1.3 Overview

The protocol enables a protocol client to request and receive a drawing page (section [1.3.2](#)) of a [web drawing](#) from the protocol server in either raster or vector format. The supported raster format is the **Portable Network Graphics (PNG)** format, as described in [\[RFC2083\]](#). The supported vector format is **Extensible Application Markup Language (XAML)**, as described in [\[MS-SLXV\]](#).

Additionally, the protocol enables a protocol client to add, edit, or delete [comments](#) associated with a drawing page or its [shapes](#).

A typical scenario for using this protocol is an application that retrieves and displays web drawings, and collects collaborative content feedback in comments. Typically a web drawing is contained in a file stored in a document repository.

1.3.1 Web Drawing

A **web drawing** is a collection of drawings page (section [1.3.2](#)), [shapes](#), resources, [comments](#), and information that can be rendered as a **drawing** in a web browser. Based on the format of the file that contains the web drawing, the protocol makes the distinction between the following types of web drawings.

Type	Description
VGSFF	A web drawing contained in a file that conforms to the format specified in [MS-VGSFF] section 2.2.1
VSDX	A web drawing contained in a file that conforms to the format specified in [MS-VSDX] section 2.2.1

1.3.2 Drawing Page

A **drawing page** is a collection of shapes (section [1.3.3](#)) that are viewed together.

Drawing pages of **VGSFF** web drawings (section [1.3.1](#)) are specified in [\[MS-VGSFF\]](#) section 2.2.2.

Drawing pages of **VSDX** web drawings are specified in [\[MS-VSDX\]](#) section 2.2.2.

1.3.2.1 Foreground Page

Foreground pages of **VSDX** [web drawings](#) are specified in [\[MS-VSDX\]](#) section 2.2.2.4.

1.3.3 Shape

A **shape** is a collection of geometry, formatting, text, images, hyperlinks, and shape data in a drawing page (section [1.3.2](#)).

Shapes contained in **VGSFF** [web drawings](#) are specified in [\[MS-VGSFF\]](#) section 2.2.3.

Shapes contained in **VSDX** web drawings are specified in [\[MS-VSDX\]](#) section 2.2.3.

1.3.4 Shape Data

A shape (section [1.3.3](#)) can have data associated with it that provides information about its meaning. Shape data (section [1.3.4](#)) can come from information stored in the file refreshed from **data providers** or from recalculations of an evaluated formula. The shape data is also formatted for display.

Shape data items contained in **VGSFF** [web drawings](#) (section [1.3.1](#)) are specified in [\[MS-VGSFF\]](#) section 2.2.3.5

Shape data items contained in **VSDX** web drawings are specified in [\[MS-VSDX\]](#) section 2.2.3.6.

1.3.5 Comment

A **comment** is a plain text annotation in a [web drawing](#). Each comment specifies an author, and a relationship with a drawing page (section [1.3.2](#)) or a specific [shape](#) on the drawing page.

Comments contained in **VSDX** web drawings are specified in [\[MS-VSDX\]](#) section 2.2.9.

Comments are not contained in **VGSFF** web drawings.

1.4 Relationship to Other Protocols

This protocol uses the **SOAP** message protocol for formatting request and response messages, as described in [\[SOAP1.1\]](#), [\[SOAP1.2/1\]](#) and [\[SOAP1.2/2\]](#). It transmits those messages by using **HTTP**, as described in [\[RFC2616\]](#), or **Hypertext Transfer Protocol over Secure Sockets Layer (HTTPS)**, as described in [\[RFC2818\]](#).

The following diagram shows the underlying messaging and transport stack used by the protocol:

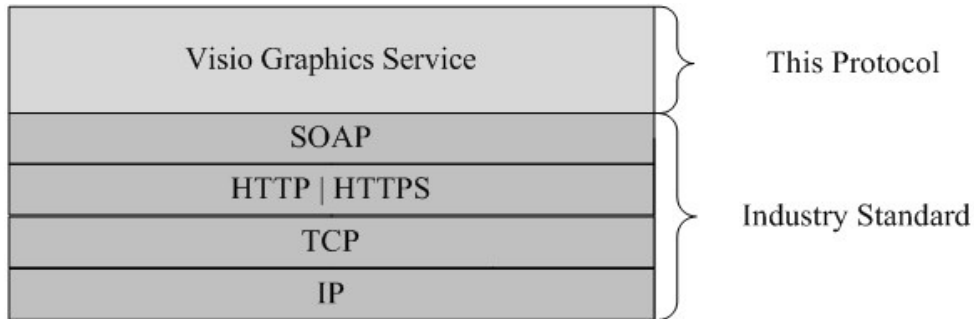

Figure 1: This protocol in relation to other protocols

1.5 Prerequisites/Preconditions

This protocol operates against a protocol server that exposes one or more **endpoint (4) URIs** that are known by protocol clients. The endpoint (4) URI of the protocol server and the transport that is used by the protocol server are either known by the protocol client or obtained by using the discovery mechanism that is described in [\[MS-SPTWS\]](#).

