

## [MS-WMS]:

# Work Management Service Web Service Protocol

---

### Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation (“this documentation”) for protocols, file formats, data portability, computer languages, and standards support. Additionally, overview documents cover inter-protocol relationships and interactions.
- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you can make copies of it in order to develop implementations of the technologies that are described in this documentation and can distribute portions of it in your implementations that use these technologies or in your documentation as necessary to properly document the implementation. You can also distribute in your implementation, with or without modification, any schemas, IDLs, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications documentation.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that might cover your implementations of the technologies described in the Open Specifications documentation. Neither this notice nor Microsoft's delivery of this documentation grants any licenses under those patents or any other Microsoft patents. However, a given Open Specifications document might be covered by the Microsoft [Open Specifications Promise](#) or the [Microsoft Community Promise](#). If you would prefer a written license, or if the technologies described in this documentation are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting [iplg@microsoft.com](mailto:iplg@microsoft.com).
- **License Programs.** To see all of the protocols in scope under a specific license program and the associated patents, visit the [Patent Map](#).
- **Trademarks.** The names of companies and products contained in this documentation might be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights. For a list of Microsoft trademarks, visit [www.microsoft.com/trademarks](http://www.microsoft.com/trademarks).
- **Fictitious Names.** The example companies, organizations, products, domain names, email addresses, logos, people, places, and events that are depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

**Reservation of Rights.** All other rights are reserved, and this notice does not grant any rights other than as specifically described above, whether by implication, estoppel, or otherwise.

**Tools.** The Open Specifications documentation does not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments, you are free to take advantage of them. Certain Open Specifications documents are intended for use in conjunction with publicly available standards specifications and network programming art and, as such, assume that the reader either is familiar with the aforementioned material or has immediate access to it.

**Support.** For questions and support, please contact [dochelp@microsoft.com](mailto:dochelp@microsoft.com).

## Revision Summary

Date	Revision History	Revision Class	Comments
1/20/2012	0.1	New	Released new document.
4/11/2012	0.1	None	No changes to the meaning, language, or formatting of the technical content.
7/16/2012	0.1	None	No changes to the meaning, language, or formatting of the technical content.
9/12/2012	0.1	None	No changes to the meaning, language, or formatting of the technical content.
10/8/2012	1.0	Major	Significantly changed the technical content.
2/11/2013	2.0	Major	Significantly changed the technical content.
7/30/2013	2.0	None	No changes to the meaning, language, or formatting of the technical content.
11/18/2013	2.0	None	No changes to the meaning, language, or formatting of the technical content.
2/10/2014	2.0	None	No changes to the meaning, language, or formatting of the technical content.
4/30/2014	2.0	None	No changes to the meaning, language, or formatting of the technical content.
7/31/2014	2.0	None	No changes to the meaning, language, or formatting of the technical content.
10/30/2014	2.0	None	No changes to the meaning, language, or formatting of the technical content.
6/23/2016	2.0	None	No changes to the meaning, language, or formatting of the technical content.
9/14/2016	2.0	None	No changes to the meaning, language, or formatting of the technical content.
9/19/2017	3.0	Major	Significantly changed the technical content.

# 1 Introduction

The Work Management Service Web Service Protocol provides a way for a protocol client to trigger task aggregation and synchronization operations for a user.

Sections 1.5, 1.8, 1.9, 2, and 3 of this specification are normative. All other sections and examples in this specification are informative.

## 1.1 Glossary

This document uses the following terms:

**application server:** A computer that provides infrastructure and services for applications that are hosted on a server farm.

**back-end database server:** A server that hosts data, configuration settings, and stored procedures that are associated with one or more applications.

**personal site:** A type of SharePoint site that is used by an individual user for personal productivity. The site appears to the user as My Site.

**SOAP action:** The HTTP request header field used to indicate the intent of the SOAP request, using a URI value. See [\[SOAP1.1\]](#) section 6.1.1 for more information.

**SOAP body:** A container for the payload data being delivered by a SOAP message to its recipient. See [\[SOAP1.2-1/2007\]](#) section 5.3 for more information.

**SOAP fault:** A container for error and status information within a SOAP message. See [\[SOAP1.2-1/2007\]](#) section 5.4 for more information.

**task:** An object that represents an assignment to be completed.

**Unicode:** A character encoding standard developed by the Unicode Consortium that represents almost all of the written languages of the world. The **Unicode** standard [\[UNICODE5.0.0/2007\]](#) provides three forms (UTF-8, UTF-16, and UTF-32) and seven schemes (UTF-8, UTF-16, UTF-16 BE, UTF-16 LE, UTF-32, UTF-32 LE, and UTF-32 BE).

**Uniform Resource Locator (URL):** A string of characters in a standardized format that identifies a document or resource on the World Wide Web. The format is as specified in [\[RFC1738\]](#).

**user profile:** A collection of properties that pertain to a specific person or entity within a portal site.

**User Profile Service:** A data source that stores, provides, and applies information about users.

**Web Services Description Language (WSDL):** An XML format for describing network services as a set of endpoints that operate on messages that contain either document-oriented or procedure-oriented information. The operations and messages are described abstractly and are bound to a concrete network protocol and message format in order to define an endpoint. Related concrete endpoints are combined into abstract endpoints, which describe a network service. WSDL is extensible, which allows the description of endpoints and their messages regardless of the message formats or network protocols that are used.

**WSDL message:** An abstract, typed definition of the data that is communicated during a **WSDL operation** [\[WSDL\]](#). Also, an element that describes the data being exchanged between web service providers and clients.

**WSDL operation:** A single action or function of a web service. The execution of a WSDL operation typically requires the exchange of messages between the service requestor and the service provider.

**XML namespace:** A collection of names that is used to identify elements, types, and attributes in XML documents identified in a URI reference [RFC3986]. A combination of XML namespace and local name allows XML documents to use elements, types, and attributes that have the same names but come from different sources. For more information, see [XMLNS-2ED].

**XML namespace prefix:** An abbreviated form of an **XML namespace**, as described in [XML].

**XML schema:** A description of a type of XML document that is typically expressed in terms of constraints on the structure and content of documents of that type, in addition to the basic syntax constraints that are imposed by XML itself. An XML schema provides a view of a document type at a relatively high level of abstraction.

**MAY, SHOULD, MUST, SHOULD NOT, MUST NOT:** These terms (in all caps) are used as defined in [RFC2119]. All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

## 1.2 References

Links to a document in the Microsoft Open Specifications library point to the correct section in the most recently published version of the referenced document. However, because individual documents in the library are not updated at the same time, the section numbers in the documents may not match. You can confirm the correct section numbering by checking the [Errata](#).

### 1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact [dochelp@microsoft.com](mailto:dochelp@microsoft.com). We will assist you in finding the relevant information.

### 1.3 Overview

This protocol allows protocol clients to refresh a user's **task** information through a middle-tier **application server**. The protocol client sends a request for a user to the protocol server, and the server responds with an acknowledgement of the request and refreshes the task information asynchronously.

