

[MS-VIEWSS]: Views Web Service Protocol

Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation for protocols, file formats, languages, standards as well as overviews of the interaction among each of these technologies.
- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you may make copies of it in order to develop implementations of the technologies described in the Open Specifications and may distribute portions of it in your implementations using these technologies or your documentation as necessary to properly document the implementation. You may also distribute in your implementation, with or without modification, any schema, IDL's, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that may cover your implementations of the technologies described in the Open Specifications. Neither this notice nor Microsoft's delivery of the documentation grants any licenses under those or any other Microsoft patents. However, a given Open Specification may be covered by Microsoft [Open Specification Promise](#) or the [Community Promise](#). If you would prefer a written license, or if the technologies described in the Open Specifications are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting iplg@microsoft.com.
- **Trademarks.** The names of companies and products contained in this documentation may be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights. For a list of Microsoft trademarks, visit www.microsoft.com/trademarks.
- **Fictitious Names.** The example companies, organizations, products, domain names, email addresses, logos, people, places, and events depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

Reservation of Rights. All other rights are reserved, and this notice does not grant any rights other than specifically described above, whether by implication, estoppel, or otherwise.

Tools. The Open Specifications do not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments you are free to take advantage of them. Certain Open Specifications are intended for use in conjunction with publicly available standard specifications and network programming art, and assumes that the reader either is familiar with the aforementioned material or has immediate access to it.

1 Introduction

The Views Web Service Protocol enables a protocol client to manage a **list view**.

Sections 1.8, 2, and 3 of this specification are normative and can contain the terms MAY, SHOULD, MUST, MUST NOT, and SHOULD NOT as defined in [\[RFC2119\]](#). Sections 1.5 and 1.9 are also normative but does not contain those terms. All other sections and examples in this specification are informative.

1.1 Glossary

The following terms are defined in [\[MS-GLOS\]](#):

GUID
Hypertext Transfer Protocol (HTTP)
Hypertext Transfer Protocol over Secure Sockets Layer (HTTPS)
SOAP
SOAP action
SOAP body
SOAP fault
XML namespace

The following terms are defined in [\[MS-OFCGLOS\]](#):

CAML
Collaborative Application Markup Language (CAML)
default list view
display name
field
Hypertext Markup Language (HTML)
list
list item
list view
list view page
server-relative URL
Uniform Resource Locator (URL)
Web Services Description Language (WSDL)
WSDL message
WSDL operation
XML fragment
XML schema
XML schema definition (XSD)

The following terms are specific to this document:

MAY, SHOULD, MUST, SHOULD NOT, MUST NOT: These terms (in all caps) are used as described in [\[RFC2119\]](#). All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

1.2 References

References to Microsoft Open Specification documents do not include a publishing year because links are to the latest version of the documents, which are updated frequently. References to other documents include a publishing year when one is available.

1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact dochelp@microsoft.com. We will assist you in finding the relevant information.

1.3 Protocol Overview (Synopsis)

The Views Web Service Protocol provides methods to create a list view, retrieve a specific list view or the collection of list views from a **list (1)**, update a list view, and delete a list view. For more information about lists (1), see [\[MS-LISTSWS\]](#). This protocol also provides methods to retrieve and update display properties of a list view by using **Collaborative Application Markup Language (CAML)** and **Hypertext Markup Language (HTML)**.

Each method in the protocol is a **WSDL operation** that accepts a set of parameters as a **SOAP** request and returns a set of values as a SOAP response.

The protocol client sends a request to the protocol server via a SOAP request message, and the protocol server sends return values to the protocol client via a SOAP response message, as shown in the following figure. All SOAP requests are made to one of several well-defined **Uniform Resource Locators (URLs)** on the protocol server, which protocol clients can discover. The protocol server never initiates any communication with the protocol client.

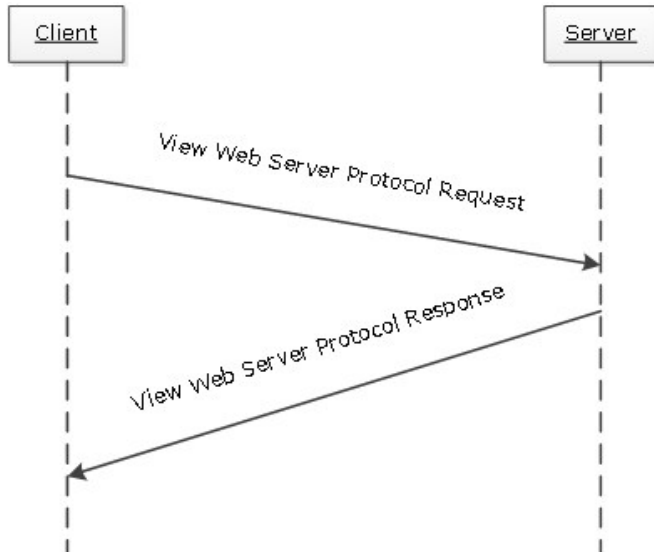

Figure 1: Views Web Service Protocol sequence diagram

1.4 Relationship to Other Protocols

This protocol uses the SOAP message protocol for formatting request and response messages, as described in [\[SOAP1.1\]](#), [\[SOAP1.2/1\]](#) and [\[SOAP1.2/2\]](#). It transmits those messages by using **HTTP**, as described in [\[RFC2616\]](#), or **Hypertext Transfer Protocol over Secure Sockets Layer (HTTPS)**, as described in [\[RFC2818\]](#).

The following diagram shows the underlying messaging and transport stack used by the protocol.

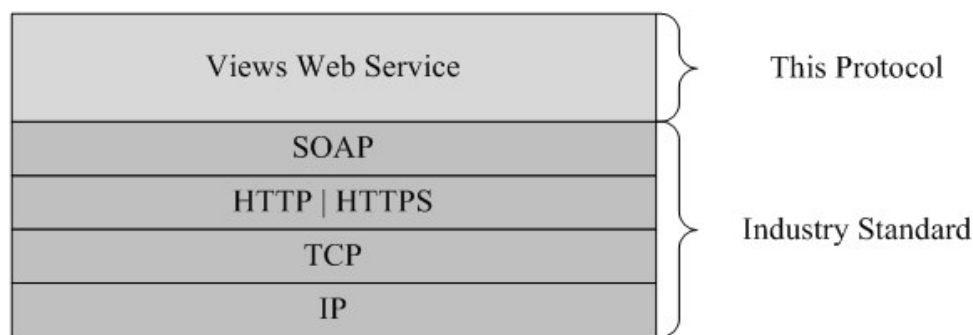

Figure 2: This protocol in relation to other protocols

1.5 Prerequisites/Preconditions

This protocol operates against a site that is identified by a URL that protocol clients recognize. The protocol server endpoint is formed by appending "/_vti_bin/views.aspx" to the URL of the site—for example, http://www.contoso.com/Repository/_vti_bin/views.aspx.

This protocol assumes that the underlying protocols have performed authentication.

1.6 Applicability Statement

The Views Web Service Protocol is applicable in the following scenarios:

- Creating and deleting a list view
- Retrieving the collection of list views of a list (1)
- Retrieving and updating the definition of a list view
- Retrieving and updating the display properties of a list view by using **CAML** and HTML

1.7 Versioning and Capability Negotiation

This document covers versioning issues in one area. This protocol uses multiple transports with SOAP, as described in section [2.1](#).

1.8 Vendor-Extensible Fields

None.

1.9 Standards Assignments

None.

2 Messages

2.1 Transport

Protocol servers **MUST** support SOAP over HTTP. Protocol servers **SHOULD** additionally support SOAP over HTTPS for enhancing the security of communication with protocol clients.

Protocol messages **MUST** be formatted as specified either in [\[SOAP1.1\]](#) section 4 (SOAP Envelope) or in [\[SOAP1.2/1\]](#) section 5 (SOAP Message Construct). Protocol server faults **MUST** be returned either via HTTP status codes, as specified in [\[RFC2616\]](#) section 10 (Status Code Definitions), or via **SOAP faults**, as specified either in [\[SOAP1.1\]](#) section 4.4 (SOAP Fault) or in [\[SOAP1.2/1\]](#) section 5.4 (SOAP Fault).

2.2 Common Message Syntax

This section contains common definitions that this protocol uses. The syntax of the definitions uses **XML schema** as defined in [\[XMLSCHEMA1\]](#) and [\[XMLSCHEMA2\]](#), and **WSDL** as defined in [\[WSDL\]](#).

2.2.1 Namespaces

This specification defines and references various **XML namespaces** by using the mechanisms specified in [\[XMLNS\]](#). Although this specification associates an XML namespace prefix for each XML namespace that is used, as shown in the following table, the choice of any particular XML namespace prefix is implementation-specific and not significant for interoperability.

