer field containing bitmask values that indicate the user-specified preferences for receiving emails related to feed activities. Emails are sent to the user under the following conditions:

- If the bit corresponding to value 0x08 is set, emails are sent to this user when a feed entry is posted to this user by any other feed user.
- If the bit corresponding to value 0x10 is set, emails are sent to this user when any other feed user replies to a feed entry posted by this user.
- If the bit corresponding to value 0x20 is set, emails are sent to this user when any other feed user replies to a reply posted by this user.

StatusNote: The body of the most recent non-reply feed entry generated by the user.

2.2.5 Simple Types

The following table summarizes the set of common XML schema simple type definitions defined by this specification. XML schema simple type definitions that are specific to a particular operation are described with the operation.

Simple type	Description
char	The char simple type is a Unicode character that is stored in a 4-byte integer.
duration	The duration simple type is the length of time, as specified in [XMLSCHEMA] .
FaultCodes	The FaultCodes simple type is an enumeration of the possible errors that the service endpoint (4) of this protocol communicates with protocol clients. The protocol imposes no restriction on the behavior of the protocol client with respect to this type.

2.2.5.1 char

Namespace: <http://schemas.microsoft.com/2003/10/Serialization/>

The **char** simple type is a Unicode character that is stored in a 4-byte integer.

```
<xs:simpleType name="char" xmlns:xs="http://www.w3.org/2001/XMLSchema">  
  <xs:restriction base="xs:int"/>  
</xs:simpleType>
```

2.2.5.2 duration

Namespace: <http://schemas.microsoft.com/2003/10/Serialization/>

The **duration** simple type is the length of time, as specified in [\[XMLSCHEMA\]](#).

```
<xs:simpleType name="duration" xmlns:xs="http://www.w3.org/2001/XMLSchema">
```

```

<xs:restriction base="xs:duration">
  <xs:pattern value="\-?P(\d*D)?(T(\d*H)?(\d*M)?(\d*(\.\d*)?S)?)?"/>
  <xs:minInclusive value="-P10675199DT2H48M5.4775808S"/>
  <xs:maxInclusive value="P10675199DT2H48M5.4775807S"/>
</xs:restriction>
</xs:simpleType>

```

2.2.5.3 FaultCodes

Namespace: http://Microsoft/Office/Server/UserProfiles

The **FaultCodes** simple type is an enumeration of the possible errors that the service endpoint (4) of this protocol communicates with protocol clients. The protocol imposes no restriction on the behavior of the protocol client with respect to this type.

```

<xs:simpleType name="FaultCodes" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:enumeration value="UnknownError"/>
    <xs:enumeration value="InvalidInput"/>
    <xs:enumeration value="InvalidConfiguration"/>
  </xs:restriction>
</xs:simpleType>

```

The following table specifies the allowable values for the **FaultCodes** simple type.

Value	Meaning
UnknownError	The cause of the error is unknown to the service endpoint (4) of this protocol.
InvalidInput	The cause of the error is invalid UserSearchCriteria input from the protocol client.
InvalidConfiguration	The cause of the error is an invalid configuration of the service endpoint (4) of this protocol or the transport layers below it.

2.2.6 Attributes

This specification does not define any common XML schema attribute definitions.

2.2.7 Groups

This specification does not define any common XML schema group definitions.

2.2.8 Attribute Groups

This specification does not define any common XML schema attribute group definitions.

3 Protocol Details

In the following sections, the schema definition might differ from the processing rules imposed by the protocol. The WSDL in this specification matches the WSDL that shipped with the product and provides a base description of the schema. The text that introduces the WSDL might specify differences that reflect actual Microsoft product behavior. For example, the schema definition might allow for an element to be **empty**, **null**, or **not present** but the behavior of the protocol as specified restricts the same elements to being **non-empty**, **not null**, and **present**.

This protocol is a server-side protocol. The client side of this protocol is simply a pass-through. That is, no additional timers or other state is required on the client side of this protocol. Calls that are made by the upper protocol or application are passed directly to the transport, and the results returned by the transport are passed directly to the higher-layer protocol or application.