### 1.4 Relationship to Other Protocols

This protocol uses the **SOAP** message protocol for formatting request and response messages, as described in [\[SOAP1.1\]](#), [\[SOAP1.2/1\]](#) and [\[SOAP1.2/2\]](#). It transmits those messages by using **HTTP**, as described in [\[RFC2616\]](#), or **HTTPS**, as described in [\[RFC2818\]](#).

The following diagram shows the underlying messaging and transport stack used by the protocol:

**Figure 1: This protocol in relation to other protocols**

This protocol also calls APIs that use the User Profile Service Web Service protocol described in [\[MS-USPSWS\]](#) to get the location of a **personal site** associated with a **user profile**.

### 1.5 Prerequisites/Preconditions

This protocol operates against a **personal site** that is identified by a **URL** that is known by a user profile service implementing the User Profile Service Web Service protocol, as defined by [\[MS-USPSWS\]](#). The protocol client needs sufficient privileges to access the site and its data stored on the **back-end database server** corresponding to the site.

This protocol assumes that authentication has been performed by the underlying protocols.

## **1.6 Applicability Statement**

This protocol is designed to run operations on behalf of a single user per invocation and store results for that user in a storage location associated with that user's **user profile**.

## **1.7 Versioning and Capability Negotiation**

None.

## **1.8 Vendor-Extensible Fields**

None.

## **1.9 Standards Assignments**

None.

## 2 Messages

### 2.1 Transport

Protocol servers MUST support SOAP over HTTP, HTTPS, or TCP.

All protocol messages MUST be transported by using HTTP or TCP bindings at the transport level.

Protocol messages MUST be formatted as specified in either [\[SOAP1.1\]](#) section 4 or [\[SOAP1.2/1\]](#) section 5. Protocol server faults MUST be returned by using HTTP status codes, as specified in [\[RFC2616\]](#) section 10, or **SOAP faults**, as specified in [\[SOAP1.1\]](#) section 4.4 or [\[SOAP1.2/1\]](#) section 5.4.

If the HTTPS transport is used, a server certificate MUST be deployed.

This protocol SHOULD transmit an additional SOAP header, the **ServiceContext** header, as specified in [\[MS-SPSTWS\]](#).

This protocol does not define any means for activating a protocol server or protocol client. The protocol server MUST be configured and begin listening in an implementation-specific way. In addition, the protocol client MUST be capable of handling the format and transport that is used by the server, for example, the SOAP format over an HTTP transport.

### 2.2 Common Message Syntax

This section contains common definitions that are used by this protocol. The syntax of the definitions uses the **XML schema** syntax in [\[XMLSCHEMA1\]](#) and [\[XMLSCHEMA2\]](#), and Web Services Description Language, as defined in [\[WSDL\]](#).

#### 2.2.1 Namespaces

This specification defines and references various **XML namespaces** using the mechanisms specified in [\[XMLNS\]](#). Although this specification associates a specific **XML namespace prefix** for each XML namespace that is used, the choice of any particular XML namespace prefix is implementation-specific and not significant for interoperability.

Prefix	Namespace URI	Reference
soap	<a href="http://schemas.xmlsoap.org/wsdl/soap/">http://schemas.xmlsoap.org/wsdl/soap/</a>	<a href="#">[SOAP1.1]</a>
tns	<a href="http://tempuri.org/">http://tempuri.org/</a>	
tns1	<a href="http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.WorkManagement">http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.WorkManagement</a>

wsaw	<a href="http://www.w3.org/2006/05/addressing/wsdl">http://www.w3.org/2006/05/addressing/wsdl</a>	Web Service Addressing <a href="#">[WSA1.0]</a>
wsdl	<a href="http://schemas.xmlsoap.org/wsdl/">http://schemas.xmlsoap.org/wsdl/</a>	<a href="#">[WSDL]</a>
xs	<a href="http://www.w3.org/2001/XMLSchema">http://www.w3.org/2001/XMLSchema</a>	<a href="#">[XMLSCHEMA1]</a> <a href="#">[XMLSCHEMA2]</a>

## 2.2.2 Messages

This specification does not define any common **WSDL message** definitions.

## 2.2.3 Elements

This specification does not define any common **XML schema** element definitions.

## 2.2.4 Complex Types

This specification does not define any common **XML schema** complex type definitions.

## 2.2.5 Simple Types

The following table summarizes the set of common **XML schema** simple type definitions defined by this specification. XML schema simple type definitions that are specific to a particular operation are described with the operation.

Simple type	Description
<b>char</b>	A <b>char</b> simple type that represents a <b>Unicode</b> character. This type is not used by this protocol.
<b>duration</b>	A time interval with its period in days, hours, minutes, and seconds. This type is not used by this protocol.
<b>guid</b>	A unique identifier. This type is not used by this protocol.

### 2.2.5.1 char

**Namespace:** <http://schemas.microsoft.com/2003/10/Serialization/>

A **char** simple type that represents a **Unicode** character. This type is not used by this protocol.

```
<xs:simpleType name="char" xmlns:xs="http://www.w3.org/2001/XMLSchema">  
  <xs:restriction base="xs:int"/>  
</xs:simpleType>
```

### 2.2.5.2 duration

**Namespace:** <http://schemas.microsoft.com/2003/10/Serialization/>

A time interval with its period in days, hours, minutes, and seconds. This type is not used by this protocol.

```
<xs:simpleType name="duration" xmlns:xs="http://www.w3.org/2001/XMLSchema">  
  <xs:restriction base="xs:duration">  
    <xs:pattern value="\-?P(\d*D)?(T(\d*H)?(\d*M)?(\d*(\.\d*)?S)?)?"/>  
    <xs:minInclusive value="-P10675199DT2H48M5.4775808S"/>  
    <xs:maxInclusive value="P10675199DT2H48M5.4775807S"/>  
  </xs:restriction>  
</xs:simpleType>
```

### 2.2.5.3 guid

**Namespace:** http://schemas.microsoft.com/2003/10/Serialization/

A unique identifier. This type is not used by this protocol.

```
<xs:simpleType name="guid" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:pattern value="\da-fA-F}{8}-[\da-fA-F]{4}-[\da-fA-F]{4}-[\da-fA-F]{4}-[\da-fA-F]{12}"/>
  </xs:restriction>
</xs:simpleType>
```

### 2.2.6 Attributes

This specification does not define any common **XML schema** attribute definitions.

### 2.2.7 Groups

This specification does not define any common **XML schema** group definitions.

### 2.2.8 Attribute Groups

This specification does not define any common **XML schema** attribute group definitions.

### 2.2.9 Common Data Structures

None.