Prefix	Namespace URI	Reference
core	http://schemas.microsoft.com/sharepoint/soap/	[MS-WSSCAML]
s	http://www.w3.org/2001/XMLSchema	[XMLSCHEMA1]
soap	http://schemas.xmlsoap.org/wsdl/soap/	[SOAP1.1]
soap12	http://schemas.xmlsoap.org/wsdl/soap12/	[SOAP1.2/1] [SOAP1.2/2]
tns	http://schemas.microsoft.com/sharepoint/soap/	
wsdl	http://schemas.xmlsoap.org/wsdl/	[WSDL]
http	http://schemas.xmlsoap.org/wsdl/http/	[WSDL]

2.2.2 Messages

This specification does not define any common **WSDL message** definitions.

2.2.3 Elements

The following table summarizes the set of common XML schema element definitions defined in this specification. XML schema element definitions that are specific to a particular operation are described with the operation.

Element	Description
aggregations	Specifies the fields (2) by which the list view is aggregated.

Element	Description
formats	Specifies the row and column formatting of a list view.
listName	The display name or the GUID of a list (1).
query	Specifies the query that a list view uses.
rowLimit	Specifies whether a list (1) supports displaying items page by page, and the number of items that a list view displays per page.
viewFields	Specifies the fields (2) included in a list view.
viewName	Specifies the GUID of a list view.
viewProperties	Specifies the attributes of a list view.

2.2.3.1 aggregations

The **aggregations** element specifies the fields (2) used to aggregate a list view. The definition of the **aggregations** element is as follows.

```
<s:element name="aggregations">
  <s:complexType>
    <s:sequence>
      <s:element name="Aggregations" type="core:AggregationsDefinition" minOccurs="0"
maxOccurs="1"/>
    </s:sequence>
  </s:complexType>
</s:element>
```

Aggregations: An **XML fragment** that conforms to the schema of the **AggregationsDefinition** complex type, as specified in [\[MS-WSSCAML\]](#) section 2.3.2.1 (AggregationsDefinition Type).

2.2.3.2 formats

The **formats** element specifies the row and column formatting of a list view. The definition of the **formats** element is as follows.

```
<s:element name="formats">
  <s:complexType>
    <s:sequence>
      <s:element name="Formats" type="core:ViewFormatDefinitions" minOccurs="0"
maxOccurs="1"/>
    </s:sequence>
  </s:complexType>
</s:element>
```

Formats: An XML fragment that conforms to the schema of the **ViewFormatDefinitions** complex type, as specified in [\[MS-WSSCAML\]](#) section 2.3.2.21 (ViewFormatDefinitions Type).

2.2.3.3 listName

The **listName** element specifies a list (1) on the protocol server. It **MUST** be the display name or the GUID of a list (1). The definition of the **listName** element is as follows.

```
<s:element name="listName" type="s:string" />
```

If the value of **listName** element is not the name or GUID of a list (1), the operation MUST return a SOAP fault message.

2.2.3.4 query

The **query** element includes the information that affects how a list view displays the data. The definition of the **query** element is as follows.

```
<s:element name="query">
  <s:complexType>
    <s:sequence>
      <s:element name="Query" type="core:CamlQueryRoot" minOccurs="0" maxOccurs="1"/>
    </s:sequence>
  </s:complexType>
</s:element>
```

Query: An XML fragment that conforms to the schema of the **CamlQueryRoot** complex type, as specified in [\[MS-WSSCAML\]](#) section 2.2.2.1 (CamlQueryRoot Type).

2.2.3.5 rowLimit

The **rowLimit** element specifies whether a list (1) supports displaying **list items** page by page, and the number of list items that a list view displays per page. The definition of the **rowLimit** element is as follows.

```
<s:element name="rowLimit">
  <s:complexType>
    <s:sequence>
      <s:element name="RowLimit" type="core:RowLimitDefinition" minOccurs="0" maxOccurs="1"/>
    </s:sequence>
  </s:complexType>
</s:element>
```

RowLimit: An XML fragment that conforms to the schema of the **RowLimitDefinition** complex type, as specified in [\[MS-WSSCAML\]](#) section 2.3.2.14 (RowLimitDefinition Type).

2.2.3.6 viewFields

The **viewFields** element specifies the fields (2) included in a list view. The definition of the **viewFields** element is as follows.

```
<s:element name="viewFields">
  <s:complexType>
    <s:sequence>
      <s:element name="ViewFields" minOccurs="0" maxOccurs="1">
        <s:complexType>
          <s:sequence>
            <s:element name="FieldRef" type="core:FieldRefDefinitionView" minOccurs="0"
maxOccurs="unbounded" />
          </s:sequence>
        </s:complexType>
      </s:element>
    </s:sequence>
  </s:complexType>
</s:element>
```

```

    </s:element>
  </s:sequence>
</s:complexType>
</s:element>

```

ViewFields: An XML fragment that contains an XML element of **FieldRef**, which conforms to the schema of the **FieldRefDefinitionView** complex type, as specified in [\[MS-WSSCAML\]](#) section 2.3.2.19 (FieldRefDefinitionView Type).

2.2.3.7 viewName

The **viewName** element specifies a list view on the protocol server. It MUST be the GUID of a list view. The definition of the **viewName** element is as follows.

```
<s:element name="viewName" type="s:string"/>
```

If the value of **viewName** element is not the GUID of a list view, the operation MUST return a SOAP fault message.

When **viewName** is not present in the message or the value of **viewName** is empty, the protocol server MUST refer to the **default list view** of the list (1). If the default list view does not exist, the protocol server MUST return a SOAP fault message.

2.2.3.8 viewProperties

The **viewProperties** element specifies the properties of a list view. The definition of the **viewProperties** element is as follows.

```

<s:element name="viewProperties">
  <s:complexType>
    <s:sequence>
      <s:element name="View" type="tns:UpdateViewPropertiesDefinition" minOccurs="0"
maxOccurs="1"/>
    </s:sequence>
  </s:complexType>
</s:element>

```

View: An XML fragment that conforms to the schema of the **UpdateViewPropertiesDefinition** complex type, as specified in section [2.2.4.3](#).

2.2.4 Complex Types

The following table summarizes the set of common XML schema complex type definitions defined in this specification. XML schema complex type definitions that are specific to a particular operation are described with the operation.

Complex type	Description
BriefViewDefinition	Specifies summary information about a list view.
SOAPFaultDetails	Specifies the details of a SOAP fault.
UpdateViewPropertiesDefinition	Specifies the attributes of a list view that are used in update

Complex type	Description
	methods.

2.2.4.1 BriefViewDefinition

The **BriefViewDefinition** complex type specifies summary information about a list view. The definition of the **BriefViewDefinition** element is as follows.

```
<s:complexType name="BriefViewDefinition" mixed="true">
  <s:sequence>
    <s:element name="Query" type="core:CamlQueryRoot" minOccurs="1" maxOccurs="1" />
    <s:element name="ViewFields" minOccurs="1" maxOccurs="1">
      <s:complexType>
        <s:sequence>
          <s:element name="FieldRef" type="core:FieldRefDefinitionView" minOccurs="0"
maxOccurs="unbounded" />
        </s:sequence>
      </s:complexType>
    </s:element>
    <s:element name="ViewData" minOccurs="0" maxOccurs="1">
      <s:complexType>
        <s:sequence>
          <s:element name="FieldRef" type="core:FieldRefDefinitionViewData" minOccurs="3"
maxOccurs="5" />
        </s:sequence>
      </s:complexType>
    </s:element>
    <s:element name="CalendarViewStyles" type="core:CalendarViewStylesDefinition"
minOccurs="0" maxOccurs="1" />
    <s:element name="RowLimit" type="core:RowLimitDefinition" minOccurs="0" maxOccurs="1" />
    <s:element name="Formats" type="core:ViewFormatDefinitions" minOccurs="0" maxOccurs="1"
/>
    <s:element name="Aggregations" type="core:AggregationsDefinition" minOccurs="0"
maxOccurs="1" />
    <s:element name="ViewStyle" type="core:ViewStyleReference" minOccurs="0" maxOccurs="1" />
    <s:element name="OpenApplicationExtension" type="s:string" minOccurs="0" maxOccurs="1"
/>
  </s:sequence>
  <s:attributeGroup ref="tns:ViewAttributeGroup"/>
</s:complexType>
```

Query: For a definition, see [\[MS-WSSCAML\]](#) section 2.3.2.17.

ViewFields: For a definition, see [\[MS-WSSCAML\]](#) section 2.3.2.17.

ViewData: For a definition, see [\[MS-WSSCAML\]](#) section 2.3.2.17.

CalendarViewStyles: For a definition, see [\[MS-WSSCAML\]](#) section 2.3.2.17.

RowLimit: For a definition, see [\[MS-WSSCAML\]](#) section 2.3.2.17.

Formats: For a definition, see [\[MS-WSSCAML\]](#) section 2.3.2.17.

Aggregations: For a definition, see [\[MS-WSSCAML\]](#) section 2.3.2.17.