3.1 Server Details

This protocol is based on stateless interaction between the protocol client and protocol server. The protocol client **MUST** be authenticated with the credentials of a user who has access to the **User Profile Service** (referred to as 'UPA Standard Authentication' in the following figure). The protocol simply exposes the data that is currently stored in the User Profile Service that is deployed and running. There is no interdependency between the information exchanged between the protocol client and protocol server during one instance of their interaction using this protocol and the next instance. The following diagram illustrates the control flow for retrieving cached information about user profiles and returning it to the protocol client.

Figure 2: Control flow of the user profile caching service

When errors are returned to the protocol client, the service endpoint (4) of this protocol specifies complex types as described in sections [2.2.4.1](#) through [2.2.4.4](#) for each error.

3.1.1 Abstract Data Model

This section describes a conceptual model of possible data organization that an implementation maintains to participate in this protocol. The described organization is provided to facilitate the explanation of how the protocol behaves. This document does not mandate that implementations adhere to this model as long as their external behavior is consistent with that described in this document.

A key aspect of this protocol is that it allows protocol clients to gain quick and scalable access to a commonly used subset of User Profile Service properties and it does so through a WCF service endpoint (4) that caches these properties from the back-end database server. Protocol clients can use the services that are offered by this protocol for commonly used user profile properties, such as email, picture URL, user name, display name, and user profile record identifier. Protocol clients cannot use this protocol to update user profile information; this protocol does not support write requests.

Because this protocol does not support write requests, the cache of user profile properties behind the service endpoint (4) of this protocol can potentially be out-of-date with the database layer before the cache is refreshed internally within the service. The following diagram captures these dependencies.

Figure 3: Dependencies on the cache

The preceding diagram illustrates that protocol clients that use this protocol MUST be able to tolerate a small delay, in the order of minutes, before a change that is made to the user profile data in the database is reflected in the cache. The cache refresh timer cannot be manipulated by using this protocol. It can be controlled only on the application server itself.

Initialization is not needed for the cache in the service endpoint (4) because the cache is populated on demand and transparently whenever the protocol client accesses data that is missing in the cache but present in the database. The protocol client interface is a very simple stateless request/response protocol.

3.1.2 Timers

None.

3.1.3 Initialization

None.

3.1.4 Message Processing Events and Sequencing Rules

The following table summarizes the list of operations as defined by this specification.

Operation	Description
GetUserData	The GetUserData operation retrieves the commonly used properties of a user profile in the user profile store.

3.1.4.1 GetUserData

The **GetUserData** operation retrieves the commonly used properties of a user profile in the user profile store.

The following is the WSDL port type specification of the **GetUserData WSDL operation**.

```
<wsdl:operation name="GetUserData" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input wsam:Action="http://Microsoft.Office.Server.UserProfiles/GetUserData"
    message="tns:IProfileDBCacheService_GetUserData_InputMessage"
    xmlns:wsam="http://www.w3.org/2007/05/addressing/metadata"/>
  <wsdl:output wsam:Action="http://tempuri.org/IProfileDBCacheService/GetUserDataResponse"
    message="tns:IProfileDBCacheService_GetUserData_OutputMessage"
    xmlns:wsam="http://www.w3.org/2007/05/addressing/metadata"/>
  <wsdl:fault
    wsam:Action="http://tempuri.org/IProfileDBCacheService/GetUserDataConfigurationFaultFault"
    name="ConfigurationFaultFault"
    message="tns:IProfileDBCacheService_GetUserData_ConfigurationFaultFault_FaultMessage"
    xmlns:wsam="http://www.w3.org/2007/05/addressing/metadata"/>
  <wsdl:fault
    wsam:Action="http://tempuri.org/IProfileDBCacheService/GetUserDataInputFaultFault"
    name="InputFaultFault"
    message="tns:IProfileDBCacheService_GetUserData_InputFaultFault_FaultMessage"
    xmlns:wsam="http://www.w3.org/2007/05/addressing/metadata"/>
  <wsdl:fault
    wsam:Action="http://tempuri.org/IProfileDBCacheService/GetUserDataUnknownFaultFault"
    name="UnknownFaultFault"
    message="tns:IProfileDBCacheService_GetUserData_UnknownFaultFault_FaultMessage"
    xmlns:wsam="http://www.w3.org/2007/05/addressing/metadata"/>
  <wsdl:fault
    wsam:Action="http://tempuri.org/IProfileDBCacheService/GetUserDataUserProfileFaultFault"
    name="UserProfileFaultFault"
    message="tns:IProfileDBCacheService_GetUserData_UserProfileFaultFault_FaultMessage"
    xmlns:wsam="http://www.w3.org/2007/05/addressing/metadata"/>
</wsdl:operation>
```