## 3 Protocol Details

In the following sections, the schema definition might differ from the processing rules imposed by the protocol. The WSDL in this specification matches the WSDL that shipped with the product and provides a base description of the schema. The text that introduces the WSDL might specify differences that reflect actual Microsoft product behavior. For example, the schema definition might allow for an element to be empty, null, or not present but the behavior of the protocol as specified restricts the same elements to being non-empty, present, and not null.

The client side of this protocol is simply a pass-through. That is, no additional timers or other state is required on the client side of this protocol. Calls made by the higher-layer protocol or application are passed directly to the transport, and the results returned by the transport are passed directly back to the higher-layer protocol or application.

### 3.1 Server Details

This protocol is based on stateless interaction between the protocol client and protocol server. The protocol client **MUST** be authenticated with the credentials of the user that the service will aggregate and refresh **tasks** for.

#### 3.1.1 Abstract Data Model

This protocol allows a protocol client to call the application server tier to trigger a refresh of a user's **task** cache. When called, the protocol server will aggregate tasks from systems defined in its configuration and write them into a storage location, such as a list in the content **back-end database server**. The protocol server returns a result indicating whether a new aggregation job was created along with an id for the job if one exists.

This protocol also allows a protocol client to call the application server tier to trigger a synchronization of tasks between an external location such as a mailbox and the back-end database server.

#### 3.1.2 Timers

None.

#### 3.1.3 Initialization

A User Profile Service Application implementing the User Profile Service Web Service protocol, as defined by [\[MS-USPSWS\]](#) **MUST** be available before this protocol can be used.

#### 3.1.4 Message Processing Events and Sequencing Rules

The following table summarizes the list of operations as defined by this specification.

Operation	Description
<b>BeginCacheRefresh</b>	Triggers the server to create a job to aggregate <b>tasks</b> on behalf of the calling user and writes results to a storage location.
<b>BeginCreateTaskPropagation</b>	Triggers the server to create a task in the external synchronization server.
<b>BeginDeleteTaskPropagation</b>	Triggers the server to delete a task in an external task server.
<b>BeginExchangeSync</b>	Starts a server synchronization for the current user.
<b>BeginRelocateTaskPropagation</b>	Triggers the server to move a task in an external task server to a target

Operation	Description
	location on that server.
<b>BeginUpdateTaskPropagation</b>	Triggers the server to update a task in an external task server.
<b>GetExchangeSyncInfo</b>	Returns information about an external server synchronization for a user.
<b>OptIntoExchangeSync</b>	Triggers the server to turn on synchronization with a task server for a user.
<b>OptOutOfExchangeSync</b>	Turns off task synchronization with a task server for a user.

### 3.1.4.1 BeginCacheRefresh

Triggers the server to create a job to aggregate **tasks** on behalf of the calling user and writes results to a storage location.

The following is the **WSDL** port type specification of the **BeginCacheRefresh WSDL operation**.

```
<wsdl:operation name="BeginCacheRefresh" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://tempuri.org/IWorkManagementServiceApplication/BeginCacheRefresh"
    message="tns:IWorkManagementServiceApplication_BeginCacheRefresh_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://tempuri.org/IWorkManagementServiceApplication/BeginCacheRefreshResponse"
    message="tns:IWorkManagementServiceApplication_BeginCacheRefresh_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The method returns confirmation of whether an aggregation job was created.

#### 3.1.4.1.1 Messages

The following table summarizes the set of **WSDL message** definitions that are specific to this operation.

Message	Description
<b>IWorkManagementServiceApplication_BeginCacheRefresh_InputMessage</b>	The request WSDL message for the <b>BeginCacheRefresh WSDL operation</b> .
<b>IWorkManagementServiceApplication_BeginCacheRefresh_OutputMessage</b>	The response WSDL message for the <b>BeginCacheRefresh WSDL operation</b> .

##### 3.1.4.1.1.1 IWorkManagementServiceApplication\_BeginCacheRefresh\_InputMessage

The request **WSDL message** for the **BeginCacheRefresh WSDL operation**.

The **SOAP action** value is:

<http://tempuri.org/IWorkManagementServiceApplication/BeginCacheRefresh>

The **SOAP body** contains the **BeginCacheRefresh** element.

#### 3.1.4.1.1.2 IWorkManagementServiceApplication\_BeginCacheRefresh\_OutputMessage

The response **WSDL message** for the **BeginCacheRefresh WSDL operation**.

The **SOAP body** contains the **BeginCacheRefreshResponse** element.

#### 3.1.4.1.2 Elements

The following table summarizes the **XML schema** element definitions that are specific to this operation.

Element	Description
<b>BeginCacheRefresh</b>	The input data for the <b>BeginCacheRefresh WSDL operation</b> .
<b>BeginCacheRefreshResponse</b>	The result data for the <b>BeginCacheRefresh WSDL operation</b> .

##### 3.1.4.1.2.1 BeginCacheRefresh

The **BeginCacheRefresh** element specifies the input data for the **BeginCacheRefresh WSDL operation**.

```
<xs:element name="BeginCacheRefresh" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence/>
  </xs:complexType>
</xs:element>
```

##### 3.1.4.1.2.2 BeginCacheRefreshResponse

The **BeginCacheRefreshResponse** element specifies the result data for the **BeginCacheRefresh WSDL operation**.

```
<xs:element name="BeginCacheRefreshResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element
        xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.WorkManagement"
        minOccurs="0" name="BeginCacheRefreshResult" nillable="true"
        type="tns1:CreateRefreshJobResult"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**BeginCacheRefreshResult:** Returns the CreateRefreshJobResult that indicates the result of the aggregation refresh request.

##### 3.1.4.1.3 Complex Types

The following table summarizes the **XML schema** complex type definitions that are specific to this operation.

Complex type	Description
<b>CreateRefreshJobResult</b>	Information about the <b>task</b> aggregation job that was created as a result of the refresh request.

### 3.1.4.1.3.1 CreateRefreshJobResult

**Namespace:** http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.WorkManagement

Information resulting from a request to create an aggregation refresh job.

```
<xs:complexType name="CreateRefreshJobResult" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" name="CreatedJob" type="xs:boolean"/>
    <xs:element minOccurs="0" name="CurrentJobId" nillable="true" type="xs:int"/>
    <xs:element minOccurs="0" name="CurrentJobIdClient" type="xs:int"/>
    <xs:element minOccurs="0" name="EncounteredError" type="xs:boolean"/>
  </xs:sequence>
</xs:complexType>
```

**CreatedJob:** The result of creating a new refresh job, which **MUST** return true if the job was successfully created and false if the job was not. A job will not be created if there is already a job running for that user or an error occurs while creating the job.

**CurrentJobId:** The integer identifier of the job that is currently running on behalf of the user. This can be the job created as a result of the request, or a job that is still in progress. **MUST** return NULL if creation of the job failed.

**CurrentJobIdClient:** Same as **CurrentJobId**, except that it **MUST** return -1 if the creation of the job failed instead of NULL.

**EncounteredError:** **MUST** return true if there was an error while creating the job and false otherwise.

### 3.1.4.1.4 Simple Types

None.