The protocol client obtains the requisite ApplicationClassId and ApplicationVersion values and the endpoint (4) URI of the protocol server that provides the discovery mechanism, as described in [\[MS-SPTWS\]](#), by means that are independent of either protocol.

This protocol requires the protocol client to have appropriate permission to call the methods on the protocol server.

The protocol client implements the token-based security mechanisms that are required by the protocol server and related security protocols, as described in [\[MS-SPSTWS\]](#).

1.6 Applicability Statement

This protocol is designed to support retrieval of [web drawings](#), and collecting collaborative content feedback in [comments](#).

1.7 Versioning and Capability Negotiation

This specification covers versioning issues in the following areas:

- **Supported Transports:** This protocol can be implemented by using transports that support sending Simple Object Access Protocol (SOAP) messages, as specified in section 2.1.
- **Protocol Versions:** This protocol is not versioned.

Capability Negotiation: This protocol does not support version negotiation.

1.8 Vendor-Extensible Fields

None.

1.9 Standards Assignments

None.

2 Messages

In the following sections, the schema definition might be less restrictive than the processing rules imposed by the protocol. The **WSDL** in this specification matches the WSDL that shipped with the product and provides a base description of the schema. The text that introduces the WSDL specifies additional restrictions that reflect actual Microsoft product behavior. For example, the schema definition might allow for an element to be empty, null, or not present but the behavior of the protocol as specified restricts the same elements to being non-empty, not null, and present.

2.1 Transport

Protocol servers **MUST** support Simple Object Access Protocol (SOAP) over Hypertext Transfer Protocol (HTTP), Hypertext Transfer Protocol over Secure Sockets Layer (HTTPS), or **TCP**.

All protocol messages **MUST** be transported by using HTTP or TCP bindings at the transport level.

Protocol messages **MUST** be formatted as specified in either [\[SOAP1.1\]](#) section 4 or [\[SOAP1.2/1\]](#) section 5. Protocol server faults **MUST** be returned by using HTTP status codes, as specified in [\[RFC2616\]](#) section 10, or **SOAP faults**, as specified in [\[SOAP1.1\]](#) section 4.4 or [\[SOAP1.2/1\]](#) section 5.4.

If the HTTPS transport is used, a server certificate **MUST** be deployed.

This protocol **MAY** transmit an additional SOAP header, the **ServiceContext** header, as specified in [\[MS-SPSTWS\]](#).

This protocol does not define any means for activating a protocol server or protocol client. The protocol server **MUST** be configured and begin listening in an implementation-specific way. In addition, the protocol client **MUST** know the format and transport that is used by the server, for example, the SOAP format over an HTTP transport.

2.2 Common Message Syntax

This section contains common definitions that are used by this protocol. The syntax of the definitions uses **XML schema**, as specified in [\[XMLSCHEMA1\]](#) and [\[XMLSCHEMA2\]](#), and WSDL, as specified in [\[WSDL\]](#).

3 Protocol Details

In the following sections, the schema definition might differ from the processing rules imposed by the protocol. The WSDL in this specification matches the WSDL that shipped with the product and provides a base description of the schema. The text that introduces the WSDL might specify differences that reflect actual Microsoft product behavior. For example, the schema definition might allow for an element to be **empty**, **null**, or **not present** but the behavior of the protocol as specified restricts the same elements to being **non-empty**, **not null**, and **present**.

Except where specified, protocol clients MUST interpret HTTP **Status-Codes** returned by the protocol server as specified in [\[RFC2616\]](#) (section 10, Status Code Definitions).