The protocol client sends an **IProfileDBCacheService_GetUserData_InputMessage** request message and the protocol server responds with an **IProfileDBCacheService_GetUserData_OutputMessage** response message. If the user profile store has user profile data that corresponds to the input **UserSearchCriteria** complex type, then this operation returns and packages that data for the protocol client as an output **UserData** complex type. The protocol client MAY send a request to retrieve multiple user profiles in one call to this operation, as specified in section [3.1.4.1.3.1](#). The operation returns one **UserData** complex type for each input that it receives if the operation finds the user data. Otherwise, the operation MUST return **NULL** in place of **UserData** corresponding to the **UserSearchCriteria**. In case of any error, the operation MUST return an error. If the operation returns a SOAP fault as specified in [SOAP1.1] section 4.4 or [\[SOAP1.2/1\]](#) section 5.4, the **SOAP fault detail** MUST contain one of the error complex types as specified in sections [2.2.4.1](#) through [2.2.4.4](#).

3.1.4.1.1 Messages

The following table summarizes the set of WSDL message definitions that are specific to this operation.

Message	Description
IProfileDBCacheService_GetUserData_InputMessage	The request WSDL message for the GetUserData WSDL operation.
IProfileDBCacheService_GetUserData_OutputMessage	The response WSDL message for the GetUserData WSDL operation.

3.1.4.1.1.1 IProfileDBCacheService_GetUserData_InputMessage

The request WSDL message for the **GetUserData** WSDL operation.

The **SOAP action** value is:

```
http://Microsoft.Office.Server.UserProfiles/GetUserData
```

The **SOAP body** contains the **GetUserData** element.

3.1.4.1.1.2 IProfileDBCacheService_GetUserData_OutputMessage

The response WSDL message for the **GetUserData** WSDL operation.

The SOAP body contains the **GetUserDataResponse** element.

3.1.4.1.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

Element	Description
GetUserData	The input data for the GetUserData WSDL operation.
GetUserDataResponse	The result data for the GetUserData WSDL operation.

3.1.4.1.2.1 GetUserData

The **GetUserData** element specifies the input data for the **GetUserData** WSDL operation.

```
<xs:element name="GetUserData" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:q1="http://Microsoft/Office/Server/UserProfiles" minOccurs="0"
name="searchCriteria" nillable="true" type="q1:UserSearchCriteria"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

searchCriteria: Contains search criteria for the service endpoint (4) to use when searching for user profile data.

3.1.4.1.2.2 GetUserDataResponse

The **GetUserDataResponse** element specifies the result data for the **GetUserData** WSDL operation.

```
<xs:element name="GetUserDataResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element
        xmlns:q2="http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.UserProfiles.Cache"
        minOccurs="0" name="GetUserDataResult" nillable="true"
        type="q2:StreamedDataOfArrayOfUserDatajHCugpoN"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

GetUserDataResult: Contains **StreamedDataOfArrayOfUserDatajHCugpoN** complex type. The collection of **UserData** complex types specified in **StreamedDataOfArrayOfUserDatajHCugpoN** complex type have a one-to-one relationship with input **searchCriteria** complex types. If the user profile data for a specific **UserSearchCriteria** is not found, the corresponding **UserData** structure is nil.

3.1.4.1.3 Complex Types

The following table summarizes the XML schema complex type definitions that are specific to this operation.