### 3.1.4.1.5 Attributes

None.

### 3.1.4.1.6 Groups

None.

### 3.1.4.1.7 Attribute Groups

None.

### 3.1.4.2 BeginExchangeSync

Starts a server synchronization for the current user.

The following is the **WSDL** port type specification of the **BeginExchangeSync WSDL operation**.

```
<wsdl:operation name="BeginExchangeSync" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://tempuri.org/IWorkManagementServiceApplication/BeginExchangeSync"
    message="tns:IWorkManagementServiceApplication_BeginExchangeSync_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://tempuri.org/IWorkManagementServiceApplication/BeginExchangeSyncResponse"
    message="tns:IWorkManagementServiceApplication_BeginExchangeSync_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

This operation returns whether the synchronization process successfully started.

### 3.1.4.2.1 Messages

The following table summarizes the set of **WSDL message** definitions that are specific to this operation.

Message	Description
<b>IWorkManagementServiceApplication_BeginExchangeSync_InputMessage</b>	The request WSDL message for the <b>BeginExchangeSync WSDL operation</b> .
<b>IWorkManagementServiceApplication_BeginExchangeSync_OutputMessage</b>	The response WSDL message for the <b>BeginExchangeSync WSDL operation</b> .

#### 3.1.4.2.1.1 IWorkManagementServiceApplication\_BeginExchangeSync\_InputMessage

The request **WSDL message** for the **BeginExchangeSync WSDL operation**.

The **SOAP action** value is:

```
http://tempuri.org/IWorkManagementServiceApplication/BeginExchangeSync
```

The **SOAP body** contains the **BeginExchangeSync** element.

#### 3.1.4.2.1.2 IWorkManagementServiceApplication\_BeginExchangeSync\_OutputMessage

The response **WSDL message** for the **BeginExchangeSync WSDL operation**.

The **SOAP body** contains the **BeginExchangeSyncResponse** element.

### 3.1.4.2.2 Elements

The following table summarizes the **XML schema** element definitions that are specific to this operation.

Element	Description
<b>BeginExchangeSync</b>	The input data for the <b>BeginExchangeSync WSDL operation</b> .
<b>BeginExchangeSyncResponse</b>	The result data for the <b>BeginExchangeSync WSDL operation</b> .

### 3.1.4.2.2.1 BeginExchangeSync

The **BeginExchangeSync** element specifies the input data for the **BeginExchangeSync WSDL operation**.

```
<xs:element name="BeginExchangeSync" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence/>
  </xs:complexType>
</xs:element>
```

### 3.1.4.2.2.2 BeginExchangeSyncResponse

The **BeginExchangeSyncResponse** element specifies the result data for the **BeginExchangeSync WSDL operation**.

```
<xs:element name="BeginExchangeSyncResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" name="BeginExchangeSyncResult" type="xs:boolean"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**BeginExchangeSyncResult:** MUST return true if the synchronization job successfully started and false if not.

### 3.1.4.2.3 Complex Types

None.

### 3.1.4.2.4 Simple Types

None.

### 3.1.4.2.5 Attributes

None.

### 3.1.4.2.6 Groups

None.

### 3.1.4.2.7 Attribute Groups

None.

### 3.1.4.3 BeginCreateTaskPropagation

Triggers the server to create a **task** in the external synchronization server.

The following is the **WSDL** port type specification of the **BeginCreateTaskPropagation WSDL operation**.

```
<wsdl:operation name="BeginCreateTaskPropagation"
xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
wsaw:Action="http://tempuri.org/IWorkManagementServiceApplication/BeginCreateTaskPropagation"
message="tns:IWorkManagementServiceApplication_BeginCreateTaskPropagation_InputMessage"
xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
wsaw:Action="http://tempuri.org/IWorkManagementServiceApplication/BeginCreateTaskPropagationR
esponse"
message="tns:IWorkManagementServiceApplication_BeginCreateTaskPropagation_OutputMessage"
xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The method returns acknowledgement that the request was received and will be processed.

#### 3.1.4.3.1 Messages

The following table summarizes the set of **WSDL message** definitions that are specific to this operation.

Message	Description
<b>IWorkManagementServiceApplication_BeginCreateTaskPropagation_InputMessage</b>	The request WSDL message for the <b>BeginCreateTaskPropagation WSDL operation</b> .
<b>IWorkManagementServiceApplication_BeginCreateTaskPropagation_OutputMessage</b>	The response WSDL message for the <b>BeginCreateTaskPropagation WSDL operation</b> .

##### 3.1.4.3.1.1 IWorkManagementServiceApplication\_BeginCreateTaskPropagation\_InputMessage

The request **WSDL message** for the **BeginCreateTaskPropagation WSDL operation**.

The **SOAP action** value is:

```
http://tempuri.org/IWorkManagementServiceApplication/BeginCreateTaskPropagation
```

The **SOAP body** contains the **BeginCreateTaskPropagation** element.

##### 3.1.4.3.1.2 IWorkManagementServiceApplication\_BeginCreateTaskPropagation\_OutputMessage

The response **WSDL message** for the **BeginCreateTaskPropagation WSDL operation**.

The **SOAP body** contains the **BeginCreateTaskPropagationResponse** element.

### 3.1.4.3.2 Elements

The following table summarizes the **XML schema** element definitions that are specific to this operation.

Element	Description
<b>BeginCreateTaskPropagation</b>	The input data for the <b>BeginCreateTaskPropagation WSDL operation</b> .
<b>BeginCreateTaskPropagationResponse</b>	The result data for the <b>BeginCreateTaskPropagation WSDL operation</b> .

#### 3.1.4.3.2.1 BeginCreateTaskPropagation

The **BeginCreateTaskPropagation** element specifies the input data for the **BeginCreateTaskPropagation WSDL operation**.

```
<xs:element name="BeginCreateTaskPropagation" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" name="taskId" type="xs:int"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**taskId:** The integer identifier of the **task** to be created.

#### 3.1.4.3.2.2 BeginCreateTaskPropagationResponse

The **BeginCreateTaskPropagationResponse** element specifies the result data for the **BeginCreateTaskPropagation WSDL operation**.

```
<xs:element name="BeginCreateTaskPropagationResponse"
xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence/>
  </xs:complexType>
</xs:element>
```

#### 3.1.4.3.3 Complex Types

None.

#### 3.1.4.3.4 Simple Types

None.

#### 3.1.4.3.5 Attributes

None.

#### 3.1.4.3.6 Groups

None.

### 3.1.4.3.7 Attribute Groups

None.

### 3.1.4.4 BeginDeleteTaskPropagation

Triggers the server to delete a **task** in an external task server.