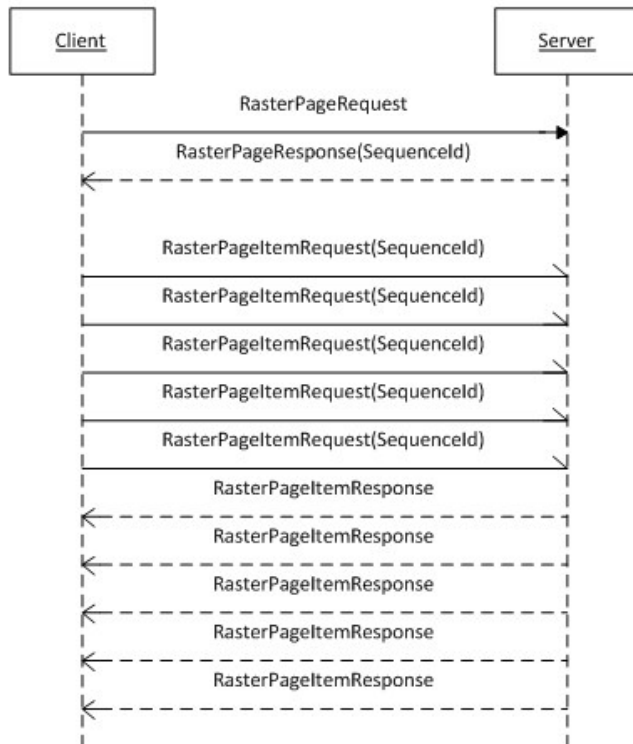

This protocol allows protocol servers to notify protocol clients of application-level faults using SOAP faults. Except where specified, these SOAP faults are not significant for interoperability, and protocol clients can interpret them in an implementation-specific manner.

This protocol allows protocol servers to perform implementation-specific authorization checks, and notify protocol clients of authorization faults either using HTTP Status-Codes or using SOAP faults as specified previously in this section.

3.1 Common Details

The **GetRasterDiagram** (section [3.1.4.1](#)) and **GetVectorDiagram** (section [3.1.4.2](#)) WSDL operations are independent and stateless. The protocol server returns the requested drawing page (section [1.3.2](#)) of the specified **VGSFF web drawing** in raster and vector format, respectively. There are no interaction dependencies between instances of client and server.

The **GetRasterPage** (section [3.1.4.3](#)) and **GetRasterPageItem** (section [3.1.4.4](#)) WSDL operations are related and require client state. A drawing page (section [1.3.2](#)) of a **VSDX** web drawing in raster format is retrieved in full as a result of a message sequence, as illustrated in the following high-level sequence diagram:

First, the protocol client sends an **IVisioGraphicsService_GetRasterPage_InputMessage** request (section [3.1.4.3.1.1](#)) WSDL message that MUST be unconditional, as specified in section [3.1.1](#). The protocol server initiates the process of retrieving or generating the drawing page. The client waits for the server to respond with the **IVisioGraphicsService_GetRasterPage_OutputMessage** (section [3.1.4.3.1.2](#)) response WSDL message that contains drawing page information and includes a message sequence identifier. This message sequence identifier is set in the **SequenceId** element of the **RasterPageTag** complex type (section [3.1.4.3.3.3](#)) and is contained in the **EntityTag** element of the **RasterPageResponse** complex type (section [3.1.4.3.3.2](#)).

Then, the protocol client sends a sequence of **IVisioGraphicsService_GetRasterPageItem_InputMessage** request (section [3.1.4.4.1.1](#)) WSDL messages, one for each item, as specified in section [3.1.1](#), of the drawing page. The client MUST set the value of the **SequenceId** element of the **RasterPageItemRequest** complex type (section [3.1.4.4.3.1](#)), to the message sequence identifier obtained in the preceding **IVisioGraphicsService_GetRasterPage_OutputMessage** response WSDL message. These requests are independent and can be sent asynchronously in any order. The protocol server uses the message sequence identifier to match the requests with the drawing page retrieved or generated as result of the **IVisioGraphicsService_GetRasterPage_InputMessage** request WSDL message that initiated the conversation. The server responds to each of these requests with a corresponding **IVisioGraphicsService_GetRasterPageItem_OutputMessage** response (section [3.1.4.4.1.2](#)) WSDL message that contains information about the requested item, as specified in section [3.1.1](#), of the drawing page.

The **SaveComments** WSDL operation (section [3.1.4.5](#)) is independent and stateless. The protocol server makes the requested [comment](#) updates and saves them to the specified web drawing. This web drawing file MUST conform to the format specified in [\[MS-VSDX\]](#) section 2.2.9.

3.1.1 Abstract Data Model

There is no abstract data model for a **VGSFF** [web drawing](#).