Complex type	Description
ArrayOfbase64Binary	ArrayOfbase64Binary is a sequence of zero or more base64Binary types.
ArrayOfguid	ArrayOfguid is a sequence of zero or more 16-byte GUIDs.
ArrayOflong	ArrayOflong is a sequence of zero or more 8-byte, long integers.
ArrayOfstring	ArrayOfstring is a sequence of zero or more strings.
MarshalByRefObject	MarshalByRefObject is the base class for objects that communicate across application domain boundaries by exchanging messages using a proxy.
MemoryStream	MemoryStream is a complex type that specifies a stream (1) whose backing store is memory.
Stream	Stream is a complex type that specifies a stream (1).
StreamedDataOfArrayOfUserDatajHCugpoN	StreamedDataOfArrayOfUserDatajHCugpoN is a complex type that contains a stream (1) with serialized contents of ArrayOfUserData complex type.
UserSearchCriteria	The UserSearchCriteria complex type specifies the list of properties that the service endpoint (4) MUST

Complex type	Description
	use when searching for user profile data. In case of any error, the protocol server MUST return either an InputFault , ConfigurationFault , or UnknownFault complex type to the protocol client.

3.1.4.1.3.1 UserSearchCriteria

Namespace: http://Microsoft/Office/Server/UserProfiles

The **UserSearchCriteria** complex type specifies the list of properties that the service endpoint (4) MUST use when searching for user profile data. In case of any error, the protocol server MUST return either an **InputFault**, **ConfigurationFault**, or **UnknownFault** complex type to the protocol client.

```
<xs:complexType name="UserSearchCriteria" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" name="AllowAlternateAccountName" type="xs:boolean"/>
    <xs:element minOccurs="0" name="CorrelationID" type="tns1:guid"/>
    <xs:element xmlns:q3="http://schemas.microsoft.com/2003/10/Serialization/Arrays"
minOccurs="0" name="EmailCollection" nillable="true" type="q3:ArrayOfstring"/>
    <xs:element xmlns:q3="http://schemas.microsoft.com/2003/10/Serialization/Arrays"
minOccurs="0" name="NTNameCollection" nillable="true" type="q3:ArrayOfstring"/>
    <xs:element minOccurs="0" name="PartitionID" type="tns1:guid"/>
    <xs:element xmlns:q3="http://schemas.microsoft.com/2003/10/Serialization/Arrays"
minOccurs="0" name="RecordIDCollection" nillable="true" type="q3:ArrayOflong"/>
    <xs:element xmlns:q3="http://schemas.microsoft.com/2003/10/Serialization/Arrays"
minOccurs="0" name="SIDCollection" nillable="true" type="q3:ArrayOfbase64Binary"/>
    <xs:element minOccurs="0" name="SearchColumn" nillable="true" type="xs:string"/>
    <xs:element xmlns:q3="http://schemas.microsoft.com/2003/10/Serialization/Arrays"
minOccurs="0" name="UserIDCollection" nillable="true" type="q3:ArrayOfguid"/>
  </xs:sequence>
</xs:complexType>
```

AllowAlternateAccountName: A single user can have multiple accounts in an organization. For example, a user can have an account "DOMAIN1\user1" for primary **authentication (1)** and another account "DOMAIN2\User1First.User1Last" for email. When a user's user profile information is created, a distinct record for each user account is created in the user profile store, but the service ensures that all of the accounts have the same user profile data associated with them in the user profile store. The service also marks one of the accounts, for example "DOMAIN1\user1" as the master account, which is used primarily to identify the user. If this value is "true", it indicates that the **UserSearchCriteria** can be applied to any of the user's accounts. If this value is "false", it indicates that **UserSearchCriteria** MUST be applied only to the master account for the user.

CorrelationID: The optional **request identifier** for the current request.

EmailCollection: The list of email addresses for users, based on which the search for their user profile data MUST be conducted by the service. A commonly used format is "user@domain.company".

NTNameCollection: The list of user names for users, based on which the search for their user profile data MUST be conducted by the service. A commonly used format is "DOMAIN\user".

PartitionID: A GUID used to filter the current request. This value MUST NOT be null or empty.

RecordIDCollection: The list of 8-byte user profile record identifiers, based on which the search for the user profile data MUST be conducted by the service.

SIDCollection: The list of security identifiers (SIDs), based on which the search for the user profile data MUST be conducted by the service.

SearchColumn: Specifies which of the following search criteria fields to use when searching for user profile data:

- If the **SearchColumn** is the string "Email" it specifies **EmailCollection**.
- If the **SearchColumn** is the string "UserID" it specifies **UserIDCollection**.
- If the **SearchColumn** is the string "NTName" it specifies **NTNameCollection**.
- If the **SearchColumn** is the string "SID" it specifies **SIDCollection**.
- If the **SearchColumn** is the string "RecordID" it specifies **RecordIDCollection**.