The following is the **WSDL** port type specification of the **BeginDeleteTaskPropagation WSDL operation**.

```
<wsdl:operation name="BeginDeleteTaskPropagation"
  xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://tempuri.org/IWorkManagementServiceApplication/BeginDeleteTaskPropagation"
    message="tns:IWorkManagementServiceApplication BeginDeleteTaskPropagation InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://tempuri.org/IWorkManagementServiceApplication/BeginDeleteTaskPropagationR
    esponse"
    message="tns:IWorkManagementServiceApplication BeginDeleteTaskPropagation OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The method returns acknowledgement that the request was received and will be processed.

#### 3.1.4.4.1 Messages

The following table summarizes the set of **WSDL message** definitions that are specific to this operation.

Message	Description
<b>IWorkManagementServiceApplication_BeginDeleteTaskPropagation_InputMessage</b>	The request WSDL message for the <b>BeginDeleteTaskPropagation WSDL operation</b> .
<b>IWorkManagementServiceApplication_BeginDeleteTaskPropagation_OutputMessage</b>	The response WSDL message for the <b>BeginDeleteTaskPropagation WSDL operation</b> .

##### 3.1.4.4.1.1 IWorkManagementServiceApplication\_BeginDeleteTaskPropagation\_InputMessage

The request **WSDL message** for the **BeginDeleteTaskPropagation WSDL operation**.

The **SOAP action** value is:

```
http://tempuri.org/IWorkManagementServiceApplication/BeginDeleteTaskPropagation
```

The **SOAP body** contains the **BeginDeleteTaskPropagation** element.

##### 3.1.4.4.1.2 IWorkManagementServiceApplication\_BeginDeleteTaskPropagation\_OutputMessage

The response **WSDL message** for the **BeginDeleteTaskPropagation WSDL operation**.

The **SOAP body** contains the **BeginDeleteTaskPropagationResponse** element.

### 3.1.4.4.2 Elements

The following table summarizes the **XML schema** element definitions that are specific to this operation.

Element	Description
<b>BeginDeleteTaskPropagation</b>	The input data for the <b>BeginDeleteTaskPropagation WSDL operation</b> .
<b>BeginDeleteTaskPropagationResponse</b>	The result data for the <b>BeginDeleteTaskPropagation WSDL operation</b> .

#### 3.1.4.4.2.1 BeginDeleteTaskPropagation

The **BeginDeleteTaskPropagation** element specifies the input data for the **BeginDeleteTaskPropagation WSDL operation**.

```
<xs:element name="BeginDeleteTaskPropagation" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" name="taskId" type="xs:int"/>
      <xs:element minOccurs="0" name="mappedKey" nillable="true" type="xs:string"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**taskId:** The integer identifier of the **task** to be deleted.

**mappedKey:** The unique identifier of the target location in the external server to delete the task from.

#### 3.1.4.4.2.2 BeginDeleteTaskPropagationResponse

The **BeginDeleteTaskPropagationResponse** element specifies the result data for the **BeginDeleteTaskPropagation WSDL operation**.

```
<xs:element name="BeginDeleteTaskPropagationResponse"
xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence/>
  </xs:complexType>
</xs:element>
```

#### 3.1.4.4.3 Complex Types

None.

#### 3.1.4.4.4 Simple Types

None.

### 3.1.4.4.5 Attributes

None.

### 3.1.4.4.6 Groups

None.

### 3.1.4.4.7 Attribute Groups

None.

### 3.1.4.5 BeginUpdateTaskPropagation

Triggers the server to update a **task** in an external task server.

The following is the **WSDL** port type specification of the **BeginUpdateTaskPropagation WSDL operation**.

```
<wsdl:operation name="BeginUpdateTaskPropagation"
xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
wsaw:Action="http://tempuri.org/IWorkManagementServiceApplication/BeginUpdateTaskPropagation"
message="tns:IWorkManagementServiceApplication_BeginUpdateTaskPropagation_InputMessage"
xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
wsaw:Action="http://tempuri.org/IWorkManagementServiceApplication/BeginUpdateTaskPropagationR
esponse"
message="tns:IWorkManagementServiceApplication_BeginUpdateTaskPropagation_OutputMessage"
xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The method returns acknowledgement that the request was received and will be processed.

#### 3.1.4.5.1 Messages

The following table summarizes the set of **WSDL message** definitions that are specific to this operation.

Message	Description
<b>IWorkManagementServiceApplication_BeginUpdateTaskPropagation_Inp utMessage</b>	The request WSDL message for the <b>BeginUpdateTaskPropaga tion WSDL operation</b> .
<b>IWorkManagementServiceApplication_BeginUpdateTaskPropagation_Out putMessage</b>	The response WSDL message for the <b>BeginUpdateTaskPropaga tion WSDL operation</b> .

#### 3.1.4.5.1.1 IWorkManagementServiceApplication\_BeginUpdateTaskPropagation\_In putMessage

The request **WSDL message** for the **BeginUpdateTaskPropagation WSDL operation**.

The **SOAP action** value is:

<http://tempuri.org/IWorkManagementServiceApplication/BeginUpdateTaskPropagation>

The **SOAP body** contains the **BeginUpdateTaskPropagation** element.

### 3.1.4.5.1.2 IWorkManagementServiceApplication\_BeginUpdateTaskPropagation\_OutputMessage

The response **WSDL message** for the **BeginUpdateTaskPropagation WSDL operation**.

The **SOAP body** contains the **BeginUpdateTaskPropagationResponse** element.

### 3.1.4.5.2 Elements

The following table summarizes the **XML schema** element definitions that are specific to this operation.

Element	Description
<b>BeginUpdateTaskPropagation</b>	The input data for the <b>BeginUpdateTaskPropagation WSDL operation</b> .
<b>BeginUpdateTaskPropagationResponse</b>	The result data for the <b>BeginUpdateTaskPropagation WSDL operation</b> .

#### 3.1.4.5.2.1 BeginUpdateTaskPropagation

The **BeginUpdateTaskPropagation** element specifies the input data for the **BeginUpdateTaskPropagation WSDL operation**.

```
<xs:element name="BeginUpdateTaskPropagation" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" name="taskId" type="xs:int"/>
      <xs:element minOccurs="0" name="lastModified" type="xs:dateTime"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**taskId:** The integer identifier of the **task** that needs to be updated.

**lastModified:** The datetime when the task that needs to be updated was last updated.

#### 3.1.4.5.2.2 BeginUpdateTaskPropagationResponse

The **BeginUpdateTaskPropagationResponse** element specifies the result data for the **BeginUpdateTaskPropagation WSDL operation**.

```
<xs:element name="BeginUpdateTaskPropagationResponse"
  xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence/>
  </xs:complexType>
</xs:element>
```

### 3.1.4.5.3 Complex Types

None.

#### 3.1.4.5.4 Simple Types

None.

#### 3.1.4.5.5 Attributes

None.

#### 3.1.4.5.6 Groups

None.

#### 3.1.4.5.7 Attribute Groups

None.

#### 3.1.4.6 GetExchangeSyncInfo

Returns information about an external server synchronization for a user.