ViewStyle: For a definition, see [\[MS-WSSCAML\]](#) section 2.3.2.17.

OpenApplicationExtension: For a definition, see [\[MS-WSSCAML\]](#) section 2.3.2.17.

The attributes are specified in the attribute group **ViewAttributeGroup**; refer to section [2.2.8.1](#) for its definition.

2.2.4.2 SOAPFaultDetails

The **SOAPFaultDetails** complex type specifies the details of a SOAP fault. The definition of the **SOAPFaultDetails** element is as follows.

```
<s:schema xmlns:s="http://www.w3.org/2001/XMLSchema" targetNamespace="
http://schemas.microsoft.com/sharepoint/soap/">
  <s:complexType name="SOAPFaultDetails">
    <s:sequence>
      <s:element name="errorstring" type="s:string"/>
      <s:element name="errorcode" type="s:string" minOccurs="0"/>
    </s:sequence>
  </s:complexType>
</s:schema>
```

errorstring: Human-readable text that explains the application-level fault.

errorcode: The hexadecimal representation of a 4-byte result code.

2.2.4.3 UpdateViewPropertiesDefinition

The **UpdateViewPropertiesDefinition** complex type specifies the attributes of the **View** element that are used for update methods. The definition of the **UpdateViewPropertiesDefinition** element is as follows.

```
<s:complexType name="UpdateViewPropertiesDefinition">
  <s:attributeGroup ref="tns:UpdateViewAttributeGroup"/>
</s:complexType>
```

The attribute group **UpdateViewAttributeGroup** is specified in section [2.2.8.2](#).

2.2.5 Simple Types

This specification does not define any common XML schema simple type definitions.

2.2.6 Attributes

This specification does not define any common XML schema attribute definitions.

2.2.7 Groups

This specification does not define any common XML schema group definitions.

2.2.8 Attribute Groups

The following table summarizes the set of common XML schema attribute group definitions defined by this specification. XML schema attribute groups that are specific to a particular operation are described with the operation.

Attribute	Description
UpdateViewAttributeGroup	Contains the XML schema definition (XSD) attributes used in methods of updating a list view.
ViewAttributeGroup	Contains XSD attributes that specify a list view.

2.2.8.1 ViewAttributeGroup

The **ViewAttributeGroup** attribute group contains attributes that specify a list view. All attributes specified by **ViewAttributeGroup** are the same as those specified by the **ViewDefinition** complex type as specified in [\[MS-WSSCAML\]](#) section 2.3.2.17.

2.2.8.2 UpdateViewAttributeGroup

The **UpdateViewAttributeGroup** attribute group contains attributes that specify a list view. This group of attributes is used in update methods as the input parameter. The definition of the **UpdateViewAttributeGroup** element is as follows.

```
<s:attributeGroup name="UpdateViewAttributeGroup">
  <s:attribute name="DefaultView" type="core:TRUEFALSE" default="FALSE" />
  <s:attribute name="DisplayName" type="s:string" />
  <s:attribute name="FPModified" type="core:TRUEFALSE" default="FALSE" />
  <s:attribute name="Scope" type="core:ViewScope" default="" />
</s:attributeGroup>
```

All attributes are specified in [\[MS-WSSCAML\]](#) section 2.3.2.17 (ViewDefinition). The DefaultView attribute SHOULD be ignored by the protocol server if it is set to false.

3 Protocol Details

The client side of this protocol is simply a pass-through. That is, no additional timers or other state is required on the client side of this protocol. Calls that the higher-layer protocol or application makes are passed directly to the transport, and the results that the transport returns are passed directly back to the higher-layer protocol or application.

Except where specified, protocol clients interpret HTTP status codes returned by the protocol server as specified in [\[RFC2616\]](#) section 10.

This protocol allows protocol servers to provide additional details for SOAP faults by including either a **detail** element as specified in [\[SOAP1.1\]](#) section 4.4 or a **Detail** element `<1>` as specified in [\[SOAP1.2/1\]](#) section 5.4.5, which conforms to the XML schema of the **SOAPFaultDetails** complex type specified in section [2.2.4.2](#). Except where specified, these SOAP faults are not significant for interoperability, and protocol clients can interpret them in an implementation-specific manner.

This protocol allows protocol servers to perform implementation-specific authorization checks and notify protocol clients of authorization faults either by using HTTP status codes or by using SOAP faults, as specified previously in this section.

3.1 ViewsSoap Server Details

3.1.1 Abstract Data Model

This section describes a conceptual model of possible data organization that an implementation maintains to participate in this protocol. This document does not mandate that implementations adhere to this model as long as their external behavior is consistent with that described in this document.

This protocol enables a protocol client to create a list view, retrieve a specific list view or the collection of list views from a list (1), update a list view, and delete a list view.

3.1.2 Timers

None.

3.1.3 Initialization

None.

3.1.4 Message Processing Events and Sequencing Rules

The following table summarizes the WSDL operations specified in this specification.

Operation	Description
AddView	Adds a list view for the specified list (1).
DeleteView	Deletes a list view.
GetView	Retrieves information about a list view, without the display properties.
GetViewCollection	Retrieves a collection of list views for a specified list (1).
GetViewHtml	Retrieves information about a list view, including the display properties in CAML

Operation	Description
	and HTML.
UpdateView	Updates a list view, without the display properties.
UpdateViewHtml	Updates a list view, including the display properties in CAML and HTML. This method operates the same as UpdateViewHtml2 with one less parameter.
UpdateViewHtml2	Updates a list view, including the display properties in CAML and HTML.

3.1.4.1 AddView

The **AddView** operation is used to create a list view for the specified list (1). The definition of the **AddView** operation is as follows.

```
<wsdl:operation name="AddView">
  <wsdl:input message="tns:AddViewSoapIn" />
  <wsdl:output message="tns:AddViewSoapOut" />
</wsdl:operation>
```

The protocol client sends an **AddViewSoapIn** request message (section [3.1.4.1.1.1](#)), and the protocol server responds with an **AddViewSoapOut** response message (section [3.1.4.1.1.2](#)).

3.1.4.1.1 Messages

The following WSDL message definitions are specific to this operation.

3.1.4.1.1.1 AddViewSoapIn

The request WSDL message for an **AddView** WSDL operation (section [3.1.4.1](#)).

The **SOAP action** value of the message is specified as follows.

```
http://schemas.microsoft.com/sharepoint/soap/AddView
```

The **SOAP body** contains an **AddView** element (section [3.1.4.1.2.1](#)).

3.1.4.1.1.2 AddViewSoapOut

The response WSDL message for an **AddView** WSDL operation (section [3.1.4.1](#)).

The SOAP body contains an **AddViewResponse** element (section [3.1.4.1.2.3](#)).

3.1.4.1.2 Elements

The following XML schema element definitions are specific to this operation.

3.1.4.1.2.1 AddView

The **AddView** element defines the input parameters for the **AddView** operation (section [3.1.4.1](#)). The definition of the **AddView** element is as follows.

```
<s:element name="AddView">
```

```

<s:complexType>
  <s:sequence>
    <s:element name="listName" type="s:string" minOccurs="0" maxOccurs="1"/>
    <s:element name="viewName" type="s:string" minOccurs="0" maxOccurs="1"/>
  <s:element minOccurs="0" maxOccurs="1" name="viewFields">
    <s:complexType>
      <s:sequence>
        <s:element name="ViewFields" minOccurs="0" maxOccurs="1">
          <s:complexType>
            <s:sequence>
              <s:element name="FieldRef" type="core:FieldRefDefinitionView"
minOccurs="0" maxOccurs="unbounded" />
            </s:sequence>
          </s:complexType>
        </s:element>
      </s:sequence>
    </s:complexType>
  </s:element>
  <s:element minOccurs="0" maxOccurs="1" name="query">
    <s:complexType>
      <s:sequence>
        <s:element name="Query" type="core:CamlQueryRoot" minOccurs="0" maxOccurs="1"/>
      </s:sequence>
    </s:complexType>
  </s:element>
  <s:element minOccurs="0" maxOccurs="1" name="rowLimit">
    <s:complexType>
      <s:sequence>
        <s:element name="RowLimit" type="core:RowLimitDefinition" minOccurs="0" maxOccurs="1"/>
      </s:sequence>
    </s:complexType>
  </s:element>
  <s:element name="type" type="s:string" minOccurs="0" maxOccurs="1"/>
  <s:element name="makeViewDefault" type="s:boolean" minOccurs="1" maxOccurs="1"/>
</s:sequence>
</s:complexType>
</s:element>

```

listName: For a definition, see section [2.2.3.3](#).

viewName: Display name of the list view. If the value of **viewName** element is empty or the **viewName** element is not present, the protocol server MUST return a SOAP fault message.

viewFields: For a definition, see section [2.2.3.6](#). When the value of the **viewFields** element is empty, the protocol server MUST create the list view with no fields (2) included. This element MUST be present.

query: For a definition, see section [2.2.3.4](#). When the value of the **query** element is empty, the protocol server MUST create the list view without any additional restriction. This element MUST be present.

rowLimit: For a definition, see section [2.2.3.5](#). When the **rowLimit** element is not present or the value of the **rowLimit** element is empty, the protocol server MUST use the default value of "0x0064", and the list view MUST support page-by-page displaying of items.

type: For a definition, see section [3.1.4.1.2.2](#).

makeViewDefault: Specifies whether to make the list view the default list view for the specified list (1). The protocol server **MUST** create the list view as the default list view if "true" is specified.