The service never matches against more than one of these fields at a time. The service chooses exactly one string specified by **SearchColumn** to conduct a search. This value MUST NOT be null or empty.

UserIDCollection: The list of 16-byte GUIDs that uniquely identify a user, based on which the search for the user profile data MUST be conducted by the service.

3.1.4.1.3.2 ArrayOfstring

Namespace: <http://schemas.microsoft.com/2003/10/Serialization/Arrays>

ArrayOfstring is a sequence of zero or more strings.

```
<xs:complexType name="ArrayOfstring" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="string" nillable="true"
      type="xs:string"/>
  </xs:sequence>
</xs:complexType>
```

string: A single string value.

3.1.4.1.3.3 ArrayOflong

Namespace: <http://schemas.microsoft.com/2003/10/Serialization/Arrays>

ArrayOflong is a sequence of zero or more 8-byte, long integers.

```
<xs:complexType name="ArrayOflong" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="long" type="xs:long"/>
  </xs:sequence>
</xs:complexType>
```

long: An 8-byte (64-bit) integer.

3.1.4.1.3.4 ArrayOfbase64Binary

Namespace: http://schemas.microsoft.com/2003/10/Serialization/Arrays

ArrayOfbase64Binary is a sequence of zero or more **base64Binary** types.

```
<xs:complexType name="ArrayOfbase64Binary" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="base64Binary" nillable="true"
      type="xs:base64Binary"/>
  </xs:sequence>
</xs:complexType>
```

base64Binary: This is a sequence of bytes represented in **base64 encoding**.

3.1.4.1.3.5 ArrayOfguid

Namespace: http://schemas.microsoft.com/2003/10/Serialization/Arrays

ArrayOfguid is a sequence of zero or more 16-byte GUIDs.

```
<xs:complexType name="ArrayOfguid" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="guid" type="tnsl:guid"/>
  </xs:sequence>
</xs:complexType>
```

guid: A 16-byte GUID.

3.1.4.1.3.6 StreamedDataOfArrayOfUserDatajHCugpoN

Namespace: http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.UserProfiles.Cache

StreamedDataOfArrayOfUserDatajHCugpoN is a complex type that contains a stream (1) with serialized contents of **ArrayOfUserData** complex type.

```
<xs:complexType name="StreamedDataOfArrayOfUserDatajHCugpoN"
  xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element xmlns:q4="http://schemas.datacontract.org/2004/07/System.IO" minOccurs="0"
      name="DataStream" nillable="true" type="q4:MemoryStream"/>
  </xs:sequence>
</xs:complexType>
```

DataStream: Specifies a **MemoryStream** complex type containing serialized contents of **ArrayOfUserData** complex type.

3.1.4.1.3.7 MemoryStream

Namespace: http://schemas.datacontract.org/2004/07/System.IO

MemoryStream is a complex type that specifies a stream (1) whose backing store is memory.

```
<xs:complexType name="MemoryStream" xmlns:xs="http://www.w3.org/2001/XMLSchema">
```

```

<xs:complexContent mixed="false">
  <xs:extension base="q4:Stream">
    <xs:sequence>
      <xs:element name="_buffer" nillable="true" type="xs:base64Binary"/>
      <xs:element name="_capacity" type="xs:int"/>
      <xs:element name="_expandable" type="xs:boolean"/>
      <xs:element name="_exposable" type="xs:boolean"/>
      <xs:element name="_isOpen" type="xs:boolean"/>
      <xs:element name="_length" type="xs:int"/>
      <xs:element name="_origin" type="xs:int"/>
      <xs:element name="_position" type="xs:int"/>
      <xs:element name="_writable" type="xs:boolean"/>
    </xs:sequence>
  </xs:extension>
</xs:complexContent>
</xs:complexType>

```

__buffer: The array of unsigned bytes from which the stream (1) is created. It represents serialized contents of **ArrayOfUserData** complex type.