The following is the **WSDL** port type specification of the **GetExchangeSyncInfo WSDL operation**.

```
<wsdl:operation name="GetExchangeSyncInfo" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://tempuri.org/IWorkManagementServiceApplication/GetExchangeSyncInfo"
    message="tns:IWorkManagementServiceApplication_GetExchangeSyncInfo_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://tempuri.org/IWorkManagementServiceApplication/GetExchangeSyncInfoResponse"
    message="tns:IWorkManagementServiceApplication_GetExchangeSyncInfo_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

Returns the ExchangeSyncInfoResult that indicates the user's external server synchronization status.

#### 3.1.4.6.1 Messages

The following table summarizes the set of **WSDL message** definitions that are specific to this operation.

Message	Description
<b>IWorkManagementServiceApplication_GetExchangeSyncInfo_InputMessage</b>	The request WSDL message for the <b>GetExchangeSyncInfo WSDL operation</b> .
<b>IWorkManagementServiceApplication_GetExchangeSyncInfo_OutputMessage</b>	The response WSDL message for the <b>GetExchangeSyncInfo WSDL operation</b> .

#### 3.1.4.6.1.1 IWorkManagementServiceApplication\_GetExchangeSyncInfo\_InputMessage

The request **WSDL message** for the **GetExchangeSyncInfo WSDL operation**.

The **SOAP action** value is:

```
http://tempuri.org/IWorkManagementServiceApplication/GetExchangeSyncInfo
```

The **SOAP body** contains the **GetExchangeSyncInfo** element.

### 3.1.4.6.1.2 IWorkManagementServiceApplication\_GetExchangeSyncInfo\_OutputMessage

The response **WSDL message** for the **GetExchangeSyncInfo WSDL operation**.

The **SOAP body** contains the **GetExchangeSyncInfoResponse** element.

### 3.1.4.6.2 Elements

The following table summarizes the **XML schema** element definitions that are specific to this operation.

Element	Description
<b>GetExchangeSyncInfo</b>	The input data for the <b>GetExchangeSyncInfo WSDL operation</b> .
<b>GetExchangeSyncInfoResponse</b>	The result data for the <b>GetExchangeSyncInfo WSDL operation</b> .

#### 3.1.4.6.2.1 GetExchangeSyncInfo

The **GetExchangeSyncInfo** element specifies the input data for the **GetExchangeSyncInfo WSDL operation**.

```
<xs:element name="GetExchangeSyncInfo" xmlns:xs="http://www.w3.org/2001/XMLSchema">  
  <xs:complexType>  
    <xs:sequence/>  
  </xs:complexType>  
</xs:element>
```

#### 3.1.4.6.2.2 GetExchangeSyncInfoResponse

The **GetExchangeSyncInfoResponse** element specifies the result data for the **GetExchangeSyncInfo WSDL operation**.

```
<xs:element name="GetExchangeSyncInfoResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">  
  <xs:complexType>  
    <xs:sequence>  
      <xs:element  
xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.WorkManagement"  
minOccurs="0" name="GetExchangeSyncInfoResult" nillable="true"  
type="tns1:ExchangeUserSyncState"/>  
    </xs:sequence>  
  </xs:complexType>  
</xs:element>
```

**GetExchangeSyncInfoResult:** The ExchangeSyncInfoResult that indicates the user's external server synchronization status.

### 3.1.4.6.3 Complex Types

The following table summarizes the **XML schema** complex type definitions that are specific to this operation.

Complex type	Description
<b>ExchangeUserSyncState</b>	Information about the external server synchronization status for a user.

#### 3.1.4.6.3.1 ExchangeUserSyncState

**Namespace:** http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.WorkManagement

Represents status for external **task** server synchronization operations for a user, including whether or not the user is set up to synchronize with the server, the time that the last synchronization completed, and results of the last synchronization.

```
<xs:complexType name="ExchangeUserSyncState" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence>
    <xs:element minOccurs="0" name="IsOptedIn" type="xs:boolean"/>
    <xs:element minOccurs="0" name="LastEndTime" nillable="true" type="xs:dateTime"/>
    <xs:element minOccurs="0" name="LastSyncResult" type="tns1:ExchangeSyncResult"/>
  </xs:sequence>
</xs:complexType>
```

**IsOptedIn:** Specifies whether synchronization is enabled for a user or not. MUST be true if tasks for the user will be synchronized and false otherwise.

**LastEndTime:** When the last synchronization operation completed

**LastSyncResult:** The outcome of the last synchronization operation for the user

#### 3.1.4.6.4 Simple Types

The following table summarizes the **XML schema** simple type definitions that are specific to this operation.

Simple type	Description
<b>ExchangeSyncResult</b>	Information about a <b>task</b> server synchronization operation.

#### 3.1.4.6.4.1 ExchangeSyncResult

**Namespace:** http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.WorkManagement

Results about a **task** server synchronization operation.

```
<xs:simpleType name="ExchangeSyncResult" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:enumeration value="NoValue"/>
    <xs:enumeration value="Success"/>
    <xs:enumeration value="UnknownError"/>
    <xs:enumeration value="CouldNotConnectToExchange"/>
    <xs:enumeration value="CouldNotGetUserCredentials"/>
    <xs:enumeration value="CouldNotKickoffJob"/>
  </xs:restriction>
</xs:simpleType>
```

```

    <xs:enumeration value="SyncWithErrors"/>
  </xs:restriction>
</xs:simpleType>

```

The following table specifies the allowable values for the **ExchangeSyncResult** simple type.

Value	Meaning
NoValue	No value.
Success	The operation succeeded.
UnknownError	There was an unknown error during the synchronization.
CouldNotConnectToExchange	The operation could not connect with the external task server.
CouldNotGetUserCredentials	The operation could not get credentials for the user it was trying to synchronize.
CouldNotKickoffJob	The synchronization operation could not be started.
SyncWithErrors	The synchronization finished but with errors.

### 3.1.4.6.5 Attributes

None.

### 3.1.4.6.6 Groups

None.

### 3.1.4.6.7 Attribute Groups

None.

### 3.1.4.7 OptIntoExchangeSync

Triggers the server to turn on synchronization with a **task** server for a user.

The following is the **WSDL** port type specification of the **OptIntoExchangeSync WSDL operation**.