3.1.4.1.2.2 type

The **type** element specifies the type of a list view. When this element is present, it **MUST** have one of the values in the following table.

Type	Description
"Calendar"	Represents a calendar list view.
"Grid"	Represents a datasheet list view.
"Html"	Represents a standard HTML list view.

When this element is not present or has an empty value, the protocol server **MUST** take it with a value of "Html".

When the value of the element is not empty and is not one of the values listed in the table, the protocol server **MUST** throw a SOAP fault message.

3.1.4.1.2.3 AddViewResponse

The **AddViewResponse** element defines the output parameters for the **AddView** operation (section [3.1.4.1](#)). The definition of the **AddViewResponse** element is as follows.

```
<s:element name="AddViewResponse">
  <s:complexType>
    <s:sequence>
      <s:element name="AddViewResult" minOccurs="1" maxOccurs="1">
        <s:complexType>
          <s:sequence>
            <s:element name="View" type="tns:BriefViewDefinition" minOccurs="1"
maxOccurs="1"/>
          </s:sequence>
        </s:complexType>
      </s:element>
    </s:sequence>
  </s:complexType>
</s:element>
```

AddViewResult: Represents the result of the operation. It **MUST** create the list view, and include the resulting **View** element when the operation succeeds. The protocol server **MAY** [<2>](#) append ">" after the **View** element. The type of the **View** element is **BriefViewDefinition**, which is specified in section [2.2.4.1](#).

3.1.4.2 DeleteView

The **DeleteView** operation is used to delete the specified list view of the specified list (1). The definition of the **DeleteView** operation is as follows.

```
<wsdl:operation name="DeleteView">
  <wsdl:input message="tns>DeleteViewSoapIn" />
  <wsdl:output message="tns>DeleteViewSoapOut" />
</wsdl:operation>
```

```
</wsdl:operation>
```

The protocol client sends a **DeleteViewSoapIn** request message (section [3.1.4.2.1.1](#)), and the protocol server responds with a **DeleteViewSoapOut** response message (section [3.1.4.2.1.2](#)).

3.1.4.2.1 Messages

The following WSDL message definitions are specific to this operation.

3.1.4.2.1.1 DeleteViewSoapIn

The request WSDL message for a **DeleteView** WSDL operation (section [3.1.4.2](#)).

The SOAP action value of the message is specified as follows.

```
http://schemas.microsoft.com/sharepoint/soap/DeleteView
```

The SOAP body contains a **DeleteView** element (section [3.1.4.2.2.1](#)).

3.1.4.2.1.2 DeleteViewSoapOut

The response WSDL message for a **DeleteView** WSDL operation (section [3.1.4.2](#)).

The SOAP body contains a **DeleteViewResponse** element (section [3.1.4.2.2.2](#)).

3.1.4.2.2 Elements

The following XML schema element definitions are specific to this operation.

3.1.4.2.2.1 DeleteView

The **DeleteView** element defines the input parameters of the **DeleteView** operation (section [3.1.4.2](#)). The definition of the **DeleteView** element is as follows.

```
<s:element name="DeleteView">
  <s:complexType>
    <s:sequence>
      <s:element name="listName" type="s:string" minOccurs="1" maxOccurs="1"/>
      <s:element name="viewName" type="s:string" minOccurs="0"/>
    </s:sequence>
  </s:complexType>
</s:element>
```

listName: For a definition, see section [2.2.3.3](#).

viewName: For a definition, see section [2.2.3.7](#).

3.1.4.2.2.2 DeleteViewResponse

The **DeleteViewResponse** element defines the output of the **DeleteView** operation (section [3.1.4.2](#)). The protocol server **MUST** delete the list view and respond with a **DeleteViewResponse** element if the operation succeeded.

The definition of the **DeleteViewResponse** element is as follows.

```
<s:element name="DeleteViewResponse">
  <s:complexType/>
</s:element>
```

3.1.4.3 GetView

The **GetView** operation is used to obtain information about a specified list view of the specified list (1), without the display properties. The definition of the **GetView** operation is as follows.

```
<wsdl:operation name="GetView">
  <wsdl:input message="tns:GetViewSoapIn" />
  <wsdl:output message="tns:GetViewSoapOut" />
</wsdl:operation>
```

The protocol client sends a **GetViewSoapIn** request message (section [3.1.4.3.1.1](#)), and the protocol server responds with a **GetViewSoapOut** response (section [3.1.4.3.1.2](#)).

3.1.4.3.1 Messages

The following WSDL message definitions are specific to this operation.

3.1.4.3.1.1 GetViewSoapIn

The request WSDL message for a **GetView** WSDL operation (section [3.1.4.3](#)).

The SOAP action value of the message is specified as follows.

```
http://schemas.microsoft.com/sharepoint/soap/GetView
```

The SOAP body contains a **GetView** element (section [3.1.4.3.2.1](#)).

3.1.4.3.1.2 GetViewSoapOut

The response WSDL message for a **GetView** WSDL operation (section [3.1.4.3](#)).

The SOAP body contains a **GetViewResponse** element (section [3.1.4.3.2.2](#)).

3.1.4.3.2 Elements

The following XML schema element definitions are specific to this operation.

3.1.4.3.2.1 GetView

The **GetView** element specifies the input parameters of the **GetView** operation (section [3.1.4.3](#)).

```
<s:element name="GetView">
  <s:complexType>
    <s:sequence>
      <s:element name="listName" type="s:string" minOccurs="1" maxOccurs="1"/>
      <s:element name="viewName" type="s:string" minOccurs="0" maxOccurs="1"/>
    </s:sequence>
  </s:complexType>
</s:element>
```

```
</s:complexType>
</s:element>
```

listName: Refer to section [2.2.3.3](#).

viewName: Refer to section [2.2.3.7](#).

3.1.4.3.2.2 GetViewResponse

The **GetViewResponse** element specifies the output of the **GetView** operation (section [3.1.4.3](#)). The definition of the **GetViewResponse** element is as follows.

```
<s:element name="GetViewResponse">
  <s:complexType>
    <s:sequence>
      <s:element name="GetViewResult" minOccurs="1" maxOccurs="1">
        <s:complexType>
          <s:sequence>
            <s:element name="View" type="tns:BriefViewDefinition" minOccurs="1"
maxOccurs="1"/>
          </s:sequence>
        </s:complexType>
      </s:element>
    </s:sequence>
  </s:complexType>
</s:element>
```

GetViewResult: Represents the result of the operation. The protocol server MUST return a **View** element that contains the details of the specified list view when the operation succeeds. The type of the **View** element is **BriefViewDefinition**, which is specified in section [2.2.4.1.<3>](#)

3.1.4.4 GetViewCollection

The **GetViewCollection** operation is used to retrieve the collection of list views of a specified list (1). The definition of the **GetViewCollection** operation is as follows.

```
<wsdl:operation name="GetViewCollection">
  <wsdl:input message="tns:GetViewCollectionSoapIn" />
  <wsdl:output message="tns:GetViewCollectionSoapOut" />
</wsdl:operation>
```

The protocol client sends a **GetViewCollectionSoapIn** request message (section [3.1.4.4.1.1](#)), and the protocol server responds with a **GetViewCollectionSoapOut** response message (section [3.1.4.4.1.2](#)).

3.1.4.4.1 Messages

The following WSDL message definitions are specific to this operation.

3.1.4.4.1.1 GetViewCollectionSoapIn

The request WSDL message for a **GetViewCollection** WSDL operation (section [3.1.4.4](#)).

The SOAP action value of the message is specified as follows.

<http://schemas.microsoft.com/sharepoint/soap/GetViewCollection>

The SOAP body contains a **GetViewCollection** element (section [3.1.4.4.2.1](#)).

3.1.4.4.1.2 GetViewCollectionSoapOut

The response WSDL message for a **GetViewCollection** WSDL operation (section [3.1.4.4](#)).

The SOAP body contains a **GetViewCollectionResponse** element (section [3.1.4.4.2.2](#)).

3.1.4.4.2 Elements

The following XML schema element definitions are specific to this operation.

3.1.4.4.2.1 GetViewCollection

The **GetViewCollection** element defines the input parameter of the **GetViewCollection** operation (section [3.1.4.4](#)). The definition of the **GetViewCollection** element is as follows.

```
<s:element name="GetViewCollection">
  <s:complexType>
    <s:sequence>
      <s:element name="listName" type="s:string" minOccurs="1" maxOccurs="1"/>
    </s:sequence>
  </s:complexType>
</s:element>
```

listName: For a definition, see section [2.2.3.3](#).