__capacity: Specifies the number of bytes allocated for this stream (1).

__expandable: Specifies if the stream (1) is expandable.

__exposable: Specifies if the underlying byte buffer is exposed.

__isOpen: Specifies if the stream (1) is open.

__length: Specifies the length of the stream (1) in bytes.

__origin: Specifies the index into the underlying buffer at which the stream (1) starts.

__position: Specifies the current position within the stream (1).

__writable: Specifies if the stream (1) supports writing.

3.1.4.1.3.8 Stream

Namespace: <http://schemas.datacontract.org/2004/07/System.IO>

Stream is a complex type that specifies a stream (1).

```

<xs:complexType name="Stream" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexContent mixed="false">
    <xs:extension xmlns:q5="http://schemas.datacontract.org/2004/07/System"
      base="q5:MarshalByRefObject">
      <xs:sequence/>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>

```

3.1.4.1.3.9 MarshalByRefObject

Namespace: <http://schemas.datacontract.org/2004/07/System>

MarshalByRefObject is the base class for objects that communicate across application domain boundaries by exchanging messages using a proxy.

```
<xs:complexType name="MarshalByRefObject" xmlns:xs="http://www.w3.org/2001/XMLSchema">  
  <xs:sequence>  
    <xs:element name="__identity" nillable="true" type="xs:anyType"/>  
  </xs:sequence>  
</xs:complexType>
```

__identity: Holds marshalling information of the object.

3.1.4.1.4 Simple Types

The following table summarizes the XML schema simple type definitions that are specific to this operation.

Simple type	Description
guid	guid is a 16-byte GUID.

3.1.4.1.4.1 guid

Namespace: <http://schemas.microsoft.com/2003/10/Serialization/>

guid is a 16-byte GUID.

```
<xs:simpleType name="guid" xmlns:xs="http://www.w3.org/2001/XMLSchema">  
  <xs:restriction base="xs:string">  
    <xs:pattern value="[\da-fA-F]{8}-[\da-fA-F]{4}-[\da-fA-F]{4}-[\da-fA-F]{4}-[\da-fA-F]{12}"/>  
  </xs:restriction>  
</xs:simpleType>
```

3.1.4.1.5 Attributes

None.

3.1.4.1.6 Groups

None.

3.1.4.1.7 Attribute Groups

None.

3.1.5 Timer Events

None.

3.1.6 Other Local Events

None.

4 Protocol Examples

This section provides specific example scenarios for retrieving a single user profile by **login name** and retrieving multiple user profiles by user profile record identifier.

Consider that the following two user profiles are part of the user profile store:

Record ID	User Name	NT Name	User ID
1	Agarwal, Nupur	contoso\nupuragarwal	4bccfd46-fb01-4c9b-988c-0730eaed529a
2	Cannon, Paul	contoso\paulcannon	b8110f57-8f8e-4c4a-9570-1c75828e18ef

The following identifiers are used in the examples in this section:

- PartitionID - 0C37852B-34D0-418E-91C6-2AC25AF4BE5B
- CorrelationID - a6b889ea-932a-4447-8d73-ce928cc912ad
- Security identifier (SID) - AQUAAAAAAAAUVAAAAoGXPfnhLm1/nfIdw6iooAA==

4.1 Retrieving a User Profile by NT Name

To retrieve a user profile by domain user account, consider the following WSDL message constructed by the protocol client to call **GetUserData**.

```
<s:Envelope xmlns:s="http://www.w3.org/2003/05/soap-envelope"
xmlns:a="http://www.w3.org/2005/08/addressing" xmlns:u="http://docs.oasis-
open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">
  <s:Header>
    <a:Action
s:mustUnderstand="1">http://Microsoft.Office.Server.UserProfiles/GetUserData</a:Action>
    <a:MessageID>urn:uuid:3548f307-1764-4099-bbab-d421557cca8d</a:MessageID>
    <a:ReplyTo>
      <a:Address>http://www.w3.org/2005/08/addressing/anonymous</a:Address>
    </a:ReplyTo>
    <a:To
s:mustUnderstand="1">net.tcp://mymachine:32845/827f1817ac334b5da4476147b9ee5a8f/ProfileDBCach
eService.svc</a:To>
    <o:Security s:mustUnderstand="1" xmlns:o="http://docs.oasis-open.org/wss/2004/01/oasis-
200401-wss-wssecurity-secext-1.0.xsd">
      ...
    </o:Security>
  </s:Header>
  <s:Body>
    <GetUserData xmlns="http://tempuri.org/">
      <searchCriteria xmlns:b="http://Microsoft.Office.Server.UserProfiles"

        </GetUserDataResponse>
    </s:Body>
</s:Envelope>