```

<wsdl:operation name="OptIntoExchangeSync" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://tempuri.org/IWorkManagementServiceApplication/OptIntoExchangeSync"
    message="tns:IWorkManagementServiceApplication_OptIntoExchangeSync_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://tempuri.org/IWorkManagementServiceApplication/OptIntoExchangeSyncResponse"
    message="tns:IWorkManagementServiceApplication_OptIntoExchangeSync_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>

```

Returns the OptIntoExchangeSyncResult that indicates the result of the operation to turn on synchronization.

#### 3.1.4.7.1 Messages

The following table summarizes the set of **WSDL message** definitions that are specific to this operation.

Message	Description
<b>IWorkManagementServiceApplication_OptIntoExchangeSync_InputMessage</b>	The request WSDL message for the <b>OptIntoExchangeSync WSDL operation</b> .
<b>IWorkManagementServiceApplication_OptIntoExchangeSync_OutputMessage</b>	The response WSDL message for the <b>OptIntoExchangeSync WSDL operation</b> .

### 3.1.4.7.1.1 IWorkManagementServiceApplication\_OptIntoExchangeSync\_InputMessage

The request **WSDL message** for the **OptIntoExchangeSync WSDL operation**.

The **SOAP action** value is:

```
http://tempuri.org/IWorkManagementServiceApplication/OptIntoExchangeSync
```

The **SOAP body** contains the **OptIntoExchangeSync** element.

### 3.1.4.7.1.2 IWorkManagementServiceApplication\_OptIntoExchangeSync\_OutputMessage

The response **WSDL message** for the **OptIntoExchangeSync WSDL operation**.

The **SOAP body** contains the **OptIntoExchangeSyncResponse** element.

### 3.1.4.7.2 Elements

The following table summarizes the **XML schema** element definitions that are specific to this operation.

Element	Description
<b>OptIntoExchangeSync</b>	The input data for the <b>OptIntoExchangeSync WSDL operation</b> .
<b>OptIntoExchangeSyncResponse</b>	The result data for the <b>OptIntoExchangeSync WSDL operation</b> .

#### 3.1.4.7.2.1 OptIntoExchangeSync

The **OptIntoExchangeSync** element specifies the input data for the **OptIntoExchangeSync WSDL operation**.

```
<xs:element name="OptIntoExchangeSync" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence/>
  </xs:complexType>
```

```
</xs:element>
```

### 3.1.4.7.2.2 OptIntoExchangeSyncResponse

The **OptIntoExchangeSyncResponse** element specifies the result data for the **OptIntoExchangeSync** **WSDL operation**.

```
<xs:element name="OptIntoExchangeSyncResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element
        xmlns:tns1="http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.WorkManagement"
        minOccurs="0" name="OptIntoExchangeSyncResult" type="tns1:ExchangeOptInResult"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**OptIntoExchangeSyncResult:** The ExchangeOptInResult that indicates the result of the operation to turn on synchronization.

### 3.1.4.7.3 Complex Types

None.

### 3.1.4.7.4 Simple Types

The following table summarizes the **XML schema** simple type definitions that are specific to this operation.

Simple type	Description
<b>ExchangeOptInResult</b>	Information about whether or not the user was successfully set up to synchronize <b>tasks</b> .

#### 3.1.4.7.4.1 ExchangeOptInResult

**Namespace:** http://schemas.datacontract.org/2004/07/Microsoft.Office.Server.WorkManagement

Information about whether or not the user was successfully set up to synchronize **tasks**.

```
<xs:simpleType name="ExchangeOptInResult" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:enumeration value="NoValue"/>
    <xs:enumeration value="Success"/>
    <xs:enumeration value="UnknownError"/>
    <xs:enumeration value="CouldNotConnectToExchange"/>
    <xs:enumeration value="CouldNotFindOrCreateMySite"/>
    <xs:enumeration value="UserAlreadyOptedIn"/>
    <xs:enumeration value="UserExchangeOperationPending"/>
    <xs:enumeration value="UnsupportedExchangeVersion"/>
    <xs:enumeration value="MissingEmailAddress"/>
    <xs:enumeration value="ExchangeWebServiceClientMissing"/>
    <xs:enumeration value="UnsupportedSharePointConfiguration"/>
    <xs:enumeration value="InvalidOrUnauthorizedUser"/>
    <xs:enumeration value="CouldNotActivateExchangeSyncFeatureOnSiteSubscription"/>
  </xs:restriction>
</xs:simpleType>
```

The following table specifies the allowable values for the **ExchangeOptInResult** simple type.

Value	Meaning
NoValue	No value.
Success	The operation succeeded.
UnknownError	There was an unknown error when enabling synchronization.
CouldNotConnectToExchange	The operation could not connect with the external task server.
CouldNotFindOrCreateMySite	The synchronization operation could not find or create the user's <b>personal site</b> in which to store synchronization data.
UserAlreadyOptedIn	The user was already set up to synchronize tasks.
UserExchangeOperationPending	The operation to enable synchronization is already in process.
UnsupportedExchangeVersion	The task server is not compatible with the synchronization operation.
MissingEmailAddress	The user's email address could not be found in the <b>User Profile Service</b> .
ExchangeWebServiceClientMissing	The component required to connect to the external task server is not available.
UnsupportedSharePointConfiguration	The local server is not configured correctly for synchronization with an external task server.
InvalidOrUnauthorizedUser	The user specified is not valid or unauthorized on the external task server.
CouldNotActivateExchangeSyncFeatureOnSiteSubscription	The synchronization operation could not be activated on the local server.

#### 3.1.4.7.5 Attributes

None.

#### 3.1.4.7.6 Groups

None.

#### 3.1.4.7.7 Attribute Groups

None.

#### 3.1.4.8 OptOutOfExchangeSync

Turns off **task** synchronization with a task server for a user.

The following is the **WSDL** port type specification of the **OptOutOfExchangeSync WSDL operation**.

```

<wsdl:operation name="OptOutOfExchangeSync" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
    wsaw:Action="http://tempuri.org/IWorkManagementServiceApplication/OptOutOfExchangeSync"
    message="tns:IWorkManagementServiceApplication_OptOutOfExchangeSync_InputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
    wsaw:Action="http://tempuri.org/IWorkManagementServiceApplication/OptOutOfExchangeSyncResponse"
    message="tns:IWorkManagementServiceApplication_OptOutOfExchangeSync_OutputMessage"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>

```

Returns true if the operation to turn off synchronization was successful and false otherwise.

### 3.1.4.8.1 Messages

The following table summarizes the set of **WSDL message** definitions that are specific to this operation.

Message	Description
<b>IWorkManagementServiceApplication_OptOutOfExchangeSync_InputMessage</b>	The request WSDL message for the <b>OptOutOfExchangeSync WSDL operation</b> .
<b>IWorkManagementServiceApplication_OptOutOfExchangeSync_OutputMessage</b>	The response WSDL message for the <b>OptOutOfExchangeSync WSDL operation</b> .

#### 3.1.4.8.1.1 IWorkManagementServiceApplication\_OptOutOfExchangeSync\_InputMessage

The request **WSDL message** for the **OptOutOfExchangeSync WSDL operation**.

The **SOAP action** value is:

```
http://tempuri.org/IWorkManagementServiceApplication/OptOutOfExchangeSync
```

The **SOAP body** contains the **OptOutOfExchangeSync** element.

#### 3.1.4.8.1.2 IWorkManagementServiceApplication\_OptOutOfExchangeSync\_OutputMessage

The response **WSDL message** for the **OptOutOfExchangeSync WSDL operation**.