3.1.4.4.2.2 GetViewCollectionResponse

The **GetViewCollectionResponse** element defines the output of the **GetViewCollection** operation (section [3.1.4.4](#)). The definition of the **GetViewCollectionResponse** element is as follows.

```
<s:element name="GetViewCollectionResponse">
  <s:complexType>
    <s:sequence>
      <s:element name="GetViewCollectionResult" minOccurs="1" maxOccurs="1">
        <s:complexType>
          <s:sequence>
            <s:element name="Views" minOccurs="1" maxOccurs="1">
              <s:complexType>
                <s:sequence>
                  <s:element name="View" minOccurs="0" maxOccurs="unbounded">
                    <s:complexType>
                      <s:attributeGroup ref="tns:ViewAttributeGroup"/>
                    </s:complexType>
                  </s:element>
                </s:sequence>
              </s:complexType>
            </s:element>
          </s:sequence>
        </s:complexType>
      </s:element>
    </s:sequence>
  </s:complexType>
</s:element>
```

```
</s:complexType>
</s:element>
```

GetViewCollectionResult: Represents the result of the operation. It MUST include the collection of **View** elements of the specified list (1), which includes an attribute group of type **ViewAttributeGroup**. The attribute group **ViewAttributeGroup** is specified in section [2.2.8.1](#), with the following exception: The **Url** attribute MUST be the **server-relative URL** of the list view.

3.1.4.5 GetViewHtml

The **GetViewHtml** operation is used to obtain details of a specified list view of the specified list (1), including display properties in CAML and HTML. The definition of the **GetViewHtml** operation is as follows.

```
<wsdl:operation name="GetViewHtml">
  <wsdl:input message="tns:GetViewHtmlSoapIn" />
  <wsdl:output message="tns:GetViewHtmlSoapOut" />
</wsdl:operation>
```

The protocol client sends a **GetViewHtmlSoapIn** request message (section [3.1.4.5.1.1](#)), and the protocol server responds with a **GetViewHtmlSoapOut** response message (section [3.1.4.5.1.2](#)).

3.1.4.5.1 Messages

The following WSDL message definitions are specific to this operation.

3.1.4.5.1.1 GetViewHtmlSoapIn

The request WSDL message for a **GetViewHtml** WSDL operation (section [3.1.4.5](#)).

The SOAP action value of the message is specified as follows.

```
http://schemas.microsoft.com/sharepoint/soap/GetViewHtml
```

The SOAP body contains a **GetViewHtml** element (section [3.1.4.5.2.1](#)).

3.1.4.5.1.2 GetViewHtmlSoapOut

The response WSDL message for a **GetViewHtml** WSDL operation (section [3.1.4.5](#)).

The SOAP body contains a **GetViewHtmlResponse** element (section [3.1.4.5.2.2](#)).

3.1.4.5.2 Elements

The following XML schema element definitions are specific to this operation.

3.1.4.5.2.1 GetViewHtml

The **GetViewHtml** element defines the input parameters for the **GetViewHtml** operation (section [3.1.4.5](#)). The definition of the **GetViewHtml** element is as follows.

```
<s:element name="GetViewHtml">
```

```

<s:complexType>
  <s:sequence>
    <s:element name="listName" type="s:string" minOccurs="1" maxOccurs="1"/>
    <s:element name="viewName" type="s:string" minOccurs="0" maxOccurs="1"/>
  </s:sequence>
</s:complexType>
</s:element>

```

listName: For a definition, see section [2.2.3.3](#).

viewName: For a definition, see section [2.2.3.7](#).

3.1.4.5.2.2 GetViewHtmlResponse

The **GetViewHtmlResponse** element defines the output parameters for the **GetViewHtml** operation (section [3.1.4.5](#)). The definition of the **GetViewHtmlResponse** element is as follows.

```

<s:element name="GetViewHtmlResponse">
  <s:complexType>
    <s:sequence>
      <s:element name="GetViewHtmlResult" minOccurs="1" maxOccurs="1">
        <s:complexType>
          <s:sequence>
            <s:element name="View" type="core:ViewDefinition" minOccurs="1" maxOccurs="1"/>
          </s:sequence>
        </s:complexType>
      </s:element>
    </s:sequence>
  </s:complexType>
</s:element>

```

GetViewHtmlResult: Represents the result of the operation. It MUST include the corresponding **View** element when the operation succeeds. The type of the **View** element is specified in [\[MS-WSSCAML\]](#) section 2.3.2.17.

3.1.4.6 UpdateView

The **UpdateView** operation is used to update the specified list view, without the display properties. The definition of the **UpdateView** element is as follows.

```

<wsdl:operation name="UpdateView">
  <wsdl:input message="tns:UpdateViewSoapIn" />
  <wsdl:output message="tns:UpdateViewSoapOut" />
</wsdl:operation>

```

The protocol client sends an **UpdateViewSoapIn** request message (section [3.1.4.6.1.1](#)), and the protocol server responds with an **UpdateViewSoapOut** response message (section [3.1.4.6.1.2](#)).

3.1.4.6.1 Messages

The following WSDL message definitions are specific to this operation.

3.1.4.6.1.1 UpdateViewSoapIn

The request WSDL message for an **UpdateView** WSDL operation (section [3.1.4.6](#)).

The SOAP action value of the message is specified as follows.

```
http://schemas.microsoft.com/sharepoint/soap/UpdateView
```

The SOAP body contains an **UpdateView** element (section [3.1.4.6.2.1](#)).

3.1.4.6.1.2 UpdateViewSoapOut

The response WSDL message for an **UpdateView** WSDL operation (section [3.1.4.6](#)).

The SOAP body contains an **UpdateViewResponse** element (section [3.1.4.6.2.2](#)).

3.1.4.6.2 Elements

The following XML schema element definitions are specific to this operation.

3.1.4.6.2.1 UpdateView

The **UpdateView** element defines the input parameters for the **UpdateView** operation (section [3.1.4.6](#)). The definition of the **UpdateView** element is as follows.

```
<s:element name="UpdateView">
  <s:complexType>
    <s:sequence>
      <s:element name="listName" type="s:string" minOccurs="1" maxOccurs="1" />
      <s:element name="viewName" type="s:string" minOccurs="0" maxOccurs="1" />
      <s:element minOccurs="0" maxOccurs="1" name="viewProperties">
        <s:complexType>
          <s:sequence>
            <s:element name="View" type="tns:UpdateViewPropertiesDefinition" minOccurs="0"
maxOccurs="1"/>
          </s:sequence>
        </s:complexType>
      </s:element>
      <s:element minOccurs="0" maxOccurs="1" name="query">
        <s:complexType>
          <s:sequence>
            <s:element name="Query" type="core:CamlQueryRoot" minOccurs="0" maxOccurs="1"/>
          </s:sequence>
        </s:complexType>
      </s:element>
      <s:element minOccurs="0" maxOccurs="1" name="viewFields">
        <s:complexType>
          <s:sequence>
            <s:element name="ViewFields" minOccurs="0" maxOccurs="1">
              <s:complexType>
                <s:sequence>
                  <s:element name="FieldRef" type="core:FieldRefDefinitionView" minOccurs="0"
maxOccurs="unbounded" />
                </s:sequence>
              </s:complexType>
            </s:element>
          </s:sequence>
        </s:complexType>
      </s:element>
    </s:sequence>
  </s:complexType>
</s:element>
```

```

        </s:sequence>
      </s:complexType>
    </s:element>
    <s:element minOccurs="0" maxOccurs="1" name="aggregations">
      <s:complexType>
        <s:sequence>
          <s:element name="Aggregations" type="core:AggregationsDefinition" minOccurs="0"
maxOccurs="1"/>
        </s:sequence>
      </s:complexType>
    </s:element>
    <s:element minOccurs="0" maxOccurs="1" name="formats">
      <s:complexType>
        <s:sequence>
          <s:element name="Formats" type="core:ViewFormatDefinitions" minOccurs="0"
maxOccurs="1"/>
        </s:sequence>
      </s:complexType>
    </s:element>
    <s:element minOccurs="0" maxOccurs="1" name="rowLimit">
      <s:complexType>
        <s:sequence>
          <s:element name="RowLimit" type="core:RowLimitDefinition" minOccurs="0"
maxOccurs="1"/>
        </s:sequence>
      </s:complexType>
    </s:element>
  </s:sequence>
</s:complexType>
</s:element>

```

listName: For a definition, see section [2.2.3.3](#).

viewName: For a definition, see section [2.2.3.7](#).

viewProperties: For a definition, see section [2.2.3.8](#).

query: For a definition, see section [2.2.3.4](#).

viewFields: For a definition, see section [2.2.3.6](#).

aggregations: For a definition, see section [2.2.3.1](#).

formats: For a definition, see section [2.2.3.2](#).

rowLimit: For a definition, see section [2.2.3.5](#).