```

4.2 Retrieving Multiple User Profiles by Record Identifier

To retrieve multiple user profiles by record identifier, consider the following WSDL message constructed by the protocol client to call **GetUserData**.

```

<s:Envelope xmlns:s="http://www.w3.org/2003/05/soap-envelope"
xmlns:a="http://www.w3.org/2005/08/addressing" xmlns:u="http://docs.oasis-
open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">

```

```

<s:Header>
  <a:Action
s:mustUnderstand="1">http://Microsoft.Office.Server.UserProfiles/GetUserData</a:Action>
  <a:MessageID>urn:uuid:d0d7a499-931c-4e16-8407-6ea7f43b2a4a</a:MessageID>
  <a:ReplyTo>
    <a:Address>http://www.w3.org/2005/08/addressing/anonymous</a:Address>
  </a:ReplyTo>
  <a:To
s:mustUnderstand="1">net.tcp://mymachine:32845/827f1817ac334b5da4476147b9ee5a8f/ProfileDBCacheService.svc</a:To>
    <o:Security s:mustUnderstand="1" xmlns:o="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-secext-1.0.xsd">
      ...
    </o:Security>
  </s:Header>
<s:Body>
  <GetUserData xmlns="http://tempuri.org/">
    <searchCriteria xmlns:b="http://Microsoft/Office/Server/UserProfiles"
xmlns:i="http://www.w3.org/2001/XMLSchema-instance">
      <b:AllowAlternateAccountName>true</b:AllowAlternateAccountName>
      <b:CorrelationID>a6b889ea-932a-4447-8d73-ce928cc912ad</b:CorrelationID>
      <b>EmailCollection i:nil="true"
xmlns:c="http://schemas.microsoft.com/2003/10/Serialization/Arrays"></b>EmailCollection>
      <b:NTNameCollection i:nil="true"
xmlns:c="http://schemas.microsoft.com/2003/10/Serialization/Arrays"></b:NTNameCollection>
      <b:PartitionID>0c37852b-34d0-418e-91c6-2ac25af4be5b</b:PartitionID>
      <b:RecordIDCollection xmlns:c="http://www.w3.org/2001/XMLSchema">
        <c:long>1</c:long>
        <c:long>2</c:long>
      </b:RecordIDCollection>
      <b:SIDCollection i:nil="true"
xmlns:c="http://schemas.microsoft.com/2003/10/Serialization/Arrays"></b:SIDCollection>
      <b:SearchColumn>RecordID</b:SearchColumn>
      <b:UserIDCollection i:nil="true"
xmlns:c="http://schemas.microsoft.com/2003/10/Serialization/Arrays"></b:UserIDCollection>
    </searchCriteria>
  </GetUserData>
</s:Body>
</s:Envelope>

```

The protocol server responds with the following WSDL message:

```

<s:Envelope xmlns:s="http://www.w3.org/2003/05/soap-envelope"
xmlns:a="http://www.w3.org/2005/08/addressing" xmlns:u="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">
  <s:Header>
    <a:Action

</GetUserDataResponse>
</s:Body>
</s:Envelope>
```

5 Security

5.1 Security Considerations for Implementers

There are no security considerations that are specific to this protocol. General security considerations pertaining to [RFC2822](#) apply.

This protocol does not introduce any additional security considerations beyond those that apply to its underlying protocols.

5.2 Index of Security Parameters

None.

6 Appendix A: Full WSDL

For ease of implementation, the full WSDL is provided in this appendix.

```
<?xml version="1.0"?>
<wSDL:definitions xmlns:soap="http://schemas.xmlsoap.org/wsdl/soap/"
xmlns:tns="http://tempuri.org/" xmlns:xs="http://www.w3.org/2001/XMLSchema"
xmlns:wsam="http://www.w3.org/2007/05/addressing/metadata" name="ProfileDBCachService"

7 Appendix B: Full XML Schema

Schema name	Prefix	Section
http://tempuri.org/	tns	7.1
http://schemas.microsoft.com/2003/10/Serialization/	tns1	7.2
http://Microsoft/Office/Server/UserProfiles	q1	7.3
http://schemas.microsoft.com/2003/10/Serialization/Arrays	q3	7.4
http://schemas.datacontract.org/2004/07 /Microsoft.Office.Server.UserProfiles.Cache	q2	7.5
http://schemas.datacontract.org/2004/07/System.IO	q4	7.6
http://schemas.datacontract.org/2004/07/System	q5	7.7

For ease of implementation, the following sections provide the full XML schema for this protocol.

7.1 http://tempuri.org/ Schema