A drawing page (section [1.3.2](#)) of a **VSDX** web drawing in raster format is composed of 6 **items**: 4 images in Portable Network Graphics (PNG) format, as specified in [\[RFC2083\]](#), the [shape](#) information in XML format, as specified in section [2.2.9.1](#), and [comments](#) in XML format, as specified in section [2.2.9.2.<5>](#) Each image represents the drawing page in different sizes, as specified by the **ItemName** element of the **RasterPageItemRequest** complex type (section [3.1.4.4.3.1](#)).

An **IVisioGraphicsService_GetRasterPage_InputMessage** request (section [3.1.4.3.1.1](#)) or an **IVisioGraphicsService_GetRasterPageItem_InputMessage** request (section [3.1.4.4.1.1](#)) WSDL message is unconditional if the value of the **EntityTag** element of the corresponding complex types **RasterPageRequest** (section [3.1.4.3.3.1](#)) and **RasterPageItemRequest** (section [3.1.4.4.3.1](#)), respectively, is null or empty, as specified by the **RasterPageTag** complex type (section [3.1.4.3.3.3](#)) and the **RasterPageItemTag** complex type (section [3.1.4.4.3.2](#)) respectively. Otherwise, the requesting WSDL message is conditional. Message sequencing rules for conditional messages are specified in [3.1.4](#).

After the initial request for a drawing page of a **VSDX** web drawing is processed and before returning the result to the protocol client, the protocol server caches it for future use. Subsequent requests for the same drawing page are served directly from this cache. The protocol server assigns a unique identifier, **OutputETag** element, to each version of a drawing page in the cache. The protocol server also assigns a unique identifier, **FileETag** element, for the current version of the web drawing that contains this drawing page in the cache. The **OutputETag** and **FileETag** are included in the **EntityTag** element of the **RasterPageResponse** complex type (section [3.1.4.3.3.2](#)). The **EntityTag** received by a client can be used on subsequent conditional requests to determine if the version of the drawing page cached on the client needs to be updated. The protocol server compares the **FileETag** and **OutputETag** from the **EntityTag** of the conditional **RasterPageTag** with the current **FileETag** and **OutputETag**, respectively, of the cached drawing page. If both elements match, the server returns a **RasterPageResponse** having the response code "NotModified"; otherwise, it generates a new drawing page.

3.1.2 Timers

The **Recalculation Timeout** timer measures the time it takes for the protocol server to recalculate the drawing page (section [1.3.2](#)) of a [web drawing](#). This timeout is configured on the protocol server.

The **Message Sequence Timeout** timer measures the time it takes for the protocol server to receive an **IVisioGraphicsService_GetRasterPageItem_InputMessage** request (section [3.1.4.4.1.1](#)) WSDL message beginning when the **IVisioGraphicsService_GetRasterPage_OutputMessage** response (section [3.1.4.3.1.2](#)) WSDL message is sent, in the sequence of messages to retrieve a drawing page of a **VSDX** web drawing in raster format, as specified in section [3.1.<6>](#) This timeout is set to one minute, and it is not configurable on the protocol server.

3.1.3 Initialization

None.

3.1.4 Message Processing Events and Sequencing Rules

The protocol operations can be executed in any order with the following restrictions:

- To fully retrieve a drawing page (section [1.3.2](#)) of a **VSDX web drawing** in raster format, the protocol client MUST follow the message sequence specified and illustrated in section [3.1](#).
- The protocol client can cache a fully retrieved drawing page of a **VSDX web drawing** in raster format. Furthermore, it can use the information set by the protocol server in the **EntityTag** element of the **RasterPageResponse** complex type (section [3.1.4.3.3.2](#)) and send it back to the server in the **EntityTag** element of a subsequent **RasterPageRequest** complex type (section [3.1.4.3.3.1](#)) in a conditional message. Based on that information, if the server decides that the drawing page has not changed, it responds with a **RasterPageResponse** having the response code "NotModified". Similarly the client can use the information set by the server in the **EntityTag** element of a **RasterPageItemResponse** complex type (section [3.1.4.4.3.3](#)) and send it back to the server in the **EntityTag** element of a subsequent **RasterPageItemRequest** complex type (section [3.1.4.4.3.1](#)) in a conditional message. If the server decides that the requested item, as specified in section [3.1.1](#), of the drawing page has not changed, it responds with a **RasterPageItemResponse** having the response code "NotModified". In these cases, the server expects the client will use the drawing page data that it cached previously. This mechanism reduces network traffic.
- If a **GetRasterPageItem** operation (section [3.1.4.4](#)) is not preceded by a **GetRasterPage** operation (section [3.1.4.3](#)) or the protocol server cannot match the value of the **SequenceId** element of the **RasterPageItemRequest**, as specified in section [3.1](#), it MUST return a **RasterPageItemResponse** with the response code "NotModified".