The **SOAP body** contains the **OptOutOfExchangeSyncResponse** element.

### 3.1.4.8.2 Elements

The following table summarizes the **XML schema** element definitions that are specific to this operation.

Element	Description
<b>OptOutOfExchangeSync</b>	The input data for the <b>OptOutOfExchangeSync WSDL operation</b> .
<b>OptOutOfExchangeSyncResponse</b>	The result data for the <b>OptOutOfExchangeSync WSDL operation</b> .

### 3.1.4.8.2.1 OptOutOfExchangeSync

The **OptOutOfExchangeSync** element specifies the input data for the **OptOutOfExchangeSync WSDL operation**.

```
<xs:element name="OptOutOfExchangeSync" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence/>
  </xs:complexType>
</xs:element>
```

### 3.1.4.8.2.2 OptOutOfExchangeSyncResponse

The **OptOutOfExchangeSyncResponse** element specifies the result data for the **OptOutOfExchangeSync WSDL operation**.

```
<xs:element name="OptOutOfExchangeSyncResponse" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" name="OptOutOfExchangeSyncResult" type="xs:boolean"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**OptOutOfExchangeSyncResult:** The result of the operation to turn off synchronization.. MUST return true if successful and false otherwise.

### 3.1.4.8.3 Complex Types

None.

### 3.1.4.8.4 Simple Types

None.

### 3.1.4.8.5 Attributes

None.

### 3.1.4.8.6 Groups

None.

### 3.1.4.8.7 Attribute Groups

None.

### 3.1.4.9 BeginRelocateTaskPropagation

Triggers the server to move a **task** in an external task server to a target location on that server.

The following is the **WSDL** port type specification of the **BeginRelocateTaskPropagation WSDL operation**.

```
<wsdl:operation name="BeginRelocateTaskPropagation"
xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/">
  <wsdl:input
wsaw:Action="http://tempuri.org/IWorkManagementServiceApplication/BeginRelocateTaskPropagation"
message="tns:IWorkManagementServiceApplication_BeginRelocateTaskPropagation_InputMessage"
xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
  <wsdl:output
wsaw:Action="http://tempuri.org/IWorkManagementServiceApplication/BeginRelocateTaskPropagationResponse"
message="tns:IWorkManagementServiceApplication_BeginRelocateTaskPropagation_OutputMessage"
xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"/>
</wsdl:operation>
```

The method returns confirmation that the request was received and will be processed.

#### 3.1.4.9.1 Messages

The following table summarizes the set of **WSDL message** definitions that are specific to this operation.

Message	Description
<b>IWorkManagementServiceApplication_BeginRelocateTaskPropagation_InputMessage</b>	The request WSDL message for the <b>BeginRelocateTaskPropagation WSDL operation</b> .
<b>IWorkManagementServiceApplication_BeginRelocateTaskPropagation_OutputMessage</b>	The response WSDL message for the <b>BeginRelocateTaskPropagation WSDL operation</b> .

##### 3.1.4.9.1.1 IWorkManagementServiceApplication\_BeginRelocateTaskPropagation\_InputMessage

The request **WSDL message** for the **BeginRelocateTaskPropagation WSDL operation**.

The **SOAP action** value is:

```
http://tempuri.org/IWorkManagementServiceApplication/BeginRelocateTaskPropagation
```

The **SOAP body** contains the **BeginRelocateTaskPropagation** element.

##### 3.1.4.9.1.2 IWorkManagementServiceApplication\_BeginRelocateTaskPropagation\_OutputMessage

The response **WSDL message** for the **BeginRelocateTaskPropagation WSDL operation**.

The **SOAP body** contains the **BeginRelocateTaskPropagationResponse** element.

### 3.1.4.9.2 Elements

The following table summarizes the **XML schema** element definitions that are specific to this operation.

Element	Description
<b>BeginRelocateTaskPropagation</b>	The input data for the <b>BeginRelocateTaskPropagation WSDL operation</b> .
<b>BeginRelocateTaskPropagationResponse</b>	The result data for the <b>BeginRelocateTaskPropagation WSDL operation</b> .

#### 3.1.4.9.2.1 BeginRelocateTaskPropagation

The **BeginRelocateTaskPropagation** element specifies the input data for the **BeginRelocateTaskPropagation WSDL operation**.

```
<xs:element name="BeginRelocateTaskPropagation" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" name="taskId" type="xs:int"/>
      <xs:element minOccurs="0" name="mappedKey" nillable="true" type="xs:string"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

**taskId:** The integer identifier of the **task** to be moved.

**mappedKey:** The unique identifier of the target location in the external server to move the task to.

#### 3.1.4.9.2.2 BeginRelocateTaskPropagationResponse

The **BeginRelocateTaskPropagationResponse** element specifies the result data for the **BeginRelocateTaskPropagation WSDL operation**.

```
<xs:element name="BeginRelocateTaskPropagationResponse"
xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence/>
  </xs:complexType>
</xs:element>
```

## **5 Security**

### **5.1 Security Considerations for Implementers**

Aggregation and synchronization will occur on behalf of the user whose identity is tied to the request. Implementers need to make sure that the identity is established for the correct user prior to making calls to this protocol.

### **5.2 Index of Security Parameters**

None.

## 6 Appendix A: Full WSDL

For ease of implementation, the full WSDL is provided in this appendix.

```

## 8 Appendix C: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include updates to those products.

- Microsoft SharePoint Server 2013

Exceptions, if any, are noted in this section. If an update version, service pack or Knowledge Base (KB) number appears with a product name, the behavior changed in that update. The new behavior also applies to subsequent updates unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms "SHOULD" or "SHOULD NOT" implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term "MAY" implies that the product does not follow the prescription.

## 9 Change Tracking

This section identifies changes that were made to this document since the last release. Changes are classified as Major, Minor, or None.

The revision class **Major** means that the technical content in the document was significantly revised. Major changes affect protocol interoperability or implementation. Examples of major changes are:

- A document revision that incorporates changes to interoperability requirements.
- A document revision that captures changes to protocol functionality.

The revision class **Minor** means that the meaning of the technical content was clarified. Minor changes do not affect protocol interoperability or implementation. Examples of minor changes are updates to clarify ambiguity at the sentence, paragraph, or table level.

The revision class **None** means that no new technical changes were introduced. Minor editorial and formatting changes may have been made, but the relevant technical content is identical to the last released version.

The changes made to this document are listed in the following table. For more information, please contact [dochelp@microsoft.com](mailto:dochelp@microsoft.com).

Section	Description	Revision class
<a href="#">3.1.4.1.3.1</a> CreateRefreshJobResult	Updated value for CurrentJobIdClient that if the creation of the job failed instead of NULL.	Major
3.1.4.1.3.1 CreateRefreshJobResult	Updated the usage of normative term for CurrentJobId element.	Minor