```
<?xml version="1.0"?>
<xs:schema elementFormDefault="qualified" targetNamespace="http://tempuri.org/"
xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:element name="GetUserData">
    <xs:complexType>
      <xs:sequence>
        <xs:element xmlns:q1="http://Microsoft/Office/Server/UserProfiles" minOccurs="0"
name="searchCriteria" nillable="true" type="q1:UserSearchCriteria"/>
      </xs:sequence>
    </xs:complexType>
  </xs:element>
  <xs:element name="GetUserDataResponse">
    <xs:complexType>
      <xs:sequence>
        <xs:element
xmlns:q2="http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.UserProfiles.Cache"
minOccurs="0" name="GetUserDataResult" nillable="true"
type="q2:StreamedDataOfArrayOfUserDatajHCugpoN"/>
      </xs:sequence>
    </xs:complexType>
  </xs:element>
  <xs:import namespace="http://Microsoft/Office/Server/UserProfiles"/>
  <xs:import
namespace="http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.UserProfiles.Cache"
"/>
</xs:schema>
```

7.2 http://schemas.microsoft.com/2003/10/Serialization/ Schema

```
<?xml version="1.0"?>
<xs:schema xmlns:tns1="http://schemas.microsoft.com/2003/10/Serialization/"

8 Appendix C: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include released service packs:

- Microsoft SharePoint Server 2010
- Microsoft SharePoint Server 2013

Exceptions, if any, are noted below. If a service pack or Quick Fix Engineering (QFE) number appears with the product version, behavior changed in that service pack or QFE. The new behavior also applies to subsequent service packs of the product unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms SHOULD or SHOULD NOT implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies that the product does not follow the prescription.

9 Change Tracking

This section identifies changes that were made to the [MS-UPSCWS] protocol document between the November 2013 and February 2014 releases. Changes are classified as New, Major, Minor, Editorial, or No change.

The revision class **New** means that a new document is being released.

The revision class **Major** means that the technical content in the document was significantly revised. Major changes affect protocol interoperability or implementation. Examples of major changes are:

- A document revision that incorporates changes to interoperability requirements or functionality.
- The removal of a document from the documentation set.

The revision class **Minor** means that the meaning of the technical content was clarified. Minor changes do not affect protocol interoperability or implementation. Examples of minor changes are updates to clarify ambiguity at the sentence, paragraph, or table level.

The revision class **Editorial** means that the formatting in the technical content was changed. Editorial changes apply to grammatical, formatting, and style issues.

The revision class **No change** means that no new technical changes were introduced. Minor editorial and formatting changes may have been made, but the technical content of the document is identical to the last released version.

Major and minor changes can be described further using the following change types:

- New content added.
- Content updated.
- Content removed.
- New product behavior note added.
- Product behavior note updated.
- Product behavior note removed.
- New protocol syntax added.
- Protocol syntax updated.
- Protocol syntax removed.
- New content added due to protocol revision.
- Content updated due to protocol revision.
- Content removed due to protocol revision.
- New protocol syntax added due to protocol revision.
- Protocol syntax updated due to protocol revision.
- Protocol syntax removed due to protocol revision.

- Obsolete document removed.

Editorial changes are always classified with the change type **Editorially updated**.

Some important terms used in the change type descriptions are defined as follows:

- **Protocol syntax** refers to data elements (such as packets, structures, enumerations, and methods) as well as interfaces.
- **Protocol revision** refers to changes made to a protocol that affect the bits that are sent over the wire.

The changes made to this document are listed in the following table. For more information, please contact dochelp@microsoft.com.

Section	Tracking number (if applicable) and description	Major change (Y or N)	Change type
3.1.1 Abstract Data Model	Verified the removal of ambiguous word "usually" in normative description.	N	Content removed.