The following table summarizes the list of operations as defined by this specification.

Operation	Description
GetRasterDiagram	The GetRasterDiagram operation retrieves a drawing page (section 1.3.2) from the VGSFF web drawing (section 1.3.1) rendered in a raster format.

The **RasterPageItemResponseCode** simple type specifies the possible types of response codes returned as an element of a **GetRasterPageItem** (section [3.1.4.4](#)) WSDL operation.

```
<xs:simpleType name="RasterPageItemResponseCode" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">

    <xs:enumeration value="OK"/>
  </xs:restriction>
</xs:simpleType>
```

The following table specifies the allowable values for the **RasterPageItemResponseCode** simple type.

3.1.4.4.6 Groups

None.

3.1.4.4.7 Attribute Groups

3.1.4.5 SaveComments

The **SaveComments** operation saves a [comment](#) to a **VSDX web drawing** in a document repository, in the form of a **CommentEntry_Type** element as specified [\[MS-VSDX\]](#) section 2.3.4.2.9.<13>

The following is the WSDL port type specification of the **SaveComments** WSDL operation.

```
<wsdl:operation name="SaveComments" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input wsaw:Action="http://tempuri.org/IVisioGraphicsService/SaveComments"
    message="tns2:IVisioGraphicsService_SaveComments_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output wsaw:Action="http://tempuri.org/IVisioGraphicsService/SaveCommentsResponse"

    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The protocol client sends an **IVisioGraphicsService_SaveComments_InputMessage** request (section [3.1.4.5.1.1](#)) WSDL message, and the protocol server MUST respond with an **IVisioGraphicsService_SaveComments_OutputMessage** response (section [3.1.4.5.1.2](#)) WSDL message as follows:

1. If the protocol server determines that an error occurred during the protocol server operation, then the protocol server MUST respond with a **VisioGraphicsServiceFault** complex type (section [2.2.4.5](#)) SOAP fault with the **Error** field set to the correct **FaultCode** value (section [2.2.5.1](#)).
2. Otherwise, the protocol server MUST return a **SaveCommentsResponse** element (section [3.1.4.5.2.2](#)).

3.1.4.5.5 Attributes

None.

3.1.4.5.6 Groups

3.1.4.5.7 Attribute Groups

3.1.5 Timer Events

The **Recalculation Timeout** timer event cancels the request for the drawing page, as specified in section [1.3.2](#), with a **VisioGraphicsServiceFault**, as specified in section [2.2.4.5](#). The **Error** field of

VisioGraphicsServiceFault MUST be set to the "RecalcTimedOut" **FaultCode** value, as specified in section [2.2.5.1](#).

The **Message Sequence Timeout** timer event expires the entity cached on the protocol server that is used to match the sequence identifier of the message sequence initiated by an **IVisioGraphicsService_GetRasterPageItem_InputMessage** request (section [3.1.4.4.1.1](#)) WSDL message to retrieve a drawing page (section [1.3.2](#)) of a **VSDX** [web drawing](#) in raster format, as specified in section [3.1.<14>](#)

3.1.6 Other Local Events

None.

4 Protocol Examples

The following sections contain examples of this protocol's usage.

4.1 GetRasterDiagram

In this scenario, the protocol client calls the **GetRasterDiagram** method (section [3.1.4.1](#)) on a protocol server named "ExampleServer". The protocol server responds with a **GetRasterDiagramResponse** element (section [3.1.4.1.2.2](#)). In this case, the drawing page (section [1.3.2](#)) does not contain data providers to be implemented by the protocol client.

To request the raster formatted drawing page, the protocol client constructs the following WSDL message:

```
<s:Envelope>
  <s:Header>
    <a:Action
s:mustUnderstand="1">http://tempuri.org/IVisioGraphicsService/GetRasterDiagram</a:Action>

        <b:Resolution>1</b:Resolution>
      </rasterDiagramRequestContract>
    </GetRasterDiagram>
  </s:Body>
</s:Envelope>
```

The protocol server responds with the following:

4.2 GetVectorDiagram

In this scenario, the protocol client calls the **GetVectorDiagram** method (section [3.1.4.2](#)) on a protocol server named "ExampleServer". The protocol server responds with a **GetVectorDiagramResponse** element (section [3.1.4.2.2.2](#)). In this case the drawing page (section [1.3.2](#)) does not contain data providers to be implemented by the protocol client.

To request the vector formatted drawing page, the protocol client constructs the following WSDL message:

```

4.3 GetVectorDiagram with AddonDataSource

In this scenario, the protocol client calls the **GetVectorDiagram** method (section [3.1.4.2](#)) on a protocol server named "ExampleServer". In this case the protocol client is requesting a drawing page (section [1.3.2](#)) in a [web drawing](#) that is linked to data with a data provider to be implemented by the protocol client.