3.1.4.6.2.2 UpdateViewResponse

The **UpdateViewResponse** element defines the output parameters for the **UpdateView** operation (section [3.1.4.6](#)). The definition of the **UpdateViewResponse** element is as follows.

```

<s:element name="UpdateViewResponse">
  <s:complexType>
    <s:sequence>
      <s:element name="UpdateViewResult" minOccurs="1" maxOccurs="1">
        <s:complexType>

```

```

        <s:sequence>
          <s:element name="View" type="tns:BriefViewDefinition" minOccurs="1"
maxOccurs="1"/>
        </s:sequence>
      </s:complexType>
    </s:element>
  </s:sequence>
</s:complexType>
</s:element>

```

UpdateViewResult: If the protocol server successfully updates the list view, it MUST return a **View** element that specifies the list view. The type of the **View** element is **BriefViewDefinition**, which is specified in section [2.2.4.1](#).

3.1.4.7 UpdateViewHtml

The **UpdateViewHtml** operation is used to update a list view for a specified list (1), including display properties in CAML and HTML. The definition of the **UpdateViewHtml** element is as follows.

```

<wsdl:operation name="UpdateViewHtml">
  <wsdl:input message="tns:UpdateViewHtmlSoapIn" />
  <wsdl:output message="tns:UpdateViewHtmlSoapOut" />
</wsdl:operation>

```

The protocol client sends an **UpdateViewHtmlSoapIn** request message (section [3.1.4.7.1.1](#)), and the protocol server responds with an **UpdateViewHtmlSoapOut** response message (section [3.1.4.7.1.2](#)).

When processing this call, the protocol server MUST perform the same actions as for the **UpdateViewHtml2** method (section [3.1.4.8](#)), with the **openApplicationExtension** parameter as empty.

3.1.4.7.1 Messages

The following WSDL message definitions are specific to this operation.

3.1.4.7.1.1 UpdateViewHtmlSoapIn

The request WSDL message for an **UpdateViewHtml** WSDL operation (section [3.1.4.7](#)).

The SOAP action value of the message is specified as follows.

```

http://schemas.microsoft.com/sharepoint/soap/UpdateViewHtml

```

The SOAP body contains an **UpdateViewHtml** element (section [3.1.4.7.2.1](#)).

3.1.4.7.1.2 UpdateViewHtmlSoapOut

The response WSDL message for an **UpdateViewHtml** WSDL operation (section [3.1.4.7](#)).

The SOAP body contains an **UpdateViewHtmlResponse** element (section [3.1.4.7.2.2](#)).

3.1.4.7.2 Elements

The following XML schema element definitions are specific to this operation.

3.1.4.7.2.1 UpdateViewHtml

The **UpdateViewHtml** element defines the input parameters for the **UpdateViewHtml** operation (section [3.1.4.7](#)). The definition of the **UpdateViewHtml** element is as follows.

```
<s:element name="UpdateViewHtml">
  <s:complexType>
    <s:sequence>
      <s:element name="listName" type="s:string" minOccurs="1" maxOccurs="1" />
      <s:element name="viewName" type="s:string" minOccurs="0" maxOccurs="1" />
      <s:element minOccurs="0" maxOccurs="1" name="viewProperties">
        <s:complexType>
          <s:sequence>
            <s:element name="View" type="tns:UpdateViewPropertiesDefinition" minOccurs="0"
maxOccurs="1"/>
          </s:sequence>
        </s:complexType>
      </s:element>
      <s:element minOccurs="0" maxOccurs="1" name="toolbar">
        <s:complexType>
          <s:sequence>
            <s:element name="Toolbar" type="core:ToolbarDefinition" minOccurs="0"
maxOccurs="1" />
          </s:sequence>
        </s:complexType>
      </s:element>
      <s:element minOccurs="0" maxOccurs="1" name="viewHeader">
        <s:complexType>
          <s:sequence>
            <s:element name="ViewHeader" minOccurs="0" maxOccurs="1">
              <s:complexType>
                <s:sequence>
                  <s:any minOccurs="0" maxOccurs="unbounded" namespace="##any"
processContents="skip" />
                </s:sequence>
                <s:anyAttribute processContents="skip" />
              </s:complexType>
            </s:element>
          </s:sequence>
        </s:complexType>
      </s:element>
      <s:element minOccurs="0" maxOccurs="1" name="viewBody">
        <s:complexType>
          <s:sequence>
            <s:element name="ViewBody" minOccurs="0" maxOccurs="1">
              <s:complexType>
                <s:sequence>
                  <s:any minOccurs="0" maxOccurs="unbounded" namespace="##any"
processContents="skip" />
                </s:sequence>
                <s:anyAttribute processContents="skip" />
              </s:complexType>
            </s:element>
          </s:sequence>
        </s:complexType>
      </s:element>
    </s:sequence>
  </s:complexType>
</s:element>
```

        </s:sequence>
    </s:complexType>
</s:element>
<s:element minOccurs="0" maxOccurs="1" name="formats">
    <s:complexType>
        <s:sequence>
            <s:element name="Formats" type="core:ViewFormatDefinitions" minOccurs="0"
maxOccurs="1"/>
        </s:sequence>
    </s:complexType>
</s:element>
<s:element minOccurs="0" maxOccurs="1" name="rowLimit">
    <s:complexType>
        <s:sequence>
            <s:element name="RowLimit" type="core:RowLimitDefinition" minOccurs="0"
maxOccurs="1"/>
        </s:sequence>
    </s:complexType>
</s:element>
</s:sequence>
</s:complexType>
</s:element>

```

All parameters are as specified by the **UpdateViewHtml2** element (section [3.1.4.8.2.1](#)), with the following exception: This method does not use the **openApplicationExtension** parameter.

3.1.4.7.2.2 UpdateViewHtmlResponse

The **UpdateViewHtmlResponse** element defines the output parameters for the **UpdateViewHtml** operation (section [3.1.4.7](#)). The definition of the **UpdateViewHtmlResponse** element is as follows.

```

<s:element name="UpdateViewHtmlResponse">
    <s:complexType>
        <s:sequence>
            <s:element name="UpdateViewHtmlResult" minOccurs="1" maxOccurs="1">
                <s:complexType>
                    <s:sequence>
                        <s:element name="View" type="core:ViewDefinition" minOccurs="1" maxOccurs="1"/>
                    </s:sequence>
                </s:complexType>
            </s:element>
        </s:sequence>
    </s:complexType>
</s:element>

```

UpdateViewHtmlResult: If the protocol server successfully updates the list view, it MUST return a **View** element that specifies the list view. The type of the **View** element is **ViewDefinition**, which is specified in [\[MS-WSSCAML\]](#) section 2.3.2.17 (ViewDefinition Type).

3.1.4.8 UpdateViewHtml2

The **UpdateViewHtml2** operation [<4>](#) is used to update details of a specified list view of the specified list (1), including display properties in CAML and HTML. The definition of the **UpdateViewHtml2** operation is as follows.

```
<wsdl:operation name="UpdateViewHtml2">
  <wsdl:input message="tns:UpdateViewHtml2SoapIn" />
  <wsdl:output message="tns:UpdateViewHtml2SoapOut" />
</wsdl:operation>
```

The protocol client sends an **UpdateViewHtml2SoapIn** request message (section [3.1.4.8.1.1](#)), and the protocol server responds with an **UpdateViewHtml2SoapOut** response message (section [3.1.4.8.1.2](#)).

3.1.4.8.1 Messages

The following WSDL message definitions are specific to this operation.

3.1.4.8.1.1 UpdateViewHtml2SoapIn

The request WSDL message for an **UpdateViewHtml2** WSDL operation (section [3.1.4.8](#)).

The SOAP action value of the message is specified as follows.

```
http://schemas.microsoft.com/sharepoint/soap/UpdateViewHtml2
```

The SOAP body contains an **UpdateViewHtml2** element (section [3.1.4.8.2.1](#)).

3.1.4.8.1.2 UpdateViewHtml2SoapOut

The response WSDL message for an **UpdateViewHtml2** WSDL operation (section [3.1.4.8](#)).

The SOAP body contains an **UpdateViewHtml2Response** element (section [3.1.4.8.2.8](#)).

3.1.4.8.2 Elements

The following XML schema element definitions are specific to this operation.

3.1.4.8.2.1 UpdateViewHtml2

The **UpdateViewHtml2** element defines the input parameters for the **UpdateViewHtml2** operation (section [3.1.4.8](#)). The definition of the **UpdateViewHtml2** element is as follows.