Initially the protocol client constructs the following WSDL message:

```
<s:Envelope xmlns:s="http://www.w3.org/2003/05/soap-envelope">

4.4 GetRasterPage

In this scenario, the protocol client calls the **GetRasterPage** method (section [3.1.4.3](#)) on a protocol server named "ExampleServer". The protocol server responds with a **GetRasterPageResponse** element (section [3.1.4.3.2.2](#)). To request the raster formatted drawing page (section [1.3.2](#)) of a VSDX web drawing (section [1.3.1](#)), the protocol client constructs the following WSDL message.

```

<s:Body>
    <GetRasterPage xmlns="http://tempuri.org/">

4.5 GetRasterPageItem

In this scenario, the protocol client calls the **GetRasterPageItem** method (section [3.1.4.4](#)) on a protocol server named "ExampleServer". The protocol server responds with a **GetRasterPageItemResponse** element (section [3.1.4.4.2.2](#)). The **GetRasterPageItem** operation retrieves an item, as specified in section [3.1.1](#), of a drawing page (section [1.3.2](#)) of a **VSDX** web drawing (section [1.3.1](#)) rendered in raster format.

To request this item, the protocol client constructs the following WSDL message:

```

<s:Envelope>
  <s:Body>
    <GetRasterPageItem xmlns="http://tempuri.org/">
      <rasterPageItemRequestContract
        xmlns:b="http://schemas.datacontract.org/2004/07/Microsoft.Office.Visio.Server.GraphicsServer"
        xmlns:i="http://www.w3.org/2001/XMLSchema-instance">
        <b:EntityTag>
          <b:DataModeName>Static</b:DataModeName>
          <b:FileETag i:nil="true"></b:FileETag>
        </b:EntityTag>
        <b:FileUrl> http://ExampleServer/BasicDiagram.vsd</b:FileUrl>
        <b:ItemName>ShapeInfo</b:ItemName>
        <b:SequenceId>363696e759d24d3aa58818e65c33b6dd</b:SequenceId>
      </rasterPageItemRequestContract>
    </GetRasterPageItem>
  </s:Body>
</s:Envelope>

```

The protocol server responds with the following for Drawing with Static **DataModeName** (section [3.1.4.3.3.1](#)):

```

<s:Envelope>
  <s:Body>
    <GetRasterPageItemResponse xmlns="http://tempuri.org/">
      <GetRasterPageItemResult
        xmlns:d4p1="http://schemas.datacontract.org/2004/07/Microsoft.Office.Visio.Server.GraphicsServer"
        xmlns:i="http://www.w3.org/2001/XMLSchema-instance">
        <d4p1:EntityTag>
          <d4p1:DataModeName>Static</d4p1:DataModeName>
          <d4p1:FileETag>{BFC23F51-DFCB-4C68-A3C0-E2422785F256},1</d4p1:FileETag>
        </d4p1:EntityTag>
      </GetRasterPageItemResult>
    </GetRasterPageItemResponse>
  </s:Body>
</s:Envelope>

```

```
    </commentData>
  </SaveComments>
</s:Body>
</s:Envelope>
```

The protocol server responds with the following:

```
<s:Envelope>
  <s:Body>
    <SaveCommentsResponse xmlns="http://tempuri.org/">
      <SaveCommentsResult>
        <Comment Action="Add" CommentID="0" Author="Name of Author" ShapeID="-1"

Done="false">SampleCommentText</Comment>
      </SaveCommentsResult>
    </SaveCommentsResponse>
  </s:Body>

8 Appendix C: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include released service packs:

- Microsoft SharePoint Server 2010
- Microsoft SharePoint Server 2013

Exceptions, if any, are noted below. If a service pack or Quick Fix Engineering (QFE) number appears with the product version, behavior changed in that service pack or QFE. The new behavior also applies to subsequent service packs of the product unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms SHOULD or SHOULD NOT implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies that the product does not follow the prescription.