```
<s:element name="UpdateViewHtml2">
  <s:complexType>
    <s:sequence>
      <s:element name="listName" type="s:string" minOccurs="1" maxOccurs="1" />
      <s:element name="viewName" type="s:string" minOccurs="0" maxOccurs="1" />
    </s:sequence>
  </s:complexType>
</s:element>
```

```

<s:element minOccurs="0" maxOccurs="1" name="viewProperties">
  <s:complexType>
    <s:sequence>
      <s:element name="View" type="tns:UpdateViewPropertiesDefinition" minOccurs="0"
maxOccurs="1"/>
    </s:sequence>
  </s:complexType>
</s:element>
<s:element minOccurs="0" maxOccurs="1" name="toolbar">
  <s:complexType>
    <s:sequence>
      <s:element name="Toolbar" type="core:ToolbarDefinition" minOccurs="0"
maxOccurs="1" />
    </s:sequence>
  </s:complexType>
</s:element>
<s:element minOccurs="0" maxOccurs="1" name="viewHeader">
  <s:complexType>
    <s:sequence>
      <s:element name="ViewHeader" minOccurs="0" maxOccurs="1">

viewBody: Refer to section [3.1.4.8.2.4](#) for a definition.

viewFooter: Refer to section [3.1.4.8.2.5](#) for a definition.

viewEmpty: Refer to section [3.1.4.8.2.6](#) for a definition.

rowLimitExceeded: Refer to section [3.1.4.8.2.7](#) for a definition.

query: Refer to section [2.2.3.4](#) for a definition.

viewFields: Refer to section [2.2.3.6](#) for a definition.

aggregations: Refer to section [2.2.3.1](#) for a definition.

formats: Refer to section [2.2.3.2](#) for a definition.

rowLimit: Refer to section [2.2.3.5](#) for a definition.

openApplicationExtension: Specifies what kind of application to use to edit the view. The protocol server can look up the application that is supposed to use that extension, and it can use that application to edit this view.

3.1.4.8.2.2 toolbar

The **toolbar** element specifies the rendering of the toolbar of a list (1). The definition of the **toolbar** element is as follows.

```
<s:element name="toolbar">
  <s:complexType>
    <s:sequence>
      <s:element name="Toolbar" type="core:ToolbarDefinition" minOccurs="0" maxOccurs="1" />
    </s:sequence>
  </s:complexType>
</s:element>
```

The **Toolbar** element is specified in [\[MS-WSSCAML\]](#) section 2.3.2.17.3 (Child Elements).

3.1.4.8.2.3 viewHeader

The **viewHeader** element specifies the implementation-specific rendering of the header, or the top of a **list view page**. The definition of the **viewHeader** element is as follows.

```
<s:element name="viewHeader">
  <s:complexType>
    <s:sequence>
      <s:element name="ViewHeader" minOccurs="0" maxOccurs="1">
        <s:complexType>
          <s:sequence>
            <s:any minOccurs="0" maxOccurs="unbounded" namespace="##any"
processContents="skip" />
          </s:sequence>
          <s:anyAttribute processContents="skip" />
        </s:complexType>
      </s:element>
    </s:sequence>
  </s:complexType>
</s:element>
```

The **ViewHeader** element is specified in [\[MS-WSSCAML\]](#) section 2.3.2.17.3 (Child Elements).

3.1.4.8.2.4 viewBody

The **viewBody** element specifies the implementation-specific rendering of the main, or the middle portion of a list view page. The definition of the **viewBody** element is as follows.

```
<s:element name="viewBody">
  <s:complexType>
    <s:sequence>
      <s:element name="ViewBody" minOccurs="0" maxOccurs="1">
        <s:complexType>
          <s:sequence>
            <s:any minOccurs="0" maxOccurs="unbounded" namespace="##any"
processContents="skip" />
          </s:sequence>
          <s:anyAttribute processContents="skip" />
        </s:complexType>
      </s:element>
    </s:sequence>
  </s:complexType>
</s:element>
```

```

    </s:sequence>
  </s:complexType>
</s:element>

```

The **viewBody** element is specified in [\[MS-WSSCAML\]](#) section 2.3.2.17.3 (Child Elements).

3.1.4.8.2.5 viewFooter

The **viewFooter** element specifies the implementation-specific rendering of the footer, or the bottom of a list view page. The definition of the **viewFooter** element is as follows.

```

<s:element name="viewFooter">
  <s:complexType>
    <s:sequence>
      <s:element name="ViewFooter" minOccurs="0" maxOccurs="1">
        <s:complexType>
          <s:sequence>
            <s:any minOccurs="0" maxOccurs="unbounded" namespace="##any"
processContents="skip" />
          </s:sequence>
          <s:anyAttribute processContents="skip" />
        </s:complexType>
      </s:element>
    </s:sequence>
  </s:complexType>
</s:element>

```

The **viewFooter** element is specified in [\[MS-WSSCAML\]](#) section 2.3.2.17.3 (Child Elements).

3.1.4.8.2.6 viewEmpty

The **viewEmpty** element specifies the message to be displayed when no items are in a list view. The definition of the **viewEmpty** element is as follows.

```

<s:element minOccurs="0" maxOccurs="1" name="viewEmpty">
  <s:complexType>
    <s:sequence>
      <s:element name="ViewEmpty" minOccurs="0" maxOccurs="1">
        <s:complexType>
          <s:sequence>
            <s:any minOccurs="0" maxOccurs="unbounded" namespace="##any"
processContents="skip" />
          </s:sequence>
          <s:anyAttribute processContents="skip" />
        </s:complexType>
      </s:element>
    </s:sequence>
  </s:complexType>
</s:element>

```

The **viewEmpty** element is specified in [\[MS-WSSCAML\]](#) section 2.3.2.17.3 (Child Elements).

3.1.4.8.2.7 rowLimitExceeded

The **rowLimitExceeded** element specifies the implementation-specific rendering of additional items when the number of items exceeds the value specified in the **rowLimit** element, but the list view is not set to support displaying items in multiple pages. The definition of the **rowLimitExceeded** element is as follows.

```
<s:element minOccurs="0" maxOccurs="1" name="rowLimitExceeded">
  <s:complexType>
    <s:sequence>
      <s:element name="RowLimitExceeded" minOccurs="0" maxOccurs="1">
        <s:complexType>
          <s:sequence>
            <s:any minOccurs="0" maxOccurs="unbounded" namespace="##any"
processContents="skip" />
          </s:sequence>
          <s:anyAttribute processContents="skip" />
        </s:complexType>
      </s:element>
    </s:sequence>
  </s:complexType>
</s:element>
```

The **rowLimitExceeded** element is specified in [\[MS-WSSCAML\]](#) section 2.3.2.17.3 (Child Elements).

3.1.4.8.2.8 UpdateViewHtml2Response

The **UpdateViewHtml2Response** element defines the output parameters for the **UpdateViewHtml2** operation (section [3.1.4.8](#)). The definition of the **UpdateViewHtml2Response** element is as follows.

```
<s:element name="UpdateViewHtml2Response">
  <s:complexType>
    <s:sequence>
      <s:element name="UpdateViewHtml2Result" minOccurs="1" maxOccurs="1">
        <s:complexType>
          <s:sequence>
            <s:element name="View" type="core:ViewDefinition" minOccurs="1" maxOccurs="1"/>
          </s:sequence>
        </s:complexType>
      </s:element>
    </s:sequence>
  </s:complexType>
</s:element>
```

UpdateViewHtml2Result: If the protocol server successfully updates the list view, it MUST return a **View** element that specifies the list view. The type of the **View** element is **ViewDefinition**, which is specified in [\[MS-WSSCAML\]](#) section 2.3.2.17 (View Definition Type).

3.1.5 Timer Events

None.

3.1.6 Other Local Events

None.

4 Protocol Examples

The following example demonstrates the creation, update, and deletion of a list view.

The user creates a list view by calling the **AddView** Web method (section [3.1.4.1](#)) with the following information in the request message.

```
<AddView xmlns="http://schemas.microsoft.com/sharepoint/soap/">
  <listName>{C2294E28-05B6-4486-804A-80F0189B992B}</listName>
  <viewName>ViewA</viewName>
  <viewFields>
    <ViewFields>
      <FieldRef Name='ID' />
      <FieldRef Name='Title' />
    </ViewFields>
  </viewFields>
  <query>
    <Query>
      <OrderBy>
        <FieldRef Name='ID' />
      </OrderBy>
    </Query>
  </query>
  <rowLimit>
    <RowLimit Paged='TRUE'>100</RowLimit>
  </rowLimit>
  <type>HTML</type>
  <makeViewDefault>>false</makeViewDefault>
</AddView>
```

The protocol server returns the following **AddViewResponse** element (section [3.1.4.1.2.3](#)) in the response message.

```
<AddViewResponse xmlns="http://schemas.microsoft.com/sharepoint/soap/">
  <AddViewResult>
    <View
      Type='HTML'
      Url='/Lists/ListA/ViewA.aspx'
      Personal='FALSE'
      DisplayName='ViewA'
      DefaultView='FALSE'
      Name='{4807AA00-190A-47CB-B2E0-8C13C04149BD}'>
      <Query>
        <OrderBy>
          <FieldRef Name='ID' />
        </OrderBy>
      </Query>
      <ViewFields>
        <FieldRef Name='ID' />
        <FieldRef Name='Title' />
      </ViewFields>
      <RowLimit Paged='TRUE'>100</RowLimit>
    </View>
  </AddViewResult>
</AddViewResponse>
```

To verify that the previous list view was added to the list (1), the user retrieves the collection by calling the **GetViewCollection** Web method (section [3.1.4.4](#)) with the following information in the request message.

```
<GetViewCollection xmlns="http://schemas.microsoft.com/sharepoint/soap/">
  <listName>{C2294E28-05B6-4486-804A-80F0189B992B}</listName>
</GetViewCollection>
```

The protocol server returns the following **GetViewCollectionResponse** element (section [3.1.4.4.2.2](#)) in the response message.

```
<GetViewCollectionResponse xmlns='http://schemas.microsoft.com/sharepoint/soap/'>
  <GetViewCollectionResult >
    <Views >
      <View
Name='{4807AA00-190A-47CB-B2E0-8C13C04149BD}'
DefaultView='TRUE'
Type='HTML'
DisplayName='ViewA'
Url='/Lists/ListA/ViewA.aspx'
Level='1'
BaseViewID='1'
ContentTypeID='0x'
ImageUrl='/_layouts/images/dlicon.png'>
      </View>
    </Views>
  </GetViewCollectionResult>
</GetViewCollectionResponse>
```

The user updates the fields (2) of the list view by calling the **UpdateView** Web method (section [3.1.4.6](#)) with the following information in the request message.

```
<UpdateView xmlns="http://schemas.microsoft.com/sharepoint/soap/">
  <listName>{C2294E28-05B6-4486-804A-80F0189B992B}</listName>
  <viewName>{4807AA00-190A-47CB-B2E0-8C13C04149BD}</viewName>
  <viewFields>
    <ViewFields >
      <FieldRef Name='ID'></FieldRef>
      <FieldRef Name='Title'></FieldRef>
      <FieldRef Name='Modified'></FieldRef>
      <FieldRef Name='Editor'></FieldRef>
    </ViewFields>
  </viewFields>
</UpdateView>
```

The protocol server returns the following **UpdateViewResponse** element (section [3.1.4.6.2.2](#)) in the response message.

```
<UpdateViewResponse xmlns="http://schemas.microsoft.com/sharepoint/soap/">
  <UpdateViewResult>
    <View
Name='{4807AA00-190A-47CB-B2E0-8C13C04149BD}'
Type='HTML'
  DisplayName='ViewA'
  Url='/Lists/ListA/ViewA.aspx'
  Level='1'

```

```

    BaseViewID='1'
    ContentTypeID='0x'
    ImageUrl='/_layouts/images/dlicon.png'>
    <Query>
      <OrderBy>
        <FieldRef Name='ID' />
      </OrderBy>
    </Query>
    <ViewFields>
      <FieldRef Name='ID' />
      <FieldRef Name='Title' />
      <FieldRef Name='Modified' />
      <FieldRef Name='Editor' />
    </ViewFields>
    <RowLimit Paged='TRUE'>100</RowLimit>
    <Formats>
      <FormatDef Type='RowHeight' Value='Auto' />
      <Format Name='ID'>
        <FormatDef Type='ColWidth' Value='64' />
      </Format>
      <Format Name='Title'>
        <FormatDef Type='WrapText' Value='1' />
        <FormatDef Type='ColWidth' Value='52' />
      </Format>
    </Formats>
    <Aggregations Value='Off'>
      <FieldRef Name='Title' Type='COUNT' />
    </Aggregations>
  </View>
</UpdateViewResult>
</UpdateViewResponse>

```

The user deletes the list view by calling the **DeleteView** Web method (section [3.1.4.2](#)) with the following information in the request message.

```

<DeleteView xmlns="http://schemas.microsoft.com/sharepoint/soap/">
  <listName>{C2294E28-05B6-4486-804A-80F0189B992B}</listName>
  <viewName>{4807AA00-190A-47CB-B2E0-8C13C04149BD}</viewName>
</DeleteView>

```

The protocol server returns the following **DeleteViewResponse** element (section [3.1.4.2.2.2](#)) in the response message.

```

<DeleteViewResponse
  xmlns="http://schemas.microsoft.com/sharepoint/soap/">

```

5 Security

5.1 Security Considerations for Implementers

None.

5.2 Index of Security Parameters

None.

6 Appendix A: Full WSDL

For ease of implementation, the full WSDL is provided in this appendix. A link to `wswire.xsd` denotes a reference to schemas as described in [\[MS-WSSCAML\]](#).

```
<?xml version="1.0" encoding="utf-8"?>
<wsdl:definitions xmlns:soap="http://schemas.xmlsoap.org/wsdl/soap/"
xmlns:tns="http://schemas.microsoft.com/sharepoint/soap/"

7 Appendix B: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include released service packs:

- The 2007 Microsoft Office system
- Microsoft Office 2010 suites
- Microsoft Office 2013
- Windows SharePoint Services 2.0
- Windows SharePoint Services 3.0
- Microsoft SharePoint Foundation 2010
- Microsoft SharePoint Foundation 2013

Exceptions, if any, are noted below. If a service pack or Quick Fix Engineering (QFE) number appears with the product version, behavior changed in that service pack or QFE. The new behavior also applies to subsequent service packs of the product unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms SHOULD or SHOULD NOT implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies that the product does not follow the prescription.

[<1> Section 3:](#) Microsoft products use a **detail** element instead of the **Detail** element in SOAP 1.2.

[<2> Section 3.1.4.1.2.3:](#) SharePoint Foundation 2010 appends ">" after the **View** element.

[<3> Section 3.1.4.3.2.2:](#) In SharePoint Foundation 2010 and SharePoint Foundation 2013, when this method is called after **UpdateViewHtml2** (section [3.1.4.8](#)) and the type of the view is HTML, the value of **OpenApplicationExtension** is returned as the value of the **View** element.

[<4> Section 3.1.4.8:](#) Windows SharePoint Services 2.0 does not support this operation.

8 Change Tracking

This section identifies changes that were made to the [MS-VIEWSS] protocol document between the April 2014 and July 2014 releases. Changes are classified as New, Major, Minor, Editorial, or No change.

The revision class **New** means that a new document is being released.

The revision class **Major** means that the technical content in the document was significantly revised. Major changes affect protocol interoperability or implementation. Examples of major changes are:

- A document revision that incorporates changes to interoperability requirements or functionality.
- The removal of a document from the documentation set.

The revision class **Minor** means that the meaning of the technical content was clarified. Minor changes do not affect protocol interoperability or implementation. Examples of minor changes are updates to clarify ambiguity at the sentence, paragraph, or table level.

The revision class **Editorial** means that the formatting in the technical content was changed. Editorial changes apply to grammatical, formatting, and style issues.

The revision class **No change** means that no new technical changes were introduced. Minor editorial and formatting changes may have been made, but the technical content of the document is identical to the last released version.

Major and minor changes can be described further using the following change types:

- New content added.
- Content updated.
- Content removed.
- New product behavior note added.
- Product behavior note updated.
- Product behavior note removed.
- New protocol syntax added.
- Protocol syntax updated.
- Protocol syntax removed.
- New content added due to protocol revision.
- Content updated due to protocol revision.
- Content removed due to protocol revision.
- New protocol syntax added due to protocol revision.
- Protocol syntax updated due to protocol revision.
- Protocol syntax removed due to protocol revision.

- Obsolete document removed.

Editorial changes are always classified with the change type **Editorially updated**.

Some important terms used in the change type descriptions are defined as follows:

- **Protocol syntax** refers to data elements (such as packets, structures, enumerations, and methods) as well as interfaces.
- **Protocol revision** refers to changes made to a protocol that affect the bits that are sent over the wire.

The changes made to this document are listed in the following table. For more information, please contact dochelp@microsoft.com.

Section	Tracking number (if applicable) and description	Major change (Y or N)	Change type
2.2.3 Elements	Updated the description for listName element.	N	Content updated.
2.2.3.7 viewName	Updated description for the value of viewName element.	N	Content updated.
2.2.4.1 BriefViewDefinition	Added "mixed=true" for the BriefViewDefinition complex type.	N	Content updated.
2.2.8.2 UpdateViewAttributeGroup	Added description for the DefaultView attribute.	N	Content updated.
3 Protocol Details	Added a note about the detail element.	N	New product behavior note added.
3.1.4.1.2.1 AddView	Added a description for the viewName element.	N	Content updated.
6 Appendix A: Full WSDL	Added "mixed=trure" for the BriefViewDefinition complex type.	N	Content updated.
6 Appendix A: Full WSDL	Added "<s:attribute name='UseSchemaXmlToolbar' type='core:TRUEFALSE' default='FALSE'/>" into the WSDL.	N	New content added.
